PRINTED BY WILLIAM CLOWES
Duke-street, Lambeth.

GENERAL BIOGRAPHICAL DICTIONARY.

GABBANI (ANTONY DOMENICO) an Italian artist, was born at Florence in 1695 and studied under Carlo Ferri at Rome. He excels most in minor subjects, as gamboles of game, children &c. His most famous work in fresco is the large cupola of Castello, which he did not live to finish falling from a scaffold in 1726 while employed on it. His colouring though sometimes feeble is generally good but he fails most in the execution of his draperies.—*Pilkington*

GABIA (JOHN BAPTIST) one of the revivers of literature was born at Verona, and flourished in the sixteenth century. He was professor of Greek at Rome and is said to have distinguished himself by his knowledge of the learned languages, of mathematics and philosophy and even of theology. His works are—A translation from Greek into Latin of the *Commentaries of Theodore* bishop of Cyrus, on *Daniel* and *Ezechiele* printed at Rome 1563, A translation of the history of Scyrtzes Curopalates, 1570 and a Latin translation of Sophocles. It is affirmed by Maffei that he also translated Zosimus and the Hebrew Psalms and translated into Greek the Gregorian Kalendar with Santi's tables with an introductory epistle in Greek by himself.—*Moreri. Maffei. Verona Illustrata*

GABRIEL (JAMES) an eminent French architect built the palace at Chonay. He also undertook the Pont Royal at Paris but died before it was finished in 1686 leaving the completion of it to his son James and Frere Roman.—**JAMES** the younger was born at Paris in 1667 and became overseer general of buildings, gardens, arts and manufactures first architect and engineer of bridges and banks through the kingdom and knight of St Michael. He died at Paris in 1742 leaving a son also first architect to the king who died in 1782.—*Newt. Diet. Hist.*

GABRIEL SIONITA a learned Maronite was professor of the Arabic and Syrac languages at Rome and flourished in the seveneenth century. He was invited to Paris to assist in M Le Jay's Polyglott and carried with him some Syrac and Arabic versions of the Bible transcribed by himself from MSS. at Rome to which he added the vowel points which were not in the original. The Latin translations of these versions were also furnished by Sionita, but in consequence of some misunderstandings between himself and his employers he did not fulfil the department assigned to him in the Polyglott but was succeeded by Echellenus. Sionita was also the translator of other Arabic works and among the rest of the *Geographia Nubienas* of Scherif al Edrisi. He was appointed professor royal of the Syrac and Arabic languages at Paris, where he died in 1648. Walton has copied his versions into the English Polyglot.—*Moreri. Newt. Diet. Hist.*

GABRIELLI (CATHERINA) one of the most celebrated singers of the last century, born at Rome in 1730 not more remarkable for the

beauty of her person the richness of her voice, and the possession of great musical talent, than for the unbounded caprice that governed her in the exercise of the latter. She was a pupil of Porpora and Metastasio under whose instructions she attained to such excellence that even Pachierotto was with great difficulty prevailed on to appear in the same opera with her lest her superiority should prove the ruin of his own fame. From the circumstance of her father having been in the service of a Roman cardinal in the capacity of cook she in her earlier years acquired the sobriquet of La Cuochetana, neither her countenance nor deportment however gave any indication of a vulgar origin. After exciting the greatest enthusiasm by her singing at most of the European capitals, she went to Russia, where she remained three years and ranked high in court favour. In 1775 she visited England and appeared at the King's theatre during that and the following season. While in this country she exhibited fewer of those freaks which abroad tended much to interfere with her popularity from a sense it is said of fear lest an English audience should break her bones." Of her whims Brydone gives a curious instance which occurred during her stay at the Sicilian court. The viceroy it seems had honoured her with an invitation to a party composed of the élite of the nobility of Palermo, which she accepted but not arriving at the appointed hour the dinner was actually put back, and a messenger dispatched who found her reading in bed. She rose and accompanied him, apologizing to the company on the ground that she had really forgotten the engagement. The viceroy was offended, and still more so when, on coming to the opera no persuasion could induce her to sing a note above her breath. He threatened her with punishment, which only made her more obstinate and she returned for answer that his excellency might indeed make her cry but he never should force her to sing. The consequence of this contumacy was immediate incarceration. She remained in confinement twelve days during which time she gave magnificent entertainments, and paid the debts of the poorer prisoners till the viceroy who was a good tempered man gave up the contest and set her at liberty without carrying his point. The most successful expedient to ensure her singing was found to be the prevailing on her favourite admirer to place himself in a conspicuous part of the theatre when she would generally address her aria to him, and exert herself to the utmost. She amassed great wealth, although by no means of a mercenary disposition, the principal source of her riches being the bounty of the emperor of Germany who was much attached to her but at length banished her from Vienna, on account of the continual broils occasioned as much by her intriguing spirit, as by the influence of her personal charms. The time of her decease is uncertain.—*Bog. Diet. of Mus.*

GABRINI (see BRASCA)

G A D

GADSBURY (John) a writer of considerable eminence in the useful science of astrology. At the latter part of the seventeenth century. He was a native of Oxfordshire, and probably of low origin, as he served an apprenticeship to a tailor. He afterwards became the pupil or assistant of William Lilly the famous astrologer, the Biograph of Butler; and in imitation of his master, he published astrological almanacs and other works relating to similar subjects, one of which is entitled "A Description of the Natures and Effects of Comets as they are philosophically, historically, and astrologically considered," London, 1665. Being a Roman catholic, he was arrested during the commotions excited by Titus Oates and his accomplices, in the reign of Charles II on account of some observations in his almanacs. The period of his death is uncertain, but he is said to have perished by shipwreck in a voyage to Jamaica. Partridge, a brother astrologer, published in 1693, a work entitled "The Black List of John Gadbury."—Granger's Big Hist. of Eng.

GADDESDEN or GATESDEN (John or) an English physician in high repute in the beginning of the fourteenth century. He was an ascetic, and was physician to king Edward II. His treatise on medicine, entitled "Rosæ Anglicaæ, or cancri for the infirmities it affords relative to the state of science and practice at the period when it was written, Gaddeston says that he cured one of the royal children of the small-pox by wrapping him in scarlet cloth and hanging acrid curtains round the bed. As a remedy for epilepsy he advises the patient to be carried to church to hear mass four times during the Ember weeks, and afterwards to suspend round his neck a scroll inscribed with a verse from the gospel of the day. Yet it appears that this superstitious practitioner was acquainted with the method of candoring salt water fresh by distillation, a process supposed to have been a modern discovery.—Matthews's Big Med. Clutterbuck's Hist. of Hertfordshire, vol. I.

GAYFARELL (James) a learned rabbinical writer was born at Mâcon in Provence about 1481, and was educated at the university of Apt. He applied himself to studying the Hebrew language and rabbinical learning, and being much pleased with the mysterious doctrines of the Cabala, at the age of twenty two he wrote a volume in their defense entitled "Abdita divina Cabala mysteria," &c. He was appointed by cardinal Richelieu his librarian, and sent into Italy to collect the best printed books and manuscripts that could be found. In 1622 he was at Venice being at that time doctor of divinity and canon law, protonotary of the apostolic see, and commendatory prior of St. Gilde's. On his return home, he was employed by the cardinal in his library for his library, and the protection to the papal cause, and to defend was authorized especially in Dombrov against the doctrine of Socinus. He died at Signac, of which place he was then abbot, in 1681. His widow was very generous, and threw him to

G A G

have been a man of great reading and wide genius, but very credulous. The following are the principal—"Universitatis Christianae," translated into English by Chilmead; "Rabbi Elie de la fine mond," Latin version, "Un exilé de la Fin des Sympathies et des Tensions;" "De magna Hebreorum studiorum libellis," &c. &c.—Meyer.

GAFORY or GAFFURIUS (FRANCISCHI) an eminent Italian composer and writer on the science of music who flourished in the fifteenth century. He was born at Lodi in the Milanese, about the year 1451, and became professor of music successively at Verona, Genoa, Naples, and Milan, in which latter capital especially he was held in high esteem. He published in 1490 an abridgment of Boethius, under the title of "Theorum Opus Musicae Discipline" printed at Naples, a treatise on the management of the voice called "Practica Musica utriusque Cantus," Milan, 1496 a series of lectures read by him at Cremona, Lodi, and other Italian towns, under the title of "Angelicon et Divinum Opus Musicae," Milan, 1508, and "De Harmonia Musorum Istrorum," Milan 1518 in which latter work he gives a synopsis of the doctrines of such of the Greek musical writers as had come to his hands. His works made their way over the whole of Europe, and most of the compositions of the sixteenth century are formed according to the rules therein laid down. His death took place about the year 1551.—Barney's Hist. of Mus.

GAGE (THOMAS) an ecclesiastic, said by some to have been a native of Ireland, while by others the county of Surrey has been assigned as the place of his nativity. Travelling into Spain, he assumed the tonsure in a convent of Dominican monks, whence he was sent in the capacity of a missionary to the Philippines in 1625. He however went to Mexico, and remained in that country till 1637 when he came to England, and settled in the country in the enjoyment of considerable property which he had acquired in his travels. Having abjured the Romish church, he obtained the living of Deal in Kent and in 1648 published his recantation sermon. He was also the author of a controversial tract, entitled "A Duel between a Jesuit and a Dominican," 4to; and "A Survey of the West Indies." This last work, which was first printed in 1651 was in 1676 translated into the French language by order of Colbert. The title of Gage a Jesuit is anonymous.—Add a G Big Diet.

GAGER (WILLIAM) a dramatist of the sixteenth century author of two Latin tragedies, entitled "Ulysses redux" and "Mohinger," and a comedy called "Rivalis." He was educated at Westminster, whence he removed to Christchurch, Oxford, on the foundation, in 1574. Here he applied himself to the study of the civil law, in which he graduated, and afterwards obtained the vicar-generality to the diocese of Ely. A curious controversy was carried on between him and a writer named Hoskyn, on the subject of the right of husbands

service chaplain. He also wrote against Dr. Balaam respecting the institution of simoniacal immunities.—*Bug-Dict.*

GARNIER (Jean) an eminent physician who was a native of Paris, where he was educated, and entering into holy orders, became a canon in the church of St. Genevieve. Entertaining doubts relative to the Roman catholic doctrines, he emigrated to England, where his learning procured him the confidence of archbishop Sharp, the lord chancellor Macclesfield, and others. He was admitted MA at Cambridge, and subsequently at Oxford, in which latter university he took up his abode supporting himself chiefly by teaching Hebrew. In 1706 he published Joseph Ben Gorion's History of the Jews in Hebrew with a Latin translation and notes &c. In 1717 he began to give lectures on the Arabic language, and he published a treatise on the small-pox translated from the works of Rhazes an Arabian physician. He also produced two valuable works relative to the early history of Mahomedanism. *Imam Abulfeda de Vita et Rebus gestis Mohammedis &c.* Latine verit. *Præfatione et Notis illustravit Joh. Gagnier Oxon 1723, folio;* and " *La Vie de Mahomet, traduite et compliée de l'Alcoran des Traditions authentiques de la Scoua, et des meilleurs Autheurs Arabes*" 1735 three volumes, 12mo. Gagnier died in 1740.—Chalmers's *Bug-Dict.* *Adams's Gen. Bug. Nou. Dict. Hist.*

GAGUIN (René) a native of Colmar near Amiens eminent as a diplomatist under Charles VIII and Louis XII, both which monarchs employed him on various missions to different European courts. He received the principal part of his education at Paris, where he was appointed keeper of the Royal Library and published a history, " *De Gestis Francorum*, in eleven books, printed at Lyons in 1554, folio." This work contains the history of affairs from the commencement of the thirteenth to the close of the fifteenth century. His death took place in 1561 at an advanced age.—*Nous. Diet. Hist.*

GAILLARD (GABRIEL HENRY) a French historian, member of the old French academy of that of inscriptions and belles-lettres, and of the third class of the institute, was born at Ostel near Scaillon, in 1736, and died at St. Priest near Chambly in 1806. He was the author of " *Poétique Française*, 2 vols.; *Histoire de François I.*, 7 vols. 12mo.; " *Histoire de Marie de Bourgogne*, 12mo. " *Histoire des Rivalités de la France et de l'Angleterre*; " *Histoire de Charles VIII*, " *Rhétorique Française*, " *Parallèle des quatre Empereurs de Sébastien, d'Empédo, de Cratulon, et de Voltaire*; " *Élogie historique sur M. Malherbe*; " *Observations sur l'Histoire de France, de Monnaie, Villes, Villages, et Géographie*, 4 vols. 12mo.—*Dictionnaire Hist.*

GAILLARD (Jean Eustache) the son of a bookseller of Lille, born in 1627. He was a pupil of Marot and afterwards of the celebrated Estienne. Entering the service of George Prince of Denmark, as the engineer of

his corps, he settled with queen Anne, his mistress, in England, where he succeeded Battista Dugli as chief-master to the queen's dagger Catchers. The whole musical world being at this time occupied with the rivalry between Hendel and Bononcini, the merits of Gaillard, though great, were comparatively unnoticed. He therefore entered into an engagement with Rich then manager of the theatre in Lincoln's-inn-fields, and composed the music to most of those mixed pieces, half opera, half pantomime, with which he entertained the town. Among these, the greatest notice was attracted by the *Neocromene or Harlequin-Fantast,* and " *The Royal Chase, or Merlin's Cave*, in which Beaufort recommended him self to the public by singing for some hundred nights, a favourite song by Gaillard, commencing "With early horn". This, which was the most popular was also one of the latest of his compositions, as he died early in the year 1740 leaving behind him an unfinished opera on the story of Orestes and Pyramus, and a valuable collection of scores, &c. in his own hand-writing. His music to the tragedy of *Oedipus* (which had before been set by Purcell) was never printed, but is now in the library of the Academy of Ancient Music.—*Bug-Dict. of Mus.*

GAIMAR or GAIMARD (GROUARD) an Anglo-Norman troubadour or minstrel of the twelfth century. He is supposed to have been a native of Lower Normandy, and between the years 1142 and 1145 he composed in octo-syllabic verse a romantic chronicle of the Anglo-Saxon kings, founded on Saxon and Welsh documents. This curious poem is still extant among the MSS. in the British Museum. M. de la Rue professor of history at Caen, has published an interesting extract from this poem describing the feats of dexterity by the exhibition of which, before the two armies at the battle of Hastings, Talleifer the bardi or jongleur of William the Norman, astonished and perhaps daunted the English soldiers, who, as the poet informs us, ascribed the joggler's skill to enchantment.—*Archæologie*, vol. xii.

GAINSBOROUGH (THOMAS) a celebrated English landscape painter. He was born in 1727 at Sudbury in Suffolk, where his father was a cobbler but in such circumstances as prevented him from bestowing on his son the advantages of education. He consequently owed to native genius and spontaneous study that great eminence which he attained in his art. His used to ramble in the woods, and employ himself in sketching the scenery around him. As length his talents having attracted observation, he was sent to London for improvement. There he is said to have practised modelling figures of animals with great success. He also made occasional drawings for an engraver and painted small landscapes for sale. Providence however, rather than application, induced him to engage in portrait painting, by which means he supported himself for some time in the metropolis, and then married and removed to Ipswich. Thence he went to Bath, where he attained high reputation, and re-

Gale, in 1624, returned to London, and engaged in the study of law, and in 1630 was admitted to the Inner Temple. He was a man of great talents, and of a retentive memory, which he applied to the study of languages, and some of the fine and subtlety of the philosophy were among the works which he studied. He died at a small town in the west of England, in 1668, and was interred in the church yard of Exeter. The landscapes of Gainsborough are distinguished for "a portrait-like representation of nature," uniting the brilliancy of Claude with the precision and simplicity of Raphael, and others of the Flemish school. His art was much esteemed by Sir Joshua Reynolds, who thus commended him in one of his Academic Discourses: "If ever this nation should possess arms sufficient to acquire to us the honorable distinction of the English school, the name of Gainsborough will be transmitted to posterity in the history of the art among the very first of that rising name." He had also extraordinary talents for music, though accompanied by a captious love of change in the instruments on which he practised, and he displayed, both in his letters and conversation, consummate taste and ability though uncultivated.—One of his brothers, a dissenting minister at Henley upon-Thame, was an ingenious mechanist, and his nephew Gainsborough Durfey, distinguished himself as an artist, but died in 1797 at the early age of thirty.—See, *Ecc. Reg. Life of Gainsborough*, by Thackeray.

GALATRO (Antonius) an Italian physician and miscellaneous writer of the fifteenth and sixteenth centuries. He was a native of the city of Otranto, and studied medicine at Padua, where he took his doctor's degree in that faculty. He settled at Naples, and was appointed physician to the king. The air of that city proving prejudicial to his health, he removed to Gallipoli, and afterwards to Lecce, at which place he founded an academy on the model of that of Naples, to which he belonged. He died in 1516, aged seventy-two. His principal work is a treatise, "De Sua Ispississima," to which is added a description of the city of Gallipoli, containing much curious information relating to geography and civil and natural history. Among his other prolixus was: "De Sua Elementaria," "De Zoro Turcico," "De Mori et Aquis," and a tract on the Expedition of the Turks against Rhodes in 1460.—Moroni, *Encyclop.*

GALILEO (Galileo) an eminent nonconformist Galileo Galilei, a man of the anti-pedagogic persuasion in the sixteenth century. He was born in Florence, and educated his studies at Leyden, where he received degrees of master of arts and doctor of law, at the age of nineteen. He became a Franciscan friar, and formed an acquaintance with Galileo and Le Clerc. He was a man of great talents, and wrote an *Historical Discourse on the Two Chief World Systems*, and a *Dialogue on the Sun's Motion*, and a *Dialogue on the Earth's Motion*, published in 1616, which was the second power of a pop-

ular congregation in the metropolis, in which Galileo he originated till his death in 1704. Dr. Gale was preparing an answer to Wall's Defence of his History of Infant Baptism at the time of his decease, and he is also said to have contemplated the publication of an English Translation of the Septuagint according to the edition of Dr. Grae and others' literary labours, for which he appears to have been well qualified by his talents and acquirements. Four volumes of his sermons likewise appeared in a posthumous publication.—See *Notitia Galilaei*, &c. *G. Bigg.*

GALE (Theophilus) a learned divine, who was a native of King's Tewkesbury in Gloucestershire of which place his father was vicar. In 1647 he became a student of Magdalen college, Oxford, where he took the degree of M.A. in 1656, having previously been chosen to a fellowship. While at the university he formed the plan of his work entitled "The Court of the Gentiles" intended to demonstrate that not only the theology but also the philosophy and physiolog of the Pagans were derived from the Bible. In 1657 he became a preacher at Winchester, among the independents, from which situation he was ejected in consequence of the Act of Uniformity in 1662. He was then received into the family of Lord Wharton as tutor to his two sons whom he accompanied to Caen in Normandy where he became intimate with Bochart and other learned foreigners. In 1665 he returned with his pupils to England, and soon after removed to London where he narrowly escaped suffering an irreparable loss through the great fire in the city which destroyed the house of a friend, in whose custody he had left his manuscript collections, previously to his journey to France. These however were accidentally preserved from the conflagration, and in 1659 he published the first part of his "Court of the Gentiles," the second appeared in 1671 and the third and fourth in 1677. The whole was speedily translated into Latin, and the work became known and valued, not only in England but on the continent. Mr. Gale became minister of a dissenting congregation in Holborn, but he resided chiefly at Newington where he conducted a seminary for the education of youth. He died in 1673 in the sixtieth year of his age. Besides his great work, he was the author of "Philosophia Generalis in duas partes distinguita," &c., "Idea Theologiae tam contemplativa quam activa, ut forum S. Scripturae determinata," &c., "The Anatomy of Infidelity," &c., &c.—*Ibid.*

GALE (Thomas) an English divine, critic and antiquary of distinguished reputation in the seventeenth century. He was born at Gresford in Yorkshire, in 1628, and received his education at Westminster school and King's college, Cambridge. He took the degree of B.A. in 1648, and that of M.A. in 1658. His reputation as a classical scholar procured him the professorship of the Greek language in the university in 1666; and in 1671 he published a collection of the most mythological

G A L.

ensis, entitled "Opuscula Mythologicae Historiarumq[ue] Graeciae et Latine," 6 vols. His son became head-master of St. Paul's school in London, in 1671; and in 1676 he obtained a prebend in the cathedral of the metropolis, having the preceding year accumulated the degrees of B.D. and D.D. at Cambridge. In 1677 he was elected F.R.S. and afterwards became one of the council, and in 1685 was chosen honorary secretary. About 1697 he presented to the library of Trinity college Cambridge, a number of curious Arabic manuscripts; and the same year he was preferred to the deanery of York. He died in that city in 1702. Among his publications are editions of the works of Herodotus, Cicero, and several other ancient writers, of some of the English monastic historians, and the Psalter in Greek and Latin from the Alexandria MS. A volume of his Sermons was published by his son, after his death and also an edition of the Brutal Itinerary of Antonius, with a Commentary. Dr Gale earned on a literary correspondence with Mabillon, Baluze, Gravina, Huet and other eminent scholars abroad by whom his learning and abilities were highly esteemed. He contributed to the Philosophical Transactions some papers on archaeology.—GALE (ROGER) a learned antiquary, eldest son of the preceding. He was born in 1673 and studied at Trinity college, Cambridge, of which he was chosen a fellow in 1697. He had an estate at Scruton in Yorkshire, and served in three parliaments as member for the borough of North Allerton, and he was also a commissioner of stamps, and subsequently a commissioner of excise which latter situation he lost in 1735. He belonged to the Royal Society and the Society of Antiquaries, and was a vice president and treasurer of the last-named learned association. He died in 1744. He published "The Knowledge of Medals," 8vo; a translation from the French of Joubert, "Registrum Honorum de Richmondi," 1732 folio, "A Discourse on the four Roman Ways in Britain" printed in the sixth volume of Leland's History, papers in the Archaeologia, &c. His manuscripts, and a cabinet of Roman coins which he collected are preserved at Trinity college Cambridge, to which he left them at his death.—GALE (SAMUEL) brother of the foregoing, was born in London in 1682, and educated at St. Paul's school under his father. He held a situation in the Custom-house, and having a taste for archaeological researches, he became one of the fellows of the Society of Antiquaries on its incorporation. Besides essays in the Archaeologia and Bibliotheca Topographica Britannica, he published "A History of Winchester Cathedral," begun by Henry and of Clarendon. He died in 1754.—Biog. Brit., Nichols's Lit. Ann.

GALEN or CLAUDIUS GALENUS, one of the most celebrated physicians of antiquity. He was born at Pergamus in Asia, A.D. 129, and was the son of Nestor, an architect, who was possessed of no ample fortune. The education of Galen was liberal and extensive,

G A L.

After studying philosophy, astronomy, geometry and general literature, he turned his attention particularly to medicine and surgery. In pursuit of knowledge, he visited Smyrna, Corinth, Alexandria and in his thirty-eighth year returned to Pergamus, where he under took the care of the public gladiators, an occupation which furnished him with opportunities for making many surgical experiments, and adding to the stock of his professional knowledge. He first went to Rome about his thirty-third year and obtained great reputation. A pestilence induced him to return to his native country whence he was recalled by an imperial mandate of the emperors Marcus Aurelius and Lucius Verus, the former of whom, on quitting Rome to make war on the Germans, confided to Galen the care of the health of his son Commodus. Of the remaining part of the life of this famous practitioner nothing certain is known, but it is probable that he died at Rome in the reign of Severus. The writings of Galen were exceedingly numerous, and though many are lost those which are extant compose a voluminous body of practical and theoretical medicine. Though he attended more to anatomy than most of his predecessors, it does not appear that he ever dissected human bodies, his anatomical descriptions being often obviously drawn from the inspection of brute animals. One of his best works is his "De Usu Partium," in seventeen books. Several editions of his works have appeared in a Latin translation, but the only complete collection in the original language is that of Charlerier Greek and Latin, Paris 1660.—Moreri, Atkin's G Biog., Hutchinson's Biog. Med.

GALESINI (PIETER) in Latin Gallesinus, apostolic prothomastary under popes Gregory XIII and Sixtus V, was a native of Milan. He took great pains in illustrating and correcting the Roman Martyrology which was published in 1577 under the patronage of St Charles Borromeo, with this title "A Martyrology adapted to the use of the Church of Rome for all the Days in the Year." The work however was not approved by the Roman censors, who thought it too long to be recited in the canonical office. He was also the author of "The Lives of the Saints that are mentioned in the Church of Milan" 1582, "A Commentary upon the Pentateuch," 1587,

"Theatrum Poestifcale," or a history of the popes, "Notes upon the Greek Text of the LXX," 1587 translations from the Greek into Latin of some Discourses of St. Gregory Nyssen, and "Theodorum;" the histories of "Salpinga Severae," and of "Armen of Halberstadt," &c. See also—Dugdale, Micro.

GALIANI (FRANCIS) an Italian able celebrated for his wit and writings, was born in the year 1763, at Chieti in the kingdom of Naples, where his father, a nobleman, was treasurer of the royal court of justice. He was educated under the care of his uncle, the archbishop of Trento, and applied to the study of the law. A numerous collection of verses on the death of the public executioner, in ridicule of the custom of that celebrating the death of

united, formed by the celebrated Gasparini, first name of the author of *Novum Organon*. This was not long before followed by his celebrated work " *Gaspariniana*," which was published at Padua in 1616. A few years after, by the desire of Cardinal Maffei, under took a collection of the various writings thrown up by the great Venerable; a catalogue of which was published in 1612. This collection he sent to the pope, and some of the books were inscribed, " *Gaspariniana*." Peter the Great copied all these short, " *Holy Father*, command that these books be made bound," which the pope virtually intended to, by giving him a living of 400 ducats per annum. In 1630, he was appointed secretary to the French embassy and soon took a lead among the wits and eminent men of Italy. During his residence in France, he composed— " Annotations upon Horace," and " Dialogues on the Corn Trade," written in opposition to the policy of the free importation of corn, then recently adopted with a view to encourage agriculture. On his return to Naples in 1679, he kept up a correspondence with the most distinguished men of France, and their manuscript letters form nine thick volumes in 4to. He died, loaded with honours and offices, and possessed of very general esteem on the 30th Oct. 1707 in his fifty-ninth year. Besides the works already mentioned, he is the author of treatises " On the innate propensities or inclinations of men, &c., the principles of the Laws of Nature and Nations, deduced from the Poems of Horace"; "On the Duties of Princes to other heterogeneous powers," and "On the Neapolitan dialect. —*Nous. Dct. Hist.*

GALILEI (Galileo) a celebrated philosopher, mathematician, and astronomer was the son of Vincenzo Galilei, a Florentine noble and a man of letters, not unskilled in the mathematics, but better known by his writings on music. Galilei was born at Pisa in 1564, and was educated by his father, whose fortune was small, to be brought up to physic but exhibiting a great dislike to that profession, he betook himself to the study of mathematics with such unswerving diligence, that, in 1589, he was chosen mathematical professor in the university of Pisa. Having heard of the invention of the telescope by Jansen, he made one for himself and in consequence was led to the discovery of the satellites of Jupiter and many other astronomical phenomena, which exciting the jealousy and envy of the violent Aristotelean, he resigned the chair of Pisa in disgust, and accepted that of Padua, where he remained for eighteen years. In 1611 his employment becoming untenable of his government, the proud Duke of Tuscany, Cosmo succeeded him at Pisa, and compensated him profusely with pecuniary stipend. He afterwards carried him to Florence, where he fell into the expense of the inquisitors, for writing the *Dialogue* of the world around the sun, and gave an eternal stigma both on his personal and the principles on which it was founded. Galileo was compelled to recant his opinions. In 1632 he delivered his last speech to which his " Dialogues on

the two greatest Systems of the world, the Ptolemaic and Copernican." In this work he exhibits the best arguments in favour of each system, without deciding the controversy, not so much however, but that his opinion in favour of that of Copernicus was very evident. Giacomo had this work suppressed when the ray of heresy was spontaneously raised, and in 1633 he was once more cited before the inquisitors at Rome, and committed into custody. Being subsequently brought to trial, he was ordered to take an oath no longer to teach or support his system, to remain in prison during the pleasure of the cardinal inquisitors, and to repeat the penitential psalm once a week for three years, his dialogues were also condemned, prohibited, and ordered to be burnt. Pope Urban VIII mitigated this sentence by confining him only to the palace of the Medici at Rome and finally to his own country-house in the vicinity of Florence, where he spent the remainder of his days, visited and esteemed by the most distinguished of his countrymen. He survived eight years in this retreat, devoting himself to the perfecting of his telescope, but by continual application, and the effects of the night air he became blind three years before his death, which took place in Jan. 1642 in the seventy-eighth year of his age. To Galilei the world, is indebted for the discovery of the rotation of the sun upon its axis. He also, by ascertaining the changing of the spots upon the disk of the orb and the hills and canons in the moon, showed that there was not so great a difference between celestial and sublunar bodies as had been imagined. He rendered no less a service to science by his investigation of the theory of motion; and in geometry he invented the trochoid, and in mechanics the pendulum, the application of which to clocks was reserved for his ingenuous natural son, Vincenzo. He also invented a machine by means of which the Venetians rendered their Lagune fluid and navigable, and the principle which he laid down in regard to gravitation, produced the barometer. The works of Galilei were published after his death, in 2 vols. 4to to which is to be added a quarto volume of his letters, subsequently published at Bologna in 1674, and a tract on the fifth book of Euclid, 4to published by his disciple Viviani, at Florence. It is to be lamented that many of the papers left behind him were burnt owing to the superstition of an ignorant nephew, who deemed them heretical because their illustrious author died a prisoner to the inquisition although allowed to reside in his own house.—*Fabron. Vita Italorum. Histories. Mech. Dct.*

GALLAND. There were two French authors of this name in the seventeenth century. *Anouilly* the elder, was a counsellor of state and proctor-general, for the kingdom of Navarre. He collected materials for a history of France and Navarre, which were published in one folio volume. He also wrote a history of Rochelle, a work on the standards and currency used by the French monarchs from the earliest ages, and a legal treatise on

G A L

the privilege of exemption from taxes due. He died in 1806.—**ALEXANDRE GAILLARD**, an old military soldier who was born of humble parentage, met **Hamilcar Pinckney** in 1804. Collier employed him to travel on the account of government, and his tact and industry are evinced by several treatises published by him on his return illustrative of the manners and customs of the Mohammedan empire and religion. He was well versed in antiquarian research, and published a learned treatise on medals and coins, but the work by which he is principally known is his curious collection of Arabic Romances, published by him under the title of *The Arabian Nights Entertainments*, a work which has gone through a variety of editions in every language of Europe. His other writings are—“An Account of the Death of Sultan Osman and the Coronation of his Successor,” *A Treatise on Cosmœ*, and a selection of the most approved Aphorisms and *Jeux d'Esprit* to be found in the works of Oriental authors. M. Gailhard was elected professor of Arabic in the university of Paris, and a member of the Academy of Inscriptions. His death took place in 1715 while he was engaged on a translation of the Koran, which he did not live to complete.—*Moreri. Novus. Dict. Hist.*

GALLOIS (JEAN) a French critic of the seventeenth century who acquired great reputation as a general scholar but is chiefly remarkable for having projected with N. de Salle, the “*Journal des Savans*” the first number of which appeared in 1665. He was a member of the Academy of Sciences and of the French Academy literaria to the king and professor of Greek in the royal college. He died in 1707.—*Moreri.*

GALLOIS (JULIAN JEAN CESAR 1.B.) a recent French physiologist. He was the son of a farmer and was educated at Caen where at the commencement of the French Revolution, he distinguished himself as a federalist, for which he was obliged to fly from Normandy. He subsequently studied in one of the medical schools of Paris and graduated as MD. He distinguished himself by his physiological researches, which he detailed in a publication, entitled “*Experiments on the Principle of Life, particularly on that of the Motion of the Heart, and the Seat of this Principle.*” Much was expected from his further research, when he fell a sacrifice to a fever in 1818.—*Med. Journal.*

GALLUS (COWAZZOS) a Roman poet of the Augustan age. He was born about 69 BC at Forum Iuli, but whether in Gaul or Italy is uncertain, as there were places in both countries anciently thus designated. He was intimate with Virgil, who has inscribed to him his *Elegies*. Augustus employed him in his war against Anthony, and rewarded his services with the government of Egypt. This advantage proved unfortunate; for having charged with perfidy and conspiracy, his property was confiscated, and he was condemned to death, a circumstance of which he put an end to his life in his forty-third year. He wrote two books of elegies in honour of his mistress,

G A L

Lyrics which were highly praised by Ovid, but are no longer extant.—*Valesius de Poet. Lat.*

GALLY (GESSNER) an English divine, was born at Beckingham in Kent in 1704. He was educated at Cambridge where he took his degree of MA. in 1731, and the same year was chosen lecturer of St Paul's, Covent Garden and instituted to the rectory of Wavendon in Buckinghamshire. In 1733 he was professed to a prebend in Gloucester cathedral, and two years after to one in the cathedral of Norwich. In 1733 Dr Gally was presented to the rectory of St Giles-in-the-Fields, and in 1735 was nominated chaplain in ordinary to the king. He died in 1769. He was the author of *Two Sermons on the Mystery of Man*, 1723 “A Sermon preached before the House of Commons upon the Accession”; a translation of “*The Morals of Theophrastus, with Notes, and a Critical Essay on Characteristic Writing*;” *The Reasonableness of Church and College Fines asserted, for Some Considerations upon Clandestine Marriages* “*A Dissertation against pronouncing the Greek Language according to Accents, &c. &c.*”—*Nicholas Lat Anc.*

GALVANI (LAWIS) an Italian physiologist celebrated as the discoverer of animal electricity or Galvanism. He was born at Bologna in 1737 and in his youth he was destined for a monastic life but being persuaded to relinquish his views of the cloister he adopted the medical profession. Professor Galvani under whom he studied anatomy gave him his daughter in marriage and he was created public lecturer in the university of Bologna, and nominated reader in anatomy to the institute in that city. He employed himself much in researches concerning comparative anatomy and published in the Memoria of the Institute curious observations on the auditory organs of birds and other subjects. His reputation as an experimental philosopher was already established when accident led him to the discovery which has perpetuated his name. His wife labouring under constitutional debility some frogs had been skinned to compose a restorative soup for her use they happened to be placed in the laboratory of the professor, on the same table with an electrical machine, when one of the assistants by chance touching with a scalpel the nerves of the leg of a frog lying not far from the conductor the muscles of the limb were observed to be immediately agitated with strong convulsions. Madame Galvani, who was present, went and informed her husband of this singular phenomenon. He repeated the experiment, and ascertained that the convulsions occurred only when a spark was drawn from the conductor while the rod touched the nerve. His subsequent enquiry induced him to ascribe the convulsive motion to the influence of a peculiar fluid or principle, which he supposed to be received by the brain, and distributed by the nerves through different parts of the body. To this principle he gave the appellation of animal electricity and named it as the cause of muscular motion. His ideas were developed in a publication,

G A M

entitled "Alonso Galvani de Vizcaya Electroscita in Natura, Experimentis, & Commentariis," 1791, 4 vols. This work, in which Galvani exercised the functions of the cultivators of science, not only in Italy, but also in England, France, Germany, and other parts of Europe. Subsequent discoveries have led to conclusions inconsistent with the hypothesis of Galvani, and indeed electricity or Galvanism (as it has been designated in honour of the discoverer) is now considered as depending on the operation of the same cause which produces other electrical phenomena. Galvani continued his enquiries, and made experiments on the electricity of the torpedo, and on the electro-motive effects of the contact of different metals, but he did not materially extend the limits of his original discovery. On the foundation of the Cisalpine republic, he refused to take the civic oath required by the new constitution as consequence of which he was deprived of his official situation. A decree was afterwards passed for his restoration to the professional class, but this testimony to his merit preceded but a short time his decease which occurred towards the close of the year 1793.—*Atlas s. G. Bag.*

GAMA (VANCO DE) a celebrated navigator and naval commander was born at Sines, a maritime town in Portugal. He was appointed by king Emanuel to command an expedition intended to follow up the discoveries on the eastern coast of Africa and the intercoastal sea to the East Indies. He set sail accorded forty in July, 1497 and was four months continuing with contrary winds before he doubled the Cape of Good Hope. Reaching Melinda, he obtained a Mahometan pilot, and in May 1498 arrived at Calicut, and was at first received in a kindly manner by the sultan or prance, but discovering that a plot was laid for his destruction, he returned to Europe and entered the port of Lisbon in September, 1499. He was created a count, and made admiral of the Persian Indian, and Arabian seas, in which capacity he commanded another expedition, consisting of a fleet of twenty ships. He was attacked by an opposing fleet on the part of the sultan, which was defeated, and two galleys captured of great value. His success led to the extensive settlements of the Portuguese in India, of which Gama, sent out a third time, was made viceroy in 1524. He died at Cochim in 1525. The Lusiad of Camoens, who accompanied Gama, is founded on the adventures of his last voyage.—*Morari. Metz. Diet. Hist.*

GAMACHE (BERTRAND SIMON) a French mathematician, was born at Marly about 1672. He was one of the servitors of the Holy Cross of St. Bertrand, and was chosen member of the French Academy of Sciences. His works were "Tables Astronomiques, &c.," 3 vols. "Tables de la Sphere et du Firmament Chrétien Philosophe," "Tables de la Sphere et du Firmament Chrétien," published under the assumed name of Clément; "Astronomical and Mathematical Dissertations," and "Dictionnaire de Langage reduced to their First Principles," 2 vols. This last has at-

G A M

quired much reputation, and is copied by a French writer. —*A Dictionary of the Thesaurus.* He died in 1736—there was also another Gamache, Pierre, a doctor of the Sorbonne, who was born in 1618. He was appointed professor of theology in the university of Paris in 1659, and after discharging the duties of his office with great credit, and obtaining the reputation of being one of the ablest divines of his time, he died in 1688. He was the author of "Commentaries on the Summa Theologica of Aquinas," in 8 vols. folio, a work much esteemed by catholics.—*Bapt. Morari. Metz. Diet. Hist.*

GAMBARA (LORENZO) an Italian poet of the sixteenth century, was protected by cardinal Alexander Farnese. His writings were much esteemed in his own time but are now little thought of. He was the author of a Latin Poem on Columbus, a Latin Treatise on Poetry, in which he dissuades Christian poets from using pagan mythology, some eclogues, entitled Venatoria, and other pieces. He died in 1596.—*Tischbech. Morari. Sacri. Onomat.*

GAMBARA (VERONICA) an Italian poetess, was born in 1485, and was the daughter of count John Francis Gambra. In 1509 she was married to Gaberto lord of Correggio whom she survived many years, devoting the rest of her life to the education of her children and the cultivation of literature. In 1528 she went to reside with her brother who was governor of Bologna, where she established a kind of academy which was frequented by many of the literati of the Roman court. On her return to Correggio she received as her guest the emperor Charles V. She died in 1550. Her works were collected and published by Zambra in 1559, with a life of the authoress. They possess much originality and vivacity and are far superior to the imitation of sonnets at that time poured forth in Italy.—*Tischbech. Rosso's Leo X. Morari.*

GAMBOLD (JOHN) an ecclesiastic, born at Haverfordwest in the early part of the last century. In 1734 he took the degree of Master of Arts at Christchurch Oxford, and was about four years after presented by archbishop Secker to the living of Stanton Harcourt. This piece of preferment he resigned in 1748, from motives of conscience having become a convert to the opinions of Zinzendorf on account of whose life and character he afterwards published. In 1754 the Moravian fraternity of which he was now become a distinguished member, consecrated him one of their bishops; in which situation he displayed much activity until his death, which took place at his native town in 1771. He was a man of blameless morals, deep erudition, and sincere though enthusiastic piety, and was much beloved for the amiableness of his manners and the inoffensive tenor of his life. While at Oxford he published in 1760 a sacred drama, having for its subject the martyrdom of St Ignatius, and in 1766 superintended an edition of the Greek Testament through the Clarendon press. At a very recent period of his life he assisted in trans-

John Chenev's "History of Greenland from the Danes"; and was the author of several sermons; an *apology* for an unorthodox article of the Church of England; and of a volume entitled "Marian and Theological Ideas."—*Nichols's Lit. Anno.*

GAWDEN (JAMES) an ingenious English architect, who studied his profession under Sir William Chambers. He was the first who gained the gold medal as an architectural prize from the Royal Academy and early acquired considerable professional reputation, which was much enhanced by the publication of his *Vitruvius Britannicus*, 3 vols. folio. He soon after went to Ireland where he built the Royal Exchange at Dublin the portico of the house of Lords, the four courts and other highly esteemed buildings in that capital. He was a fellow of the Society of Antiquaries as also of the Royal Irish Academy and died at Cavan brook near Lucan in 1824, being then in his eighty-fifth year.—*Mosch. Mag.*

GANDY (JAMES) an able artist, was born in 1619 and was a pupil of Vandick. His works possess considerable merit and some of his portraits are very little inferior to Vandick either in dignity of expression, or colouring. He is however almost unknown, being taken to Ireland by the old duke of Ormond, and retained in his service, the then unsettled state of that country prevented his talents from receiving due notice. He died at Exeter in 1689.—*Pilkington.*

GANGANELLI (see CLEMENT XIV.)

GARAMOND (CLAUDE) an engraver and letter-founder was born at Paris. He first distinguished himself about 1510 when he founded his printing types clean from all remains of the black letter which he brought to such perfection as to surpass every thing that had been done in this way before. All parts of Europe were supplied with his types which were distinguished by his name by way of excellence particularly his small roman. By command of Francis I. he founded three species of Greek types for the use of Robert Stephens who printed with them all his beautiful editions both of the New Testament and several Greek authors. He died in 1561.—*Moreri.*

GARASSE (FRANCIS) a French jesuit, noted for the violence and scurrility of his controversial writings was born at Angouleme in the year 1585. He entered the Jesuit's college at the age of fifteen and during his novitiate published a defence of his order which without being devoid of wit was still more distinguished for asperity and buffoonery. He followed this publication up with many more in a similar strain, and on taking orders became a very popular preacher. In 1625 he ventured on the production of a larger work, entitled "The curious Doctrine of Wits, or Proverbies to Wit of this Age, &c. refuted by Father Garasse of the Order of Jesus," 4to. This production, with a vein of wit, was so defective in respect to accuracy, judgment, and representation as to produce considerable animadversion, nor was he more fortunate in his "Theologick Summary of the Capital

Theology of the Christian Religion," which was not only severely exposed by the old Dr. Cyran, but provoked a furious censure from the Sorbonne. The jesuits thought fit to yield to the storm, and banished him to one of the houses of their order at Paris, where he caught the plague during a virulent attack among the infected and died in 1631 at the age of forty six.—*Boyle's Morer.*

GARCIA LASSO de GARCILASO de la VEGA an eminent Spanish poet, was born at Toledo in 1539, being the younger son of a nobleman who had been employed on some important negotiations. He was early distinguished for his wit and fancy and adopting the poetical principles of his friend Boscan, who rejected the ancient maxims, and substituted others borrowed from Italy, was a principal instrument in rendering them popular. His works which are contained in a small volume, consist principally of pastorals, in which his chief excellence is a tenderness that is still more beautifully displayed in his sonnets. His classical taste kept him clear from the bombast of his countrymen, but his learning and judgment were superior to his genius. Garcilaso followed the profession of arms and attended Charles V in many of his expeditions, in one of which he lost his life in 1536 at the early age of thirty three.—Another GARCILASO de la Vega a native of Peru composed a Spanish History of Florida and of Peru.—*Moreri. Monthly Mag. Oct. 1796.*

GARRARD or GERARDS (MARK) a Flemish painter was born at Bruges in 1561. He came to England soon after 1580 and remained here until his death which happened in 1635. He painted history landscape architecture and portraits. His works are numerous, but possessing no peculiar mark, are not easily known. His procession of queen Elizabeth to Hunsdon house has been engraved by Vertue. His execution is neat but his flesh-colours are thin and light possessing rather a bluish tinge.—*Walpole's Anecdotes.*

GARDEN (ALEXANDER) an eminent botanist and zoologist, born in Scotland in 1730 and educated at the university of Edinburgh. He went to America, and settled as a physician at Charleston in South Carolina in 1752. From his first arrival in the country he engaged in botanical researches, and becoming dissatisfied with the system of Tournefort then followed by most naturalists, he opened a correspondence with the celebrated Linnaeus in 1755. Soon after he obtained the Philosophia Botanica, the Systema Naturae, and some other works of the Swedish botanist, which greatly assisted him in his enquiries. His labours were directed to the discovery and verification of new species among the animal and vegetable tribes of North America, in which he was very successful. To his exertions Linnaeus was indebted, particularly for a knowledge of the insects and fishes of Carolina; among which is the *Elmias facicularis*; a most curious animal, resembling both a lizard and a fish. After a residence of nearly twenty years in America, Dr. Garden returned to England,

in consequence of the political circumstances which prevailed in America now. He was elected a Fellow of the Royal Society in 1772; but very soon after, still two years since, from other pecuniary causes in London, where he died April 25, 1791. Dr. Gardiner published "An Account of the Gymnastick Exercises, or Muscular Eat," in the Philosophical Transactions, and some other detached papers but produced no separate work.—*Rox's Cyclop.*

GARDINER (FRANCIS) Lord Gardiner, a Scotch lawyer of eminence, born in 1721 at Edinburgh, and educated in the university of that capital. Having practised with great success as an advocate, he was in 1766 appointed solicitor to the king, and soon after raised to the dignity of a judge, when he took, agreeably to the custom of the Scottish bench the title by which he is now most commonly known. A volume of miscellaneous pieces in verse and prose, and two more entitled "Travelling Memoranda," were published by him anonymously and after his death a posthumous volume was added to the latter work. He died in 1793.—*Memoirs prefixed to Posthumous Volume of his Works.*

GARDINER (JAMES) an officer of distinguished merit in the reign of George II. He was born in 1688 at Carriden Linthgowshire, and made the army his profession at the early age of fourteen, when he obtained a commission in the Dutch service. He afterwards commanded a company among the English troops at the battle of Ramillies, and rose to the rank of lieutenant-colonel. On the breaking out of the Scotch rebellion of 1745 Gardner, who then commanded a regiment of dragoons, fell at the head of his men, in the action fought at Preston Pans, on the 21st of September in that year, being cut down by a blow from a scimitar axe, in eight of his own house. A singular story is told of his sudden conversion from a strenuous course of life by the accidental perusal of a Calvinistic treatise, entitled "Heaven taken by Storm." He is also said to have received a supernatural intimation of his own approaching death. It is remarkable that three of his nearest relatives including his father were killed, like himself, in action.—*Lays by Doddridge.*

GARDINER (SIR THOMAS) an English prelate in the reigns of Henry VIII, Edward VI, and queen Mary. He was the natural son of Lionel Woodville, bishop of Salisbury brother to the lady Elizabeth Woodville, who as the widow of Sir John Grey, captivated the affections of Edward IV and became his queen. Gardiner was born in 1483 at St Edmund's Abbey, Suffolk, and received his education at Eton, Hull, Cambridge, where he distinguished himself by his progress in the study of law, canon and civil law, the classics, and theology. In 1500 he succeeded to the leadership of the society to which he belonged, but soon renounced the ministry, and attached himself to the court. His first master, which he always considered a fortunate opportunity exceeding of improving himself with Wolsey than that of the people, in the service of this

prelate he gained himself an active employment in the service, and soon ranked high in the favour of his master, and consequently in that of the court. In 1527 his talents and address pointed him out a proper person to be entrusted with the negotiations then going on at the papal court respecting the King's divorce from Catherine of Aragon; and although unsuccessful in his mission, his exertions were not the less appreciated being rewarded with the archdeaconship of Newark and Leicester in succession and the appointment of secretary of state. His devotion to the king now got the better of his allegiance as churchman to the pope, and he not only did all in his power to facilitate his designs with respect to the queen, whose divorce he signed, but on Henry abjuring the supremacy of the pontiff and declaring himself head of the church he was warmly supported by Gardiner newly created bishop of Winchester. The first proof of his acquiescence in and approbation of this measure was a treatise written by him in its favour, entitled "De veritate Obedientiæ." The bishop continued to enjoy the full suzerainty of court favour till his capricious master taking a disgust at queen Catherine Park consulted with him on the easiest method of getting rid of her and acquainted in a plan the leading feature of which was the exhibition of articles against her on a charge of heresy. The design had proceeded so far that officers were already summoned for the purpose of arresting her when the queen in a personal interview with her husband, had addressed enough to turn the tables on the bishop, to re-establish herself in the king's favour and to plague him, whom she suspected of being a principal adversary in a state of disgrace from which he never emerged during the life of Henry. With his immediate successor he stood in a light still more unfavourable, his continued opposition to the doctrines of the reformed church and their establishment as the national religion, bringing on him the full weight of the displeasure of the prevailing party who succeeded in inducing the young monarch to commit him to the tower, with a sentence of deprivation from his diocese. On the accession of Mary however his star was again in the ascendant, he was not only received into favour and restored to his see, but elevated to the office of chancellor of England and first minister of state. The persecution he had himself under gone, on account of his religious tenets had not taught him meanness or tenderness towards others, and he now distinguished himself as a principal mover in the executions which took place during that reign, acting occasionally with equal celerity and cruelty. In his private character however he appears to much greater advantage, being not only learned himself, but a great encourage of learning in others; though artful, and skilled in dissimulation, with no slight degree of ambition and its usual companion pride, he yet possessed one of the most amiable traits in the human disposition—gratitude to perfection. To Wolsey he was

as much divided in his doctrine as in his scruples, and notwithstanding his opinions he espoused sincerely those Huguenots who never will shrink to speak of their monarch but in terms of the most affectionate respect. His errors, whatever they were, may be considered as almost屏ed for by the regret with which probably to his dearest he looked back upon them. "Exaudi cum Petro sed non sicut cum Petro," is said to have been a frequent exclamation of him in his latter days. He died November 12 1555. A treatise by him, entitled "Necessary Doctrine of a Christian Man," printed in 1545 is said to be a joint work by him and Cranmer.—*Bibl. Brit.*

GARDNER (ALAN lord) a naval officer was born in the north of England and at the age of thirteen became a midshipman. After passing through various promotions, in 1766 he was made post-captain in the Preston, of fifty guns, which he commanded on the Jamaica station. In 1775 he had the Duke, of ninety eight guns, in which ship he first broke the French line on the 12th of April. In 1793 he was made rear-admiral and appointed commander-in-chief on the Leeward Island station. After making an ineffectual attempt on Martinique, he returned home and was then employed as rear-admiral of the white with Lord Howe and so distinguished himself upon the 1st of June, that he was made a baronet and major-general of the marines. A dangerous mutiny breaking out in the fleet at Portsmouth admiral Gardner attempted to quell it, but using harsh means, the crew became so enraged against him that it was with difficulty he escaped with life. In 1800 he was created an Irish peer and in 1807 succeeded earl St Vincent in the command of the channel fleet, which his health obliged him soon to relinquish. He sat in three successive parliaments, and was finally made a British peer with the title of baron Gardner of Ulsterster. He died at Bath in 1809.—*Naucl. Chronica.*

GARENCHIERES (THEOPHILUS) A French physician, a native of Paris, who abjured the Romish faith, and quitting a respectable practice at Caen in Normandy came over to this country. He was a good Rhetor, and published an English translation of the Progostinations of Nostradamus. His other works are a treatise, entitled "Anglica Flagellum," and another on the Tincture of Coral. He died in London in great distress in 1680.—*Wood.*

GARET (JEROME) a learned French Benedictine of the congregation of St Maur, was born at Havre-de-Grâce about 1627 and died at the abbey of Jumièges in 1694. He edited a valuable edition of the works of Campanella, in 2 vols. folio, with notes, published at Rouen, 1679. It is preceded by a curious dissertation on the monastic life of that celebrated saint.—*Maur.* Now in *Dart. Hist.*

GARIBOLDI (Antonio) professor of divinity at Montefiascone, where he was born in 1597. He also filled the office of moderator of the school held at Charenton, and published several theological works, the principal of which are—*"Explanation of the Cata-*

chism of the Reformed Church;" "A Way to Salvation;" and "On the Mediatorial Office of Christ." He also possessed a talent for poetry, which he exhibited in two Latin heroic poems the one entitled "Adolphina," the hero of which is the celebrated Gustavus Adolphus; and another which has for its subject the "Swiss Customs." He died in 1630.—*Maur.*

GARLAND a grammarian and poet of the eleventh century whose name is variously spelt, John Garland by some, who contend that he was a native of Devonshire while others call him Jean de Garlante, contending that he was born at a place of that name in Normandy and stirring the opposition of his English birth to his constant attendance in this country upon his patron William the Conqueror. His works are—two Treatises on Synonymes and Ambiguoas Terminus Paris, 1490, 4to, reprinted by Pynson 1496, and again in 1500 London, "A Dictionary of Alchemy" 1571 Basile Bvo, and three poems, one on the Doctrines of Faith entitled "Prophetus," and a second on the Duties of Man to his Creator called "Facetus" and a third

On the Contempt of the World. He died about the year 1061.—*Primer's Worthies.*

GARNERIN (—) a celebrated aeronaut, who, if not the most scientific was at least one of the most daring and adventurous of the profession. He was the first man who made the experiment of descending in a parachute, a feat which he accomplished on the 21st of September 1802 ascending from an enclosure in North Audley-street, Grosvenor square. At the computed height of 4154 French feet the intrepid voyager through the fields of air cut the rope which attached the car to the balloon, and descended safely in the fields near Kentish Town, the balloon falling next day near Farnham in Surrey. M. Garnerin's death was occasioned by apoplexy in the Theatre du Jardin Bouffons at Paris, August, 1833. Having the rope which sustained the curtain in his hand by a sudden relaxation of his grasp, he allowed it to fall, when one of the weights struck him on the head, and he never recovered from the effects of the blow.—*Ara. Bibl.*

GARNET (Hirway) an English jesuit of great notoriety was born in Nottinghamshire in 1555, and was educated at Winchester school. He then went to Rome and entered into the Society of Jesus in 1575, and became professor of philosophy and theology in the Italian college at Rome. In 1586 he returned to England as provincial of his order, and although it was then illegal for a catholic priest to remain in the country, he abode there without molestation for many years. In this situation he held a secret correspondence with the king of Spain, and by an answer which he gave to a case of conscience submitted to him, in regard to the destruction of heretics, is said to have given an impulse to the gunpowder plot, and as an accomplice in this conspiracy, he was tried and executed at the west end of St. Paul's May 3, 1606. He acknowledged, previously to his

G A R

execution, that the plot had been revealed to him in plain English, and then advised his thought & resolution to conceal it. He died with great fortitude and fortitude, and was buried with the greatest enthusiasm. He was the author of some religious tract. As some instances of opinion existing as to the propriety of the steps taken against him, many works were written in defence of them by the writers of those days.—*Annals of England*. *Dodd's Clerical Hist.*

GARNET (Thomas) an ingenious physician and natural philosopher, who was a native of Cawton in Westmoreland. After having served as an apprenticeship to a surgeon, he went and studied at Edinburgh and took the degree of M.D. He commenced professional practice at Bradford in Yorkshire where he delivered chemical and philosophical lectures. He then removed to Knaresborough and afterwards to Harrogate. In 1793 he went to Liverpool, intending to embark for America, but while waiting to take his passage he composed lectures which met with so much approbation, that he relinquished his design of emigrating and in 1795 he obtained the professorship of chemistry at Anderson's Institution, Glasgow. On the foundation of the Royal Institution in 1800 he was invited to become lecturer on chemistry which offer he was obliged to resign through ill health, and he died in 1802 at the age of thirty-six. Dr Garnet was the author of "A Tour through the Highlands and part of the Western Isles of Scotland," 2 vols. 4to, "Outlines of Chemistry," 6vo and "Zoonomia, or the Laws of Animal Life, in Health and Disease" 4to which last was a posthumous publication.—*Preface to Zoonomia.*

GARNIER. There were three French authors of this name. JEAN GARNIER a native of Paris, born 1612, entered into the order of Jesuits, and became professor of eloquence and philosophy at Bologna, where he died in 1681. He published a spin edition of Marcator 1673 "A Supplement to Theodore," in 4to; and "Systema Bibliothecae Collegii Parisiensis Soc. Jes." He also edited the "Breviary of Liberties," and the "Journal of the Popes." JEAN JACQUES GARNIER was born in 1729 at Goros sur Mayne, and at the breaking out of the Revolution filled the chair of Hebrew professor at Paris. He published a "Continuation of the History of France" by Velly and Villaret, an essay "On the Origin of the Government of Justice," 18mo, two treatises, "De l'Education Civile," 18mo, and "De Commerce comme un plaisir;" and a work in two small volumes, entitled "The Man of Letters." During the rage of terror he fled from the capital to Hospital, where he died in 1795.—**GARNIER** (Jean), a dramatic writer of some note, who made his living in point of time to 1800, 1801 much assisting in the composition of tragédies en musique, that he acquired great reputation, and was induced to abdicate his former calling, which he had commenced

G A R

at Thonon, for the purpose of devoting himself wholly to the writing of tragedy. His works, which are now become classic, were collected and printed at Lyons in Paris 1807, 1808. There is also a later edition, 1807. His death took place in 1806.—There was also a learned Benedictine of this name known as the editor of St Basil's works, who died in the year 1725.—*Moreri Novus Dict. Hist.*

GARRICK (David) the most eminent actor ever produced by the English stage, was born at Hereford in 1708. His grandfather was a French refugee on account of the exiles of Nantes, and his father a captain in the army on half pay usually resided at Lichfield where he married the daughter of one of the vicars of the cathedral. He was educated at the grammar-school of Lichfield, but was more distinguished for his sprightliness than attachment to literature, and he gave an early proof of his dramatic tendency by inducing his school fellows to act the Recruiting Officer in which he himself took the part of sergeant Xits being then only twelve years of age. As the circumstances of his father were narrow, he was sent to Lisbon upon the invitation of his uncle, a considerable wine-merchant in that capital. His stay at Lisbon was very short, and returning to Lichfield, he was placed under the celebrated Samuel Johnson, who had then undertaken to instruct a few youths in the belles-lettres. A love for the stage had however become firmly rooted in the mind of Garrick and singular to say his master was induced to accompany him in a speculative journey to the metropolis. This remarkable event took place in the years 1736-7 and at the recommendation of Mr Gilbert Walmsley Garrick was placed under the care of an eminent mathematician at Rochester with a view of cultivating his general powers previously to his admission at the Temple. The death of his father however disturbed this arrangement and having been left a legacy of a thousand pounds by his uncle he joined his brother Peter Garrick in the wine trade. This connection was however soon dissolved, and in the summer of 1741 he gave entire sway to his long repressed inclination by joining Ciffard's company at Ipswich, where under the assumed name of Lydiard he played a great variety of parts with uniform success. At this time the stages of the metropolis were but inadequately supplied with leading performers, so that when Ciffard, who was manager of a theatre in Goodman's-fields, introduced his accomplished recruit there on the 19th of October, 1741 the effect was immediate and decisive. He judiciously chose the part of Richard III, which required not that dignity of person which he did not possess, while it gave him a scope for all the strong marking of character and changes of passion, in which his principal excellence consisted. He at the same time adopted a natural mode of recitation, which was a daring innovation on the part of a new performer, before audiences accustomed to the artificial declamation of the school which preceded him, but so far-sparedly did this return to nature

and his facility of expression, that the effect was irresistible. The part of Richard was repeated for many successive nights, and the embellished theatres were deserted, and strange scenes from the west end of the town thronged the streets of the city. The proprietors of the old theatre, alarmed at his success, threatened Garrick with a prosecution as an intruder upon their patents, and Fleetwood drew Garrick over to Drury lane. After finishing the winter season of 1742 at this theatre he visited Dublin where his reception was equally flattering. On his return he varied his characters by parts in general comedy and even descended to the representation of almost absolute stupidity in that of Abel Drugger. Stage quarrels and a second visit to Dublin engrossed the interval until he became a manager in his own right, an event which took place in the spring of 1747. By acting at Covent-garden he had reduced Drury lane to such a state of inferiority that Lacy the patentee, was glad to admit him a partner upon equal terms, Lacy assuming the care of the property and general economy and Garrick the management of the stage. Under these auspices Drury lane opened in 1747, on which occasion his old and constant friend Samuel Johnson furnished the new manager with a celebrated prologue, one of the few which merit lasting preservation. This period formed an era in the English stage from which may be dated a comparative revival of Shakespeare and a reform both in the conduct and licence of the drama, which is very honourable to the genius of the actor who effected it. In 1749 Garrick married Mademoiselle Violette (see ensuing article) and the remainder of his theatrical career was a long and uninterrupted series of success and prosperity until its close. Although parsimonious, and occasionally too hasty in his intercourse with authors he managed to keep on terms with the majority of the most respectable and received from many of them an excess of incense which was but too acceptable. In 1763 he visited the continent, and on his return after an absence of a year and a half was received with excessive applause. He had written while an actor his farce of "The Lying Valet," "Love" and "Mis in her Teens," and in 1766 he composed, jointly with Colman the excellent comedy of "The Claudiose Marriage." The year 1769 was signalised by the famous Stratford Jubilee a striking proof of his enthusiasm for Shakespeare. It occupied three days at Stratford and its representation at the theatre lasted for ninety-two nights. After the death of Lacy in 1773, the sole management of the theatre devolved upon Garrick, who continued to fulfil the duties of that office until 1776 when he determined upon his final retirement, and sold his society of the theatre for £37,000. The last part which he performed was Dido Falir in "The Womans," for the benefit of the Theatrical Fund, its distribution for the relief of decayed actors, the sum of which he performed. At the conclusion of the play he addressed a brief fare-

well to the audience. The grand delivery with which this was delivered and received, rendered it truly impressive, and few persons ever quitted the stage with pleasure or loss and transmutes. He did not long enjoy his quiet and well-earned repose, dying under a suppression of crime, the effects of which produced a stupor on the 20th of January, 1779. His remains were interred with great pomp in Westminster abbey his funeral being attended by a numerous assemblage of rank and talent. His large fortune, after an ample provision for his widow leaving no children, was divided among his relations. As an actor David Garrick seems never to have been surpassed for truth, nature and variety and facility of expression for which his countenance appears to have been admirably adapted. Expression, indeed, and the language of passion formed his great strength, being equalled by many of his contemporaries in the enunciation of calm, sentimental, and poetical declamation. As a man his predominant fault was vanity and a spirit of economy bordering on parsimony a品质 which Dr Johnson would however occasionally dispute. His excessive love of praise necessarily made him unwilling to share it, and he is charged with endeavouring to keep down rising talents on this account. In his commerce with the great he was exceedingly happy preserving sufficient freedom to make him a pleasing companion without encroachment on either side, and his attention to decorum secured him the society of the most grave and dignified characters. His literary talents were respectable but not superior besides the pieces already mentioned, he is author of some smart epigrams and jeux d esprit, a great number of pleasant prologues and epilogues, a few dramatic interludes, and many judicious alterations of old plays.—Damer's *Life of Garrick. Aut. Reg.*

GARRICK (Eva Maria) wife and relief of the celebrated David Garrick was born at Vienna, February 29 1735. Her maiden name was Violette under which appellation she attracted the notice of the empress-queen Maria Theresa as a dancer and by her command changed it to that of Violette a translation of the German word violette the monogram of her name. In 1744 she arrived in England, bringing with her a recommendation from the countess of Stahrenberg to the countess of Burlington who received her on her obtaining an engagement at the Opera as an inmate of Burlington house and ever after treated her with maternal affection. These circumstances gave rise to a very general but erroneous idea, that she was a natural daughter of the emperors, born before his marriage with the countess, but the dates of the respective events prove the inaccuracy of the supposition. Whilst under the protection of this noble family Mademoiselle Violette formed an attachment with David Garrick, and on the 2d of June, 1769, the nuptials were celebrated with the assistance of the mad and ominous, a marriage portion of £4000 being bestowed upon the bride by the master. In 1781 and in 1783 she accompa-

and the author of several treatises on the art of distillation, and other works on chemistry and medicine. He died at Paris, in the year 1680.

GARDEAU (MARGUERITE), a woman, who was the governess of Charles, King of France, in his boyhood. She was born in Paris, October 16, 1625, and was buried in the same year with her husband, near the entrance of the choir in Westminster abbey, on the 20th day of October in the same year.—*Biog. Brit.*

GARIBOLD (XAVIER ARISTIDE), a native of Paris, who became captain of the royal stables, and was the author of several treatises on horsemanship. He died at an advanced age in 1774. Among his works are—“*Le Nouveau poulain Mayéchal*,” &c., “*Traité des Voitures*,” &c.; “*Le Guide de Cavalerie*,” 1680; “*La Noticeuse de ce qu'il y a de plus utile dans les Connaissances humaines*,” 1690; and Descriptive Accounts of several Arts, in the Collection of the Academy.—*Nouv. Dict. Hist.*

GARTH (SAMUEL), a physician and poet, was descended from a respectable family in Yorkshire. He received his academic education at Peter house, Cambridge, where it is said he resided until he took his degree of M.D. in 1691. He was admitted a fellow of the college of physicians the next year and soon attained the first rank in his profession. He was a nations wing and his commanding talents, and proficiency in polite literature, secured him patrons of great rank and influence. A division which arose among the medical professors, on the subject of the establishment of a dispensary for the poor of the metropolis induced Dr. Garth, who espoused the cause, to compose his mock heroic poem, “*The Dispensary*.” It was first published in 1698, and being widely read and admired, naturally contributed to the fame of the author. In 1697 he composed and printed his “*Harrington Oration*,” which was much entitled for its literary merit. Although a party man, he was always ready to benefit men of merit on every side and hence was an early convert of Pope. In 1710 he addressed a copy of verses to Lord Godolphin, an his chamberlain, and displayed his attachment to the house of Hanover by an elegant Latin dedication of an intended version of Lucretius to the elector, afterwards George I. On the accession of the latter, he accepted the honour of physician to the king, and physician-general to the navy. He died in the height both of reputation and fortune, in London, in June, 1720. Sir John Dryden has left no work behind him, & is little known, and indeed appears to have been destined rather to chemistry and practical philosophy than to pay any very close attention to literature. He was a distinguished member of the Society of Arts, and was decorated a knight of the Bath, and a member of the Royal Society of Medicine, which induced him to reside in his residence and kind

country during an interval of his stay at London, or to be employed by such distinguished persons, which he however did not do, but the subject of his conversation seemed to distract all thoughts of literary labour. His “*Chambers*,” however, gave very power on the seat of the Duke of Newcastle, in his most uncompromising position, and is not without merit and original grace. His occasional pieces are sprightly and elegant; and his last literary labour was to superintend a translation of Ovid's *Metamorphoses*, to which he supplied a preface, which is not very highly esteemed.—*Biog. Brit. Johnson's Life of Garth*.

GARTHSHORE (MAXWELL) an eminent physician and seconchour, who was a native of Kirkcudbright in Scotland, where his father was minister. After serving an apprenticeship to a surgeon and apothecary at Edinburgh, he entered into the army but left it in 1756 and settled at Uppington in Rutlandshire. Thomas he removed to London about 1763, and continued during nearly half a century the practice of those branches of the profession to which he had devoted himself. He was a fellow of the Royal Society and of the Society of Antiquaries and physician to the British Lying-in-hospital. Though Dr. Garthshore enjoyed a high reputation for skill and learning, he was not much distinguished for his literary productions, which consisted of medical and physiological papers in the *Philosophical Transactions*, the *London Medical Journal*, &c. His death took place in 1812, at the age of eighty.—*Genl. Mag.*

GARVE (CHARLES), a German metaphysician, was born in 1745 at Breslau in Silesia. He studied at Frankfurt, Halle, and Leipzig, at which latter place he was professor of philosophy. He died in 1796. His works are—*A translation of Cicero De Officiis, with a philosophical commentary*; “*Remarks on the Writings of Gellert*; “*Essays on various Subjects*”; *Observations on the general Principles of Moral*; “*Dissertatio de ratione accidendi instantis phænomenorum*; “*On the Inclemencies*, a prose-essay crowned by the Academy of Berlin in 1789; “*Dissertatio de nominibus que pertinent ad logicas probabilities*; “*A Sketch of the most remarkable Principles of Moral Philosophy, from the time of Aristotle to the present Day*.” Garve also translated some of our best authors into German, as Smith's *Wealth of Nations*, Paley's *Moral and Political Philosophy*, and Burke on the Sublime and Beautiful.—*Biog. Univ.*

GARZI (LORENZO), an Italian painter, was born at Rome in 1640 and was a disciple of Andrea Sacchi. His works are not much known here, but in Italy are celebrated for their design, execution, and colouring. At the age of eighty, by order of Clement XI, he painted his most excellent work, the dome of the church of Degli Spagnoli, which he lived to finish, dying in 1731. He is considered by

424

GARSON (John) an English poet of celebrity in the reign of queen Elizabeth. He was a native of Walthamstow in Essex, and was the son of sir John Gascoigne, by whom he was disdained. He studied at Cambridge, and afterwards at Gray's-inn. He then entered into the army and served in the Low Countries, under the prince of Orange who gave him a captain's commission which he soon resigned, in consequence of a quarrel with his colonel. Returning to England he became a courtier and employed his talents in writing masques for the entertainment of the queen. Four dramatic pieces and several poems, including a satire entitled "The Sheep Glass" were the productions of his pen. He died at Stamford in Lincolnshire in 1577. His works which display harmony and elegance of versification, have of late years, in common with those of several of his contemporaries, attracted that attention to which they are entitled.—*Chambers's Biog. Dict.*

GASCOIGNE (or WILLIAM) chief justice of the court of king's bench in the reign of Henry IV. He was a native of Gawthrop in Yorkshire and after completing his legal studies, he was called to the bar. In 1399 he was made a serjeant, and the following year was raised to the bench of Common Pleas, whence in 1401 he was removed to the chief justiceship of the King's Bench. In this high office he is said to have distinguished himself by committing to prison the heir-apparent to the crown, afterwards king Henry V for an assault on the person of the judge, and an attempt to rescue from the arm of the law one of his criminal complices. Several abstracts of the opinions of this judge on legal questions, as well as his official arguments and decisions, occur in old law-books. He died in 1413.—*Biog. Brit.*

GASCOIGNE (WILLIAM) an ingenious natural philosopher of the seventeenth century, who appears to have had the best title to be considered as the first inventor of the microscope. On the publication of a similar discovery by M. Ascani, in the first volume of Philosophical Transactions, Mr Townley addressed to the Royal Society a communication, in which he says, "I think it right to inform the world that I have found, by some scattered papers, of one Mr Gascoigne, that before the

invention of my great power of glass, he had the microscope made of glass only for testing diamonds, and that he did not invent the microscope upon glass, but that others were accustomed to polish many diamonds in the houses. The instrument he first made I have seen by me, and two more perfected by him; which diamonds he would have greatly improved, had he not been unfortunately slain in his late master's service. He had a treatise on Optics ready for the press, but thought I have used my utmost endeavours to retrieve it, as has not been with success."—Hutton's Abridgement of the Philosophical Transactions vol. i. p. 161.—Gascoigne was a native of Lancashire, and was probably a volunteer in the royal army during the civil war as he was killed while fighting for Charles I, at Marston Moor July 2, 1644, at the age of twenty-three.—*Arch. Reg.*

GASPARINI (FRANCESCO) a native of Lucca, born in 1650. He was one of the ablest musical composers of the last century, and besides the opera of *Eusebii*, written in conjunction with Almoni, was the author of "Cantic da Camera a Voce Soia," Lucca, 1697; and a treatise entitled "L'Armonico pratico al Cimbalo," Soc. Venice 1708. He died about the year 1724.—*Hug. Dict. of Mus.*

GASSENDI (PIERRE) an eminent philosopher and mathematician, was born in the year 1593 at Chantemerle near Digne in Provence. He early displayed a lively and inquisitive genius, which determined his parents, although in moderate circumstances, to bestow upon him the best education in their power. Under the instruction of an able master at Digne he made a rapid progress in the Latin language, and was afterwards put to philosophy at the university of Aix. At the age of nineteen he was appointed to fill the vacant chair of philosophy at Aix, and notwithstanding that the authority of Aristotle was still warmly maintained, after the example of Vives, Ramus, and others, he ventured publicly to expose the defects of his system. His lectures on this subject, which were delivered in the indirect form of paradoxical problems and published under the title of "Exercitationes Paradoxicae ad verbum Aristoteles," gave great offence to the votaries of the declining philosophy, but obtained him no small reputation with Peiresc and other learned men through whose interest, after being induced to take orders, he was presented to a canonry in the cathedral church of Digne, and made doctor of divinity. Thus enabled to apply closely to philosophical and astronomical pursuits, he composed a second book of "Exercitationes," which excited so much envy that he ceased all direct attacks on Aristotle, although he still maintained the predilection he had formed for the doctrines of Epicurus, which he defended with great learning and ability. He strenuously maintained the atomic theory in opposition to the fictions of the Cartesians, and in particular asserted the doctrine of a vacuum. On the subject of metals he also explained the pro-

son or Junius, he was a man of much literary merit. He died at Paris in 1648. His works include a history of the life and times of Galileo Galilei, the correspondence of several of the best men and talents, and especially that of cardinal Richelieu, by whom he was appointed in 1645 professor of mathematics at Paris. Here he delivered lectures on astronomy to crowded audiences, and by his great application so injured his health that he was obliged to return to Digne in 1647 from which place he did not return until 1653, when he published the lives of Tycho Brahe, Copernicus, Purbach, and Rodriguezanus. He also resumed his astronomical labours with an intensity to which his state of health not being adequate, his former disorder returned, and terminated his life in 1656, in the sixty third year of his age. He is ranked by Barrow among the most eminent mathematicians of the age, and mentioned with Galileo, Gilbert, and Descartes. Gassendi was the first person who observed the transit of Mercury over the sun. It is to the credit of both philosophers, that although mutually wroth in their scientific controversies, Gassendi and Descartes became friends in the sequel. The MSS. which the former left behind him and the treatises published during his life were in 1658 collected by Sorbonne in six volumes, folio. They consist of the philosophy of Epicurus; the author's own philosophy, the lives of Epicurus, Peiraeus, Muller, and others, in addition to those already mentioned, refutations of Descartes's *Metaphysics*, and other treatises.—*English Hist. of Phil.* Nos. 214, 215. *Hutton's Math. Dict.*

GASSICOURT (CHARLES LEWIS CADIER dit) an acute French philosopher of the present age, the son of a Parisian apothecary by whom he was educated for the bar and even practised with much reputation and intrepidity during that singular period of the Revolution so fatal to many of his brethren whose exertions in behalf of the accused not unfrequently involved the advocate in the fate he vainly strove to avert from his client. M. Cadier Gassicourt being, however, fortunate enough to escape the dangers of the times met the politics of which he entered, published in 1797 a pamphlet which attracted some attention on the "Theory of Elections." This was his first production with the exception of a "Mémoire on Natural History" written at the early age of fifteen. Several other essays, on political and other subjects, followed, among which was one "On the Future State of Mankind," "St. Germain, a treatise on the New Modes of Thinking, Writing, and Speaking, introduced into France by the Authors of the 'Times,'" and others on the "Influence of the Masonic Societies in the Progress of the Revolution," and the "Influence of the National Guard." Among his numerous writings, which appeared during the same period, were a volume on "The War of Washington," and a Dramatic Poem entitled "The principal characters in the reign of Louis XIV and his suc-

cessors." On the 1st of January 1800, he was elected a member of the Polytechnic school, and the personal friend of Buffon, Malibran, Lavoisier, and Cuvier, he seems to have diverted his attention at a great degree, if not altogether, from the stormy track of politics and to have devoted his time principally to the study of chemistry and physics. Having occupied himself in revising a treatise of his father's on "Domestic Pharmacy" the work ran at once through several editions, and did also a "Formulary" on the same subject, and to these he added several valuable works of his own, the most important of which is the "New Dictionary of Chemistry" afterwards introduced with great success into the Polytechnic school. This book appeared first in 1803. In 1809 he followed the army into Austra, and subsequently wrote an account of the campaign during which he invented a military instrument called "Les Baguettes." The plan for the organisation of the board of health also owes its origin to him and he had not only the satisfaction of seeing it eagerly adopted but that of obtaining the appointment of reporter to secretary to his own institution. In this capacity he continued till the day of his death, which took place at Paris early in the summer of 1823. Besides the literary productions already enumerated he was the author of a series of essays on "London and the English Nation" in which he displays much candour and impartiality, and a treatise on the application of the Physical Science to Military Purposes. To a great variety of other useful and scientific publications he was a material contributor such as the "Journal of Pharmacy" originally edited in 1809 under the title of the "Bulletin of Pharmacy," "The Annals of Physics and Chemistry," "Complete Course of Agriculture," "Révues Encyclopédiques," "Dictionary of Medical Sciences."

Memoirs of the Medical Society of Emulation, &c &c, and almost on his first introduction into literary society assisted in founding the Lyceum, afterwards the Athénéeum, at Paris of which he was one of the original members in the year 1785.—*N Month, May*

GASETTIER (Kew George) a physician was born at Ferrière in Gâtinais, in 1791. He early devoted himself to the study of physic, which he practised at the epoch of the Revolution. In 1793 he was chosen a member of the provincial assembly of Orléans, and was elected mayor of Montargis in 1795; according to the new popular form. In 1791 he was deputed by the Loire to the Legislative Assembly. The severity of his principles could not secure him from the fury of the ultra-revolutionary party, and in 1793 he was destined a ban to his country and arrested. The fall of Robespierre and of his principal accomplices happily released him from the fate which awaited him; but still being pursued by the hatred of his enemies, he was obliged to postpone his departure for five years. In the promotion of 1797, the king decorated him with the Order of St Michael. He was the author of ambitious

“ Mémoire sur la Thérapeutique médicale et sur l’Histoire naturelle du Gâtinais,” 1780, “ Histoire des Epidémies qui ont régné pendant dix ans dans le Gâtinais,” 1783, “ Annales médicaux aux physiques,” “ Traité sur les Spécifices en Médecine,” these four last received the prizes of the Royal Society of Medicine, “ Dissertation sur le supplice de la Guillotine.” This was written to contradict an error which had been asserted by the physiologist, Semmerring, and maintained by M. Sue jun. Both pretended that the criminals suffered great pain after decapitation, and M. Sue added that after the death of the courageous Charlotte Corday, he had seen her fine face blush with indignation in the dirty hands of the executioner who showed her to the populace. Besides numerous other works, in 1816 Gastellier published a pamphlet with this title—“ A mes Concitoyens” in which he refuted the calumnies which slander had spread against his conduct during the Revolution. Gastellier died in 1821.—*Biographie Nouvelle des Contemporains.*

GAUBIL (Antoine) a jesuit, was born at Caillac in 1708. He was sent as a missionary into China, where he remained thirty-six years. He became so thoroughly acquainted with the history and literature of the Chinese as to astonish the natives themselves. He was the author of ‘A History of Genghis Khan, and of all the Dynasties of the Mongols his Successors, Conquerors of China,’ drawn from the History of China, of which Mr Gibbon says ‘This translation is stamped with the Chinese character of domestic accuracy and foreign ignorance.’ He also gave a translation of the Chankung, and sent several memoirs to fathers Sescat and Freret which they have used in their works. He died in 1759.—*New Dict. Hist.*

GASTRELL (Francis) bishop of Chester born in 1668 at Slapton, Northamptonshire. He proceeded from Westminster school on the foundation to Christchurch, Oxford where he graduated as A.M. in 1687 and as A.D. in 1700, on obtaining the chaplaincy to the house of Commons. Two years after wards, on the recommendation of the house, he was presented to a canonry at Christchurch, whose piece of preferment he was allowed to retain when, in 1714, he was raised to the episcopal bench. Soon after his elevation, he refused to institute Mr Pepys into the warden ship of Manchester college, on the ground that he was disqualified by holding only a matriculation degree, because the subject of judicial inquiry in the court of King’s Bench. The point was given against him, but he nevertheless received a public vote of thanks from the university of Oxford for his conduct in vindicating their privilege. On the accession of

George I. bishop Gostrell became unpopular with the ministry, and nearly失宠失势失势。 In the affair of Astbury Gostrell privately thinking that prelate, he yet opposed the proceedings against him in the house of Peers, which he considered as unconstitutional and unjust. Among the most celebrated of his writings are—a treatise on the “ Moral Proof of a Future State” and another entitled “ Christian Institutes,” “ A series of Bovis Lectures,” afterwards arranged as a continuous discourse against deism, and pamphlets against Dr Samuel Clarke and Mr Collins, on the question of the Trinity. This last treatise was written early in 1714 and mainly contributed to his advancement to the episcopal dignity. He enjoyed the reputation of a sound scholar and an able polemic and died in a fit of the gout in 1725.—*Biog. Brit.*

GATAKER (Thomas) a learned English divine and critic of the seventeenth century. He was born in London in 1574, was sent to St John’s college, Cambridge in 1590 and on the foundation of Sidney college in 1596 he was appointed one of the fellows. Having been ordained, he commenced preaching at the parish church of Everton near Cambridge and soon after removed to London and became preacher to the society of Lincoln’s Inn. In 1603 he took the degree of B.D. In 1611 he was presented to the rectory of Rotherhithe in Surrey, and while there resident published the substance of a course of sermons under the title of ‘The nature and use of Lots,’ a treatise historical and theological 1619 4to. In the next year he made a tour through the Netherlands, and after his return home in 1623 he published a Defence of his Treatise on Lots, against the animadversions of a Mr Balfour. In 1637 appeared a more extended defence of his opinions under the title of ‘ Thomas Gataker Londinensis Antithesis contra Gulielmum Amensiam Gaberti Voeti de Sorte Theologiae reposita,’ 4to. In 1642 he was chosen one of the assembly of divines at Westminster, but in the discussions which took place he opposed the introduction of the Covenant and declared in favour of Episcopacy, and though he in general complied with the authority of the parliament, yet he remonstrated strongly against the trial of king Charles I. In 1648 he published ‘ Thomas Gataker de Novi Testamenti Stylo Dissertatio,’ 4to, in which he vindicated the purity of the language of the sacred writers against the objections of Sebastian Pietersen. This was followed by his “ Adversaria miscellanearia Animadversiones variorum, lib. vi. comprehensa,” 1651, 4to. The following year he published an edition of the Meditations of the emperor Marcus Antoninus. He died in 1654, and in 1659 his son, Charles Gataker published ‘ Adversaria Miscellanearia Posthumae,’ folio, forming the sequel to the former work. He was the author of several other theological productions. His Opera Critica were printed at Utrecht, 1698, folio.—*Biog. Brit.*

G A U

GAUCHER, (Gaucho, Gaucho), a French engineer and author, died Nov. 1866. He was a native of Paris, and educated at the Ecole des Ponts et Chaussées. He became an engineer in 1825, and in 1830, appointed to the Bureau of Bridges. He then left the service of the state. He published—"Observations sur l'Industrie Française," "Voyage dans l'Algérie," "Méthode, ou Traité complet de l'Art de l'Échelle," &c. vol. deux, published in Geneva; "Traité d'Architecture," "Lettres des Artistes," folio 8vo, and he also wrote the author of the lives of engineers inscribed in Fontenay's "Dictionnaire des Artistes."—*Nouv. Dict. Hist.*

GAUDEN (Jew) an English poet, was born in 1605, at Mayfield in Essex. He was educated at St. John's college Cambridge where he took his degrees in arts and was subsequently presented to the vicarage of Clapton in Cambridgeshire, and to the rectory of Brightwell Barts. He then entered himself a member of Wadham college, Oxford, where in 1641 he graduated as DD. On the commencement of the civil war he complied with the prevailing party by made deas of Bocking, and a member of the Westminster assembly of divines, which however he did not attend but abandoned the cause of the parliament when it proceeded against monarchy and episcopacy. In 1648 he printed the celebrated treatise—"Euse, Boudjang, or the Portraiture of his sacred Majesty in his solitudes and sufferings," which in a few months had ten thousand seventeen editions. That Dr. Gauden was the principal instrument in making this work public cannot be disputed, but how far he may be deemed the author of it, or in how great a degree it may have originated with the king has been a subject of much controversy. The evidence for and against its authorship by Gauden is to be found in Nichols's Literary Anecdotes, and Lang's History of Scotland. However the point may be determined, the ascribing this treatise to the king created the most favourable impression, both at home and abroad, of his piety, meekness, and humanity, and in the opinion of lord Shaftesbury, it was mainly instrumental in procuring for him the title of martyr. Dr. Gauden was subsequently the acknowledged author of several tracts in favour of the depressed church the merit of which he did not fail to plead at the Restoration, in the first year of which he was promoted to the vacant see of Exeter. At once greedy and ambitious, he was by no means satisfied with this recompence, but sought to be bishop of Winchester. He could only obtain however a translation to the see of Worcester, and his disappointment is said so generally to have affected him, as to bring on a violent fit of the spleen and stranguary, which terminated his existence in 1658, in his fifty-seventh year. His religious opinions are to have been an able, though silent man, whose principles could be easily understood in circumstances, and moments of opportunity, and of unavoidable necessity, were better suited to the politician, than to follow the speculist or divine.—*Bog Univ.*

GOUVERNÉUR (Gouverneur) a French engineer and author, died at Paris in 1838. "Going to Paris to study," he intended to become the pupil of Deshayes, under whom he distinguished himself by his unusual attention to professional exercises. The knowledge which he displayed of the different branches of mechanics procured him the appointment of instructor of the pupils in the School of Mars, and he was afterwards elected a member of the Society of Mechanics at Paris. In this station he contrived a mode of facilitating instruction in reading and writing, somewhat on the plan of Joseph Lancaster. On this subject he published a work, entitled "Méthode pour apprendre en même temps à écrire, à lire, et à écrire sous la dictée, à l'usage des écoliers primaires. Paris An. 3 8vo." He also published treatises on Osteology Myology and Sphinctiology, the latter of which especially has been highly praised, as a classical manual of a branch of anatomical science. Gouvernur, notwithstanding his literary and professional labours, and the excellencies of his private character appears to have received little patronage. He lived poor, and died at Paris almost unknown in 1838.—*Bog Univ.*

GAULTIER (Louis) abbé, born in Italy of French parents was taken early to France which country he adopted. Thus worthy man devoted himself entirely to the service and instruction of youth. Observing that the severer forms of education deprived infancy and youth of that portion of happiness so necessary to the development of their moral and physical faculties, he conceived the project of smoothing the rugged path of education by instructive games known to children by the name of the "Abbé Gaultier's Games." He was one of the warmest supporters of the systems of Bell and Lancaster. The horrors of the Revolution forced him to quit France, and he retired to the Hague. Not wishing to live in sole dependence he accepted the situation of tutor to the children of the British ambassador whom he accompanied to England. Wishing to be useful in his surroundings, he gave his instructions gratuitously to the children of French emigrants, and with the same benevolence qualified masters, who successfully propagated his method of instruction. After the peace of Amiens he returned to Paris and resumed his teaching which he continued until his death which took place in 1818, in his seventy-fifth year. His works are very popular and some of them have gone through twenty editions. The following are among the principal—"Lèçons de Grammaire suivant la méthode des Tableaux analytiques," 1787; "Jet raisonné général pour les Enfants," 1797; "Méthode pour analyser la phrase et le récit à ses Principes Élémentaires;" "Méthode pour apprendre grammaticalement la Langue Latine sans connaître les règles de la Composition;" "Traité caractéristique d'une meilleure Education ou Actions et Discours ration-

abstraite de l'Opéra, et régularisera certaines idées
qui ont été développées dans le traité de Mathématique;"
"Système de géométrie Pratique, nécessaire à l'Éducateur de la plupart des Arts et Métiers," 1782, &c. — *Bibl. Nove. des Géomètres.*

GAUTIER D'AGOTY (JAMES) a native of Mireilles, who lived at Paris in the latter part of the eighteenth century, and was a member of the Academy of Sciences of Dijon. He was a painter, engraver and antiquarian, and ascribed to himself the merit of being the inventor of the art of making engravings to be painted in colours. The same method however was previously practised by Leblanc, who used only three colours, while Gautier used four. The numerous plates which he executed in this manner form the best monument of his fame. He published several works on anatomy with engravings: "Nouveau système de l'Anatomie," 2 vols. 12mo 1750-1751, the second volume of which was an attack on the Newtonian doctrine of colours.

"Zoogénie ou génération des Animaux," 1750 12mo, "Observations sur la Physique, l'Histoire Naturelle, et la Peinture," a scientific journal, continued from 1752 to 1755 which gave rise to the *Journal de Physique*, "Ob servations sur la Peinture et les tableaux anciens et modernes," 1753 2 vols. 12mo, and "Collection de Plaques anciennes gravées en couleurs," 1757 4to, left incomplete. He died at a very advanced age, in 1755. His end is said to have been hastened by chagrin at learning that his name had been struck out of the list of the academicians of Dijon through the malice of Mistet, secretary of the Academy, with whom he had quarrelled.—**GAUTIER (ARNAUD EDOUARD)** son of the foregoing, practised the same art, and executed the plates for the early numbers of the "Observations périodiques sur l'Histoire Naturelle, &c." published by Remy, and published "Courr complét à l'Anatomie" Nantes, 1773, folio, containing a collection of the various anatomical plates engraved by his father with exceptions by M. Jadalot.—**GAUTIER (JOHN BAPTISTE)** another son of James, died at Paris in 1786, after having published, under the title of "Galerie Française," Paris, 1770 4to, portraits of celebrated French men and women with memoirs.—**GAUTIER d'AGOTY (EDWARD)** grandson of James, practised the art of engraving in colour, in which he made some improvements. He published at Paris, about 1780, engravings from the pictures of some celebrated painters; but the work had little success, and the artist, in disgust, went to Italy, and died at Milan in 1804.—*Bibl. Univ.*

GAUTHHEY (EMILIAN MARIE) an eminent mechanician and engineer, who was a native of Châlons-sur-Saône in France. He studied mechanics at Versailles, under his uncle, who was instructor of the carpenters, who which he assisted the salvoes of bridges and highways, then directed by the celebrated Perronet. The State of Burgundy appointed him chief engineer in 1758, and he was shortly after elected a member of the Academy of Dijon. In 1767

he constructed the first of Savoie's canal from Chambéry to Dijon, which was commenced in 1763, and finished in 1791. It is termed the central canal [canal du centre] forming a navigable track, twenty-three leagues in extent. Besides this work, he executed several great undertakings in the same province, among which are the canal of Châtillon-sur-Saône, the bridge of Navilly over the Doubs, part of the junction canal of the Saône and the Yonne. The two latter works completed a communication by water between the Atlantic and the Mediterranean on which account a medal was struck with the legend—"Utrumque insula puncta triplex." These labours procured for Gauthhey great reputation and he was about to be rewarded with the order of St Michael when the Revolution broke out. Subsequent events having occasioned a dissent of the corps of engineers of the state with the engineers of bridges and highways, Gauthhey was appointed inspector-general and called to Paris in that capacity in 1791. He took an active part in the various projects which came under discussion before the council and on various occasions displayed an enlightened mind in the promotion of schemes beneficial to the nation. He was nominated a member of the Legion of Honour at the time of its institution, and was commandant of that legion some years afterwards. He died July 14 1806, aged sixty-four. Among the works which he published are—*Mémoire sur l'application de la Mécanique à la construction des Voûtes* 1772 4to, "Dissertation sur les dégradations causées aux piliers du Dôme du Panthéon Français, et sur les moyens d'y remédier" 1798 4to, "Projet de déviation jusqu'à Paris des Rivieres d'Ourcq Thérainne et Buvronne d'une part et des Rivieres d'Estenne Jeugne Orge Yvette et Buvre d'autre part," 1803 4to. For several years previously to his death he was engaged in arranging the information derived from his professional researches, in a work entitled "Traité complet sur la construction des Ponts et des Canaux navigables" which was published in 3 vols. 4to 1802-1812, by his nephew M. Necker with a memoir of the author.—*Bibl. Univ.*

GAY (JOHN) an eminent English poet, was born at or near Buntingstall in 1685. He was descended from an ancient but reduced family who, after an education at the free-school at Buntingstall, apprenticed him to a silk mercer in London. He showed however such a distaste to trade, that after a few years of negligent attendance, his indentures were cancelled by agreement, and he devoted himself henceforward to literature. In 1711 he published his "Rural Sports," which he dedicated to Pope, then a young poet like himself, which compliment introduced them to each other, and proved the foundation of a friendship which lasted till his death. In 1718 the easy, impudent disposition of Gay being unfavourable to his pecuniary circumstances, he accepted the office of secretary to Anne, duchess of Monmouth, which probably being little more than nominal as re-

and the author of "Vivian" to pay his court to him, and the distinguished stock-broker, John Craggs, of the Art of Whipping, and the like. "Lavater," was published in the same year. He was soon after engaged in the service of the Duke of Lauderdale. "The Heiress," a tragic drama, being attributed to him, which was followed by an unsuccessful comedy, entitled "The Wife of Bath." In 1714 his caricature of Ambrose Philips's system of pastoral was published, under the title of "The Shepherd's Week." This performance, which attracted considerable attention, was dedicated to lord Bolingbroke, who, with the Tory party then in power, much befriended the poet. By their interest he was at length appointed secretary to the earl of Clarendon, in his embassy to the court of Hanover, but the death of the queen once more threw a cloud upon his rising prospects. In 1715 appeared his burlesque drama of "What d'ye Call it?" which was followed by a farce, in conjunction with Pope and Arbuthnot, called "Three Weeks after Marriage," which altogether failed. In 1720 he was endeavored by the countenance of the numerous friends whom his kind and amiable disposition had secured, (many of them possessing rank and fortune,) to publish his poems by subscription, by which expedient he secured a thousand pounds and a present of South-sea stock from secretary Craggs, and might have made his fortune, had he sold in time. This he could not be prevailed to do, and his consequent disappointment seriously affected his health. In 1723 he produced his tragedy of "The Captives," and some instances of court favor encouraged him to employ himself in his well-known "Fables," written professedly for the instruction of the Duke of Cumberland and published with a dedication to that prince in 1726. For this performance which, while it ^{was} absent of La Fontaine exhibits great wit in the mode of narration and much lively and natural painting he naturally expected a handsome reward, but was offered nothing better than the office of gentleman usher to the young princess Louise, which he declined as an indignity, and all the subsequent solicitations in his behalf were unavailing to. Under this state of disappointment, he composed his famous "Beggar's Opera," the notice of which seems to have been prefaced by Swift. It was first acted in Mr. and Mrs. Lincoln's-in-the-Fields, having been previously rejected at Drury Lane. Its chief purpose was to ridicule the Italian opera, but the original spirit of the poem rendered it an unique composition; nor is it easy to define the mixture of tragedy, comedy, burlesque, and satire, which the audience found its originality and interest. Its moral tendency has been much discussed, but when it appeared and continued to run, it was universally agreed Gay's intention was to expose the vices of one class, and to follow out their rise in some slender narrative, and to give the name of another, which he himself probably rather to strip off the mask under which falsehood and depravity in

the higher grades, for concealed, from the view not only of the world at large, but of the offending parties themselves. So true is it, however, the "Beggar's Opera," which ran for thirty-three successive nights, and transfixed the actress who represented the Beggar with a sickness, so offended the persons then in power that the lord chamberlain refused to a concert for performance a second part of it, entitled "Poly." This resentment however rather served the author than otherwise, as it induced his friends and the party in opposition to come forward on its publication with so laudable a subscription that his profits amounted to £2000, whereas the "Beggar's Opera" had gained him only 400. A further benefit accrued in the patronage of the duke and duchess of Queensbury, who took him into their house, and condescended to manage his pecuniary concerns. He was soon after assed with dejection of spirits, attributed to disappointment but which possibly originated in habitual indolence and a constitutional tendency to choleric. He enjoyed however intervals of ease sufficient to enable him to compose his scenes of "Acis and Galatea," and the opera of "Achilles" but being seized with an inflammation of the bowels he died in December 1738 at the age of forty-five. No man was more sincerely lamented by all who knew him, and his memory was honoured by interment in Westminster abbey where his monument exhibits an epitaph by Pope, which evinces considerable affection and feeling. Swift and Arbuthnot also manifested great regard for him. As a man, Gay possessed little energy of mind to support the independence which he affected, but he was eminently gifted with the gentle virtues which beget affection. As a poet he cannot be ranked in the first class, but he seldom fails to give pleasure, and among his smaller pieces his two ballads of "All in the Downe" and "Twas when the Seas were roaring" will ever be felt and admired. "The Beggar's Opera" may be deemed the finest of the ballad, or modern comic operas, a species of praise that will be estimated according to the very different opinions formed of the merit of that species of entertainments. Gay's works are to be found in all collections.—See *Brit. Johnson's Poets. Spanish & Spanish.*

GAYE, a musician in the service of Louis XV with whom he was a great favorite. He is principally known as having furnished occasion to that monarch for a royal bon-mot. Gaye had given offence by some impudent remark to the archbishop of Rheims, and desiring that prelate's influence at court, hastened to acknowledge his fault to the king, and obtained his pardon beforehand. A few days after, while he was engaged in singing part of a mass, the archbishop took occasion to intimate to the king that the unfortunate musician's voice was much injured by time, with the view of procuring his dismissal. "You are in error," replied Louis, "the man sings well enough; his fault lies in the way in which he is apt to speak."—See *Dicit. of Mus.*

DAYOT DE PITAVAL (FRAUENS) a French Jesuit, was born at Lyons in 1673 of a noble family, and was educated at Paris. He took orders, and became in 1696 to then quitted the church and entered the army, without abandoning any distinction. At the age of fifty he became an advocate but meeting with no greater success in this than in the other profession, he devoted himself to literature. His principal work, entitled—*Causes Célebres*, is more remarkable for its length than its merit, being in twenty volumes 12mo. Though interesting in its subject, it is heavy, weak, and pedantic in its style. It has been two or three times abridged. His other works are—*The Art of adornning and improving the Mind*, a compilation, entitled *Bibliotheque des Gens de Cour* and *An Account of the Campaings of 1713 and 1714*, a compilation from the Memoirs of Vilbert. He died in 1743.—*Moreri*; *Dart. Hist.*

GAZA (THEODORE) a native of Thessalonica, who was one of the principal revivers of Greek literature in Italy, in the fifteenth century. On the devastation of his native place by the Turks in 1430, he took leave of Greece, and went to Mantua, where he acquired a knowledge of the Latin language. In 1441 he was made a professor in the university of Ferrara, where he taught Greek from a grammar of his own composition and lectured on the Orations of Demosthenes. About 1450 he entered into the service of pope Nicholas V and he was also patronized by cardinal Bessarion. On the death of the pope he resided some time with Alfonso king of Naples, who dying in 1458 Gaza returned to Rome. Cardinal Bessarion then procured him a rich benefice in Calabria, from which he derived little revenue through his own negligence. Having completed a Latin translation of Aristotle's *Treatise on Animals*, he presented the work to pope Sixtus IV, who gave him fifty crowns for his learned labour which the indigent scholar is said to have thrown into the Tiber. He then went to Ferrara, whence he removed to Calabria, but he afterwards appears to have returned to Rome and died there in 1478. Besides the works noticed before he translated into Latin the Aphorisms of Hippocrates, with Galen's *Commentaries*, Theophrastus on Plants, Alcian's *Tactics*, Diogenes of Halicarnassus on Composition, some Homilies of John Chrysostom, &c. He likewise wrote a Greek version of Cicero de Senectate, and his Socratis Scipione, and wrote "Liber de Atticis Membris," and *Epistola de Origine Tarcarum*. Gaza is said to have been the most accomplished of all the Greek emigrants, who contributed to the revival of learning in the west of Europe.—*Doveri*; *Diss. IV de Graecis Etruskis. Tirocnius. Brig. Univ.*

GERER, an Arabian philosopher, who, according to Leo Africanus lived in the eighth century. He is said to have been a Greek by birth, and to have apostatized from Christianity to Mahometanism. His writings relate to astronomy and chemistry; or rather alchemy, on which last subject his authority was

so great, that he was styled the master of emperors by that era. A Latin translation of his *Commentary on the Almagest of Ptolemy* was printed at Nuremberg in 1553, and his alchemical works were published in Latin by Gezelius, under the title of "*Liber Philosophorum*," and an English translation of them by Robert Russell appeared at Leyden in 1668.

Sylvio Gober conjectured many errors in the astronomy of the ancients, and described chemical instruments and operations with greater accuracy than his predecessor. Vulgar ignorance ascribed to this philosopher the character of a magician, on which Naude remarks, that from the catalogues of the works of Geber given by Geimer, it may be concluded he understood every thing except magic.—Another philosopher named Geber is supposed to have been a native of Seville in Spain and to have flourished about 1090. These individuals have been improperly confounded by some writers.—*Naude Apologie pour les Grands Hommes soupçonnés de Magie. Histor. Aldin's G. Bag*

GED (WILLIAM) a goldsmith of Edinburgh, was the inventor of stereotype printing which he first practised in 1725. In 1729 he went into partnership with one William Fenner a stationer in London, but owing to the jealousy of the other printers and the ill treatment of his partner he lost considerably and in 1733 he returned to Scotland where he printed an edition of Sallust. He died in very indifferent circumstances in 1749.—*Gen. Bag. Dict.*

GEDDIES (ALEXANDER) a Roman catholic divine, was born in 1737 in the parish of Ruthven, in the county of Banff Scotland. His parents who were Roman catholics, sent him, at the age of fourteen, to be educated at Scain, a free Roman catholic seminary in the Highlands. At the age of twenty-one he was removed to the Scotch college at Paris and returning to Scotland in 1764, he was ordered to Dundee to officiate as priest among the catholics in Angus. The next year he removed to Traquair and became chaplain to the earl of that title and in 1768 again visited Paris. In 1769 he returned to Scotland, and became pastor of a considerable Roman catholic congregation at Auchincloich in Banffshire. This office he retained for ten years, which were however signalized by much pecuniary embarrassment and many difficulties, arising from a need to build chapels, and a false notion of relieving himself by farming *speculations*, none of which projects prospered, although he finally extricated himself with honour and punctually. In 1779 the University of Aberdeen granted him the degree of LL.D being the last catholic since the Reformation to whom it had been confided. About this time he repaired to London, with a view of obtaining the necessary facilities for his grand scheme of a new English translation of the Old and New Testament. This work he half meditated for many years, but he desisted of a version of the scriptures in the mother tongue, and never favoured by the

referred to his own opinions, he was with many others, until the passing of the Edict of Nantes, which forbade the free exercise of their religion; in 1685, the execution of the Huguenot opinions of Dr. Gobelin, belonged to the plenary baptism of the papists, and the diremunt of the church was not without much sorrow, and the true Huguenot opinions suspended him. His strong character he repaid with great suspicion, and a mixture of ingenuity and irony that was much felt at the time. In 1707 he published the second volume of his *Historie*, which, displaying equal talents, produced similar opinions from both catholics and protestants. He was in the midst of a translation of the *Bible*, when he yielded to the ravages of a painful disease, and expired on the 46th of February, 1696. Dr. Godwin asserted the freedom of private judgment in too great a degree to be palatable to his own communion, upon which he assumed so many new views in respect to scriptural authority and doctrine, it is not very surprising that he should be regarded as an infidel by the equally orthodox, both catholic and protestant. This learned but eccentric divine wrote many tracts of more or less power in vindication of his peculiar notions and opinions, as well as some indifferent verses, but his labours have not the fate of those of every man who only strives against the established authority and tradition of ages. Varieties of his own opinions, at least, may very naturally profit a mind reposed on a subtlety to the examination of a sea of doubt and uncertainty, which requires very little loss in the way of faith, and imposes upon no stronger foundation than individual opinion.—See Ann. Reg. God's *Lies* of Godwin.

GELDENHAUER (GERARD) an historian and divine, was born at Nimeguen in 1492, and was educated first at Duxter and then at Louvain. He was for some time historian and reader to Charles V, while archduke, and then became secretary and private reader to the bishop of Utrecht. In 1526 being sent by Maximilian of Burgundy to Wittenberg to examine the state of religion there, he turned Lutheran, and going to Worms he married, and became a teacher of youth. He died in 1542. He was intimate with the celebrated Beza, who was so displeased at his change of religion, that he wrote against him under the name of Vulmarus. He was the author of "Historia Beliorum;" "Historia seu Estate," &c. &c.; "Descriptio Insulae Balavorum;" "Schediologia Episcoporum Ultrachicanorum;" "Promulgatio Scholastica;" "De Viris Illustribus Germanis;" &c. with some Latin poems, histories, and epistles, and several other publications.—See Thott. Mavri.

GELLERSTEDT (CORNELIUS FRANCISCUS) an eminent Swedish poet and writer on the belles lettres. He was born in 1763 at Nyköping, in the province of Södermanland, where his father was a poor peasant. When quite young he displayed a decided taste for poetry; and while at school he composed a poem, in which he found an harmony with

Haberm and Goethe, which lasted during their lives. In 1784 he went to the university of Leipzig to study theology, and after four years, returned home and continued a preacher till he never acquired much fame as an actor. He afterwards became tame to young gentlemen of fortune; and in 1794 he accompanied one of his pupils to Europe. His first poetical production was entitled "Apparatus, or Denmark and Wit," begun 1748, which procured him the reputation of being a highly agreeable writer. He now gave up his clerical profession, and devoted himself entirely to poetical tuition. In 1744 he took the degree of M.A. and the following year he published the first volume of his *Fables*, some plays, and a novel, entitled "The Swedish Comedians." In 1748 appeared the second volume of his *Fables* and he also produced a work called "Consolations for Valentimanns," probably suggested by the state of his own health as he was a great sufferer from hypochondriac affections. In 1751 he was made professor extraordinary of philosophy at Leipzig, and he was afterwards offered another appointment in the same university but ill health prevented him from accepting it. He died December 13th 1769. Few writers have exercised so much influence over their contemporaries as the amiable and virtuous Gellert, who, in a great measure formed the taste and directed the opinions of his age. Though not a poet of the first class, he deserves to be ranked among the national classics, on account of the purity of his style in narration and didactic composition. His verses are easy and flowing and his prose is simple and elegant, but he never reaches the sublime. His comedies are strictly moral, yet deficient in that fire and spirit which may be considered as almost essential to such compositions, in spite of which however, they were all well received by the public. His works have often been published, both collectively and separately.—*Nous. Diet. Hist. Atlas*; G. Bing.

GELLERT (CAROLUS ERASO) brother of the preceding distinguished as a metallurgist. He studied first at Magdeburg, and then at the university of Leipzig. Being invited, with several other learned Saxons, to Petersburgh he became an adjunct of the academy for ten years, and his intimacy with the celebrated Euler inspired him with a passion for the cultivation of the sciences of physic and chemistry. He returned to Saxony about 1746, to prosecute his researches. His mineralogical lectures attracted to Freiberg a great many strangers and proved extremely profitable. In 1752 he was appointed controller-commissary of the mines, and charged with the inspection of machines and the examination of ore and minerals of Saxony, in 1763 administrator in chief of foundries and forges at Freiberg; in 1765 professor of metallurgy at the academy of mines in that city; and of length, in 1783, effective controller of mines. He made great improvements in science by his mineralogical researches; and he was the first introducer of the process of

GELIUS (GELLIUS) by his compilation on a large scale "Antiquitatis Romanae," 1584, 1595. His works, which are numerous, include "Elementa de Chalcographia," composed from the treatise of Cato; "Elementa de Chalcographia Metallorum," "Geographia Antiquorum," &c.—*Bibl. Orie.*

GELLIUS (GELLAUERUS) an Italian poet and prose writer, was born at Florence in 1492. Having originally a shoemaker, but, proceeding the advantages of education, he soon became distinguished. He wrote two comedies in prose "L'Ercole," and "La Sparta," which were considered the best compositions of the kind then existing. He was also the author of some dialogues entitled "I Caprioli del Bottino;" others on physical topics styled "La Ciro," with some dissertations on the poems of Petrarca and Dante. Remarks on the Italian Language, &c. He likewise translated the *Ecclaeis* of Ennius into Italian. He died in 1563.—*Moreri. Thorebach.*

GELLIBRAND (HARVEY) a mathematical writer of eminence in the 17th century. He was born in London in 1597; and was admitted a commoner of Trinity college, Oxford, in 1615, where about four years after he took the degree of B.A. and proceeded M.A. in 1623. The professorship of Astronomy at Gresham college becoming vacant by the death of Edmund Gunter he was chosen to fill that office in 1656. He was extremely intimate with Henry Briggs, the Savilian professor of astronomy at Oxford, who dying in 1630, while engaged in writing a work on trigonometry the task of completing it devolved to Gellibrand. During the time he was thus occupied, he was called before the high commission court by Dr Laud, bishop of London, on account of the publication of an almanack, for 1631 by William Balem, his servant, in which the names of protestant sufferers for religion taken from Fox's *Martyrology* were inserted instead of the saints of the Romish calendar. But it appears that similar almanacks had been previously published, Gellibrand and his servant were both acquitted. In 1633, having completed the work entrusted to him by Briggs, he published it under the title of "Trigonometria Britannica, sive de Distancia Traegetorum inter h[ab]itum." folio. He died in 1656 at Gresham college, and was buried in the church of St Peter-in-Pow, in Broad-street, London. His works include treatises on the longitude, the variation of the magnetic needle, and on magnetism; besides several not published—*Ward's Lives of the Gresham Professors. Matthew's Bibl. Philos.*

GELIUS (AVRUS), a Roman orator and voluminous writer of the second century. He studied rhetoric under Gennadius Probus, at Rome; and philosophy at Athens, under Faventius Pammachius; and others. His work, entitled "Meditatio Attica," consisting of critical and philological observations, which he had taken up from reading and conversation, has preserved his name from oblivion. It was commenced in the night of a festival which he spent in the honourable Athens, from which afterwards he did not return: like the

wreath of Admetus, "Mithridates," and other representations "Coffin-work"; it derives its title from the facts and maxims of antiquity, and the fragments of former writers which are included in it. Gelius died about the beginning of the reign of Marcus Aurelius. The best editions of his works are those of Gronovius, Leyd. Edit. 1706, 2 vols. folio; and Corpius, Lips. 1705, 2 vols. folio. There is an English translation of the *Nectes Atticae* by the Rev. W. Bellet. —*Poetiv. Edit. Let. Statuti Introd. in Hist. Lit.*

GEMINIANI (TAZIAZZO) an eminent composer, principally for the violin born at Lucca in 1697. He commenced his musical education under Leonati, of Milan a celebrated violinist, better known by the name of Il Gobbo afterwards studied counterpoint under Scarlatti at Rome and finally became a pupil of Corelli. Although a perfect master of his instrument, he was considered so wild and unsteady a master that he put the whole orchestra into confusion more than once at Naples, while acting as leader of the band, and was therefore induced to retire from that situation. In 1714 he came to London, where he published his first work consisting of twelve solos, which though extremely difficult, professors have considered superior to those of his great master White in England he continued to print, at intervals, various compositions of the same description all of which are remarkable for the excellence of their style as for the labour and skill necessary to their execution. He was also the author of three treatises on the art of managing his favourite instrument and of a musical piece entitled "The Enchanted Forest." This latter composition printed in 1756 is an attempt to express by mere sound without the assistance of words, the episode contained in the thirteenth book of the *Jerusalem Delivered*. It was not, however, very successful. Geminiani continued to reside in London, playing occasionally his own compositions at the houses of the nobility, and supporting himself by teaching till 1750, when he went to Paris, but returned in 1755. Dubourg master of the king's band in Ireland was one of his best scholars, and sent him an invitation, which he accepted, to come to Dublin in, but owing to his great age, and the vox sonus which he experienced at being robbed of some valuable music, he did not survive his journey more than a twelvemonth, dying at Dublin in 1764.—*Bibl. Diet. of Mus.*

GEMISTUS PLETHON (GNEZEX) a philosopher of the 15th century. He was a native of Constantinople and appears to have resided chiefly in the Peloponnesus, where he acquired the character of a man of great learning and virtue. He became a zealous advocate for the doctrines of the later Platonists, and consequently a violent opponent of the Aristotelians. He also defended the Greek church against the Latins; and in 1458 he was sent to the council of Florence to discuss the subject of a proposed union between the two churches. His final and strongest in the cause which he maintained, gained the admiration of his oppo-

ments, which distinguished him as the most sensible, most eloquent, and most popular orator in France, was sent to Paris to represent the King, and to demand his release; and he was sent to the Convention to represent the King, and to help to bring about the fall of Louis the XVI., and Maximilian Robespierre, and Marat, his adherents, and his enemies. His influence in the Convention was predominant; for among the many instances of disregard to which he was exposed, we may notice his refusal to remain in Paris, and his flight in 1792, at the age of one hundred and twenty-four years; and his writings are a study on the differences between the doctrine of Rohan and Artois, a book against the arguments of George Washington for Artois; a treatise on various topics, two books on the affairs of Geneva after the battle of Montmore, commemorating on the tragic events of Zemester, besides a number of theological, historical, and philosophical pieces yet remaining in manuscript. —Prestwich, *Hist. Gen.* Aitken's *G. Eng.*

LEBRUN (GILBERT CHARLES LE) marquis de l'Aspin, born in 1688, was a counsellor of the parliament of Paris, and filled the office of receiver of requests. He was the author of "Traité de l'Opéra ou Mémoires pour servir à l'Historie de l'Aspir Humain," 6 vols., 1730, afterwards augmented to eight volumes, and in 1733 he published "Antiquités de la Musique de France," &c. He died in 1746. —Moreri, *New Dict. Hist.*

GENDRE (Louis LE) a French historian born of an obscure family at Rouen, and educated through the patronage of De Harlay, afterwards archbishop of Paris. He entered into the church, and became a canon and sub-chancellor of the cathedral of Notre Dame. After publishing a life of his patron, he produced "Histoire de la France" 3 vols. folio, Paris, 1710; reprinted in 8 vols. 1720. Besides an abridgment of the national annals this work includes a catalogue of the ancient manuscripts, French historians, with criticisms on their writings, an account of the manners and customs of the French in different ages, the genealogy of the royal family, and a chronological catalogue of the great officers of the crown. He was made abbot of Notre Dame de l'Assomption, in the diocese of Chartres. His death took place February 1, 1733. He published several other works, and left an interesting life history of his own life, each written in a different style and manner, which he intended to be committed to the press.—Lamartine.

GENDRE (Charles LE) one of the revolutionaries chief in France, who was originally a lawyer, and afterwards a teacher at Paris. He possessed considerable natural talents, which he used to extract active service at the period of revolution. After having been a leader of royalist proprieetors, he was employed by the government of the popular party to collect information. He distinguished himself by his skill in counterfeiting so many documents, and in passing them off as genuine, that he was called with others, the "King of Forgers." He was one of the principal leaders of the revolutionaries party, and was a member of the committee of safety, of which he was president, and of the committee of public safety, of which he was vice-president. —Lamartine.

de GICHY de CHAMONIX, de Chambon, a celebrated soldier, a favorite in the court, and was a companion after his retirement, under the title of "friend of royalty." In September 1792 he went down a deputy from Paris to the National Convention, in which he voted for the death of the king. After having lost in the metropolis and the departments, both one of the most valiant among the Bretons, who participated in the tyrannical government of Rohan, he joined Tallien and others in the destruction of that chief. It was then that he signified himself by driving away the members of the Jacobin Club, locking up their hall, and delivering the keys to the Convention. He was named a member of the Committee of Public Safety in August 1793 and he denounced those with whom he had been connected and declaimed continually against the sanguinary measures in which he had participated. On the revolt of the Jacobins against the Convention in April and May 1793, he displayed a great deal of courage and activity marching several times at the head of the troops who defended the legislative body and contributing much to the defeat of his old associates. He afterwards was made a member of the Council of Ancients, in which he figured to less advantage than in the Convention, his eloquence being more remarkable for force of expression than for precision or elegance. He died at Paris, December 13, 1797, at the age of forty-one, leaving his body to the surgeon, that he might, as he said, become useful to mankind even after his death.—*Dict. des H. M. de l'Acad.* 3.

GENDRE (Adrian MARIE LE) professor of mathematics at the military school of Paris, member of the Académie des Sciences, and chevalier of the legion of honour. In 1787 doubt being raised as to the respective positions of the observatories of Paris and London to put an end to them it was resolved that the points placed between Dunkirk and Boulogne should be verified, and Le Gendre, Cassini, and Mechain were employed in this operation and the new means which they employed gave a much more exact result than any which had been tried before. In 1794 M. le Gendre published his "Mémoire sur les transcendantes elliptiques, and his "Éléments de Géométrie" which last is considered very able. His new treatment of the orbits of planets being founded on principles purely analytical he was accused of having given loose or some paradoxical ideas, which induced him to remodel his book and make it much clearer. M. le Gendre also made many learned researches on the subject of the attraction of elliptical ellipsoids; and commenced his researches on homogeneous ellipsoids to the Académie des Sciences. In 1774 he assisted M. de Prony to form trigonometrical tables for the decimal division of the circle taking the lead in the analytical part, and computing very elegant formulae to determine the incommensurable ratios of the sides. In 1776, becoming a member of the company superintendancy of weights and measures, he discharged the functions of this

officer while was member of the ministry of the interior. M. de Génie was a member of the legislative assembly at the time of their body; and under the imperial government was named censorial for life of the university. On the re-establishment of the king he became, in 1815, member of the council for public instruction, and in 1816 he was named, conjointly with M. Poleni, examiner of the candidates for the Polytechnic school. Besides the above-mentioned works he also published

Nouvelle Théorie des Pendules; " Nouvelles Méthodes pour la determination des Orbites de Comètes; " *Supplément à l'Essai sur la Théorie des lumières; Exercices de Calcul intégral.* —*Bog Univ. des Contemporains.*

GENESIUS (Jesuarius) one of the Byzantine historians, flourished about the year 940. By order of Constantine Porphyrogenitus, he wrote a history of Constantinople, in four books, from Leo the Armenian to Basil the Macedonian. It was printed in 1733 at Venice, by Pasquali, in his edition of the Byzantine historians, but was very imperfect.—*Sam. Cossut.*

GENNADIUS. There were two ecclesiastics of this name in the latter part of the fifth century. Of these the elder succeeded Anatolius as patriarch of Constantinople in 456, and died in 471. He was an able and active prelate, and was the author of a Commentary on the Prophecies of Daniel and a treatise written against the Anathema of Cyril of which latter work alone a few fragments are remaining.—The other was a priest of Macellus and wrote, about the year 493 a treatise on Ecclesiastical Dogmata, and a volume of Memoirs of the most celebrated Writers of the Church. Some have asserted that he was in his heretic a Pelagian, but the accusation appears to have been advanced without sufficient proof of its correctness.—*Morari.*

GENOVESI (Arrivio) an able writer on philosophical and metaphysical subjects, born in 1714, at Castiglione in Italy. His friends intended him for the church, which he declined, in order to follow the law, a study which he abandoned in its turn, and devoted himself to general literature. He acquired considerable notoriety at Naples, about the middle of the last century, by the lectures which he delivered as professor of metaphysics, having been chosen to fill the chair in 1741. A considerable degree of popular esteem was excited against him by his advocating in this capacity the opinions of Galileo and Newton, from the effects of which he was protected only by the immediate patronage of the king, who gave him the professorship of ethics. In an attempt to succeed to the divinity chair he was failed by the clergy who excluded against him as a heretic, but he eventually succeeded to that of political economy. The work by which he is most advantageously known to us is "*Italia Monetaria.*" His other writings are—"Philosophical Considerations on the Italian Monarchs;" "*A Collection of Economic Studies;*" "*A System of Logic;*"

"*The Institutions of Philosophy;*" "*Notes of Value; and a Manual of Political and Commercial Economics.*" His death took place in 1769.—*Filippo Pisa Falorni.*

GENTILESCHI (Giovanni) an English painter, whose family name was Scacci, was born at Pisa in 1563. He was invited to England by Charles I who appointed him keeper in his court, with a considerable salary, and employed him in his palace at Greenwich and at other public places. His principal performances in England were the ceilings of Greenwich and York houses. On the death of the king, when his collection of paintings were sold, 600L were given for nine of Gentileschi's pictures, which are said to be in Marlborough-house. His most admired performance abroad was the picture of cardinal Bettaruglio a palace at Rome. He attempted portrait painting but without success his talent lying altogether in history. He died here in 1647.—His daughter, **ANNIBELLA GENTILESCHI**, equally famous for her love imagined and talents in painting passed the greatest part of her life at Naples, and died in 1662. She excelled her father in portraits, and was but little inferior in history. Her principal historical picture was that of David and Goliath. She took the portraits of the royal family and of many of the nobility of England.—*Pilkington. Lord Oxford's Anecdotes.*

GENTILIS. There were two brothers of this name sons of a physician at Arezzo. **ALBERICO** the elder born in 1550 accompanied his father who had abjured the Romish church to England, where he resumed the study of jurisprudence, and obtained the professorship of civil law at Oxford. He was the author of a treatise "*De Jure Belli*" favourably noticed and used by Grotius, in dialogues "*On the Interpretation of the Law*" and a small work, entitled "*Lectiones Virgiliana.*" He died in 1608 or as some say in 1611.—A son of his, named **ROBERT,** in genius but dissipated man translated father Paul's History of the Inquisition into English.—**SCIPIO GENTILIS**, the younger brother born 1559 was compelled to quit his native country by the same motives which excommunicated the rest of the family. He sought refuge in Germany and after studying at Wittenberg Leyden, &c. obtained the professorship of civil law at Alton. His translation of Tasso's *Jerusalem Delivered* into Latin verse, has been much admired. His other works are—a Paraphrase of the Psalms, "*De Jure publico populi Romanorum;*" "*De Rebus materiae et aereis Nuptiis;*" "*De Coagulatione;*" "*De desideriis inter virum et uxorem;*" &c. &c. He died in 1610.

GENTILET (Valentine) a learned French protestant writer was a native of Vienne in Dauphiné, and distinguished in the sixteenth century. He is said by some to have been a high advocate in the parliament of Toulouse, and afterwards apothecary of the republic of Geneva; and from the preface to one of his works, it appears that he was at one time president of the parliament of Grenoble. His

the author of the *History of the English Revolution*, and the *History of the English Commonwealth*. He was a man of great learning, and had written a number of works, and also a history of the reign of King Charles I. He was a member of the Society of Friends, and also a Quaker. He was a member of the Society of Friends, and also a Quaker. He was a member of the Society of Friends, and also a Quaker.

LEATHES (Thomas) a dramatic writer, and actor born in Ireland in 1722. He was educated at Dublin, and was the schoolfellow of Moore. At the age of six years he obtained a commission in the army, but on peace taking place in 1748, his regiment was disbanded, and he left the service. He then abandoned his inclination by going on the stage. His first appearance was at Dublin as the character of Abdon in *Orcomen*, and he afterwards performed at Bath, Edinburgh, and many places in various parts of the country but with no extraordinary success, as his histrionic talents did not surpass mediocrity. He then relinquished his profession, in expectation of some provision from the marquis of Granby but the sudden death of that nobleman disappointed his hopes, and he was again obliged to become an actor. In 1776 he was engaged at the Haymarket, by Mr. Foote, and being dismissed after three months, he went to Dublin. Having experienced the various hardships of a wandering actor and the disappointments of an unfriendly audience, he closed his mortal career December 16th, 1784, leaving the history of his professional life as a warning to stage-struck youth. He was the author of several plays, a volume of fables and other pieces of no importance.—*See Drury.*

GEOFFREY of MONMOUTH, called also Goffrey ap Arthur an ecclesiastic and historian of the twelfth century. According to Leland, he was educated at Monmouth in a convent of the Benedictines, among whom he entered. He was afterwards made archdeacon of Monmouth, whence he was raised to the bishopric of St. Asaph. The unquiet state of affairs in North Wales induced him to quit that country and retire to the court of Henry II, who gave him the abbey of Abergavenny, which he intended to hold in communion with the episcopal see; but his clergy insisting on his residence among them, he refused to yield to their requisition, and died at Merton abbey, where the abbey being bestowed on another person, he was left without a home there. Geoffrey wrote various works, but his *Historia Regum Britanniae*, or the *History of the Britons*, is the most popular of his pen which requires no introduction to most known to be in the English states, though a translation into Latin was made by Bede. It contains a chronological history of the kings of Britain from the creation of the fabric of Britain till the

beginning of the eleventh century, including the reigns of the Saxon kings, and the conquest of England by the Normans.

EDWARD LEWIS Living of Cheshillton, and son of Hawes, was elected of the elector, Elector-Augustus, by Sophia, daughter of Frederick elector-palatine, and grand-daughter to James I. He was born in 1665, and was early trained to arms under his father. In 1682 he married his cousin, Sophia Denechou, only daughter of the duke of Zell, a match attended with little domestic happiness. He then engaged in the service of the emperor and signalised his valor in three campaigns against the Turks in Hungary. In 1700 he succeeded to the electorate, and in this succession was joined in the alliance against France. The command of the imperial army was conferred upon him after the battle of Blenheim in 1704, but owing to the jealousies among his confederates, being enabled to act as the defensive only he resigned the command at the end of three campaigns, leaving however his own troops in the service of the allies. At the peace of Rastadt Lewis XIV solemnly recognised the electoral dignity in the house of Lengburg, as he had before done in the treaty of Utrecht the succession of the same house to the throne of Great Britain, which event took place on the death of Anne in 1714, when the elector was in the fifty fourth year of his age. On his accession he was of course thrown into the arms of the whig party who indeed since maintained the principles by which the Stuarts had been set aside. As George I excited little personal influence on the events of his reign, they need only be referred to with brevity. The late tory remonstrants were called to account for their conduct in respect to the treaty of Utrecht, and several of the leaders were impeached or driven into exile. Owing to the dissatisfaction produced by these measures among a still powerful party, including a majority of the high church clergy and the yeomanry, tumults ensued in various parts of the country, and at length in 1715 the earl of Mar openly proclaimed the Pretender in Scotland. After some sanguine, attended with various success this insurrection being ill seconded by the English Jacobites, was entirely quelled, and several of the leaders lost their lives on the scaffold. The disaffection to the new family continued however so great, that the rebels were driven into more than one unpopular measure with a view to support it, the most impudent and indefensible of which was the augmentation act, extending the duration of parliament from three years to seven. The king, who probably considered the possession of the British crown precarious, sought to increase the value of his German possessions by the purchase of Brandenburg and Saxony, which possession he determined to support against the alliance of Sweden. This proceeding in connection with a quarrel with Charles XII, who, in company with the east-Prussians, projected an invasion of Scotland in favour of the

Restoration. The following will describe: "Charles II died childless in 1685, and William III. became King of England; when under the Regency of the Duke of Ormonde, whose influence it was to bring good terms with Great Britain. The Duke of Ormonde in 1697 put us up to this plan; which, however, was soon removed by the unfeeling project of the celebrated Spanish minister cardinal Alberoni, who formed a quadruple alliance between the three powers already mentioned, with the accession of the emperor. The seizure of Sardinia and invasion of Italy by the Spaniards, gave pretence for the sending of a strong British naval expedition into the Mediterranean, under Sir George Byng who encountered and nearly destroyed the whole of the Spanish fleet of Sicily. This success was followed by the recovery both of Sicily and Sardinia, and although the court of Spain made heavy complaints of the attack without a declaration of war it was obliged to accede to the terms of the allied powers and a pacification of the north of Europe was also effected by the mediation of Great Britain. In 1700 the national delusion usually entitled the South-sea Bubble, was the source of much private calamity in England, and produced disturbances which recalled the king from a visit to his German dominions, in order to consult with his ministers on the measures necessary to restore public credit. In 1702 a new conspiracy against the existing government was discovered, which led to the apprehension of several persons, among whom was the celebrated Attorney bishop of Rochester who was exiled for life. The ministers of France and England, cardinal Fleury and Mr Robert Walpole being both pacifically inclined, the two countries long remained in peace notwithstanding the death of the duke of Orleans, and the good understanding secured for some years the general repose of Europe. In 1725 a treaty between Spain and the emperor excited king George a jealousy so much, that he deemed it necessary to counteract it by another at Hanover comprising most of the other European powers. He also sent a fleet to the West Indies under admiral Hawke, who, with his crew fell a sacrifice to disease and the tempestuous malignity of his orders, a catastrophe which was considered the most inglorious disaster of his reign. The Spaniards then commenced the siege of Gibraltar, but all differences were finally settled by a negotiation, during which the king, who had set out on a journey to the continent, was seized with a paralytic attack of which he died at Greenwich, June 11, 1760, in the sixty-eighth year of his age, and the thirtieth of his reign. George I was pale and simple in his taste and appearance, and grave and stern in his general manner, although gay and familiar with his intimates. His principal merit, natural prudence and good sense, and well understood his interests, at least when his heart was conciliated. His able management of the German dominions, was conspicuous; and possibly looking at the life of his son which he now

passes, the name of Good George, might be given him. His reign was marked by the establishment of the Bank of England, and the foundation of the Royal Society of Arts. He had put away his wife the second year, and then, however, but was not governed by them. Leopold wrote to the first sovereign of the house of Hanover a panegyric of modern history in such vicinity although, in other respects, literature seems to have claimed little either of his respect or attention.—*John Bigg - Socialist.*

GEORGE AUGUSTUS II., King of Great Britain son of George I. was born in 1683. He married in 1705 Wilhelmina Dorothy Charlotte of Brandenburg Anspach, and came to England with his father at the accession of the latter, and was created prince of Wales. He was made regent during the king's visit to the continent in 1716, but a political difference causing he lived some time estranged from the court. This branch was however finally accommodated, and he again received the attention due to the heir apparent, until his father's death in 1727 when he succeeded to the throne. He inherited in full force the proclination of George I for Germany and the same system of politics, and the same ministers, continued to govern the nation after his accession as before it. In 1732 Walpole introduced into parliament his financial scheme of an extension of excise which excited so violent an opposition that he was obliged to withdraw it, but most of its intended provisions have been since adopted. In 1737 the same minister took advantage of some theatrical pasquinades (probably rendered obscene by design) in order to limit the number of play-houses, and to subject dramatic writings to the inspection of the lord chamberlain. Duperes having long prevailed with Spain, in regard to the trade to the West Indies, a convention between the two courts was signed in 1739 but the terms gave so little satisfaction to the merchants of Great Britain, that Walpole found himself obliged to yield to the clamour and war with that country taking place the same year the nation was gratified by the capture of Portobello by admiral Vernon. Austria (see his life) was also sent out on his celebrated expedition, and a powerful fleet and army were fitted out to capture Carthagena. The failure of this latter enterprise owing to the mismanagement and disengagement between the naval and military commanders, produced so much discontent throughout the nation, that Walpole, in 1742 was obliged to resign. In the mean time the death of the emperor Charles VI raised the question of France and other powers, to strip his daughter Maria Theresa, of her inheritace, which did not induce George II, as successor of the pragmatic succession, to decline in her favour. An English army was accordingly sent to the continent, and strengthened by a body of Hessians in British pay. The English troops shared in the campaign, the command of which was however entrusted to the earl of Shrewsbury. The battle of Dettingen followed, in which the French were defeated, but with little credit to the English, who were obliged to quit

the field of Marathon, where their wounded, in this battle, displayed great bravery; but after his victory, under the command of Lord Stanley, the author was often present, in disgust, with the command of the army, who suffered in the King's second war, William, duke of Cumberland, who lost the bloody battle of Flodden in 1513, and the French, commanded successively at Flodden during the rest of the war, distinguished by the literary pretensions of Francis, the popular leader in 1745 enabled the young pretender to try his fortune in a descent on the northern part of the island; and accordingly he embarked in a French frigate, and landed on the Scottish coast in the July of the same year. He was immediately joined by many of the clans, with whom he proceeded southward, and contending adding to his army, he proclaimed his father king at Perth, and took possession of Edinburgh. Having defeated the royal troops at Preston Pans, he at length entered England, where he had promises of adequate support, but although he penetrated without opposition so far as Berwick the people showed but little active inclination to his cause. News of the arrival of the duke of Cumberland with several regiments from Flanders, and of the rapid assembling of troops from all quarters, to oppose and intercept him, intimidated the pretender and his council, that a retreat was quickly determined upon, and effected without loss. The arms of the adherents were again successful in a skirmish at Falkirk, but here their fortune ended; for the duke of Cumberland, meeting his forces, came up with the augmented army at Culloden near Inverness, and on the 17th of April, 1746, obtained an easy victory, which finally terminated the struggles of the house of Stuart. The young pretender with great difficulty made his escape, and the blood of his adherents, who were treated with great military severity by the duke of Cumberland, also flowed very copiously on the scaffold. During their events the king received numerous demonstrations of attachment to his person and family; and it was obvious that the greater part of the nation connected the interests of civil liberty with the support of the principles which had called the house of Hanover to the throne. In 1748 the war, which had been very unprofitable of advantage to England, was terminated by the treaty of Aix-la-Chapelle. In 1751 died Frederick, prince of Wales, who having lived for a considerable time at variance with his father, was naturally thrown into the opposition party, and thereby in a manner which has not been unusual with English heirs apparent, became the avowed patron of popular forms of government. He appears to have been a well-educated prince, with sufficient eloquence and energy of character. In 1755 another collision between Britain and France occurred, in their respective dominions in America, and particularly in that country, where the contest was between the two nations for the crown. The events of the next century, the political power of Europe became concentrated, with rapidly, under the influence of the alliance of France and of Austria.

George II., who, to the surprise of posterity, owing to the prudence of his reign, rather than to the blessing of the sovereign, The war with France exposed the most vigorous part of their resources, as the Duke of Cumberland, at the head of an invincible army, was obliged to capitulate to the French, who took possession of the whole of the electorate. When Mr Pitt, however, was called by the voice of the people to the direction of affairs, England, weak and divided, had declined so low that few troops had been summoned to defend the kingdom from invasion, suddenly exerted the martial energies of her character, and victories followed in every quarter of the globe. The French power in the East Indies was annihilated. In America, Quebec and the whole of Canada yielded to her arms. The islands of Senegal and Guadalupe fell under British dominion, and the battle of Minden healed the national reputation in Germany. In this state of affaire George II. suddenly died from the uncommon circumstance of the rapture of the right ventricle of the heart, which without previous suffering, terminated his life on the 25th of October 1760 in the seventy-seventh year of his age and thirty-third of his reign. George II. was a prince of very moderate abilities, personally parsimonious, and wholly regardless of science or literature, but although hasty and somewhat obstinate in temper he was honest and open in his disposition. His queen the cultivated and well-informed Caroline acquired a great ascendancy over him, which did not however prevent some of the sexual attachments so common with royalty, but George II. was not of a disposition to permit them to be very injurious to his people. Upon the whole this monarch was not unpopular and dying as he did, in the midst of a successful war, he enjoyed at the time of his decease no small share of national attachment.—*Athenæum*: *G. Biggs' Society's Hist. of England*.

GEORGE III., king of Great Britain, born the 4th of June 1738 was the eldest son of Frederick, prince of Wales, by the princess Augusta of Saxe Gotha. On the death of his father in 1751, his education was entrusted to the earl of Harcourt and the bishop of Norwich but the formation of his opinions and character seems to have been materially influenced by the paternal ascendancy of the princess Augusta, who in her turn appears to have been principally guided by the counsels of the earl of Bute. George III., who had been privately created prince of Wales, ascended the throne as the successor of his grandfather, George II., on the 25th of October, 1760, being the last reigning king of that year. A preparatory war having made the existing administration headed by Mr Pitt, (afterwards earl of Chatham,) exceedingly popular, no immediate change was made in the cabinet, and the first measures of the new king to his council and parliament, were favorable to the singular combination formed of the conduct of a young prince of Jonathan's person and youthful levity, who enjoyed the advantages of being

and did advantage of the new Whig and Whig-Union party opposite. But the old Whig party, to give it the name of the owners of a reign of upwards of half a century, would be history, nothing more will be attempted beyond a slight allusion to its principal features, as illustrative of the character and conduct of the monarch. In 1761 the Pitt administration exchanged Mr Legge and lord Holderness for viscount Buryington and the wif of Bute, a fact worthy notice as concerning that series of important ministerial changes which so curiously distinguished the first ten years of the reign of George III. In the same year Mr Pitt resigned the seals of foreign secretary in consequence of being outvoted in the cabinet on the subject of a war with Spain which he deemed absolutely necessary an opinion that was borne out by the event before the year expired. The marriage of the king with the princess Charlotte Sophie of Mecklenburg-Schwerin (an union which in its result operated materially on the domestic character of this reign) also took place in 1761 that ceremony being performed on the 28th of September and the joint coronation of the king and queen following on the 23d of the same month. A new administration, formally headed by lord Bute having entered into negotiations with France and Spain, preliminaries of peace with those nations were signed on the 3rd of November 1763 at Fontainebleau, on terms which although favourable to Great Britain fell far short of national expectation. In 1763 the publication of the celebrated periodical paper entitled the North British, written by Mr John Wilkes, then member for Aylesbury in a spirit of unsparing censure of the Bute administration, led to a series of ill-judged measures, in regard to that individual, that did any thing but honour to the council which produced them a remark rather strengthened than otherwise by the fact, that the result of them proved favourable to the interests of civil liberty. In the midst of these differences, two voyages of discovery were undertaken the one under commodore Byron, and the other commanded by captain Wallis and Cartwright being the first of the series of similar expeditions which have done very considerable honour to this reign. In 1764 Mr George Grenville, who had become premier by the unexpected retirement of the earl of Bute, began that career of measures in relation to the taxation of the American colonies, the consequences of which have proved so momentous, and notwithstanding the strenuous opposition of the colonies, the Stamp act was passed the following year. About the same time, in consequence of some appearance indicative of the malady which obscured the latter years of the king's existence, a bill was passed to enable his majesty to appoint the queen, or any of the royal family residing in England, his lawful successor, and regent of the kingdom. The attempt of the ministry to provide the facts royal family to the designation of George II, with the exclusion of the pretender George of Walde, caused such

alarm, that another change of administration took place, in which the name of Rockingham was placed at the head of the government. In 1766 the new administration, among other popular measures, repealed the odious slave-trade act, at the same time however passing a declaratory act, assertive of the right of imposing colonial taxation. The parliamentary session followed this concession, and other measures of the Rockingham cabinet, could not however preserve it from the fate of the ministry which had preceded it, and upon the 30th July, 1766 it was dissolved, and succeeded by one formed by Mr Pitt, (then created earl of Chatham) who took the office of lord privy seal, but not without a considerable decline in public favour, and with a party of support that materially paralysed his energies. In 1767 Mr C. Townsend, chancellor of the Exchequer in this administration, revived the American disputes, by imposing duties on certain articles imported into America, and in 1768, lord Chatham, disgusted with the conduct of his colleagues resigned the privy seal, and was succeeded by lord Bute. The same year was distinguished by the return of Mr Wilkes for Middlesex, and the popular tumult attendant upon his imprisonment and attorney. In 1769 that popular leader was expelled the house of commons, for publishing with severe comments, a letter written by lord Weymouth one of the ministers in his capacity of chairman of the quarter-sessions at Lambeth; he was however returned by his constituents a third, and even a fourth time until the administration determining to enforce his expulsion at all events, declared the opposing candidate colonel Latrell, (notwithstanding a majority of nearly 1000 votes,) duly elected, a proceeding which, some time after the event, was virtually declared illegal by parliament itself. This unconstitutional proceeding did not prevent the same bold and active partisans from gaining a verdict of four thousand pounds against the secretary of state lord Halifax, for the illegal seizure of his person and papers, by which certain general warrants were judicially declared illegal. The year 1770 was signalised by another change of administration, which rendered lord North premier; by the passing of the Grenville act for regulation of the proceedings of the house of commons, in regard to contested election by a bold address and remonstrance to the throne from the livery and corporation of the city of London, and by the celebrated letters of Jemima. In the session of 1771, the house of commons ordered the attendance of certain persons, for publishing the debates of the house. The printers not attending to the summons, were ordered into the custody of the serjeants-at-arms, and one of them being taken and carried before alderman Wilkes, he immediately discharged him, and issued process to prosecute the persons who had arrested him, for false imprisonment. The lord mayor (Crosby) and aldermen Oliver acted in a similar manner on the arrest of others of the printers; on which, being members of the house, they were ordered to stand in their

shattered by the revolution in the United States, and the subsequent contest between the royalists and republicans in France, which ended in the victory of the former, and the loss of the empire and colonies of France. The ministry, however, was not very anxious by these events to limit the powers of the king, or to restrain the members of the royal family from marrying, without the king's permission, before the age of twenty-five ; as this subsequently it was approved by both houses of parliament. In 1775 the insurrections in America burst into an open flame, and three sloops laden with tea (one of the taxed articles in the port of Boston) were destroyed by armed persons in disguise, who threw the whole of the cargo overboard. These disturbances produced a royal message in the commencement of the session of 1776, calling on parliament for such measures as would duly assert the supremacy of the mother country. This communication was immediately followed by the introduction of new bills by Lord North, the first inflicting a penalty equal to the value of the cargo destroyed, and shutting up the port of Boston ; the second annihilating the charter of King William, by investing the crown with the nomination to all offices and employments, and thereby giving power to send persons chosen of political enemies to England for trial. It is the province of history to record the consequences of this impolitic policy in the colonies, and the progress of events from the formation of a general congress of the Americans at Philadelphia in 1776, until the hostile alliance of France, Spain, and Holland, and finally, of the peace which terminated the existence and independence of the United States of America in 1783. The previous summary, as illustrative of the opening of a new era, and as bearing some reference to the vicissitudes of personal character might be necessary ; but from the commencement of the American war, the personal history of the sovereign merges into that of the country, and would therefore be trifled by a mere advertence to the parliamentary and party struggle which ended in the accession to power of the Duke of York; beyond the fact that George III always exhibited a flounce of temper throughout his reign, and made all attempts to form a coalition against him which were disengaged from himself. The conduct of parsons, divested of their ecclesiastical condition, and the numerous attempts to form a coalition between the Whig and Tory parties, began about the time of the American dispute, and terminating the day and disastrous American war, in a course of the most strenuous opposition to the policy, and indecisive

partial government. George III, by that time, had won for his cause the support of the Whigs, though he had lost that of the Tories, who were divided by party which, never afterwards entirely dissolved him. The smooth course of the early years of the administration of Mr Pitt, correspondingly added to this national division, which exhibited itself very strongly, when the constitutional validity of the king again disputed itself in 1789, and still more upon his subsequent recovery. In reference to the French revolution, and the important contests which arose out of it, it is sufficient to remark, that George III zealously concurred in the policy adopted by his administration, and consequently is entitled to his share of the credit or censure which impartial posterity may pass upon the consequences, as exhibited in the lasting benefits acquired or the lasting burdens which it has imposed on the people of Great Britain. A similar observation will apply to the domestic, and Irish and Indian policy of Pitt's cabinet, as also to the transactions connected with the Irish rebellion. It is unnecessary to observe that George III was immovable in his opposition to the demands of the Irish catholics, and acceded by the influence of the church and a predominant share of popular feeling in union with his own, was enabled to eject the Fox and Grenville administration, which succeeded on the death of Mr Pitt, with nearly as much public acclamation as had attended the dissolution of the cabinet arising out of the coalition of Mr Fox with Lord North. The proceedings of the Fox-oval administration until the final retirement of the king in 1810, require no detail here, while the peculiar species of influence exercised by the monarch renders the interval which elapsed from his retirement to his death, a blank in his biography. His decease took place on the 29th January, 1820 in the eighty-second year of his age and fiftyninth of his reign. The political character of George III is tolerably deducible from the course of policy pursued in his long and eventful reign. It is obvious that he acceded the throne with a disposition to resist that predominant whig influence which, since the accession of the house of Hanover had exclusively engrossed the management of public affairs. That ten abatement of a portion of the oligarchical situation which the events of the Revolution of 1688, and the Hanoverian succession, had tended so much to systematize, was doubtful, will now possibly be allowed by the world on all sides. It must however be at the same time granted, that the several influences opposed to whigdom dominated over the accession of George III, exhibited modes of government in other respects, which became those who established them for better in the character of adherents of the associated family than in that of subjects of the house of Hanover. The American war, although by no means propitious in the first instance, was followed by the predominance of those identical ideas of passive obedience, or implicit submission, so

society by degrees and without any opposition, established all over England, and throughout the other colonies, and was maintained by the power of the sword, and the force of the law, but the inherent principle of equality, in one form, what would have been granted in another. In this spirit all the foolish contests with Wilkes, as well as the really small matters after all, which excited the ire and displeasure of James, were more or less designed for the maintenance of some hereditary privilege or prerogative, magnified into theoretical and artificial importance, by the friends of close government and prerogative. The change of circumstances produced by the French Revolution, gave quite a new impulse to practical British policy, and it is for the curious to trace the personal character of the monarch in the course of events so overwhelming and various. Backed as the adopted policy of the country necessarily was, by the fears, alarms, and convictions, of the most influential portion of the community, George III from that time had seldom occasion to put forth his personal feelings or opinions, which are therefore to be gathered only from his ready acquiescence in the various strong domestic measures affecting the liberty of the subject, and otherwise restrictive or severe, upon the partisans of what one side called reform, and the other revolution. It is always useful when a sovereign acts for a series of years in accordance with the views and opinions of a large portion of his subjects; whether altogether correct or not, it tends to strengthen the popular voice, and proportionably to weaken more jobbing party interests. The principal feature of the last half of the reign of George III is undoubtedly the increasing importance and ascendancy of public opinion, which, in conjunction with the press, is gradually becoming a species of fourth estate, which can never be again neglected as it has been, and which it is obvious, is rapidly undermining the close oligarchical influence to which it is in its nature so decidedly opposed. The great progress of the country in every branch of science and information during the last half century will, in fact always reflect a portion of honour on the individual whose name it bears, and although, with the exception of voyages of discovery and the inventions connected with war, the government of George III seems to have had little direct share in the promotion of art, science, or literature, it will and possibly ought, to share in the honour which follows from their diffusion and prosperity. For the rest it may be observed of this sovereign, that he possessed personal courage and steadiness of character in a high degree; and he certainly merits the credit, always due to those, whether kings or subjects, who strictly adhere to their own principles. Of a plain, simple, but not enlarged understanding, he acted upon his convictions with sincerity, but was generally neither numerously equal to anticipate the progress of events himself, or to be instructed in that respect by others.

It must be observed, however, that he appears to have been inferior to his predecessor in the number of his moral virtues, which, however, and notwithstanding, were plain and practical. Liberality and the fine arts engaged but a small share of his attention, and hunting, agriculture, mechanical contrivances, and domestic interests, seem to have chiefly occupied his leisure. Religious, moral, and in the highest degree temperate, the character of his private life was always exemplary, and few sovereigns have enjoyed the benefit of a good character in this respect more abundantly. His deportment as a father and a husband, according strictly with the national and popular notions of propriety, rendered him and the queen an eternal theme of praise, and the throne was regarded as a pattern in respect to the conjugal duties. Although occasionally hurried and impetuous in speech his manners were extremely easy and familiar. In conversation he exhibited much general and particular curiosity, a tendency often accompanied with a unusually retentive memory which he also eminently possessed, never forgetting a person whom he had ever seen or a circumstance which had ever been communicated to him. To conclude, it has been observed of George III, that "he would never do wrong except he mistook wrong for right" and such doubtless may be regarded as the opinion of a large majority of the people over whom he so long reigned.—Original.

GEORGE called also Anna, a learned Maronite, flourished towards the latter end of the sixteenth and beginning of the seventeenth century. He came to Rome during the pontificate of Clement VIII, and there published "A Syrus and Chaldeus Grammat," which is much esteemed. On his return home he was chosen patriarch of the Maronites, and died in 1641. He introduced the use of the Gregorian calendar among the Maronites.—Murs.

GEORGE, surnamed the Cappadocian, was born at Epiphania in Cilicia, where his father was a falter. From that station he raised himself by his talents of negotiation, and obtaining, through the influence of his patron, a lucrative commission to supply provisions to the army he hesitated not to enrich himself by the basest acts of fraud, until his conduct became so notorious that he was obliged to flee from justice. He then went to Alexandria, and proferring much aid for the doctrine of Anna, he acquired great influence. About the year 356, when Athanasius was obliged to flee from the fury of the schismatics, who were commanded by the emperor Constantine to expel him from his see, George was elected bishop in his place. In this station he gave full liberty to his cruel nature, persecuting the catholics with unfeeling fury plundering their houses, and burning their monasteries. Nor was his oppression confined to the catholics alone, all the inhabitants of his diocese were alike victims to his rapacity, which he caused to sink a gulf, that the people at length rose up and expelled him from the city, nor was

George Cappadocia, a learned Greek, was born in 1395 in the isle of Crete of a family originally from Trebessin. He went to Italy, and was patronised by Francis Barbero, a noble of Venice through whose influence he obtained a Greek professorship at Vicenza, which he was obliged to quit, he says, in consequence of the unkindness of Guarino. He then removed to Venice, where he remained until about 1437, when he received an invitation from pope Eugenius IV to settle at Rome, and during the life of that pontiff he was occupied in teaching rhetoric and philosophy and in translating Greek into Latin. Pope Nicholas V made him his secretary but his arrogant temper led him into many quarrels with the learned men of the court, among whom were Guarino, Gasco, and Poggio. Some of his translations also giving offence to the pope he was obliged to leave Rome, and in 1452 he took refuge at Naples, where he was well received by King Alfonso. In 1459, being at Venetia, he presented to the doge his version of Plato's Book on Laws, and was engaged as a professor of belles-lettres. In 1464 he revisited his native land and thence proceeded to Constantinople. On his return to Italy finding that one of his pupils Paul II, was pope, he returned to Rome, but falling under his displeasure, he was imprisoned for four months in the castle of St Angelo. He is supposed to have died about 1460. His works which are very numerous, contributed greatly towards the introduction of Greek literature in the west. He translated into Latin: "Eusebius's Ecclesiastical Preparation," several works of Cyril of Alexandria, of Gregory Nyssos, of Gregory Nazianzen, and of John Chrysostom, many others of Aristotle, Plato on laws, Pliny's Natural History and Consolations, and an edition of the Iliad. He likewise composed: "Dissertationes, Novi," "Reflectiones and Considerationes on some Orations of Cicero," "Elogia," "Orationes," and many controversial treatises. His "Complaint of Aristotle against Plato" gave great offence to the Neapolitan, who caused his translation to be publicly withdrawn.—*Histoire des Grecs et des Latins.*

CHARLES CADOUDAL, the son of a miller, was born at a village near Armentières, in 1770, and at length was sent to Paris to receive his education. The town of Armentières, situated on the Artois, and on their banks, was converted into a fortress, and the castle was intrusted to the ecclesiastic church, and the ville d'Armentières is considered as a saint and a martyr, and the patron of England and the Order of the garter. George of Cappadocia formed a very valuable collection of books, which the emperor Julian made the foundation of the library which he established in the temple erected in honour of Trajan at Antioch, but which the emperor Jovian shamefully permitted to be burnt.—*Fabriani Biblio. GEORGE (Chevalier de St) a native of Grandselve, equally celebrated for his skill as a chess-player and as a performer on the violin. He composed an opera, entitled "La Cléopâtre," and was director of the orchestra at the concert of symphonies in Paris in 1770. The che-

who could complete the task in the absence of his superior. He afterwards returned to Paris, where he died in indigent circumstances in 1851.—*Bis. Dict. Mus.*

GERALD (ALEXANDER) a Scotch pugnacious divine and ingenious writer on polite literature. He was born at Garinach in Aberdeenshire in 1726 and was educated at the Marischal college where he took his degrees in arts, and then went to Edinburgh. In 1748 he obtained a license as a preacher in the kirk of Scotland, and in 1750 he was chosen assistant to David Foddye Marischal professor of moral philosophy at Aberdeen on whose death he succeeded to the vacant chair in 1752. He took orders in 1759, and the next year he was appointed professor of divinity in the Marischal college and minister of the Grey Friar's church in Aberdeen. About the same time he was created DD. In 1771 he resigned his professorship and benefice and was raised to the theological chair of King's college Aberdeen, to the duties of which office he assiduously attended till near the time of his death which occurred in 1793. His works consist of several occasional sermons, "An Essay on Tests" 1579, 8vo, which was rewarded with a gold medal offered for the best piece on the subject by the Philosophical Society of Edinburgh and of which an enlarged edition was published in 1780, "Discussions on the Genius and Evidences of Christianity" 1766 8vo, "An Essay on Genius" 1774 8vo, and two volumes of Sermons 1780 and 1783.—*Supt. to Encycl. Brit. Aikin's G. Bis.*—**GERARD (GILBERT)** son of the preceding was a native of Aberdeen where he received his education. Adopting the clerical profession he went to Holland and became minister of an English church at Amsterdam. On returning to his native country he was chosen Greek professor at King's college Aberdeen. After the death of his father he was professor of divinity in the same college, and he was appointed one of the royal chaplains for Scotland. He died in 1815. He published from his father's manuscripts in 1799 a portion of his theological lectures, under the title of "The Pastoral Care" 8vo a work of considerable merit. His own productions are—"A Sermon on Indifference with respect to Religious Truths" and "Institutes of Biblical Criticism" 8vo.—*Gent. Mag.*

GERARD (JONAS) a learned German divine of the lutheran church in the seventeenth century. He was a native of Jena and after studying at the university there he went to Altdorf in 1643, to acquire a knowledge of the Oriental languages. Having returned to Jena, in 1645 he took the degree of M.A. and in 1646 he was appointed assistant professor of philosophy at Wittenberg. He afterwards was professor of history at Jena, and finally professor of divinity and rector of the university. He died in 1668, aged forty-seven. Among his works are valuable treatises on the

Rosa. Druc.—Vol. II

Scriptures, genealogy, and history of the Catholic church; and an epitome of theological common places, of which an improved edition was published by his son, J. ERNST GERARD, professor of divinity at Giessen, where he died in 1707.—*Aikin's G. Bis.*—*Merton.*

GERARD THOM, TUNG, or TENQUA, the founder and first grand-master of the order of Knights Hospitallers, or Knights of St John of Jerusalem. He was a native of the Isle of Martigny on the coast of Provence or according to others of Amalfi in Italy. Having made a pilgrimage to Jerusalem, while it was in the hands of the infidels, he distinguished himself so much for piety and prudence, that in 1080 he was made superior of an hospital attached to a Benedictine monastery near the holy sepulchre. The chapel of this establishment was dedicated to St John in consequence of a tradition that it stood on the site of the house of Zebedee the father of St John the Evangelist. After the capture of Jerusalem by Godfrey of Bouillon, Gerard proposed the foundation of a new religious order which should be devoted to the seemingly incompatible observances of monachism and chivalry. The project was adopted and in 1100 many individuals entered into an association under the title of Hospitaliers of St John of Jerusalem who besides the vows of chastity, poverty and obedience bound themselves especially to assist and protect all distressed Christians. The rules of the order being drawn up were approved by pope Paschal II., and Gerard was recognised as the first grand-master which office he retained till his death in 1120. Such was the origin of that celebrated order of military monks, who obtained extensive possessions in almost every part of Christendom, and after escaping the catastrophe which awaited the hapless Templars, they have survived amidst political and religious revolutions, even to the present age as the knights of Malta.—*Merton.*

GERARDE (JOHN) an English surgeon, who wrote on botany in the latter part of the sixteenth century. He was a native of Cheshire and after having been educated as a surgeon he appears to have travelled abroad. He at length settled in London, where he not only practised his profession, but also superintended a botanical garden belonging to lord Bayleigh. He resided in Holborn, then a suburb of the metropolis, where he had a garden of his own, in which he cultivated many curious exotics. He was master of the Apothecaries Company and appears to have been favoured by the College of Physicians. His works are—"Catalogus Arborum, Frumentorum et Plantarum, tunc vndeversa quia exoticarum, in Horto Joh. Gerardi, curia et chirurgi Londini, sistossum," 4to, 1596 and 1599, and a "Herbar. or General History of Plants," folio, 1597, republished with great improvements by Thomas Johnson in 1633. The former of these publications contained an enumeration of 1039 species of plants, and the latter was founded on the *Herbal of Dodds*.

G E R.

man, with figures from the Dutch Herbal of Thibautius. Though the literary abilities of Gerhard appear to have been unexceptionable, yet he has the merit of having excited a taste for botany in this country and furnished to the cultivation of the science a useful book for reference.—*Pulney's Sketches of Botany in England. Actae: G. H.*

GERBERT (MARTIN) a dignified ecclesiastic, prince-abbot of a Benedictine convent at St Blas in the Black Forest, born in the Austrian states in 1720. He united a liberal disposition to extensive learning and great taste in the fine arts, especially in music. With a view to advance the latter his favourite science, he travelled, with the permission of the pope, through France, Germany and Italy, his rank in the church procuring him access to the libraries, &c., of all the principal monastic institutions and thus enabling him to collect materials for a history of church music from the best and most authentic sources. This work he finished in six years after his return although a fire which destroyed the valuable library belonging to his abbey consumed also a great part of the materials which he had collected and rendered it much less complete than it would otherwise have been. It appeared in 1774 in two volumes with numerous engravings, and is entitled *De Canticis et Musica Sacra à primâ ecclēsiae estate usque ad presens tempus*. The historical part of it embraces three distinct eras, the first of which ends with the accession of St Gregory to the papal chair, the second, descends to the fifteenth century and the third brings his narrative down to the period in which he lived. In 1784 a work of still greater value to artists and historians issued from his pen being a collection of all the ancient musical writers between the third century and the invention of printing whose compositions had till his time remained in manuscript. This book, which is entitled *'Scriptores Ecclesiastici de Musica Sacra potissimum'*, is now become exceedingly scarce, an excellent analysis of its contents is however given by M. Torkel in his *Histoire de la Musique*. The prince-abbot survived till the year 1793.—*Eccles. Dict. of Mus.*

GERBIER (or BAITHASAR) a miniature painter, was born at Antwerp in 1592. He is distinguished as having been engaged in conjunction with Rubens, to negotiate a treaty with Spain, and as being for some time British resident at Brussels. He was employed by Charles I., and being also acquainted with architecture, was engaged by lord Craven to give designs for Hampton Hall which has been burnt. In 1648 he made his appearance as an author and founder of an academy at Berchem-green, and he continued to publish pretensions with all kinds of wild schemes and projects. He afterwards settled at Surinam, but the Dutch government considering him an agent of the King of England, he was seized and sent back to Holland. He returned to England on the Restoration and died in 1667.

G E R.

He was not much distinguished as an artist.—*Walpole's Antwerp Pillarbox*

GERBILLON (JOSEPH FRANCIS) a jesuit missionary was born at Verdun in 1654, and entered the Society of Jesus in 1670. In 1685 he embarked on a mission to China with six other mathematicians of the society. He remained at Pekin to study the Tartarian language and so ingratiated himself with the emperor that he appointed him to join an embassy sent to regulate the boundaries with the court of Muscovy. By his address he contributed greatly to the success of that negotiation, and on his return to China was chosen by the emperor his instructor in mathematics and philosophy. He was permitted to preach the Christian religion in China and had the direction of the French college in Pekin and finally was made superior general of all the jesuit missionaries sent from France. He was the author of *Elements of Geometry* extracted from Euclid and Archimedes' and

Geometry practical and speculative both written in the Chinese and Tartar languages, and printed at Pekin. He left in MS. a voyage to Siam of which extracts are given in M. Chantre's *Mélanges Historiques*. Gerbillon died at Pekin in 1707.—*Mores. Aves. Dict. Hist.*

GERDIL (HYACINTHUS SICHEMONT) a Roman cardinal was born at Samoens in Piedmont, in 1718. He entered the Barnabite order and in 1742 he became professor of philosophy at Macerata and afterwards at Tum where he was appointed tutor to the prince royal of Sardinia. In 1777 Gardil was made a cardinal and removed to Rome where he lived in comparative retirement. He warmly opposed the intended negotiations with the French consular government in 1801 and considering Bonaparte's proposal for a concordat as a mockery he openly disengaged from it. He died at Rome in 1802. His works are *A Treatise on the Immortality of the Soul*, *'Treatise on the Nature and Origin of Ideas'*, in which he maintained the opinions of Malebranche against those of Locke, an *'Introduction to the Study of Religion'*, *'A Treatise against Deists'*, *The Phenomena of Capillary Tubes*. He also published three works in refutation of some paradoxes of Melon, Montesquieu and Rousseau. Of these the last appears to be the best and Rousseau himself acknowledges, that it was the only book written against him which he thought worthy of being read to the end.—*Athenaeum vol. v. from his Elogi published at Rome—Dict. Hist. Nouv.*

GERHARD (EPERAIN) a German lawyer and philosopher was born at Giersdorf in Silesia, in 1682. He was advocate to the court and regency of Weimar, and afterwards became professor of law in the university of Altdorf, where he died in 1718. He was the author of *'Delinatio Philosophae rationalis'*, to which is subjoined an excellent dissertation *'De Principiis Sapientis Impedimenta'*, &c. with several treatises in jurisprudence and philosophy.—*Nous. Dict. Hist.*

GERHARD (JOHN) an eminent Lutheran

G E R.

divine, was born at Quadrilberg in Saxony, in 1582. He was appointed by John Casimir, duke of Saxeony to a church in Franconia, and at the same time to be professor of divinity in the Cassanum college of Coburg. In 1616 he was appointed professor of divinity at Jena where he continued until his death in 1657. He was four times chosen rector of the university. His works, written in Latin and German, consist of treatises on theological subjects critical and polemical commentaries on certain books of the old and new Testament &c only one of which has Meditations is well known in this country.—His eldest son JOHN ERNST was born in 1621 at Jena. He was appointed professor of philosophy at Wittenberg in 1646, and of history at Jena in 1652. He died in 1688. His principal works are *Disputationes theologicae Fasciculus*, "De Ecclesiis Coptis Orta, Progressus et Doctrina," "Harmonia Linguarum Orientalium," —*Historia ecclesiastis Sacra*, xvii. et seq. *Io. Gerhardi, Lepcis* 1727. *Moreri.*

GERLACH (STEPHAN) a Lutheran divine was born at Künzlingen in Sustria in 1546 and studied at the university of Tubingen where in 1566, he took his degree of BA. On account of the plague he removed to Esslingen where he obtained the degree of doctor in philosophy. In 1573 he accompanied David Ungnad on an embassy from the emperor Maximilian II. to the Turkish court. He continued at Constantinople for five years, during which time he collected several Greek MSS which he purchased for Crusius. On his return to Tubingen he was made professor dean of the church and a member of the senatus academicus. He was the author of several controversial pieces of Disputationes Theologicae de precipuis horum temporum controversiis and of a journal (in German) of the embassy to the Porte. He died in 1612.—*Melchior Adam Ficker's Thesaurus. Niever.*

GERMANICUS (CAESAR) a Roman general the son of Drusus and nephew of the emperor Tiberius. When Augustus adopted the latter as his successor Germanicus was in turn adopted by his uncle. He entered when young on military service, and towards the close of the reign of Augustus he was sent into Germany to oppose the celebrated chieftain Arminius, whom he at length subdued after a severe contest and on his return to Rome he was rewarded with the honour of a triumph. His talents and success excited the suspicious jealousy of his imperial uncle, which was much increased by the disposition which his soldiers had shown to make him emperor on the death of Augustus. He was then sent into the Oriental provinces where he extended the Roman power; but was diverted in his operations by Piso the governor of Syria, who had been employed by Tiberius as a spy on the actions of his nephew. He died at Antioch AD 19, at the age of thirty three, owing, as is supposed, to poison administered to him by Piso. His death occasioned a great sensation at Rome and a profusion of honours was decreed to the memory of this prince, who had

G E R.

been the hope and delight of the Roman people. He was not only famous for his military talents, but also acquired literary reputation as he wrote some Greek comedies, and translated the Phoenissena of Aratus into Latin verse though the latter production has been ascribed to the emperor Domitian who was also called Germanicus.—*Moreri. Univ. Hist.*

GERSON (JOHN) by some called Chartier an illustrious Frenchman, usually styled "Doctor Christianissimus," was born at Gerson in France in 1363. He studied divinity and received the degree of doctor in 1392 and three years after he became canon-chancellor of the church of Paris. In 1408 when Louis Duke of Orléans was murdered by order of the duke of Burgundy, which John Petit was base enough to justify Gerson caused the doctrine of this tyranticide to be condemned by the doctors and bishops of Paris. He also distinguished himself at the council of Constance where he made a speech in which he enforced the superiority of the council over the pope, he also caused the doctrine of John Petit to be condemned there. Not daring to return to France for fear of the vengeance of the duke of Burgundy he retired into Germany and finally went into a convent at Lyons, where he died in 1489. The best edition of his writings is that of Du Pin in 1706 in 5 vols. fol. in which there is a Gersoniana, which is represented as being very curious.—*Du Pin. Blount's Censora. Care. Moreri.*

GERVAISE (ARMAND FRANCIS) a French monk entered among the barefooted Carmelites, but not finding them sufficiently austere he took the habit of La Trappe in 1695 of which order he became abbot. He however made himself so obnoxious in this office rousing and fomenting divisions among the monks that he was obliged to resign although he still continued to live according to the rules of La Trappe. In his first volume of his *Hist. générale de Cîteaux* the Bernardines were so violently attacked, that they obtained an order from the court against him and he was arrested at Paris and conducted to the abbey of Notre Dame de Reims, where he was confined and died in 1765. He was the author of *The Life of St. Cyprian*, "The Lives of Abelard and Heloise," "History of the Abbé Seger," "Life of St. Ireneus," "Life of the Apostle Paul," "Letters on English Ordinations, and against Courayer," "Life of Ruius," &c.—*Moreri.*

GERVAISE (NICOLAS) a French missionary brother of the preceding was born at Paris. Before he arrived at his twentieth year he went with some missionaries to Siam, where he staid four years, and made himself master of the language. On his return he published "Hist. naturelle et poétique du Royaume de Siam, 1698 4to., and "Description historique du Royaume de Macassar," two very curious works. He was afterwards provost of the church of St Martin at Tours, where he wrote a *Hist. de St Martin*, which was criticised by don Stephen Badier, and sixteen years after he published "Hist. de Boëc."

G E S

Being consecrated bishop of Limerick in 1796, he went there; but on their arrival, he and all his clergy were massacred by the Caribs, Nov 20, 1798.—More.

GERVASE of Canterbury an historian of the thirteenth century was a monk of the monastery of Christchurch in that city. His principal works are a chronicle of the Kings of England from the year 1122 to 1200, and a history of the Archbishops of Canterbury from St Augustine to archbishop Hubert, who died in 1205. His chief excellence consists in his strict attention to chronology. The above works are published in Twysden's "Hist. Anglican script X."—Twysden's *supra*.

GERVASE (or TILBURGH) an historian of the thirteenth century so called from the place of his birth was nephew to king Henry II and through the interest of Otho IV he was made marshal of the kingdom of Aries. He was the author of—*A History of the Holy Land. Origines Burgundiorum. Mirabilia Orbis*, a chronicle entitled *De Orbis imperialibus*, of which there is a MS in Benet college Cambridge. He likewise wrote a commentary on Geoffrey of Monmouth's British history and a tripartite history of England. The compilation of the exchequer book entitled *Liber Niger Scaccarii* has also been ascribed to him by some but this has been disputed.—Tanner's *Bibl. Brit. N. cholson's Hist. Library*.

GESNER (CONRAD) an eminent physician naturalist, and general scholar of the sixteenth century. He was born at Zurich in Switzerland in 1516. The circumstances of his father would perhaps have prevented the due cultivation of those talents for study which he early displayed had not Ammannus professor of Latin and rhetoric at Zurich, taken him into his house and liberally afforded him classical instruction. He stayed three years with his patron and pursued his studies with great diligence. When he was not more than fifteen he lost his father who was killed during military service, and the small patrimony which he left being divided among a numerous family Gesner was reduced to distress which was heightened by his sufferings from a dropsical disease with which he was afflicted. Having however recovered his health he resolved to seek his fortune abroad and going to Strasburgh he entered into the service of Wolfgang Fabricius Capito Hebrew professor in the university who taught him that language. In a few months he returned to Zurich, and procured a pension from the senate to enable him to make the tour of France. He passed a year at Bourges where he studied the Greek and Roman classics and added to his scanty income by giving instruction to others. He afterwards visited Paris whence he returned to Strasburgh and not long after was recalled to Zurich to teach grammar to children, at a salary barely sufficient for his support. In this situation he increased his personal difficulties by entering into wedlock, and with a view to improve his circumstances engaged at his leisure hours in the

G E S

study of medicine. At length he went to Basil to avail himself of the means of improvement which the university of that place afforded. Though his pension was continued, he found it inadequate to his expenses and therefore engaged in editing the Greek lexicon of Phavorinus. From Basil he removed to Lausanne where the senate of Bern appointed him professor of Greek and gave him a stipend which relieved him from the fears of indigence and enabled him to prosecute his literary researches with less embarrassment than before. After continuing three years in this station he went to Montpeier, where he applied himself particularly to anatomical and botanical enquiries and then going to Basil he obtained the degree of MD. Thus qualified for the practice of his profession he took up his residence at Zurich where in addition to his employment as a physician he gave public lectures on philosophy. Besides these his stated labours, he took several journeys, in order to collect plants and other objects of natural history of which he was the first in modern times who is recorded to have formed a museum. He also cultivated a botanic garden and employed a painter and an engraver whose labours he assisted and directed. His correspondence with men of learning and science in various parts of Europe was very extensive and the vast number of new observations which he collected relative to natural history entitle him to a place among the principal benefactors of that branch of knowledge. The number of books which he published was so great that it seems difficult to conceive how amidst his other occupations he could have found time to compose them. Among his principal productions may be mentioned—*Historia Animalium. Mithridates, sive de differentiis Linguarum Observaciones. Bibliotheca universalis, sive Catalogus omnium Scriptorum complectens, in tribus linguis Lat. Græc et Heb extantium et non extantum usque ad annum, 1565.* He also published an amplification of a part of this treatise under the title of *Pandecta*. This very industrious scholar died of the plague in 1565.—Tanner's *Elogies Sacrae. Halleri Bibl. Med. et Bot. Historian's Bug Med.*

GESNER (JOHN) canon of Zurich, and professor of natural philosophy in the university there. He pursued his studies at Leyden and afterwards at Basil where he formed an intimacy with the celebrated Haller. He attached himself particularly to the study of natural history and in 1741 he published two Dissertations on Plants, in which he announced the discoveries of Linnaeus as destined to produce a reform in the science of nature. He was also the author of two dissertations on Petrifications or extraneous Fossils reprinted together at Leyden in 1758. Another discourse which he produced on vegetable matter, entitled "De Rannuculo Belbello" did not do much credit to his penmanship as it was a descriptive account of a supposed wonderful plant, which in fact had

G E S

been formed artificially by fastening the flowers of the daisy on a branch of crowfoot or ranunculus. Haller as well as Gesner became the dupe of this deception which was discovered by Sir Joseph Banks. Gesner's principal work is entitled—*Tabulae Phytographicae analysis Generum Plantarum exhibantes*, of which a new and improved edition appeared at Zurich in 15 fasciculi 1793-1813. Gesner died in 1790 aged eighty-one.—Ross's *Cycloped. New Dict. Hist.*

GESNER (JOHN JAKOB) brother of the preceding was professor of Hebrew in the Carolus college at Zurich and was distinguished as a writer on numismatics. He formed an extensive collection of coins and medals which he bequeathed to his brother on his death in 1787 at the age of eighty. His works comprise accounts of the medals of the Greeks Macedonians, Syrians Egyptians Scythians &c and of those of the Roman emperors, and contain the result of his own researches as well as those of the learned medalists who preceded him.—Hirsch's *Manual of Eminent persons of the 18th Cent* Biog Univ.

GESNER (JOHN MATTHIAS) an eminent philological writer who was a native of Franconia in Germany and was educated in the gymnasium of Asbach whence in 1710 he removed to the university of Jena and studied theology. In 1715 he was appointed co-rector of the gymnasium of Weimar and keeper of the public records. Thence he went to Leipzig to preside over the school of St. Thomas in that city, and on the establishment of the university of Gottingen he accepted of an invitation to become professor of rhetoric in 1734. He was also entrusted with the inspection of all the schools in Gottingen and of the philological seminary there and was made librarian and president of the German society. On the establishment of the Royal Society of Gottingen in 1751 he was appointed a member. In 1753 he was nominated a counsellor of state and in 1761 permanent director. He died August 3 the same year at the age of seventy.—His principal work is *Nodus Thessaurus Linguis Latinae* 4 vols. folio, besides which he published selected lectures from the classic writers under the titles of *Chrestomathia Graeca*, *Ciceronianæ*, *Plinianæ* &c editions of the *Scripторium Rei Rusticæ* of Quintilian of Horace of Claudian of the Orphic Fragments and he was also the author of *Prima linea Isagoges in Eridivineum universalem* 2 vols. 8vo and other learned productions.—Aikins's G Biog Univ.

GESNER or GESSNER (SOLON) a Swiss landscape painter more distinguished as a writer of pastoral romance. He was born in 1730 at Zurich where his father was a bookseller. After having finished his education he was admitted as a partner in the trade and at the age of twenty two he travelled through Germany on commercial business and in the course of his tour formed an acquaintance with many of the German literati. Soon after his return home in 1753 ap-

G E S.

peared his first production a short piece, entitled "Night" in a style of composition between prose and verse, of which the English reader may form an idea from the translation of Gesner's subsequent work *The Death of Abel* or from Macpherson's *Ossian*. His next publication was *Daphnis* a pastoral romance in three cantos and this was followed by his *'Idylls* which established his reputation. *The Death of Abel* appeared in 1758 and not only went through numerous editions at home but was also translated into many foreign languages. Gesner afterwards published some minor pieces among which was *The First Navigator* and he attempted but with no extraordinary success, the pastoral drama. About his thirtieth year he married the daughter of M. Hindegger a gentleman of Zurich who had a collection of paintings by artists of the Flemish school the inspection of which inspired Gesner with a taste for the art of design. He had learned to draw when young and he now began seriously to attempt the imitation of those productions which he so much admired. He at first only designed ornaments for the books which he published, but in 1765 he published twelve etchings of landscapes, from his own designs, and twelve more appeared in 1769. His offices and employment were various, for his occupations of bookseller engraver painter and author he added the civic distinction of being a member of the council of Zurich and in 1768 he was appointed bailiff of Elsbach. He received testimonies of respect and admiration from several parts of Europe and the empress Catherine of Russia presented him with a gold medal. He died of apoplexy March 2 1788. All his works are written in prose but in a style of great purity and elegance fewer traces of the Swiss dialect appearing in his compositions than in those of any of his countrymen. Popular as his *Death of Abel* has been in England the translation affords no just ideas of the German original, much of the merit of which depends on taste and delicacy of expression. An edition of his works was published in two vols. 4to embellished with engravings from his own designs.—Aikins's G Biog Univ. *Dict Hist. Biog Univ.*

GESUALDO (CARLO) prince of Venosa in the Neapolitan territories, flourished about the close of the sixteenth century. He gave his attention to the cultivation of the science of music which he studied under Pomponio Nenna. In the composition of madrigals he met with great success, and is supposed to have formed his style on the model of those ancient Scottish melodies which had become popular in the preceding century, but which he is said to have much improved upon. Dr Burney however who appears to have examined the whole six books of madrigals which go under his name is of a different opinion but Germaniani on the other hand was frequently known to declare that the foundation of all his studies was laid on the works of this author. Two editions of detached parts of his composition were

G E W

printed in 1585 and 1593, by Simon Molnaro at Genoa. A complete collection of his works afterwards appeared in 1613. The date of his death is uncertain.—*Bug. Dict. of Mus. Barber's Hist. of Mus.*

GETHIN (Lady Grace) an ingenious lady, the daughter of Sir George Norton of Abbotleigh in Somersetshire was born in 1676. She married Sir Richard Gethin in Ireland, but died shortly after in 1677 in her twenty first year. She left behind her some papers which were collected and published under the title of 'Reliques Gethinienses, or some remains of the most ingenious and excellent lady Grace Lady Gethin lately deceased, being a collection of choice discourses, pleasant apothegms, and witty sentences, written by her for the most part, by way of essay and at spare hours' 1700. Mr Congreve wrote a copy of verses to her memory, and Dr Buck in his anniversary sermon on her death, says that 'te superior talents and mental endowments she joined meekness, candour, piety, and integrity.' A monument was erected to her memory in Westminster abbey though she was really buried at Hollingbourne in Kent.—*Bellar's Memoriæ Nobis Continuation of Granger.*

GETHING (RICHARD) a penman was a native of Herefordshire, but settled in London. In 1616 he published a copybook of various hands well executed, which was followed by another, entitled 'Chirographia', in which he aims at the improvement of the Italian hand. He also published 'Calligraphotachia', which was dedicated to Sir Francis Bacon.—*Massey's Origin and Progress of Letters.*

GEVARTIUS (JOAN GASPER) a learned critic, was born at Antwerp in 1593. He first studied in the Jesuit college at Antwerp whence he removed to Louvain, and then to Douay. In 1621 he took the degree of LL D at the latter place and afterwards went to Antwerp where he was made town-clerk. He devoted great part of his time to literary pursuits, and published 'Lectioenam Papini anarum Libri quinque in Stato Papini Silvas' and 'Electorum Libri tres, in quibus plurimae veterum Scriptorum loco obsecra et Controversa explicantur illustratur, et emendatur'. He also distinguished himself by his poetical attempts, particularly by a Latin poem published at Paris in 1618, on the death of Thucydus. He corresponded with most of the learned men of his time, and some of his letters have been printed in the 'Sylloge Epistolarum' by Bateman. He died in 1666.—*Nivœus Sacri Opuscula Moxri.*

GEWOLD (CHRISTOPHER) a lawyer and historian of the seventeenth century, was a native of Franconia, but the year of his birth and that of his death are unknown. He was one of the legal counsellors of Maximilian, first Elector of Bavaria, who confided to him the inspection of the archives of the duchy. He published 'Genealogia Seruissamensis Bojanorum Ducorum' 1650 folio, 'Chronicon Monasterii Nechernensis', 4 vols., 'Historia Monasterii Nechernensis', 1618, 'Rerum Annales', 1618,

G H I

Wigulus; 'Handb. Metropolis Saluburgeana', 1620, 'Dilectissimo Novico veteri eisque Continuum,' 1619, and 'Commentarius de Septemviro Romani Imperii', 1621.—*Moxri.*

GHEN (HENRY or) Henricus de Ghen davo archdeacon of Tournay in the thirteenth century. He was a German by birth, and appears to have studied at the university of Paris, where he took the degree of doctor in theology. He is said to have surpassed all his contemporaries in knowledge of the scriptures, and to have been intimately acquainted with the Aristotelian philosophy. He died in 1293. His works include a treatise entitled 'Summa Theologica', and 'Commentaries on the Metaphysics and Natural Philosophy of Aristotle'—*Trithemius de Script. Eccles.*

GHEZZI (JOSAFAT) an Italian artist born in the territory of Ascoli in 1634. He was instructed in painting by his father SEBASTIAN GHEZZI who had been a scholar of Guercino. After the death of his father he went to Fermo to study jurisprudence and philosophy but he likewise continued his attention to the art of painting in which he became a proficient by the assistance of Lorenzino an eminent painter of Fermo. Having completed his studies he went to Rome where he relinquished his legal pursuits, to devote himself to the cultivation of the arts. Many of the churches of Rome were decorated with the works of his pencil executed in conjunction with Baldi, Sauter Passari, Parodi and other artists. In 1674 he was appointed secretary of the Academy of St Luke at Rome, and he was also a member of the academy of Arcadians. He was still living in 1718 when Orlando published an account of him in his 'Abecedario Pittorico'.—**GHEZZI (PETER LEO)** his son was born at Rome in 1674. He studied the art of painting under his father whom he assisted in ornamenting the Roman churches. He also made designs for a gallery in the papal palace of Castel Gandolfo but the work was never executed. He is chiefly celebrated as a caricaturist, his productions displaying a striking peculiarity of style and composition. The title of one of his works is 'Raccolta di XXIV Canzoni designate colia penne dal cel Cav P. L. Ghezz, conservata nel gabinetto di S. M. il Re di Polonia', 1750 folio. He died in 1755.—*Abeard Pitt. Elmer's Dict. of the Fine Arts.*

GHIBERTI (LORENZO) a Florentine, famous for his skill as a sculptor in metal. He was instructed in the goldsmith's art by his father, Bartoluccio. He soon surpassed his master, and attained such excellence in the engraving casting, and working of metals, that, among various artists who presented designs for a brass portal for the church of St John Lateran at Rome he obtained the preference. He executed this undertaking in 1410, at the expense of 22,000 florins, and in so admirable a manner that Michael Angelo, on beholding the workmanship, enthusiastically declared it was worthy to decorate the gate of Paradise. When pope Eugenius IV went to the council of Florence in 1439,

G I A

Ghiberti made for him a golden mitre or tiara which weighed fifteen pounds, the pearls and precious stones with which it was adorned weighed five pounds, and the cost of the whole was 30,000 ducata. He died at the age of sixty-four and was interred in the church of St Croce at Florence. He left a work on ancient paintings which remained unpublished.—*Abecedar Pittero.*—*BONACCORIO GHIBERTI*: the son of Lorenzo was of the same occupation and was extremely skilful in making chased figures and ornaments. He died young leaving a son, VITTORIO whom he instructed in his art, but he proved worthless and dissolute and wasted his paternal inheritance Pope Paul III having sent him to Ascoli to carry on some architectural work he was killed in the night by his own servant, whom he had attempted to rob.—*Ibid.*

GHILINI (JEROME) a man of letters was born at Monza in the Milanese in 1739. He studied in civil and canon law and settled at Alessandria but on becoming a widower he took the ecclesiastical habit. He had an abbey in the kingdom of Naples and was made apostolical protonotary and was afterwards presented to a theological canonry in the church of St Ambrose at Milan. He published Poems, Cases of Conscience,

Annals of Alessandria and its circumjacent Territory and Teatro di Nomini Letterati a work which though little valued for correctness is often quoted in biography. The year of his death is unknown.—*Moreri.*

GHIRLANDAJO (DOMENICO) a painter whose real name was Corradi was the son of a goldsmith at Florence and was born in 1449. He painted for the churches and convents in Florence and was called to Rome by Sixtus IV to assist in painting his chapel. He was much distinguished and employed but his greatest glory is his having been the master of Michael Angelo. He died in 1493.—His son RODOLFO was also brought up to the art, and was much esteemed by Raphael himself whose style he imitated. He died in 1560.—*Moreri. Philibertus Ross's Cyclopedie.*

GIAMBERTI (FRANCESCO) a Florentine architect of the fifteenth century. He made the designs for many buildings at Florence and at Rome, but he particularly deserves notice on account of a work which he composed containing numerous drawings of ancient monuments remaining in the Roman territory and in Greece. The designs are drawn on parchment and the work which has never been published is preserved in the Barberini library at Rome.—*Eines's Diet of Fine Arts.*

GIAMBERTI DI ST GALLO (GRULIANO) an eminent architect the son of the preceding born in 1443 and died in 1517. He built a cloister for the hermits of St Augustine at Florence which stood near the gate San Gallo, whence the architect derived the appellation by which he is best known. He was architect, sculptor and engineer to the house of Medici, and besides a magnificent palace which he erected for the grand duke Lorenzo, he built many palaces, churches, and fortresses,

G I B

at Florence Pisa Rome &c. He was reckoned one of the first architects of his age, and being a candidate for the office of architect of St Peter's when the rebuilding of that church was proposed, he was much mortified at the preference being given to Bramante. The direction of the undertaking was subsequently offered him by Pope Leo X, but he then refused to accept it as he was in the decline of life.—*ANTONIO DI SAN GALLO* his brother who was a carver in wood an architect and engineer died in 1534.—*Eines's Abecedar Pittero.*—See *SAN GALLO.*

GIANNONE (PETER) an esteemed modern historian was born at Ischitella in Apulia in 1676. He was brought up to the law and distinguished himself by writing a History of Naples 4 vols. 4to. 1723. Its freedom with respect to the origin of papal power gave great offence to the court of Rome which raised a persecution against the author that necessitated him to quit his country. He found an asylum in Piedmont with the king of Sardinia who however deemed it expedient to disguise his protection under the appearance of confinement. He died in 1748. His posthumous works were published in 1768 in a quarto volume containing among other miscellaneous matter his profession of faith a justification of his history and a life of him by Panzani.—*Fabroni's Vita Italorum.*

GIARDINI (FELICE) a Piedmontese musician originally a chorister at the Duomo in Milan afterwards a pupil of the celebrated Somis at Turin through whose instructions he became eventually the first violinist of his day. In 1700 he came to England where the applause which his performance excited is described to have been only equalled by that bestowed upon Garrick. In 1754 he was placed at the head of the orchestral department at the opera-house and afterwards joined Mingotti in the management of that theatre the speculation did not however prove a fortunate one. With the exception of a visit paid to Naples from 1784 to 1789 inclusive under the patronage of sir W. Hamilton Gardini remained in this country till 1793 when he was induced to visit Russia and attempted to get up burlettas of his own composing both at St Petersburg and at Moscow. The effects of a dropsey had however now materially impaired his physical powers and he met with little success but died at the latter capital of great indigence about the close of the same year.—*Eng. Diet of Music.*

GIBBON (EDWARD) an eminent English historian, was born at Putney in 1737. He was the only surviving child of Edward Gibbon esq a gentleman of an ancient Kentish family and his constitution was so infirm in his infancy that he was reared with great difficulty. After being two years at a private school at Kingston-upon-Thames he was sent at the age of twelve to Westminster where his weakly state of health precluded him from making a regular progress in the classical studies of the school. After several changes of situation in which he was chiefly the object

G I B

of medical care, his constitution suddenly acquired strength, and he entered as a gentleman-commoner at Magdalen college Oxford, before he had completed his fifteenth year. He remained fourteen months at Oxford, which he characterises in his memoirs as most unprofitably spent and his censor of that university is very strong and unequivocal. To a total neglect of religious instruction he attributes his boyish conversion to the Roman catholic religion which was produced entirely by an assiduous perusal of the controversies between the catholics and protestants and to use his own expression as he entered into the field without armour he fell before the weapons of authority which the catholics knew so well how to wield. Following his convictions he solemnly abjured the errors of heresy at the feet of a catholic priest in London, and then wrote a long letter to his father to justify the step which he had taken. The consequence of this disclosure was his immediate banishment to Lausanne where he was placed under the care of M. Pavillard a learned calvinistic minister. By the well directed efforts of his tutor aided by his own mature reflections his new faith gradually gave way and he was again restored to protestantism. His residence at Lausanne was also highly favourable to his progress in knowledge, and the formation of regular habits of study. The below letters, and the history of the human mind chiefly occupied his attention, and to this fortunate period of retirement and application he was chiefly indebted for his future reputation as a writer and a thinker. In 1758 he returned to England and immediately began to lay the foundation of a copious library and soon after composed his '*Essai sur l'Etude de la Litterature*' in the French language which for some years had been more familiar to him than his own. This work which was printed in 1761 was a highly respectable juvenile performance, and obtained considerable praise in the foreign journals. He some time after accepted a captain's commission in the Habsburg militia, and for some time studied military tactics with great assiduity, but he heartily rejoiced when the peace of 1763 set him free. After passing some months in the metropolis he visited Paris and Lausanne at which latter place he employed himself in collecting and preparing materials for a profitable journey to Italy. This took place in 1764, and it was at Rome as he himself informs us on the 16th October in that year as he sat musing among the ruins of the capitol, while the bare footed friars were singing respons in the temple of Jupiter that his idea of writing the decline and fall of the Roman empire entered his mind. He had previously thought of the history of the republic of Florence, and of that of the Swiss liberty, in the last of which he had made some progress, but he subsequently committed the MS. to the flames. In 1770 he first tried his powers in his native tongue by a pamphlet in vindication of Warburton's extraordinary hypothesis concerning the connexion of Vergil's

G I B

fabled descent of *Aeneas*, with the Elysian mysteries entitled 'Critical Observations on the sixth book of the *Aeneid*'. It received great commendation particularly from professor Hayne; and with some unnecessary asperity of which however Warburton was little entitled to complain proved a conclusive refutation. In the same year he lost his father who left him possessor of an involved estate which never seems to have been entirely extirpated. In 1774 by the favour of his kinsman Mr afterwards lord Elliott he obtained a seat in parliament for the borough of Liskeard and was a silent supporter of the North administration and its American politics for eight years. In 1776 the first quarto volume of his 'Decline and Fall of the Roman Empire' was given to the public which at once riveted general attention the first edition going off in a few days and a second and a third being scarcely equal to the demand. Of all the applause he received none seemed to flatter him so much as the spontaneous suffrages of Hume and Robertson but on the other hand his chapters on the secondary causes of the growth and progress of Christianity produced much acrimonious attack. Of his numerous assailants however he answered Mr Davis only and that because he attacked not the faith but the fidelity of the historian. His vindication against this opponent has been much admired for the keenness and polish of its retort and it is generally admitted that he successfully refuted the principal charges against his historical accuracy and as he was evidently an un believer in revelation he judicially sought to do no more. The prosecution of his history was for some time delayed by his complying with the request of ministers to answer a manifesto which the French court had issued against Great Britain preparatory to war. This he very ably executed in a 'Memoir Justificatif' composed in French which was delivered in a state paper to the courts of Europe, and for this service he received the appointment of one of the lords of trade. In 1781 appeared the second and third volumes of his history, and at a new election he lost his seat for Liskeard but was brought in by ministerial influence for the borough of Lynton. On the retirement of the North administration he lost his appointment by the dissolution of the board of trade and immediately formed the resolution of retiring to his favourite Lausanne which plan he put into execution in 1783 and becoming joint possessor with his friend Deyverdin of a handsome and finely situated house he commenced a mode of living happily compounded of the man of letters, and the gentleman of easy fortune. Here in the course of four years he completed the three remaining volumes of his history which were published together in April 1788. Of a work so well known, it is unnecessary to dilate in a compendium like this dictionary, although liable to some objection on the score of style and occasionally of sober moral propriety, it has taken a secure

GIB

place among the English classics, and forms a distinguished object in the literary history of the eighteenth century. The remainder of Mr Gibbon's life was that of a private gentleman. The storms of the French Revolution which he regarded from the first with extreme fear and aversion gradually lessened his attachment to Lausanne, but his return to England which took place in 1793 was hastened by his solicitude to sympathise with his friend Lord Sheffield under a heavy domestic calamity. He spent some months with that nobleman, when his attention was called to the progress of a disorder which he had endured in silence for three-and-twenty years. This was a rupture that finally produced a hydrocele which after two palliative operations terminated in a mortification that carried him off on the 16th January 1794, in the sixty-seventh year of his age. Mr Gibbon was fond of society and possessed in an eminent degree the manners and sentiments of a gentleman. As a politician or public man he appears to less advantage as he wore the yoke of ministerial servitude on the merest notions of interest and emolument, and never seems to have ascended to the dignity of a principle in reference to any portion of his parliamentary career. It is however as the student and historian that he principally claims attention, and in these capacities the universal acknowledgment of the world has allowed him the highest rank. In 1796 his friend, Lord Sheffield published two quarto volumes of his miscellaneous works of which the most valuable part is the memoir of his life and writings which are written with much apparent frankness. Many of his private letters are subjoined which are lively and entertaining. The second volume contains a journal of his studies with remarks upon books, besides his smaller publications already mentioned.—*Gibbon's Mem. with Lord Sheffield's Additions.*

GIBBON (John) an ancestor of the preceding was born in London in 1629. After serving as a soldier in the Netherlands and America he returned home, and by the patronage of Sir William Dugdale procured the employment of blue mantis in the herald's college. At his death he was the oldest officer at arms, but his visionary and eccentric conduct prevented his further promotion. He died about 1700. He wrote *Introductio ad Latinam Blasoniam*, an *Essay towards a more correct blazon in Latin*, 8vo. and various tracts exhibitive of much superstition and credulity in regard to astrology omens &c &c. He also collected a particular account of the services of heralds from various authors which he published under the title of *Heraldo Almemoria* —*Abel's Hist. of Colleges at Arms.*

GIBBONS (GRAVELING) an eminent sculptor, born in London of Dutch parents about the middle of the seventeenth century. He was a member of the board of works under Charles II and James II. He excelled particularly in carving flowers both in wood and stone, and many fine productions

GIB

of his chisel are yet to be seen in the choir of St Paul's and Windsor the font in St James's church, Westminster, the archbishop's throne in Canterbury cathedral, the decorations of Petworth house, and Lord Campden's monument at Exton. The base of the fine equestrian statue of Charles I at Charing-cross and that of James II at the back of Whitehall chapel are also specimens of his ability as a statuary. His death took place in 1721.—*Walpole's Anecdotes.*

GIBBONS Mus. Doc. (ORLANSO) an excellent musician and composer born in 1583 at Cambridge. In 1604 he was appointed organist to the chapel royal St James's and graduated as MD at Oxford in 1622. In his capacity of composer to the king he was appointed to write the music to be introduced in solemnizing the nuptials between Charles I and Henrietta Maria, on which occasion he went to Canterbury in 1625 and presided at the organ during the ceremony, but unfortunately catching the small pox he died in that city and was buried in the cathedral. Besides his church music the characteristics of which are fine harmony simplicity and extraordinary grandeur he published in 1612 a collection of madrigals of five parts the melodies to Wither's translation of Hymns and Songs of the Church and several pieces for the organ and the virginal. He was a musical family —EDWARD his elder brother having taken his degree as Mus. Bac at Oxford became organist to the cathedral at Bristol and was the preceptor of Matthew Locke. He was possessed of considerable landed property the whole of which was sequestered by the parliament on account of his having advanced 1000£ for the king's service during the civil war.—ELLIS the younger brother published in 1701 a collection of madrigals.—CHRISTOPHER GIBBONS the son of Orlando was educated under his uncle Ellis and in 1664 was admitted to the degree of doctor in music by the university of Oxford on the personal recommendation of the king with whom he was a great favourite. Several anthems of his are extant and he is said to have assisted in the *Canticum Sacrum*, published in 1674. His death took place in 1676.—*Bug. Dict. of Music.*

GIBBONS (Thomas) a dissenting clergyman of the sect called independents born in 1720 at Swaffham Norfolk. In 1742 he came to London and entered upon his ministerial functions in Silver-street Haberdashers hall &c and ultimately occupied a situation as one of the masters of the Blue and academy. He was the author of a great variety of sermons, several of which were collected and published after his decease in three volumes. His other works are a "Life of Dr I Watt,"

Female Worthies, *Juvenilia*, a collection of miscellaneous poems and a "System of Rhetoric." He obtained the degree of DD from the University of Aberdeen in 1764, and died in 1783.—*Aikin's C. Big.*

GIBBS (JAMES) a Scotch architect born according to some in 1674, though others

GIB

have fixed the time of his birth so late as in 1685. He was a native of Aberdeen, and educated at the Marischal-college in that university, where he graduated. Travelling into the Netherlands he was fortunate enough to attract the notice of a noble countryman, the then Earl of Mar whose liberality gave him the means of following up the pursuit of his favourite study architecture, among the classical models of ancient Rome. The interest of the same patron was exerted in his behalf on his return to Great Britain in 1710, and through his exertions and recommendation Mr Gibbs was entrusted with the execution of several public buildings an employment which tended much to the increase, not only of his pecuniary resources but of his reputation. Among these the church of St Martin in the fields (the beautiful facade of which is considered his chief *d'oeuvre*) was erected by him at an expense it is said of £2 000. A church at Derby, the new buildings of King's college Cambridge and the senate-house in the same University the church of St Mary le Strand London, and the Radcliffe library at Oxford, "are also reckoned among his happiest efforts. The copyright of a collection of his designs which appeared in 1728 in folio including the copper plates sold for 1900*l.* His death took place in August 1754.—*Walpole's Anecdotes.*

GIBBS (VICARY) a clever English lawyer born in 1732 at Exeter in which city his father practised as a surgeon. He proceeded in due course from Eton to King's college, Cambridge on the royal foundation and in 1772 obtained a Craven scholarship. Entering himself of Lincoln's Inn he contracted an intimate acquaintance there with Mr Dunn, afterwards lord Ashburton whose countenance and support tended mainly to his future advancement in the profession of the law. He succeeded Mr Burke in the recordership of the city of Bristol and was soon distinguished as an eloquent pleader and an able advocate. His subsequent exertion on the trials of Hardy, Tooke, Thelwall &c. ranked him still higher in his profession. He obtained a silk gown and proceeded rapidly through the different stations of chief justice of Chester solicitor and attorney general, (an accepting which last office he was knighted) till being raised to the bench as a puisne judge he was finally elevated to the dignity of lord-chief justice of the Common Pleas in 1814. Sir Vicary Gibbs filled this important post about four years, when his advanced age and increasing infirmities induced him to resign. He survived his retirement from public life about two years, and died in the month of February 1820.—*Gent Mag.*

GIBSON (EDWARD) an English prelate distinguished as an antiquary and divine. He was born at Knipe in Westmorland in 1669 and after receiving a grammatical education at a free-school in his native county, he proceeded to Oxford, and entered himself a scholar at Queen's college. He much distinguished himself while at the university by his

GIB

learning and industry especially in the acquirement of the northern languages. He commenced his literary career by the publication of new editions of Drummond's 'Polemico Middiana,' and James V of Scotland's 'Cantilenae Rusticae.' These works were followed by a Latin version of the 'Chronicon Saxonum' and a catalogue of MSS. in the library of bishop Tunstall together with those of Dugdale at Oxford. In 1713 appeared his 'Codex Juris Ecclesiastici Anglicani.' In 1735 he succeeded Dr Wake as bishop of Lincoln, and in 1739 was translated to the see of London over which he presided until his death in 1748. Besides the publications already noticed he edited in 1698 the posthumous works of Mr Henry Spelman and composed a life of Mr Thomas Bodley, several tracts on the antiquities of Britain, sermons, and pastoral letters.—*Biog Brit.*

GIBSON (RICHARD) an English portrait painter of considerable eminence in his profession though angularly diminutive in stature his height not exceeding three feet ten inches. He was born in 1685 of humble parentage and was placed as dwarf page in the service of a lady of rank residing at Mortlake who noticing his talents placed him under the tuition of De Cleyn superintendent of the tapestry works in that village and an artist of no mean skill. With these advantages Gibson made considerable progress especially in water colour drawing in oils also has copies from Lely whose manner and style of painting he was most successful in catching obtained him considerable reputation Charles I sent for him to court took him into his household in the capacity of page of the back stur and carried his condescension so far as to give away the bride in person at his wedding. A wife seems to have been purposely provided for him by nature in the person of a Mrs Anne Shepherd who was of precisely the same height with himself. The fruits of this eccentric marriage on which Waller composed an epithalamium were nine children all of the usual stature five of whom attained to maturity. During the Commonwealth Gibson was in high favour with the protector Cromwell "who sat to him repeatedly." His political sentiments indeed appear to have been either extremely pliant or little regarded from the insignificance of his person as after the Restoration we find him equally patronised by the court, and instructing the daughter of James II in her favourite art. Gibson reached his seventy fifth year when he died at his lodgings in Covent-garden in 1690. His wife survived him nineteen years, and attained to the age of eighty nine. The portraits of this diminutive couple were painted by sir Peter Lely. Two members of the same family excelled the same art—WILLIAM Gibson nephew of Richard, whose style he followed—and Edward who purchased the whole of Lely's collection at his death, and who applied himself principally to Crayon paintings. The former was born in 1644, and died in 1702.—There was also a THOMAS GIBSON a painter, who

G I G

ived in the early part of the last century at Oxford and produced many creditable papers. He was born in 1690 and died in 1751.—*Walpole's Anecdotes.*

GIBSON (THOMAS) a native of Morpeth in Northumberland equally eminent in the sixteenth century as a physician and a polemic. In his controversial writings he distinguished himself as a warm advocate of the reformed religion of which he was a most zealous member. The free promulgation of his opinions made it advisable for him to go abroad for the Continent during the reign of Mary, but on the accession of her successor he returned to England. His writings are now but little known the titles of most of them have been however preserved by Tanner and Aikin. The principal are—*The sum of the Actes and Decrees made by divers Bishops of Rome. A briefe Chronicle of the Bishops of Rome & Blessynge*, and a tract entitled *A Treatise beboefull to preserve the People from Pestilence*. His death took place in 1552.—*Wood.*

GIFFORD (JOHN) an historical and political writer whose real name is stated to have been John Richard Green. He was born in 1758 and was supported by his grandfather from whom he derived property sufficient to enable him to enter as a gentleman commoner at St John's college Oxford. He left the university without taking a degree and adopted the legal profession, but having dissipated his fortune and involved himself in difficulties he went to the Continent under the assumed name by which he was subsequently designated. He returned to England in 1788 and when the French Revolution had excited the hopes and expectations of one party in this country and the anxious fears of another Mr Gifford took up his pen in behalf of the alarmists, and produced some political pamphlets which have been long since consigned to oblivion. He also became a contributor to the British Critic and to the Antipodal Review, besides which he was the author of *The Reign of Louis XVI*, and complete History of the French Revolution 1794, &c., "The History of France from the earliest Times to the End of the Revolution" 1795 5 vols. &c., "A Rendezvous in France in the Years 1792 3 4, and 5 &c." 1797, 2 vols. 8vo, and "A History of the Political Life of the Right Honorable William Pitt," 3 vols. 4to. In reward of his services as a political partisan, Mr Gifford obtained a pension and he was made one of the police magistrates of the metropolis. He died at Bromley in Kent March 6 1818.—*Ann. Biog.*

GIGGEO (ANTHONY) a learned Italian ecclesiastic and Oriental scholar flourished during the former part of the seventeenth century and was a priest of the congregation of Oblati at Milan. He was admitted by the Ambrosian college of Milan to the degree of doctor. He was the author of a Latin translation of the 'Commentaries of R. R. Salomon Aben Ezra and Levi-Gerson, on the Book of Proverbs,' of a 'Chaldee and Targumic

G I L

Grenzmann; and of *Thesaurus Linguae Arabicae seu Lexicon Arabicum-Latinum*, 1635, 4 vols. folio for which pope Urban VIII nominated him to an honourable post in the College de Propagandi at Rome but he died when going to take possession of it in 1632.—*Loud's Hist de la Lit d'Italie. Nouv. Dict. Hist.*

GILBERD or GILBERT (WILLIAM) an English physician and experimental philosopher of the sixteenth century. He was born in 1540 at Colchester in Essex of which borough his father was recorder. After having studied at Cambridge, and according to Anthony Wood, at Oxford also he went to a foreign university where he took the degree of M.D. Having returned to England he was chosen a fellow of the College of Physicians, and settling in London he was appointed physician in ordinary to queen Elizabeth who bestowed on him a pension. He was continued in his post by James I, but died very shortly after the accession of that prince November 30 1603. His corpse was interred in Trinity church Colchester where a monument was erected to his memory. He has perpetuated his name by a work entitled *De Magnete magnetisque corporibus, et de magnao magnate Tellure Physiologia nova*, London 1600 folio. In reference to this treatise professor Millington in his Lectures at the Royal Institution says Dr William Gilbert a physician of Colchester who notwithstanding he wrote in the sixteenth century was a strenuous advocate for the inductive mode of reasoning in philosophical matters which was so happily introduced by the great lord Bacon and who investigated every circumstance connected with magnetism with a degree of zeal and success hardly to be expected at so early a period ascribes the first application of the magnet to the purposes of navigation in Europe to Flavio or John de Guaja or Giova a Neapolitan who he says used it in the Mediterranean sea in the thirteenth century. This work has been highly applauded by several English philosophers, especially by lord Bacon and Dr Isaac Barrow, and it is also deserving of notice that Dr Halley adopted Gilbert's hypothesis of a great central magnet in the earth and applied it to the explanation of the variation and dipping of the needle in the mariner's compass. He also proposed a mode of discovering the latitude at sea, described in a work published in 1624 by Thomas Blundeville under the title of "Theoriques of the Planets, together with the making of two Instruments for Seamen, for finding the Latitude without Sun Moon, or Stars invented by Dr Gilbert." A posthumous treatise of this writer *De Mundo nostro sublunari, Philosophia nova*, Amsterdam, 1651 4to, was edited by the learned Gruter. It is an ingenious but fanciful piece in which he advances the notion that the planets are animated beings, actuated by magnetism as an intelligent principle.—*Wood's Athenae Oxoniensia. Watchman's Biog Med. Athene's G Biog*

GIL

GIL

GELBERT (Sir HENRY) an English navigator and maritime discoverer in the reign of queen Elizabeth. He was born in Devonshire about 1552, and his mother soon after becoming a widow, married Mr. Raleigh, and the celebrated sir Walter Raleigh was the fruit of her second nuptials. The subject of this article studied at Eton and Oxford, but his disposition inclining him to prefer an active life to literary retirement, he was early introduced at court, where he probably acquired those principles of devoted loyalty which were then extremely fashionable. Adopting the military profession he served with reputation in the expedition to Havre in 1563, and on other occasions. He was then sent into Ireland, where he rose to the chief command in the province of Munster and in 1570 he was knighted by the lord deputy sir H. Sidney. Returning to England shortly after he married a rich heiress, but unfortunately lost a part of his fortune by engaging in a project for converting iron into copper. In 1571 he was returned MP for the borough of Plymouth and the next year he was sent on military service to the Netherlands. Possessing a strong propensity for speculation and enterprise he next turned his attention to a scheme for exploring the Arctic Seas, relative to which he published A Discourse of a Discovery for a new passage to Cathay, 1576. This work which is said to display the knowledge and ingenuity of the author to advantage, is a book of very rare occurrence and in a bookseller's catalogue for 1825 a copy is marked £85¹. It was reprinted in Hakluyt's collection of voyages, vol. iii. In 1578 sir Humphrey Gilbert obtained from the queen a most ample patent, empowering him to discover and colonize in North America any land then unsettled. He made a voyage to Newfoundland, but soon returned home unsuccessful. In 1583 he sailed again with a small fleet, and having landed on Newfoundland in the beginning of August, he took possession of the harbour of St John's. Shortly after he embarked in a small sloop to explore the coast, and one of his vessels having sounded, he steered homewards in the midst of a tempestuous sea. On the 9th of September when his little bark was in manifest danger he was seen by the crew of the larger vessel, standing on the stern with a book in his hand and was heard to exclaim "Courage my lads! we are as near heaven as sea can be." About midnight the bark was swallowed up by the waves, and all on board perished with her. Such was the fate of a man who possessed talent, enterprise and courage, which had he survived might have enabled him to make some important discoveries.—*Pitcairn de Brit Scriptor Princeps Mertonis de Dux. Regn. Brit.*

GILBERT (Sir JAMES) an English judge and writer on judicial affairs whose works are much esteemed. He was born in Devonshire in 1676, and probably received a regular legal education, but where he studied is uncertain. In 1715 he was appointed one of the judges of the court of King's Bench in Ireland, and

was afterwards chief baron of the Exchequer of that kingdom. In 1772 he obtained the office of a baron of the Exchequer in England, and was subsequently joined in a commission with sir Joseph Jekyll and sir Robert Raymond, for the custody of the great seal. He rose to the rank of chief baron of the exchequer and died not long after a Bath in 1795. He was interred at Bath abbey church and a commemorative cenotaph was erected for him in the Temple church London. He published

Reports of Cases in Equity and the Exchequer folio, The History and Practice of Civil Actions in the Common Pleas, 8vo, 'A Treatise of the Court of Exchequer' 8vo

The History and Practice of the Court of Chancery 8vo besides works on wills trusts, ejectments distressed, and replevins, tenures, rents &c and an abridgment of Locke's Essay on the Human Understanding, but his principal production is a treatise on the

Theory of the Law of Evidence which has passed through several editions one of the latest of which considerably enlarged by Capel Loft, appeared in 1801 in 3 vols. 8vo.—Chalmers's Biog. Diet

GILBERT (THOMAS) an English gentleman distinguished for his efforts towards the improvement of the poor laws. He inherited a small estate which he endeavoured to improve by legal practice and with that view he entered as a student of the Temple. Not meeting with much success as a lawyer he accepted of a military commission in a regiment raised by lord Gower in 1745 and was afterwards appointed paymaster of the pensions to the widows of officers in the royal navy which office he held from the first institution of the fund till his death. Through the interest of the Gower family he was elected MP for Newcastle under lime and afterwards for Lichfield, which place he represented for several years but at length vacated his seat in favour of lord Francis Gower and retired from public life. While a senator he promoted many plans for the improvement of the roads in the interior of the kingdom but his exertions were principally directed towards the amelioration of the laws for the relief of paupers. He procured an act of parliament to oblige overseers of the poor to make returns of the sums expended for their maintenance, and another for a list of all charitable donations for their support. He proposed various other measures which failed from the opposition they experienced. Mr. Gilbert succeeded sir Charles Whitworth as chairman of the committee of ways and means and he held the place of comptroller of the great wardrobe till it was abolished. He died at his seat at Cotton, in Staffordshire in December 1798 aged seventy eight. Between 1781 and 1787 he published several tracts on the poor laws, among which was a "Plan for the better relief and employment of the Poor," 8vo.—Genl Mag.

GILBERT (JOHN) the younger brother of Thomas and son of a gentleman in Staffordshire, who after receiving a common education

G I L

at home, was bound apprentice to the father of Matthew Boulton of Birmingham the celebrated engineer. On the death of his father when he was but sixteen, he undertook the management of some extensive lime-works belonging to his family. He was subsequently introduced to the duke of Bridgewater at the time when he was projecting improvements of his collieries in the vicinity of Manchester. Mr Gilbert having surveyed the works formed the plan of making a navigable canal for the conveyance of coal to Manchester which undertaken he afterwards carried into execution in conjunction with Mr Brindley to whom the whole design and conduct of the work has been usually attributed. In June 1757 Mr Gilbert removed with his family to Worsley that he might with greater convenience attend the prosecution of the business in which he had engaged. He resided there forty years highly respected and esteemed by his noble employer and all with whom he was connected dying August 4th 1797 aged seventy-three. Besides the works carried on for the duke of Bridgewater he was employed on other occasions wherein he manifested no common degree of skill and judgment as a civil engineer and among the improvements which he suggested was a method of obtaining rock salt, by blowing it up with gunpowder.—*Ross's Cycloped*

GILBERTUS (Anelicus) a medical practitioner and writer of the twelfth century Leland bestows on him high praise for his skill in the art of healing and he is said to have been the first Englishman who treated diseases in a rational manner. He was the author of a work entitled *Practices Medicinae*, another called *Compendium Medicinae* and commentaries or illustrations of the aphorisms of Hippocrates.—*Leland de Script. Brit. Friend: Hist. of Physic*

GILBERT (WILLIAM) a writer distinguished for the peculiarity of his opinions and his merit as a poet. He was a native of the West Indies and was bred to the colonial bar. Between 1780 and 1790 he came to England, being employed on a case of court martial and here he appears to have spent the remainder of his days at first in a state of distress owing to the detention of some hugested property which was however afterwards adjudged to him. Of his private life but little is known, except that he was an admirer of the French Revolution from its imagined correspondence with some peculiar speculations of his own relative to providential retribution and the causes of the rise and fall of nations. He was also a believer in judicial astrology. His principal literary production is *The Hurricane a Theosophical and Western Eclogue* To which is subjoined a *Solitary Effusion in a Summer Evening*, Bristol 1796. He also published a pamphlet on a professional topic and two works entitled *The Law of Fire and The Standard of God displayed* which were probably expositions of the author's peculiar theological tenets. Besides these publications he wrote a poem in praise of Garrick perhaps suggested by sir Joshua Reynolds's

G I L

pictures of the celebrated actor between tragedy and comedy as it varied on the same idea. Mr Gilbert at length became deranged and died in that state about 1804.—*Retrospective Review* vol. x

GILCHRIST FSA (Octavus) a distinguished literary character son of an officer of the 3d regiment of dragoon guards and brother of Mr R. A. Gilchrist, an artist of eminence. He was born at Twickenham in 1779 and educated at Magdalen college Oxford. Mr Gilchrist's principal productions are an *Examination of the Assertions of Ben Jonson's enmity to Shakespeare* 8vo 1806, an edition of the *Poems of Bishop Corbet* with notes, and a *Life of the Author* 8vo 1808, and a "Letter to W Gifford esq on a late edition of Ford's plays." He had collected materials for and made considerable progress in, a work intended to illustrate the rise and progress of the English stage comprehending specimens of every one of the minor dramatic writers anterior to the Revolution including the collections of Dodoley Reed and Hawkins with selections from the works of Greene Peele Lodge Nash and others and specimens of masques pageants &c. The appearance however of another publication in periodical numbers entitled *Old Plays* partially anticipating his design deterred him from publication. He died at Stamford in Lincolnshire in June 1823 aged 44.—*See Biog.*

GILDAS SAPIENS a British ecclesiastic and historian of the sixth century. He was the son of Caw a prince of the Strathclyde Britons who with his family emigrated to North Wales to avoid subjection to the Anglo-Saxons. Gildas is supposed to have been educated in the famous monastery of Bangor and to have gone as a missionary to Ireland, after which according to some authors, he visited France and Italy. He appears to have passed some time in retirement on one of the small islands called the Hohes in the estuary of the Severn but being disturbed by piratical intruders, he removed to the monastery of Glastonbury where he died in 570. There is extant a declamatory distribe ascribed to Gildas which has been repeatedly published under the title of *Epsstola ad Excidio Britannie et Castigatio Ordinis Ecclesiastici*. This is a violent invective against the whole British nation exhibiting a truthful picture of the depravity of manners which pervaded all ranks of society and impating to the retributive vengeance of heaven the misery consequent on the numerous Saxon invasions. Some doubts have arisen as to the authenticity of this epistle the unsparring severity of summadverence with which the Britons are treated being considered as more characteristic of a foe to their race and nation than of the alleged author. Such was the opinion of the rev Peter Roberts who moreover conjectured that the chronicle of the kings of Britain called *Brut Tysilio* was the work of Gildas, and that the querulous epistle ascribed to him was written by the Saxon prelate St Aldehelm who, according to

GIL

William of Malvern, composed such a work against the Bohemians.—*Liber de Scriptis Brit. Monachorum. Epist. Hist. Lib. Robert's Tract. of the Boh. Clercs. Append. No. 1.*

GILLION (CHARLES) an English domestic writer one of the many laymen of the Dissident whom Bayle describes as "a person of great literature but mean genius." He was a native of Glastonbury, Dorset, whence he was born in 1665 and placed at an early age in the college at Douai, with the view of taking orders in the Roman church. Neither his inclination however nor his opinions, which were adverse to revelation, fitted him for the cloister and he accordingly returned abruptly to his native country in 1685. The little property in his possession was soon wasted in the pleasures of a town life and an impudent marriage completed, the disengagement of his affairs, for the purpose of retrieving which he turned his attention to the stage in the double capacity of actor and author. In neither of the branches of his new pursuit however was his success commensurate with his expectations. Besides three plays, all of which were unsuccessful, he was the author of a life of Betterton the actor a grammar of the English language and a treatise entitled the "Deut's Manual" in which he recants certain sceptical opinions, formerly published by him in the preface to his friend Charles Bloot's works, an edition of which he superintended. The work by which he is principally known is his "Complete Art of Poetry." He printed several other pamphlets in his capacity of critic and died 1723.—*Elog. Drew.*

GILL (ALEXANDER) There were two of this name father and son, both in succession head masters of St Paul's school. The elder was a native of Lincolnshire, born 1564. He studied at Corpus Christi college Oxford where he graduated as A.M. in 1590 and in 1608 was placed by the Mercers' Company at the head of the foundation above mentioned over which he presided with considerable reputation till his death in 1635. He was the author of a Commentary on the Creed printed in one volume folio a tract on the Trinity and another entitled "Logonomus Anglicus," in 4to. He has buried in the chapel belonging to Mercers' Hall, in Cheapside. His son who was born in London in 1597 succeeded his father in his appointment, on obtaining which he took the degree of D.D. at Trinity college, Oxford, of which society he was a member. While in this situation he had for his pupil John Milton who appears to have been much attached to his preceptor. In 1640 circumstances occasioned his removal from the school on which he opened one on his own account, in Aldermanbury-street. Wood speaks highly of his Latin poems, a collection of which was printed in 1655 in 1 vol. 12mo under the modest title "Postaci Comitina." His death took place in 1642.—*Wood. Worth's edition of Milton.*

GILL (JOHN) a supralapsarian divine of the last century, eminent as an oriental scholar, and possessing at the same time a profound

GIL

acquaintance with the Classics. He was born Nov 19 1697 at Kettering, Northamptonshire, and at the age of nineteen became pastor to a congregation of Baptists in his native place. In 1718 he removed to Higham Ferrers, which again he quitted for the superintendence of a more considerable meeting in the Borough of Southwark. He was the author of a most laborious commentary in 9 folio volumes, entitled to "Exposition of the Bible" in which he displays deep erudition and unweary industry. This work of which a subsequent edition in ten volumes has appeared, procured him the honorary degree of Doctor in Divinity from the university of Aberdeen. His other productions all distinguish'd for the learning which they exhibit, are 'An Exposition of the Song of Solomon' folio 1728, 'The Cause of God and Truth' 4 vols folio 1735, 'A Dissertation on the Antiquity of the Hebrew Tongue' 1767, and 'A Body of Divinity' 3 vols. 4to, besides a great variety of sermons and other devotional tracts. His death took place in the month of October 1771 at his house in Tooley-street Southwark.—*Lyt's prefiz'd to Tracts & Sermons.*

GILLES (JEAN) an eminent composer and native of Provence, educated for the profession of music in the cathedral of Aix. Besides several fine motets. He was the author of a celebrated "Requiem for the Dead," originally written in order to be performed at the funeral of two brothers, counsellors of the parliament of Toulouse whose sons employed Gilles for the purpose. At the end of six months however the time originally agreed upon for the production of the music when all the most celebrated musicians of the neighbouring provinces were engaged for the performance the final party of the young men seems to have so far cooled that they demurred to the payment of the stipulated sum, on which the indignant composer exclaimed

"Very well then, I will keep it for myself." His decease taking place within a few months, it was actually performed at his funeral, and in 1767 was repeated at the church of the oratory in Paris in the burial service for Rameau.—*Elog. Diet. of Mus.*

GILLES (PATER) a scholar and traveller was born at Albi in 1490. He visited the coasts of Provence and travelled into Italy making observations on natural history and antiquities. On his return he passed some time with George d'Armagnac bishop of Rhodes, who induced him to compose his book "De Vi et Natura Australium," which he dedicated to Francis I in 1533. He was some time after sent by that monarch to travel in the Levant, but not being supplied with money he was at length obliged to enlist in the troops of Sultan Soliman II for a subsistence. He returned in 1550 and went to Rome to his patron the cardinal d'Armagnac, where he died in 1555. He also published some translations from the Greek, and two geographical pieces "De Topographia Constantinopoli lib. iv;" and "De Bosphoro Thracio, lib. ii" which are much esteemed.—*Moren.*

GILPIN (BARNARD) an English divine of the sixteenth century, styled, on account of his zeal and piety the Apostle of the North. He was born at Kentwate in Westmoreland, in 1517 and received his education at Queen's college, Oxford, where he took the degree of M.A. in 1541 and about the same time obtained a fellowship, and was admitted into holy orders. His reputation as a scholar procured him advantageous offers from the agents of cardinal Wolsey on the foundation of the college of Christchurch and he accordingly removed thither. In this station he displayed his zeal as an advocate for the catholic faith in a public dispute with Hooper afterwards bishop of Gloucester. On the accession of Edward VI Gilpin again entered the lists as a catholic advocate though not without some reluctance, and being opposed by the famous Peter Martyr, he acknowledged himself unable to maintain his cause. From this time his religious opinions became unsettled till his doubts finally terminated in his becoming a protestant. In 1549 he commenced B.D., and in 1552 he was presented to the vicarage of Norton in the diocese of Durham. This living however he resigned, and went abroad first to Louvain and then to Paris where he superintended the printing of a treatise on the Eucharist written by his uncle bishop Tonstal who had entrusted him with it for that purpose. In 1556 he returned to England and was made rector of Easington and archdeacon of Durham which benefices he subsequently exchanged for the living of Houghton le Spring. Being now ardently attached to the cause of reformation he applied himself to the correction of superstitious practices among his parishioners and the promotion of the Protestant cause. Queen Mary being on the throne and the old religion re-established the conduct of Mr Gilpin exposed him to the displeasure of his superiors. Twice he was accused of heresy before his relative bishop Tonstal who protected him against his enemies though he disapproved of his principles. At length an information was forwarded to bishop Bonner whose seal for the doctrines of the Catholic church induced him to adopt unmeasured measures for the apprehension of Mr Gilpin. His friends apprised him of his danger and advised him to withdraw from the kingdom. But his zeal was of too ardent a character to admit of his profiting by that counsel, and anticipating the fate of martyrdom he ordered his steward to provide him a long garment to wear at the stake and awaited with composure the arrival of the expected messengers with the order for his arrest. Before he could reach London queen Mary died and he returned in peace and safety to Houghton. The accession of Elizabeth restored the ascendancy of the protestants and the bishopric of Carlisle becoming vacant he was destined to fill that situation but conscientious motives prevented him from accepting it. In 1561 the provostship of Queen's college was offered him but this also he refused countering himself with the living of Houghton, where he discharged

in a most exemplary manner the duties of a parish priest besides which he founded schools for the education of youth, and contributed as far as his audience extended to the advancement of religion and virtue. His death took place March 4 1583. Independent of his theological studies he was a man of learning having a general acquaintance with such branches of knowledge as were then cultivated. But though he is said to have had a talent for poetry as well as prose composition he did not publish any of his own productions.—*Life by Rev. W. Gilpin.*

GILPIN (SAWICKY) R.A. an eminent modern painter of horses and wild beasts. He was born at Carlisle in 1733, and at the age of fourteen was apprenticed to Mr Scott a ship painter who resided in Covent-garden. The taste of the young artist was influenced by the scenes amidst which he was placed and the first productions of his pencil which attracted notice were sketches of carts, horses and market groups made from his master's shop-window. He obtained the patronage of William duke of Cumberland uncle of his late majesty from whose stud at Windsor he selected subjects on which to employ his pencil and by practice and observation made himself intimately acquainted with the structure and action of that noble animal the horse whence the peculiar spirit and accuracy of his delineations. Some of his compositions on historical subjects have great merit especially
The Triumph of Camillus *The Election of Darius* *The Horses of Diomedes* and
The Fall of Phaeton. He also executed a painting of a group of tigers which has been much admired and is said to be his chief d'oeuvre. This piece was in the collection of the late Mr Winstanley. His studies from nature of the horse are strikingly characteristic of the sullen dignity and commanding presence of the king of brutes. Mr Gilpin practised at least one branch of engraving as he made etchings of heads for works on biography published by his brother the rev W Gilpin. He died at Brompton March 8 1807.—*Bryant's Dict of Paint. Rees's Encyclopedia*

GILPIN (WILLIAM) brother of the subject of the last article born at Carlisle in 1724. He was destined for the church and received his education at Queen's college Oxford where he took the degree of M.A. in 1748. After entering into orders he for many years kept a grammar-school at Cheam in Surrey, but at length he obtained a prebend in the cathedral of Salisbury and the vicarage of Boldre in the New Forest in Hampshire, where he died April 5 1804. He was the author of several works relating to divinity and ecclesiastical biography which were well received by the public but his literary reputation is principally founded on his picturesque tours through various parts of the kingdom. His principal publications were *The Life of Bernard Gilpin*, 1751 8vo, *The Lives of John Witchell &c* [1764] 8vo which was translated into German, *Lectures on the Catechism of the Church of England* 1779

2 vols. 8vo; "Observations on Forest Scenery" 2 vols. 8vo; "Observations relative to Picturesque Beauty, made in 1772 on several parts of England, particularly the mountains and lakes of Cumberland and Westmoreland 2 vols. 8vo; "Observations relative to Picturesque Beauty made in 1776 on several parts of Great Britain, particularly the Highlands of Scotland, 2 vols. 8vo, Sermons to a County Congregation 2 vols. 8vo, and Exposition of the New Testament, &c." 4to 1790 reprinted in 2 vols. 8vo.—*Gent. Mag.*

GILLRAY (JAMES) an artist famous for his talents as a designer of caricatures which he engraved or etched with aqua-forte. His works, which exhibit much humour spirit, and fertility of invention, procured him the reputation of being the first caricaturist of his day. He died June 1 1810.—*Eldon's Diet of the Fine Arts.*

GIN (PETER LOUIS CLAUDE) a French writer was born at Paris in 1726 and became successively counsellor of the parliament of Paris and member of the grand council. His works are *Traité de l'Elégance de barreaux*,

De la Religion par un homme du Monde 1778 *Les vrais Principes du Gouvernement Français*; *Analysé rasonné du droit Français*. He was also the author of several translations, which are highly esteemed of Homer Hassod, Theocritus, Demosthenes, and Goldsmith's *Vicar of Wakefield*. He died in 1807.—*Dict. Hist.*

GIOJA (FLAVIO or JOHN) an Italian mathematician of the fourteenth century who is supposed to have invented the mariner's compass. He was a native of Paestum, near Amalfi, in the kingdom of Naples and was born about the year 1300. The custom of marking the north point of the compass with a fleur de lis is said to have been adopted in honour of the Neapolitan royal family of the house of Anjou who bore the arms of France and as a memorial of Gioja's discovery the territory of Principato in which he was born has a compass for his armorial emblem. Yet this valuable instrument seems to have been known in Europe before the time of Gioja, since Dante alludes to the magnetic property of the needle and its attraction for the north pole. And there is reason to believe that the Chinese were accustomed to use the magnetic needle for nautical purposes long before their country was known to the Europeans who probably derived it, either mediately or immediately from that ingenious people. The claims of Gioja as an original discoverer are at best extremely problematical.—*Aikins's Gen. Biog.*

GIORDANI (VIRGIL) an able engineer and mathematician born in 1655 at Bitonto in the Neapolitan territories. He was of low origin and served in his youth as a private soldier in the Pope's Galles. Having devoted his leisure hours to the study of arithmetic, he succeeded in obtaining a situation on board one of them as purser but quitted it on being appointed keeper of the castle of St Angelo at Rome. On the foundation of the academy in

that capital, by Louis XIV. Giordani, who had by that time acquired considerable reputation as a mathematician, was appointed by him tutor in that science, and afterwards obtained a professorship in the Sapienza college. He published a treatise "De Compromissis Gravium Argumentis, folio," *De Euclide Restituto*, folio, *Fundamentorum doctrinae Motus Gravium*, and an epistle, *Ad Hyacinthum Christopherum*. His death took place in 1711 at Rome.—*Movers*

GIORDANO (LUCA) a Neapolitan artist, the pupil of Spagnoletto and Pietro da Cortona born 1629. After travelling through the principal cities of Italy and studying more particularly the style of Paolo Veronese, Correggio and Titian he settled in Spain, where he became a great favourite with Philip V who conferred on him the honour of knighthood and carried him with him to Naples. His most celebrated picture the *Revolt of Lucifer* is still preserved in that capital, others of his works are to be found at Milan. Some of them are said to be such excellent imitations of Titian both in composition and colouring as to be with difficulty distinguished from the paintings of that great master. His death took place at Naples in 1704.—*Pit. Kingdom*

GIORGII (AUGUSTINE ANTHONY) a learned Italian ecclesiastic was born in 1711 at St Maur in the diocese of Rumini and entered the Augustinian order in 1727. He devoted himself particularly to the study of the oriental languages, and was professor at various Italian seminaries until 1746 when he was invited to Rome by pope Benedict XIV to the theological chair of La Sapienza, he also made him Librarian del Angelica. The emperor Francis I gave him repeated invitations to settle at Vienna accompanied by the most liberal offers, all of which Giorgii declined. In 1761 he published a work entitled *Alpha betum Thibetanum* containing many valuable dissertations, and the geography mythology history and antiquities of Thibet which proved of considerable use to the missionaries sent by the college de Propaganda to Thibet. His next publication *Fragmenta Evangelij S. Iohannis Graeco Copto Thebaicum sensu quarto &c. &c.* was no less valuable. His other works consist of letters, dissertations on subjects of oriental criticism, and antiquities and polemical treatises. He died in 1797—*Baroni's Vita Italorum.*

GIORGIONE an eminent painter whose real name was Giorgio BARBARELLI was born in 1478 at Castel Franco in the Trevisan but was educated at Venice. His earliest pastime was music, in which he was no mean proficient, but applying himself next to design he became a scholar of John Bellini, whom he soon surpassed. By frequent experiments he became the first colourist of his time. Titian worked under him to learn his secret, but Giorgione discovering his aim it is said immediately dismissed him. He introduced the fashion of painting the fronts of the houses at Venice in fresco. He died of the plague in

1286. His expression was strong and elevated, his imagination rich and colouring lively and strictly natural. He painted some scanted portraiture and beautiful landscapes.—*D'Argenville's Fies de Peint. Pillington.*

GIOTTO the second of the revivers of painting in Italy was the son of a simple peasant named Bondone and was born in 1276 in the district of Vespuiano near Florence. Being observed by Cimabus drawing figures on the ground whilst feeding his sheep he took him to Florence and instructed him in the art of painting to which he entirely devoted himself. He improved greatly upon his master and his reputation soon spread through Italy many copies of which he adorned with his works, which are still existing. He particularly excelled in monochrome in which the Death of the Virgin at Florence was highly admired by Michael Angelo and the Ship of St Peter placed over the grand entrance of that church in Rome has received numerous encomiums. Giotto was a generally informed and lively man and has been often introduced into their novels by Boccaccio and Sacchetti. He died in 1336.—*Tribachot's Pillington's Dict.*

GIRALDI (LILIO GUCCONIO) better known to the learned by his Latin name Gyraldus, an erudite and ingenious author born in 1479 at Ferrara. He studied under Guarini and De metrus Chalcidyleus, and has been considered by Casanova De Thou and other authorities one of the most learned men whom modern Italy has produced. Cardinal Ran gom induced him to quit Modena for Rome where he continued till the sacking of that city by the troops of Charles V on which occasion he lost every thing that he possessed and returned in indigence to his native city where he died of gout in 1552 and was buried in the cathedral. He was the author of seventeen publications on various subjects the principal of which are—his history of the heathen deities, ten dialogues on the histories of the Greek and Latin poets two on those of modern Italy and a treatise on the calendar entitled *De Annis et Mensibus*. His works were collected after his decease and printed first at Basil in 1580 in two folio volumes and again at Leyden in 1696.—*Moreri.*

GIRALDI (Giovanni Battista) better known by his adopted name Cinto an Italian novelist and poet whom some have not hestitated to rank among the best tragic authors of his country. He was nearly related to Libio Gregorio with whom he was contemporary being born at Ferrara in 1504. His attention was in the earlier part of his life directed to the study of medicine in which science he graduated and lectured in the university before longing to his native city at a period when he had scarce attained the age of majority. He was afterwards secretary to the duke his sovereign, and on his decease read lectures on the belles lettres at Lucca, Mondovi and other principal cities till he obtained the professorship of eloquence at Pavia. His principal works are nine tragedies and a series of 100 novels, written in the manner of those of Bo-

caccio, and published under the title of "His-
catastrophes." He was also the author of some
creations composed in the Latin language. The
gout, which seems to have been hereditary in
his family afflicted him severely and at length
caused his death which took place at Ferrara
in 1573. His son Celio Giraldi, collected his
works after his decease and published the
whole in 8vo at Venice 1583.—*Moreri. Bug-
Uras.*

GIRALDUS (see BABBY)

GIRARD (GABRIEL) a learned and inge-
nious ecclesiastic a native of Clermont born
1678. The duties of a canonry which he pos-
sessed interfering with his studies he renounced
it in order to be able to pursue them at leisure.
The duchess de Berry made him her
almoner and he was employed by the govern-
ment as Russian and Slavonian interpreter to the
king. He became a member of the Acad-
emy in 1744, and published a treatise on the
principles of the French tongue in two duo-
decimo volumes as also another on French
Synonyms which has gone through severa-
editions. He died in 1748.—There was also
a jesuit of this name a native of Dol, accused
of sorcery before the parliament of Aix by a
girl of eighteen named Cadire who declared
that he had made use of infernal arts to de-
bauch her person. He was however acquitted
after a long trial which caused a great sensa-
tion at the period all over France. *Nous
Diet Hie.*

GIRARDON (FRANCIS) an eminent French
sculptor the pupil of Anguier. He was born
at Troyes in 1628 Louis XIV patronised
him, and sent him to Rome in order to com-
plete his studies. On his return he executed
the celebrated equestrian statue of his royal
patron who on the death of Le Brun ap-
pointed him his successor as inspector general
of sculpture &c. Girardon produced several
very fine specimens of art among the best of
which are the Richelieu mausoleum in the
church of the Sorbonne and a group on the
subject of the rape of Proserpine in the royal
gardens at Versailles. He died in 1715.—
D'Argenville.

GIRTIN (THOMAS) an eminent English
landscape painter a native of London born
in 1773. He was a pupil of Dayes, and was
the first who introduced the method since
practised with success, of drawing on car-
tridge paper. Many of his landscapes thus
executed were equally admired with his paint-
ings in oils. The productions by which he
was principally known in his life-time were—
his panoramic views of Paris and London, ex-
hibited in Spring-gardens which evinced both
taste and genius. He laboured for many years
previously to his death under a constitutional
asthma, which did not however entirely pre-
vent his following up his profession till within
a very short period of his decease. This took
place in November 1802.—*Edwards's Anec.*

GLABER (ROBERT) a Benedictine monk
of Clugny who flourished in the eleventh cen-
tury and who has perpetuated his name by a
Chronicle or History of France written in

G L A

Latin, which, though harshly composed and full of fable, is valuable for the information it contains of those remote periods. It consists of five books, the first of which contains the events of the monarchy previously to the election of Hugh Capet, and the others which followed it, to the year 1046. He also wrote a life of William, abbot of St Benignus at Dijon.—*Morer.*

GLANDORP (MATTHIAS LEWIS) a German physician of the seventeenth century. He was a native of Cologne where his father was a surgeon, under whom he pursued his professional studies. He afterwards went to Padua, to attend the lectures of Fabricius ab Aquapendente, Spigelius, and Sanctarius, and in the university of that place he graduated as M.D. Having visited the principal towns of Italy, he returned in 1618 to Bremen where he settled as a practitioner of physic and surgery and acquired so much reputation that in 1628 he was made first physician to the archbishop and afterwards to the state of Bremen. He died after 1633 but at what period is not exactly known, though some writers date his death as late as 1660. He wrote on surgical topics, and his works consisting of four treatises, were republished in one volume 4to at London in 1739 with a life of the author.—*Hutchinson's Biog. Med.*

GLANVIL or GLANVILE (JOSEPH) a philosophical and theological writer of the seventeenth century. He was born at Plymouth in 1636 and was educated at Exeter College, Oxford where he took the degree of BA in 1655. The next year he removed to Lincoln college and proceeded MA in 1658 about which time he was appointed chaplain to Francis Raw, provost of Eton college who was in favour with Oliver Cromwell. The death of his patron taking place Mr Glanvil returned to Oxford and engaged in making researches into experimental philosophy. On the formation of the Royal Society after the Restoration he was chosen one of the fellows and he distinguished himself as a zealous and active, if not a very efficient member of that scientific association. Having taken holy orders he obtained a living in Essex and in 1668 he was induced to the vicarage of Frenze in Somersetshire. Thus he exchanged in 1666 for the rectory of the abbey-church at Bath in which city he then fixed his residence. Much of the remainder of his life was occupied in literary disputes in defence of the Royal Society and the philosophy of Bacon against those who advocated the sinking cause of Aristotle and the schoolmen. Glanvil's chief opponent was Henry Stubbe a physician of Bath; but their controversy has long since ceased to interest the reading public, and our author is better known at present on account of an elaborate and singularly credulous treatise which he wrote entitled 'Some Philosophical Considerations touching the Being of Witches and Witchcraft,' than as the advocate of experimental philosophy. He died in 1688.—*Bog. Brit.*

GLANVILL or GLANVILL (RANULPH)

G L A

or an English baron of the twelfth century, celebrated as a lawyer and a warrior. He was of Norman descent, and in the reign of Henry II he held the office of justiciary of the kingdom. It was at that period that he signalized his valour in repelling the invasion of England by William king of Scotland, who was taken prisoner as he was besieging the castle of Alnwick. Richard I, after his accession to the crown is said to have imprisoned Glanvil and obliged him to pay for his freedom the immense sum of fifteen thousand pounds towards the expences of a crusade to the Holy Land. The aged magistrate accompanied his master on the expedition to which he had so largely contributed and perished, together with a vast multitude of other English warriors at the siege of Acre in 1190. To judge Glanvil is attributed a curious treatise on the laws and customs of England. This work remained in manuscript till 1754 when it was published by the "permission and proclamation of sir William Stanhope" a judge of the Common Pleas as sir Edward Coke informs us and a translation from the pen of John Beames, esq; of Lincoln s-man appeared in 1818 with a note of the author.—*Dugdale's Orig. Jurid.*

GLASS (JOHN) a Scottish clergyman was born at Dundee in 1638 and educated at New College, St Andrews. After taking his de gree he became minister of a country church and in 1727 he published a treatise to prove that the civil establishment of religion was inconsistent with Christianity. This gave so much displeasure that he was deposed and became the founder of a new sect, called Glasites and afterwards Sandemanians. He wrote a great number of controversial tracts and died at Dundee in 1773.—His son JOHN GLASS was also born at Dundee in 1725 and was brought up a surgeon. He made several voyages to the West Indies, but not liking his profession he quitted it and took the command of a merchant ship trading to the Brazil. In 1763 returning to London with all his property on board four of the sailors entered into a conspiracy and murdered captain Glass his wife and daughter and some of the men. They then proceeded to Dublin where they were apprehended and executed. Captain Glass was a man of considerable abilities and published A Description of Tenerife with the Manners and Customs of the Portuguese who are settled there.—*Aikin's G. Biog. Biog. Diet.*

GLASSE (GEORGE HENRY) an English clergyman and classical scholar of eminence. He was educated at Christchurch college, Oxford where he took the degree of MA in 1762. On the resignation of the rector of Hauwell Middlesex by his father Dr Samuel Glasse in 1765 he was collated to that benefice which he held till his death in November 1809. He fell by his own hand in a state of mental un stability. Mr Glasse obtained distinction for his classical acquirements at an early period of his life, and possessed a remarkable faculty of writing Greek verses. In 1781 he published a Greek translation

G L A

of Milton's *Comus*; and in 1795 a translation of the *Sonnet Argument* of Milton into the same language, both in verse. He likewise published "Contemplations on the Sacred History" derived from the Works of Bishop Hulme, 4 vols. 1820, "Louis, a Narrative of Facts supposed to throw Light on the Mysterious History of the Lady of the Hay-stack," translated from the French, a volume of sermons on various subjects, besides many single sermons, and articles in the *German Magazin*.—*Lyon's Environs of Lord Supp.* *Gent Mag.*

GLASSIUS (SOLON) a learned ecclesiastic & native of Thuringia, born at Sonderhausen in that province in 1593. He received his education in the university of Jena where he took his doctor's degree in theology and was elected to a professorship in the same science. He afterwards obtained the appointment of superintendent of the churches and schools in Saxe-gotha. He was the author of 'Onomastologia Messae Prophetica Phulologia Sacra, &c., Exegesis Evangeliorum et Epistolorum,' Canticula Mosuca et Davida,

Disputationes in Augustanam Confessionem, &c. His death took place in 1656.—*Meyer.*

GLAREANUS the name by which Henry Loris or Lort, a celebrated Swiss musician, author and composer is generally known being so called from the place of his nativity Glarus, where he was born in 1488. He studied under Cochleus, and was the intimate friend of the celebrated Erasmus, who speaks of him as an excellent general scholar and one well versed in divinity philosophy mathematics, and other sciences. His principal work is a treatise now become extremely rare entitled *Dodecachordon* printed at Basle in one volume 1547. It is important from the insight it gives into the state of practical music at the commencement of the sixteenth century and contains a variety of specimens selected from the chief œuvres of the principal composers of the period with many anecdotes and documents connected with them and their works. Choron has made much use of this tract. He also composed the poetry of the Panegyrique de l'Alliance des Cantons which gained him great credit as well as more substantial marks of approbation from his countrymen, and the emperor Maximilian I honoured him on another occasion with a ring and laurel wreath. He died in 1563.—*Bog Diet of Mus. Teuner.*

GLAUBER (JOHN RODOLPH) a chemist of eminence in the seventeenth century. He was a native of Germany and after having travelled in other countries, he settled at Amsterdam in Holland where he earned on his researches into the theory and practice of the art with some success, and made some useful discoveries. He published the following works:—*Fura novi philosophi* 1650, "De Auri tractatus, seu de Auro potabilis vero," 1650, "Explosio miraculum mundi," 1656,

Falsi Germanie seu Concentratio Vini

G L B

Primum et Lignum " " *De Natur. Salinis*, 1656; "Opus Minimorum partis tere," 1656; &c. These treatises appear to have contained all the chemical science then known intermixed however with a great deal of visionary speculation concerning the philosopher's stone and the elixir of life. The compound now termed sulphate of soda, was discovered by this chemist, whether it was long known by the application of Glauber's salts. Mr Brande ranks Glauber with Van Helmont, Basil Valentine, Begara and George Agricola, and to these experimentalists as he observes we are indebted for a rich and profitable harvest of discoveries, and with them many weighty doctrines and brilliant discoveries had their origin which now adorn our science and of which we daily avail ourselves, forgetful of the fountain whence they flow. An abridgement of the works of Glauber was published in German in 1715.—*Rœr's Cycloped. Journal of the Royal Institution* vol. ii.

GLEDITSCH (JOHN GOTLIB) a physician of Frankfort-on-the-Oder born at Leipzig in 1714, graduated as MD at the former university in 1740. Here he lectured on physiognomy, the materia medica botany and other cognate branches of the art of medicine. He afterwards settled at Berlin where he was appointed superintendent of the botanical garden, and professor of anatomy in the Royal Academy of Sciences. He wrote on the management of trees on the method of destroying locusts, on fungi, on the management of bees, on the system of plants with a variety of miscellaneous tracts on subjects connected with rural economy botany physic &c and died in 1786.—*Chalmers's Biog.*

GLENDOWER (OWEN) who has been sometimes called the Wallace of Wales. The precise date of his birth is uncertain some fixing it at May 28th 1349 others on the same day in 1354. The place of his nativity is better ascertained to have been Trefgarne in Pembskeshire where he was born of Elin a local descendant from Catherine, daughter and heiress to Llewellyn last Prince of Wales. His father's name was Gryffyd Vychan. At an early age he was sent to London for education and afterwards entering himself of one of the inns of court studied for the English bar but relinquished the profession on being appointed scutiger to Richard II. Jolo Goch a contemporary bard gives a splendid description of his family mansion or rather palace and indeed he appears at this time to have exercised considerable feudal influence carrying on with great spirit a contest of some duration with Reginald lord Grey da Ruthyn respecting an estate called Crossau in which he was for a time successful, but on the deposition of his royal patron by Henry of Bolingbroke his old antagonist took advantage of the unsettled state of the country to renew his usurpation. Nor did his evil practices end here for Grey being charged with the delivery of a summons to Owen from the new king to attend him on his Scotch expedition purposely neglected to deliver it, and Glendower being in consequence

G L I

outlawed for disaffection, his enemy seized upon all his lands, and the parliament treated his remonstrances with contempt. Glendower in revenge rallied his rebellion, forcibly dispossessed Grey of his lands, and having succeeded in raising a considerable force caused himself to be proclaimed prince of Wales, September 20 1400. To this strong measure he is said to have been mainly incited by some traducatory prophecies of Merlin, and certain it is, that many of his countrymen of consideration were induced by the same motives to join his standard. In one of the battles fought on this occasion, in 1408 he made prisoner his old enemy the lord Grey the price of whose ransom was fixed at 10 000 marks and a stipulation of neutrality which latter was cemented or rather converted into amity afterwards by Jane Owen's third daughter becoming lady Grey. Having defeated the king's troops under sir Edward Mortimer Henry put in motion against him three grand divisions of his army but returning to the mountains he failed all attempts to bring him to action and the rebellion of the Percys breaking out, joined the coalition causing himself at the same time to be formally crowned at Machyn leath in Montgomeryshire sovereign of Wales. The rashness of Henry Percy brought on the fatal battle of Shrewsbury before all his Welch auxiliaries had come up. Their Prince however is said to have been so near as to have reconnoitered the action from the top of a lofty tree but seeing all was lost, directly retreated and continued his marauding warfare. Thus he kept up with various success, occasionally assisted by Charles VI of France with whom a treaty of his is yet extant dated 1404, in which he is styled "Owenus Desiratius Princeps Wallie." Finding it impossible to subdue Henry in 1415 condoned to treat with him but Owen died on the 20th of September in that year during the negotiation which was however continued and ratified by his son Mareduyd ap Owen February 24 1416. Direct descendants of his are yet living in the family of Monington settled at the place of that name in Herefordshire, which is also assigned by tradition as the burial place of Glendower. He appears to have been a man of considerable ability considering the rude age in which he lived and to have united in no common degree the different qualities of a statesman and a captain of bandits.—*Thomas's Life of O Glendower*

GLISSON (FRANCIS) an eminent English physician and anatomist, was born in 1597 at Rempstone in Dorsetshire. He received his academical education at Cambridge, and applying to the study of physick settled in London in 1634, became a fellow of the college of physicians in 1639, and acquired great reputation by his lectures *De Morbis Parvorum*. During the civil wars he retired to Colchester, where he practised with great credit. Returning to London he remained there during the great plague and although he visited many patients, escaped the infec-

G L O

tion. He died in 1677 at the age of sixty Dr. Glisson was highly esteemed by the greatest men of the faculty in his own day. His *Anatomia Hepatis* London, 1656, in particular attracted considerable attention, containing a more exact account of the anatomy and functions of the liver than had hitherto appeared and the name of the author has been attached to a part supposed to be of his own discovery—the capsule of the vena portarum. Besides his medical and anatomical works, Dr. Glisson was author of an elaborate metaphysical treatise entitled *Tractatus de Natura Substantiarum Energetica*. London 1672, 4to.—*Halleri Bibl. Med. Aski's Mem. of Medicine.*

GLOVER (RICHARD) a poet of some reputation. He was the son of Richard Glover a merchant of London and was born in St Martin's lane Cannon street in 1712. Being intended for trade although he received a classical education at a private school it was not followed up by an attendance at either university. He early displayed an attachment to the belles lettres, and when only sixteen wrote some vers to the memory of sir Isaac Newton which obtained considerable attention. In 1737 he married a lady with a handsome fortune, and in the same year published the epic poem of *Leonidas* which was highly countenanced by the party in opposition to sir Robert Walpole headed by Frederick prince of Wales. It is no mean performance abounding in noble sentiments, considerably varied by incident and description, but it labours under the want of interest, and its poetry is not of a character sufficiently imaginative for lasting popularity. A poem entitled the *Progress of Commerce* followed in 1739, one of the objects of which was to rouse a spirit of national hostility against the Spaniards and the ministry a purpose which was much more effectually answered by his celebrated ballad of "Hooper's Ghost." In 1748 he was chosen by the London merchants to conduct an application to parliament complaining of the neglect of trade and the speech which he pronounced at the bar of the house was printed and much applauded. While rising to notice as a public man however he became embarrassed in his private affairs, and made a temporary but honourable retreat with a view to greater economy. In 1751 he was an unsuccessful candidate for the office of chamberlain to the city of London. In 1753 his tragedy of *Boadicea* was performed at Drury lane theatre with partial success. His *Medea*, imitated from Euripides and *Semele* appeared in 1761 and obtained greater attention. About this time too his circumstances were so much improved that he ventured to return to public life and being chosen MP for Weymouth he was esteemed by the mercantile interest as an active and able supporter. He died in November 1765 at the age of seventy three. He left behind him another epic poem forming a sequel to *Leonidas* entitled the *Athenaeum*, which was published in 1768 but engaged very little

G L U

attraction. Mr Glover was also one of the many persons to whom partisans have attributed the letters of Junius.—Johnson and Chalmers's *British Poets*.

GLOVER (THOMAS) a native of Ashford Kent born 1543. He was well skilled in the antiquities of this country, and obtained the appointment of Somerset herald after going through the preliminary grade of pursuivant at arms in the herald's college. In this capacity he was employed to accompany the lords Willoughby and Derby on their missions to the courts of Copenhagen and Paris in order to instruct the several sovereigns knights companions of the order of the garter. He was the author of a treatise *De Nobilitate Polonica* folio 1608 and a Catalogue of Honor folio 1610 both which were printed after his decease by his nephew Thomas Miller. Camden was much indebted to him for his assistance in developing many pedigree of the principal families of Great Britain. His death took place in 1588.—*A Nod's College of Arms*. *Fuller's Worthies*.

GLUCK (*CANTOFRÉ*) one of the most eminent composers of modern times who has indeed been styled the Michael Angelo of music. He was born of low parentage in the Upper Palatinate on the borders of Bohemia, in 1714 or as Labord asserts in 1712. In this part of the country the peasantry are naturally inclined to music and young Gluck exhibiting a still more decided taste for it than even the generality of his young companions set out for Vienna supporting himself on the road by the exercise of his talents. Arrived at the capital by laborious application and the strictest economy he was enabled to procure better instruction than his native province afforded until a nobleman of the court whose notice he was fortunate enough to attract took him with him into Italy where he studied under Martini at Milan and made so great a proficiency in a very short period that before the expiration of the four years, during which he remained in the country he had composed several operas and acquired such a reputation that lord Middlesex then the principal director of the English opera, was induced to offer him an engagement which he accepted to visit London. The times however were unfavourable to him; he reached England in 1745 during the height of the rebellion when all foreigners especially catholics, were looked upon with suspicion and although in order to conciliate public favour Gluck commenced by the production of a piece entitled 'La Caduta de Giganti' full of complimentary allusions to the duke of Cumberland it had not the good fortune to survive more than five representations. His *Artamene* and *Piramo e Tisbe* which followed, were scarcely more successful and mortified and disappointed at his failure he returned to Italy where he applied himself with great success, to the reformation of the dialogue and business of the opera which up to this period had been little more than a series of unconnected scenes, serving as mere

G M E

vehicles for the airs and accompaniments. In this design he derived great assistance from Cimarosa a writer of considerable taste and genius who composed for him several dramas, all the parts of which were in unison and regularly developing a specific plot. Of these the principal were the *Orfeo*, *Alceste* and *Armida* pieces which stimulated the genius of Gluck to the composition of that sublime and powerful music which has secured his immortality. Vienna, Naples, Rome, Milan, and Venice were in turn the theatres of his glory, and an additional expenditure of upwards of fifty thousand pounds in a single winter is said to have enriched the Bolognese arising principally from the concourse of strangers attracted to their city in order to witness the performance of *Orfeo*. His next attempt, which he commenced at Paris was of a nature hardly less hazardous this was to adapt if possible the French tongue with success, to Italian melody of which from the genius of the language it was supposed to be scarcely susceptible. Here too he was again completely triumphant as was evinced by the brilliant run of his *"Iphigénie en Aulide"* the text of which was taken with little or no variation from the drama of Racine. In 1766 *Alceste* an exact copy of the tragedy of Euripides, made an impression equally strong after which *Iphigénie en Taïnde* closed the lyric career of the composer. Gluck was at the zenith of his reputation when the celebrated Piccini arrived at Paris and immediately a contest hitherto unknown in the annals of musical rivalry commenced. The whole capital was divided upon the merits of the two composers, and Etienne Piccini on Gluck? was the first question asked of every one. Pamphlets innumerable were published on the occasion. Suard and Arnaud espoused the cause of Gluck, while La Harpe and Marmontel wrote on the part of Piccini. The merits however of the parties were so nicely balanced that it proved at last but a drawn battle. In 1779 Gluck quitted Paris for Vienna, where in 1782 he was visited by the grand duke Paul of Russia and his consort, two years after which he suffered a paralytic affection which eventually deprived him of life November 15 1787. He was said to have amassed a fortune of thirty thousand pounds sterling by the exercise of his talents and the profits arising from the sale and performance of his compositions.—*Bug's Diet of Mus.*

GLYCAS (MICHAEL) a Greek historian was a native of Byzantium is supposed to have flourished in the twelfth or thirteenth century. He is principally known by his *Annals*, in four parts, containing the history of the world to the birth of Christ and that of the Byzantine empire down to the death of Alexius Comnenus in 1118. His *Annals* were translated into Latin by Leon ciavus and published by father Labbe in 1660 with notes.—*Vasis Huius Greci Mores*.

GMELIN (JANUS GEORGIUS) a German botanist, physician and traveller of the last cen-

G O A

tury. His father was an apothecary at Tübingen, where he was born in 1709; and after completing his studies in the university there he took the degree of M.D. in 1737. He went to Petersburgh, and was made a member of the Imperial academy, and in 1731 professor of chemistry and natural history. In 1733 he was employed, in conjunction with G. F. Müller and others, in an expedition to explore the boundaries of Siberia. He returned to Petersburgh in 1743, and resumed the offices he had previously filled. In 1747 he visited his native country, and during his absence he was appointed to another professorship vacant by the death of Beckenstein, on the dates of which he entered in 1743. He died of a fever in May 1755. His works, which are valuable for the scientific information they afford are

Flora Siberica seu Historia Plantarum Siberiae 1747 1749 2 vols. 4to, to which two more parts were added by his nephew, and

Travels through Siberia, written in German 4 vols. 5vo.—*Akademie Ber.*

GMELIN (SAMUEL THOMAS) nephew of the preceding was born in 1743 at Tübingen, where he studied and took the degree of M.D. in 1763. He travelled through France and Holland, and becoming distinguished for his acquaintance with natural history, he was made professor in the Imperial academy at Petersburgh. He was sent by the Russian government, with professor Goldenstadt, on an expedition of discovery to the provinces of the empire bordering on the Caspian sea. After travelling from 1768 till 1773 Gmelin was made a prisoner by a Tartar chief who being disappointed of the sum he demanded for his liberation, treated the traveller with so much harshness that he died in confinement in July 1774. His published *Histoire Naturelle*, Petrop. 1768, 4to, and an account of his travels appeared in 4 vols. 4to, 1771 1774 and 1786 the last volume having been edited by professor Pallas.—*Idem.*

GMELIN (JOHN FREDERICK) an eminent chemist and natural philosopher who like the foregoing was a native of Tübingen. He studied at the university of that place and at Gottingen where he obtained the professorship of chemistry and natural history. He was the author of *Onomastologia Botanica*, 9 vols. 8vo, "Apparatus Medicinarius," 2 vols. 8vo, and many other works relating to chemistry, mineralogy and natural history, but he is most advantageously known as the editor of the "Systema Naturae of Linnaeus published at Leipzig in 9 vols. 8vo 1788. He died at Gottingen in May 1805. Besides his literary labours he is distinguished by some discoveries of vegetable and mineral substances useful in the art of dying.—*Nous. Diet. Hist.*

GOAD (John) an eminent classical teacher was born in London in 1651, and educated at Merchant Taylors' school, and at St. John's college, Oxford. He took orders, and in 1643 was made vicar of St. Giles's, Oxford, where he performed his duties with perseverance during the siege of the city by the parliamentarian forces. He then obtained the vicarage of

G O D

Tunstall, and took his degree of B.D. in 1661; he was made head master of Merchant Taylors' school, which situation he held for nearly twenty years, but in 1681 it being suspected that he was inclined towards popery, he was discharged, but with a gratuity of £101. These suspicions proved true for in 1686, in the reign of James II, he openly professed himself a Roman catholic. He died in 1699. His works are *Genealogicon Latineum*, a dictionary for the use of Merchant Taylors school, *Autodidactica, or a practical vocabulary &c.*, *Declamation whether monarchy be the best form of Government?*

Astro-Meteorologica, or Aphorisms and Discourses of the Bodies celestial their natures influences &c. The subject of this is a kind of astrology founded on reason and experiment and gained him great reputation. After his death was published *Astro-Meteorologia sana, &c.*—*4th. Oxon. Dodd's Chapel Hse. Granger*

GOBELIN (GILLES) a French dyer who lived in the seventeenth century, whose name has been perpetuated by being applied as the designation of a kind of tapestry. He made improvements in the art of dyeing scarlet and residing in the suburbs of Paris his house and manufactory were called the Gobelins. He died before the middle of the seventeenth century and in 1666 an establishment for the manufacture of fine tapestry was founded on the spot he had occupied under the auspices of the minister Colbert whence the work produced there was termed the Gobelin tapestry.—*Dufresnoy*

GOBIEN (CHARLES LE) a French jesuit, born in 1653 at St Maloës. He is principally known as the author of a series of letters on the progress of Christianity among the Chinese having accompanied the missionaries sent out by the brethren of his order to that empire in the capacity of secretary. He also published an account of the edict issued by the emperor of China in favour of the Christian religion in 1220. A History of the Manan Islands, 1700, and was a contributor to the *Lettres Edifiantes et Curieuses*. He died in 1706 at Paris.—*Moreri*

GODDARD (JONATHAN) a learned and ingenious chemist and physician, born at Greenwich about the year 1617. He was originally a member of Magdalen college Oxford, and went through the usual course of study during a residence of four years in that university after which he travelled, and on his return graduated as doctor of medicine at Catherine hall, Cambridge. On the breaking out of the civil war Dr. Goddard took part with the parliament, and was in 1651 appointed by Cromwell (whom he attended both in Scotch and Irish expeditions, in quality of physician to the forces) warden of Merton college in the university where he had first matriculated, his patron being then its chancellor. In the short parliament of 1653 he sat as sole representative for Oxford and two years after was chosen professor of physic in Graham college. His acknowledged rank as a man of science and

giant, at length overcame the prejudice raised, against him by his republican principles, which were not however of so uncompromising a nature as to prevent his accepting in 1663 a situation at the council board of the Royal Society on the first institution of that incorporation. In 1668 he published a pamphlet entitled a "Discourse setting forth the unhappy condition of the practice of physic in London," the principal object of which was to induce his brother physicians to follow his example in always marking up his own prescriptions without the intervention of the apothecaries. This excited of course a strong sensation among the members of the latter body who attacked him in all directions and eventually carried their point. The invention of the famous nostrum called Guttæ Anglæ came but more generally known by the name of Goddard's Drops the secret of which composition Charles II is said to have purchased for 5000*l.* has been erroneously attributed to him instead of Dr William Goddard. The principal pretension however of Dr Goddard on the score of ingenuity is his title to be considered the first English constructor of a telescope a claim which professor Ward in his history of Gresham college advances for him. He continued to lecture on chemistry and medicine as Gresham professor till the 24th of March 1674 when returning from a meeting of some philosophical friends he was suddenly seized with apoplexy in Cheapside and died before he could be conveyed home. Several of his tracts are preserved in Birch's Memoirs of the Royal Society and in the philosophical transactions of that body.—*Biog Brit Word's Gresham Professor.*

GODEAU (ANTOINE) an active and exemplary French prelate, bishop of Grasse and afterwards of Vence born in 1605 at Dreux. He was one of the earliest and most able members of the French Academy and was particularly distinguished by cardinal Richelieu to whose patronage he owed his preferment. He appears to have had a strong turn for sacred poetry and was a voluminous writer on devotional subjects as well in verse as in prose of the former a specimen exists in his translation of the book of Psalms which the protestants preferred to that of Marot while in the latter his ecclesiastical history in three folio volumes 1653 which though left unfinished contains the history of the first eight centuries gives ample proof of his learning and industry. He also published a treatise called "Christian Morals" of which there is an English translation by Kennet. He died of apoplexy April 21 1671.—*Nouv Dict Hist.*

GODEFROL There was a French family of this name several members of which were distinguished for their learning and abilities during the latter half of the seventeenth and the eighteenth centuries.—DENYS GOBON the father was a native of Paris, born in 1549. He was eminent as a lawyer and held a seat in the parliament of Paris till the revolution of

the edict of Nantes drove him from his native country to Geneva whence he afterwards retired to Strasburg. Of his works, which are voluminous, those by which he is most advantageously known are his "Corpus Juris Civilis 4to, Note in Quatuor Lib. Instit." and "Opuscula varia Jura." He died in 1622 at Strasburg leaving two sons THOMAS and JAMES of these the former adhered to the religion which his father had abjured, and became a counsellor of state in Paris. He published a work on the genealogies of the principal French families and died in 1642 at Munster.—His son DENYS so named after his grandfather was the author of a political treatise containing maxims of instruction concerning "Les Droits du Roi" etc. His death took place in 1681.—JOHN GOBON another son of his published an edition of the memoirs of Philip de Comines in 5 vols, the "Memoirs of Queen Margaret;" and the "Journal of Henry III." He died in 1732.—JANUS, the brother of the first Theodore followed his father to Geneva, where he became professor of jurisprudence and a member of the council having embraced the reformed religion. He was the author of several tracts on professional as well as miscellaneous subjects and died in 1652.—*Nouv Dict Hist.*

GODFREY of Bouillon chief of the first crusade and king of Jerusalem was the son of Baudouin II count of Boulogne and in his mother's right was heir of the Lower Lorraine. He served in the armies of the emperor Henry IV who conferred upon him the title of duke of Lorraine. When the first crusade was set on foot, Godfrey was one of the earliest and most illustrious princes who took the cross, and the command of the principal army was confided to him for which he was eminently calculated by his prudence and moderation. He was accompanied by two of his brothers, Eustace and Baldwin. Before his departure he sold or pledged his heredities of the lands of Bouillon to the church of Liege. In the autumn of 1096 he led his army through Germany Hungary and Bulgaria, and arriving at Philippi in Thrace he sent to the Greek emperor Alexius Comnenus, to demand the liberation of Hugh count of Vermandois, brother to the king of France who had been seized at Durazzo and detained as a captive. Mutual jealousies arising between the eastern and western Christians, he was obliged to use some violence to obtain the security and justice which he required, but at length an agreement was concluded. After gaining several advantages of late moment, Godfrey at length proceeded to the great object of his enterprise the conquest of Jerusalem. The siege of this city began in June 1099 and it was carried by storm July 15. Eight days after Godfrey was proclaimed king of Jerusalem by the unanimous voice of the army but his humility would not suffer him to assume the ensigns and titles of a sovereign, and he governed under the title of Defender and Baron of the Holy Sepulchre. He then overthrew the sultan of Egypt with a vast host at

GOD

the battle of Ascalon, and the reduction of all Palestine followed. Godfrey established the feudal institution in his kingdom, and a code of jurisprudence entitled *The Assise of Jerusalem*. He died after a year's reign in 1100. He is immortalised as the hero of Tasso's *Jerusalem Delivered*, nor did his splendid qualities require the aid of fiction to establish his character.—*New Hist. Gibbon. Moxon.*

GODFREY, of Viterbo an ancient chronicler, is supposed to have been born in the twelfth century at Viterbo in Italy. He was chaplain and secretary to the emperor Frederick and his son Henry VI. His chronicle which according to his own account, was the fruit of immense research begins with the creation of the world and ends with 1186. It is written in Latin prose and entitled *Pantheon*. It was first printed at Basle in 1559 and is to be found in Pistorius's collection of German writers. Although of little authority in other respects, it is thought worthy of credit for the events of his own time. Another work by Godfrey entitled *Sperulum Regum* is preserved in MS. in the imperial library at Vienna.—*Moxon. Turborth.*

GODOLPHIN (John) a learned cavalier of the seventeenth century born at the place of the same name in one of the Scilly islands in 1617. He was educated at Gloucester Hall Oxford where he graduated in 1643 as LLD. On the breaking out of the troubles he joined the puritanical party and during the protectorate was a judge of the admiralty court. After the restoration his reputation for learning and integrity did away the offence of his previous political conduct, and the court appointed him one of the king's advocates in which situation he became a warm assertor of royal supremacy. His works are—*A View of the Admural's Jurisdiction*, 1661 8vo. *The Orphan's Legacy* 1674 4to. *The Holy Arbour folio*, “*The Holy Lambek*” and “*Repertoriu Canonicum*” 4to. He died in 1678.—*Bog. Brit.*

GODOLPHIN (SIRNEY) a native of Corn wall, born in 1610. He received his education at Exeter college, Oxford and according to Hobbes, was possessed of considerable literary attainments, as well as of an elegant fancy. Of his works there are only remaining a few miscellaneous poems, and a translation of that part of Virgil's *Aeneid* which describes the loves of Dido and Aeneas, printed together in one 8vo volume 1653. He espoused the Royalist party during the civil war and was killed in a skirmish at Chagford, Devonshire in 1643.—SIDNEY GODOLPHIN earl of Godolphin of the same family as the preceding and educated at the same university. He began a career of politics at an early age under Charles II, and was one of those who voted for the exclusion of the duke of York from the throne in 1680 notwithstanding which he continued in office after the accession of James II. On the flight of that monarch, and while the country was yet in suspense, Godolphin voted for a regency,

GOLD

yet was after the capture of the crown on William and Mary made a treasury commissioner. During the reign of Anne he reached the head of his department being appointed lord high treasurer of England and in 1704 became a knight companion of the garter. This honour was followed up in 1706 by a patent creating him earl of Godolphin. He had now however reached the zenith and four years afterwards was obliged to retire from Office. His death took place in 1712.—*Birch's Lists.*

GODWIN (FRANCIS) son of Thomas Godwin bishop of Bath and Wells a prelate who fell into disgrace with queen Elizabeth in consequence of his contracting a second (some say a third) marriage in his seventieth year. Francis, the subject of this article was born in 1561 at Havington Northamptonshire and in his seventeenth year was elected to a studentship at Christchurch Oxford. Having entered the church he obtained the rectory of Samfield Orcas in Somersetshire with a stall in Salisbury cathedral and in 1593 graduated as Doctor in Divinity on being promoted to the sub-deanery of Exeter. Possessing a strong turn for the study of ecclesiastical antiquities he associated himself with his friend Camden in a tour for the purpose of exploring the principal monastic remains in the kingdom especially in Wales. The result of his labours was a work descriptive of that part of their united researches to which he had more particularly applied himself which he published in 1601 under the title of *A Catalogue and Lives of English bishops*. This treatise through the recommendation of Lord Buckhurst gained him the notice and the favour of Elisabeth who raised him to the see of Llandaff whence her successor in 1617 translated him to the more lucrative one of Hereford. He married a daughter of Wolton bishop of Exeter and after a lingering illness died in 1633. Bishop Godwin was a good mathematical scholar and is said to have understood the true theory of the motion of the moon nearly a century before it was generally known. Bishop Wilkins is indebted to him for many hints afterwards followed up by the latter in his *Secret and Swift Messenger*. He was also an elegant Latinist as appears by the third edition of his *Ecclesiastical Catalogue* which he published under his own superintendence in consequence of the very slovenly manner in which the second had been printed in his absence. As an historian he is considered clear and accurate and his annals of the reigns of Henry VIII Edward VI and Mary have gone through three editions, to the last of which his son Morgan (archdeacon of Shropshire) added an English translation in 1630. His other works are *The Man in the Moon* by Donunga Gonsales, 8vo printed after his death, a treatise *On the Value of the Roman Sestertia and Attic Talent*, and *Nuncius Iacobinus*.—*Bog. Brit.*

GODWIN (MARY) better known by her maiden name of Wollstonecraft, a writer of considerable but eccentric genius, was born in

G O D

54

ex-mate London in 1750. Her parents, whose circumstances were humble, afterwards so moved to a farm near Beverley in Yorkshire where she attended a day-school. The family again returned to London but nothing appears to have taken place remarkable until Miss Westoncraft attained her twenty fourth year except her adoption of very singular opinions in respect to the privileges of her own sex, and on religion politics and matters generally. On attaining the age above mentioned, she set up a school, in conjunction with her sisters with whom she removed to Newington green where she obtained the notice and friendship of Dr Price. She never however appears to have relished the confinement of a school and meditating literary employment she wrote a pamphlet, entitled "Thoughts on the Education of Daughters," the copyright of which she sold for ten guineas to Mr Johnson of St Paul's Church yard who afterwards proved one of her most liberal patrons. She was subsequently employed for some time as governess in the family of an Irish nobleman on quitting which she had again recourse to literature and produced "Mary a Fiction" Original Letters from real Life, "The Female Reader," and some articles in the Analytical Review. She was also one of the first to answer Burke's Reflections on the French Revolution which answer was followed by her celebrated "Vindication of the Rights of Women." The eccentricity of her theory was altogether equalled by the singularity of her practice which led her first into the indegence of a romantic but fruitless attachment to Mr Fuseli the painter although a married man and unhappily to one more intimated with an American, of the name of Linsay whose desertion caused her to attempt suicide. This ardent passion like the former was however overcome by a succeeding one the object of which was Mr Godwin author of "Political Justice," "Caleb Williams," and other well known productions. As the bonds of wedlock were deemed a species of slavery in the theory of this strong minded but fanciful female it was only to legitimatise the forthcoming fruits of the union that a marriage between the parties took place. The connexion however proved unfortunate as she died in childbirth after being delivered of a daughter in August 1797. From the account given of her by Mr Godwin, who published her life, she was a woman of great but undisciplined, natural powers and strong passions to the suggestions of which she yielded as to the voice of nature which it could not be improper to attend to and as the forms and laws of society are particularly restrictive upon females in this respect, she held that they augmented the prejudices to which it was unreasonable to submit. Setting aside all discussion of the correctness of this theory of the danger attendant on its practice this extraordinary female was herself an eminent instance. Besides the works above mentioned, Mrs Godwin published a "Moral and Historical View of the French Revolution," and "Letters from Norway," which

were written with great sense and eloquence. After her death, Mr Godwin published, 12mo, some miscellaneous letters and an unfinished novel with a life of the authoress, almost as curious as herself and which it is apprehended will do little to advance the credit of the theory under which she acted.—*Life by Godwin.*

GODWIN (THOMAS) a native of Somersetshire born 1587 and educated at Magdalene hall Oxford. He took his master's degree in that university in 1609 and became shortly after master of the Abingdon grammar-school. Bishop Montagu patronised him much on account of his learning and abilities and presented him in 1616 to the living of Brightwell Berks when he retired from his former situation. His writings consist of *Romanæ Historia Anthologica*, an excellent school book printed in 4to 1613 for the use of the seminary over which he then presided, *Syntaxis Antiquitatum Hebreicarum* 8vo 1616.

Moses et Aaron a treatise on the Jewish rites and ceremonies 1637; "Three Arguments to prove Election upon Forecast by Faith" and "Florilegium Phrasorum." His death took place in the spring of 1643 at his parsonage house in Brightwell.—*Bieg Brit.*

GÓEZ (DAMIAN DE) a Portuguese author of the sixteenth century born of a noble family in 1501 at Alenquer and educated in the court of king Emanuel of whose household he was a member. Having obtained permission to travel he visited most of the continental courts, cultivating an acquaintance with the literati whom they maintained among others with Erasmus, Olaus Magnus, and cardinal Bembo. John III recalled him to Lisbon after fourteen years absence from his native country during which he had married and settled at Louvain. His reception was at first in the highest degree favourable and he was commissioned by the court to write the history of Portugal his success however appears to have created him enemies who went so far as to lodge a public accusation against him and procured him to be put under arrest with orders not to pass the boundaries of the capital. The truth or falsehood of the charge was prevented from being brought to an issue by his sudden and unexpected death the manner of which has been variously related some asserting that it took place accidentally in a fire while others aver that he was found dead in his own house whether by apoplexy or strangulation could never be ascertained. The date of his decease is by all fixed in 1560. His principal writings are—"Hispanus Laudatio" "Fides, Religio Moreque Ethnologia," "De imperio et Rebus Lusitanorum;" "Commentarium Rerum Gestarum in India a Lusitanis" and "Legatio Indorum Imperatoris ad Emanuelum Lusitanum Regem AD 1532." The style of his compositions in the Portuguese language is said to have been much vitiated by his long residence in foreign countries.—*Moreri.*

GOFF (THOMAS) a divine and dramatic writer born in Essex about 1593, and was educated at

• G O L

• G O L

Westminster-school at Chipping-sedge, Oxford, where he made the display of 1610. In 1610 he was preferred to the living of East-Claudia where he died in 1619. He wrote several pieces and five tragédies, which were not published until some years after his death. In the latter part of his life he wrote some sermons which possess a good deal of fancy and directness with fervent emotions.—Athen. Oxon. Vol. i. Biog. Dram. Genl. Mag.

GOUDET (ANTHONY YVES) a French writer who was the son of a Parisian advocate and was educated for his father's profession. He obtained by purchase the place of counsellor of the parliament, but distinguished himself more as a man of letters than as a lawyer. In 1758 he published a work, entitled *Origine des Lois des Sciences, et des Arts et de leurs Progrès chez les Anciens Peuples* 3 vols. 4to reprinted in 1758 and 1809 and translated into English. He commenced a treatise on the origin and progress of laws &c. among the French but was prevented from completing it by his death which occurred in 1758 at the age of forty-two. As an author Gouget exhibits much industry and research and a considerable degree of learning, but there is nothing in his speculations very striking or profound, and his volumes are valuable only for the mass of information which he has so honorably collected.—Nees. Dict. Hist. Biog. U.S.A.

GOLDING (ARTHUR) an English writer of the age of Elizabeth born in London. He translated Ovid's Metamorphoses into English verse of which Pope speaks in terms of qualified commendation, also Caesar's Commentaries and Pomponius Melis meta prose. He was likewise the author of an account of the earthquake of 1580 and of several devotional and other treatises. He was patronised by Cecil Sidney and other of the leading literati of his time but the precise period both of his birth and decease is uncertain.—Biog. Brit.

GOLDONI (CHARLES) an eminent writer of comedy was the son of a physician of Venice where he was born in 1707. As soon as he could read, he attached himself to the writers of comic drama, and before he was eight years of age he sketched a plan of a comedy of his own invention. He was sent to learn rhetoric at the Jesuits' college of Perugia, and philosophy at Rimini. However his inclinations still leading him to the contrary he eloped from Rimini with a company of comedians. After his father's death he was prevailed upon by his mother to take up the profession of a lawyer at Venice but circumstances causing him to quit it he went to Milan where he became the secretary of the Venetian resident. He here brought out his first piece, entitled *Il Gondoliere Veneziano* and soon after removing to Verona he joined a company of players, whom he accompanied to Genoa where he married. He then returned to Venice, and set himself about reviving the Italian stage. In 1761 he received an invitation from the manager of the Italian

theatre at Paris, which he accepted, and made similar efforts. On the conclusion of his engagement he obtained an introduction to the court, and was appointed Italian master to the princesses, with apartments in Versailles and a pension. On the accession of Louis XVI he was appointed Italian teacher to the princesses Clotilde and Elisabeth but his infirmities obliging him to retire from court, he went to Paris where as his old age he was deprived of his pension, in consequence of the Revolution. He died in 1792 at the age of eighty five. Goldoni possessed real comic talents but he wrote too rapidly to attain the highest rank. Voltaire in one of his letters styles him the painter of nature. His dialogue is lively and spirited and his pieces have a moral tendency. They were printed at Leghorn in thirty-one volumes, 8vo 1788-91.—*Life by Himself*. Monthly Mag.

GOLDSMITH (OLIVER) an eminent poet and miscellaneous writer was born in 1731 at Pallas in the county of Longford Ireland. His father the rev Charles Goldsmith a clergyman of the establishment, sent him at an early period to Dublin college and after wards, with a view to the medical profession to the university of Edinburgh. At both these institutions the eccentricity and carelessness of his conduct involved his friends in considerable difficulties and he was removed to Leyden at the expense of his uncle the rev Thomas Contarne. After studying medicine and chemistry at the university for about a year he left it with only one clean shirt and no money in his pocket, to make the tour of Europe on foot and actually travelled in this way through Flanders part of France Germany Switzerland and Italy. It was probably at Padua that he took a medical degree as he remained there six months but his uncle dying while he was in Italy he was again obliged to travel on foot to England and reached London with a few pence in his pocket. He luckily found a countryman and fellow colleague Dr Sleigh who generously assisted him and recommended him as an usher to a school at Peckham. He remained but a short time in this situation and then took lodgings in London in order to follow the profession of an author. He acquired a department in the Monthly Review wrote essays in the Public Ledger (since published under the title of *The Citizen of the World*) and also a weekly pamphlet entitled *The Bee*. In 1765 he suddenly appeared as a poet, by the publication of his celebrated production *The Traveller* which having been written some time before, he finished and enlarged at the recommendation of Dr Johnson. The public agreed with that eminent critic and the celebrity which this poem procured its author was the cause of his introduction to the most eminent literary characters of the day. In 1766 appeared his well-known *Vicar of Wakefield* which at once secured general applause. He also about this time composed one of his most successful works, a *History of England in a Series of Letters from a Nobleman to his Son,*

GOL

8 vols. 8vo, which for its elegance and Moral spirit was usually attributed to lord Lytton; but in 1769 his comedy of the " Good Natured Man," was acted at Covent-garden with but indifferent success, and he applied to the more certain labour of a " Roman History" and a " History of England," in four volumes. His political fame was greatly enhanced in 1770 by the publication of his " Deserted Village" for which he could hardly be induced to take the proffered recompence of 100*l.* until satisfied that the profits of the bookseller could afford it. In 1772 he produced his comedy of " She Stoops to Conquer" which being completely successful was very profitable. He did not on this account neglect compilation and besides a Grecian history he supplied the booksellers with A History of the Earth and Animated Nature composed out of Buffon and others, in a manner which was both amusing and instructive although the scientific acquirements of the author were not sufficient to guard against numerous errors. Such was the confidence he had acquired of his skill in compilation that he was meditating a universal dictionary of the arts and sciences when a despondency of mind probably owing to the derangement of his circumstances brought on a low fever which owing to an over dose of a powerful remedy terminated his existence in April 1774. He was buried with little attendance in the Temple church but a monument has been erected to his memory in Westminster Abbey with a Latin inscription by Dr Johnson. The manners of Goldsmith were eccentric even to absurdity, but no writer of his time possessed more genuine humour or was capable of more poignancy in marking the foibles of individuals, of which faculty his unfinished poem of " Retaliation" furnishes a very happy specimen. His literary fame as a poet is fixed by his poems of " The Traveller" and " The Deserted Village" not to mention his pleasant ballad of " The Hermit," which with some short miscellaneous pieces, complete the catalogue of his pieces in verse. His " Vicar of Wakefield" forms no mean claim for him as a novelist, and as a prose writer his style is peculiarly easy clear and unaffected. As a thinker he possibly possesses little depth or originality and his humour both as a dramatist and essayist, although lively is occasionally extravagant. His compositions are peculiarly felicitous, and it was truly observed in his eulogium by Dr Johnson, that he left no species of writing untouched and adored all to which he applied himself.—*Anns. Reg. Akins: G. Ross.*

GOLIUS. The name of two brothers natives of Holland, born of an ancient family and both celebrated as eminent Oriental scholars. JAMES the elder and more distinguished of the two, was born in 1596 at the Hague. He commenced his education at Leyden, and in 1622 accompanied the Dutch embassy to the court of Mulay Zeydan, emperor of Morocco, in quality of interpreter. He acquired the favour of the emperor who made him many valuable presents of books and manu-

GOM

script, including a history of the theatres of Fes and Morocco. On his return to Europe he was chosen to succeed his former friend Erpenius, lately deceased in the Arabic professorship at Leyden and was soon after appointed also to the mathematical chair in the same university and made Oriental interpreter to the states-general having previously spent fifteen months in travelling to Aleppo various parts of Syria and Constantinople. A large collection of manuscripts made by him in his travels, he presented to his university and died at length September 26 1667. Of his works the principal are an Arabic translation of the New Testament with a Greek version, as also the Protestant Confession Catachism and Liturgy. He compiled two valuable lexicons of the Arabic and Persian tongues the latter of which was printed in London, wrote a life of Tamerlane and published a new edition of Erpenius's Grammar and translations of Elmacus's " History of the Saracens" and the astronomical works of Alfragan.—PETER his brother born at Leyden embraced the Catholic religion and travelled into Syria, where he became the founder of a carmelite convent on Mount Lebanon. Returning to Europe he went to Rome and assisted in bringing out the Arabic Bible printed in that capital in 1671. He translated also the works of Thomas-a-Kempis into the same language and died in 1673 at Surat in the East Indies, whether he had proceeded as a missionary.—There was also a THOMAS GOLIUS, professor of ethics at Strasburg in which city he was born in 1592. He published a Greek grammar and is known as the author of an abridgment of Aristotle's *ad Nicomachum*. His death took place in 1600.—*Movers.*

GOLTZIUS (HWART) an eminent antiquary was the son of a painter and was born at Venlo in 1526. He was instructed in his father's art, and at the same time he applied himself to the study of literature, history and particularly of antiquities. He resided some years at Antwerp but in 1558 he removed to Bruges. He made several tours through the Low Countries, Germany, France and Italy in pursuit of his favourite study. He was patronised by the emperor Ferdinand and other distinguished persons, and he was created a citizen of Rome. He died at Bruges in 1583. He was the author of " Fasti Romani ex Augusto numismatisbus et marmoribus, Iulii Caesaris et Augusti Vit. ex numismatisbus, " " Scolia et Magia Graeca ex numismatibus," a work much esteemed, " Fasti Consolare, Ieones Imp. Romanorum et series Astartorum, " " Thesaurus Antiquitatum." Golzus was also a printer and engraver on wood.—*Movers.*

GOMAR or GOMARUS (FRANCIS) an eminent Calvinistic divine, a native of Bruges, born 1563. He studied awhile in both the English universities, and graduated at Cambridge as BD. On his return he obtained a professorship at Heidelberg which in 1605 he relinquished for the theological chair at Ley-

GOM.

de, the celebrated Arminius being his colleague. The different views taken by these two professors on some of the leading political questions, both as to doctrine and discipline soon terminated in a controversy which was carried on by both parties with scarcely less acrimony than acuteness. Gomar stoutly defending the opinions of Calvin, especially on the points of election and predestination, and distinguishing himself much by his seal in the synod which condemned those of his opponent. He subsequently filled literary situations both at Middleburgh and Saumur but died at Groningen in 1641 having for some short time previously to his decease filled the chair of Hebrew professor there. His controversial tracts were collected four years after his death and printed in one folio volume at Amsterdam.—*Actus G. Bug.*

GOMBERVILLE (MARIE LE ROI seur de) a French writer was born in or near Paris in 1599. His first productions were romances and works of a light kind, which gained him a literary reputation and caused him to be enrolled in the number assembled by cardinal Richelieu for the foundation of the French Academy. At the latter part of his life he determined to devote his mind and his pen to religion and adopted a strict course of life which it is said was not long continued. He died in 1674. His works are—‘ Mémoires de Louis de Gonzague duc de Nevers’ ‘ Raison de la Rivière des Amazones’ ‘ La Doctrine des Meurs, tirée de la Philosophie des Stoiques représentée en cent Tableaux’ which though curious, is not much admired.

Canticæ Cythereæ ‘ Polexandre’ and ‘ Le jeune Alcidae’ published by Madame Gornier who says that Gomberville’s was merely an outline. He also wrote ‘ Discours des Vertus et des Vices de l’ Histoire’ with several pieces of sacred poetry &c.—*Niceron. Moreri.*

GOMERSAL (ROBERT) a divine and poet, was born in London in 1600 and was educated at Christchurch, Oxford where he took his degree in arts, and being created bachelier of divinity distinguished himself as a preacher at the university. He became vicar of Thorne combe in Devonshire where he died in 1646. He published a volume of sermons which were much esteemed. His poetical productions are numerous, the principal are—“ The Levite’s Revenge” and a tragedy called “ Lodovick Sforza duke of Milan.” —*Athen. Oxon. Eng. Dra.*

GOMEZ DE CIUDAD REAL (ALVAREZ) a Spanish Latin poet was born in 1468 at Guadalaxara in Spain. He was page of honour to the archduke afterwards the emperor Charles. He was the author of ‘ Thalia Christiana,’ or the triumph of Jesus Christ, in twenty five books ‘ Musa Paulina, or the Epistles of St Paul in elegiac verse, the Proverbs of Solomon, but his most esteemed work is a poem on the order of the golden fleece, entitled ‘ De Principis Burgenst. Militis quam Vallaris aures vocant.’ He died in 1538.—*Anton. Bibl. Hisp. Moreri.*

GOO

GOMEZ DE CASTRO (ALVARES) a Spanish writer, was born at St Eulalia near Toledo in 1515 and was educated at Alcalá. He was the author of many works, the principal of which is a life of ‘ Cardinal Ximenes.’ He was patronised by Philip II who employed him in preparing an edition of the works of St Ignatius but on the death of Gomez it was concluded and published by John Grimaldi. Gomez died in 1580.—*Ant. Bibl. Hisp. Moreri.*

GOMEZ (MAGDALEN ANGELICA PORSONNE) a French authoress was the daughter of Paul Porsonne a player and was born at Paris in 1684. She married M. de Gomez a Spanish gentleman of small fortune in whose circumstances she was deceived. She however procured sufficient by her works to live at St Germain-en Laye where she died in 1770. She was the author of a great number of romances which are well written and have been much esteemed—‘ Les Journées Amusantes’ 8 vols. ‘ Clementine’ 2 vols., ‘ Anecdotes Persans’ 2 vols., ‘ Hist. du Comte d’ Oxford’ ‘ La Jeune Alcidae’ 3 vols (see Gomberville) ‘ Les Cent Nouvelles’ 8 vols. She also wrote some tragedies which were unsuccessful—*Dict. Hist. Moreri.*

GONGORA (LOUIS) a celebrated Spanish poet, was born at Cordova in 1562 and was the son of Francis des Argores and Eleanora de Gongora whose name he took. He was brought up to the church and was made chaplain to the king and a prebendary in the cathedral of Cordova. His works were published in one volume quarto, under the title of ‘ Obras de Don Louis de Gongora y Argote.’ They consist chiefly of lyrical poems, in which he excelled, being called by his countrymen the prince of lyric poets. His style however is often difficult to comprehend even to the Spaniards themselves and he has had almost as many censurers as admirers in his own country. He died in 1627.—*Moreri.*

GONZAGA (LOCRETIA) a celebrated lady of the sixteenth century was the daughter of Piero Gonzaga lord of Gazzanola. She received a literary education and was a pupil of the famous Bandello. At the age of fourteen she married Giampaolo Mauroni of Ferrara, who conspiring against the life of duke Hercules II, was capitally condemned in 1546. Lucretia used every effort to procure his pardon but in vain for though his life was granted him he was imprisoned for life. A collection of letters imploring the intercession of almost all the powers of Europe have been attributed to this lady but are now proved to have been composed by Orsotimo Landi. They however show that she had acquired much reputation by her real compositions. She died at Mantua in 1576. Several of her works were printed one of which was a small volume of poems.—*Bayle. Moreri. Trubisch.*

GOODAL (WALTER) a Scotch antiquary was born in Banffshire Scotland in 1706, and in 1723 he entered himself a student in King’s college, Aberdeen. In 1730 he was employed in the advocate’s library, Edinburgh, of which

G O O

he was appointed librarian in 1735. He died in 1756. He was warmly devoted to Mary Queen of Scots, and projected her life, which he relinquished for his work entitled *An Examination of the Letters said to have been written by Mary to James earl of Bothwell in which he endeavoured to prove them forged*. In 1754 he published an edition with explanatory notes of sir John Scott's "Stag-gering State of Scot's Statesmen" and contributed to Keith's "New Catalogue of Scotch Bishops," and published an edition of Fordun's *Scotachronicon*. He also assisted the celebrated Thomas Ruddiman in compiling the catalogue of the Advocates library upon the plan of the Bibliotheca Cardinals *in persona*.—*Life of Ruddiman by Mr G Chalmer*.

GOODWIN (THOMAS) a nonconformist divine in the seventeenth century was born at Rolesby in Norfolk in 1600. He was educated at Christchurch college and Catherine-hall, Cambridge of which he afterwards became fellow. Having taken orders he was elected lecturer of Trinity church in Cambridge in 1622 and in 1632 he was presented by the king to the vicarage of the same church. Becoming however dissatisfied with the terms of conformity he relinquished his preferments and in 1634 he quitted the university. When the puritans were persecuted by the episcopal consistories he fled to Holland where he became pastor of the congregation at Arnhem. At the beginning of the long parliament he returned to London and became a member of the assembly of divines with whom however he did not always agree. His attachment to the independent party rendered him a favourite with Cromwell through whose influence in 1649 he was made one of the commissioners for the approbation of public preachers, and appointed president of Magdalen college Oxford, where he formed a meeting upon the independent plan. He attended Cromwell upon his death bed and expressed himself most confident in his recovery and when the event proved that he was mistaken he thus expressed himself in a subsequent address to God, thou has deceived us and we are deceived. After the Restoration he was ejected from Oxford and retired to London where he was permitted to continue in the exercise of the ministry till his death in 1679. He was the author of numerous sermons, expositions, pions and controversial treatises.—*Calemy's Account of sect. Mrs. Palmer's Noncon. Mem.* *Neal's Hist. Purit.* *Granger's Biog. Hist. of Eng.*

GOOGE (BARNARD) a celebrated poet and translator flourished in the sixteenth century. He was educated at Christ's college Cambridge whence he removed to Staple Inn. He is supposed to have been the same who was a relation and retainer of sir William Cecil queen Elizabeth's minister and who was gentleman pensioner to the queen. He was the author of a volume published in 1563, entitled *Elegy Epitaphs and Sonnets*, which is very scarce. His principal transla-

G O R

tion was the "Zodiac of Life" from *Horatius Palingenius Statius*, a very moral but tiresome satire with other works.—*Pitman's Thesaurus Poet.*

GORDON (ALEXANDER) a learned writer and excellent draughtsman was a native of Scotland but resided for many years in Italy and other parts of Europe. He was successively appointed secretary to the society for the encouragement of learning to the Egyptian Club and to the Antiquarian Society. In 1741 he went to Carolina with governor Glen where he received a grant of land and occupied several offices. He died there about 1750. He was the author of *The Lives of Pope Alexander VI and his son Caesar Borgia*; *Istuarium Septentrionale or a Journey through most Parts of the Counties of Scotland illustrated by Copper plates Additions and Corrections to the Above*; *A Complete History of ancient Amphitheatres*, translated from the Italian; *Twenty five Plates of all the Egyptian Mummies in England and other Egyptian Antiquities*; *An Essay towards explaining the Hieroglyphical Figures on the Coffin of a Mummy*—*Nichols & Lt Associates*.

GORDON (ANDREW) professor of philosophy in the Scot's monastery of the Benedictines at Erfurt and correspondent of the Academy of Sciences at Paris was born near Aberdeen in Scotland in 1712. He was sent to study at Ratibus and in 1731 he undertook a tour through Austria, Italy and France. In 1732 on his return he entered the order of the Benedictines in the Scot's monastery where he was ordained a priest. He drew upon his staff the attacks of the peasants and the displeasure of some of his catholic brethren by preferring the modern philosophy to the scholastic. He is also well known by his discourses in electricity. Besides some controversial pieces he was the author of the following—*Impartial Account of the Origin of the present War in Great Britain*; *Phy whole Experimental Elements Philosophia utilis et jucunda*; *Phenomena Electricitatis exposta*. Dr Priestley mentions him as the first person who used a cylinder instead of a globe in the electrical apparatus. He died in 1751.—*Hawkins's Manual of eminent Persons who died in the Eighteenth Century*.

GORDON (HENRY) called by courtesy lord George Gordon was the son of Comte George duke of Gordon in Scotland, and was born in 1750. He entered when young into the navy but left the service during the American war in consequence of a dispute with lord Sandwich relative to promotion. He then became a member of the house of Commons where he sat during several sessions for the borough of Ludgershall. His parliamentary conduct was marked by a certain degree of that eccentricity which became but too conspicuous in his subsequent behavior but he displayed no deficiency of wit or talent, often amazementing with great freedom on the proceedings of the ministers and their opponents. At length in 1780 a bill

G O R

having been introduced into the houses for the relief of Huguenot refugees from certain penalties and disabilities, he collected a vast mob consisting of the members of a protestant association and the rabble of the metropolis, at the head of which he marched in procession to the house of Commons to present a petition against the proposed measure. The dreadful riot which ensued and which was not suppressed till after the destruction of many catholic chapels and dwellings, the prison of Newgate, and the house of the chief-justice Lord Mansfield led to the arrest of Lord George Gordon, and his trial on the charge of high treason but no evidence being adduced of treasonable design, he was acquitted, though the magnitude of the mischief which his unprudence had occasioned rendered him the object of apprehension as an insane and dangerous enthusiast. His future conduct was little calculated to efface such impressions. In May 1786 he was excommunicated for refusing to come forward as a witness in a court of law. He then published a 'Letter from Lord G Gordon to the Attorney General of England in which the motives of his Lordship's public Conduct from the beginning of 1780 to the present Time are vindicated' 1787 8vo. In the beginning of 1788 having been twice convicted of libelling the French ambassador the queen of France and the criminal justice of the country he retired to Holland, but he was arrested sent home, and committed to Newgate where he passed the remainder of his life. He died November 1 1793, disturbed in his last moments by the knowledge that he could not be buried among the Jews, of whose religion he had become a zealous professor during his imprisonment.—*See. Reg.*

GORDON (THOMAS) an industrious writer in favour of civil and religious liberty was born at Kirkcudbright in Scotland towards the close of the seventeenth century. After receiving an academical education in his own country he came to London and maintained himself as a classical teacher. He first distinguished himself in the Bangorian controversy in defence of Bishop Hoadly which acquired him the notice of Mr Trenchard, a zealous Whig in conjunction with whom he wrote a series of papers, entitled *Cato's Letters*. They were likewise the authors of 'The Independent Whig,' and on the death of Trenchard or Robert Walpole acquired the literary aid of Gordon and procured him the place of commissioner of wine licences, which he held until his death. Besides his political works he supplied English versions of Tacitus and Sallust, which he disfigured by an attempt to imitate the energy and conciseness of the originals but on the other hand showed a very critical knowledge of the sense of his authors. He died in 1750, at the age of sixty-six, leaving behind him two posthumous works, entitled 'A Cordial for Low Spots,' and 'The Pillars of Priestcraft, and Orthodoxy shewn.' As a party writer he possesses strength and acuteness, but is too prone to

G O S

coarseness and vulgarity. He was a skilful writer on the side of freedom but it was at a time when exertions in this direction were not unwarded.—*Allen's G. Reg.*

GORE (THOMAS) an heraldic writer was born at Alderton in Wiltshire, and was educated at Magdalen college, Oxford. He then went to Lincoln's Inn but soon after retired to his patrimony at Alderton. In 1660 he was appointed high sheriff of Wiltshire but having suffered from some attacks upon his character while in that office, he wrote a defence entitled 'Loyalty displayed, and Falsehood unmasked.' He was also the author of A Table showing how to blazon a Coat ten several ways, 1655; Series Alphabetica Latino-Anglica, Nomina Gestituarum sive cognitorum plurimum familarum, quae mutant per annos in Anglia forsan, 1667 Catalogus in certa capita seu classes, alphabetico ordine concinnatum plurimum omnium Authorum (tam antiquorum quam recentiorum) qui de re Heraldica, Latino Gallico Ital. Hispan. scriptores, 'Nomenclator Geographicus.' He died at Alderton in 1684.—*Ath. Or. Gent. Mag.*

GORGIAS, surnamed LOINTINUS from Leontium in Sicily was a learned orator and sophist, who flourished in the fifth century BC. He is said to have been a disciple of Empedocles and was one of the earliest writers on rhetoric. He displayed his eloquence at the Olympian and Pythian games, and made such an impression that a golden statue was erected in his honour at Delphi. He was one of the first who introduced numbers into prose and who treated of common places and showed the use of them for the invention of arguments and on this account Plato gave the name of Gorgias to his elegant dialogue on this subject which is still extant. Gorgias lived to the age of one hundred and seven or one hundred and eight years.—*Festus. Bell. Grec. Miser. Sacra Onom.*

GORIO (ANTONY FRANCIS) a learned antiquary of the eighteenth century was a native of Florence. He was the author of 'Museum Etruscum 3 vols. folio 1737' 'Museum Cortonense folio 1750,' 'Museum Florentinum or a Description of the Cabinet of the Grand Duke 11 vols folio,' and of Ancient Inscriptions in the Towns of Tuscany 3 vols folio 1727.—*New Diet Hist.*

GORIUS (ABRAHAM) a celebrated master-dallast, was born at Antwerp in 1549. He resided at Delft, and devoted himself entirely to collecting ancient rings, seals, and curiosities. His works are much valued by all antiquarians they consist of 'Dactylotheca seu Annulorum, Sigillorumque & Ferre, &c. Argenteo, atque Auro promptuaria,' 'Paralipomena Numismatum' and 'Thesaurus Numismatum familarum Roman' —*Eagle. Miser.*

GOSSELINI (JULIAN) an Italian writer, was born at Rome in 1525 and at the age of seventeen was taken into the service of Ferdinand Gonzaga, then vicaroy of Sicily, whom he accompanied to his government of Milan in 1546. He then became his secretary, which situation he held under three succeeding

G O E

governor. His writings were much esteemed and obtained him great reputation the principal one—*Three Comparisons viz. of the Faust and Salomon against the Medea; of Giovan-Luigi de Fieschi against the Republic of Genoa, and of some Placentines against the Duke Pietro Luigi Farnese, The Life of Ferdinand Gonzaga;*" Rime or a collection of Poems several times reprinted "Discourses Letters and some Latin poems and letters. He died in 1587.—Bayle, Thibault.

GOSSON (STEPHEN) a divine and poet, was born in Kent in 1554 and studied in Christchurch Oxford. He left the university without completing his degrees, and came to London where he wrote some dramatic pieces which were never published. He then took a rooted dislike to the drama, and retiring into the country he became tutor to a gentleman's son but in consequence of some dispute with the father he quitted his situation and took orders. He was first preferred to the living of Great Wigborough in Essex and in 1600 to the rectory of St Botolph Bishopsgate where he died in 1623. He was an imitator of sir Philip Sidney whose contemporary he was. His unpublished plays were—*The Comedy of Captain Muro* —*Praise at Parting* and *Catilina's Conspiracie* and in opposition to the drama he wrote *Play confuted in five several Actions* and *The School of Abuse*. He was also the author of the *Apophemides of Phaleo* and of a sermon entitled *The Trumpet of War* —*other Oevres* *Gend May* *Bogus Dram.*

GOSLING (WILLIAM) an English clergyman of some note as a collector of antiquities and topographical writer. He was born in 1703 and having received an academical education and taken the degree of MA he entered into holy orders. He obtained the vicarage of Stone in the Island of Oxney and was a minor canon of Canterbury where he long resided and died March 9 1777. He published in the Philosophical Transactions an account of a fire ball seen in the air and an explosion heard December 11 1741 and he was also the author of *A Walk in and about the City of Canterbury with many Observations not to be found in any Description hitherto published* London 1774 8vo, second edition enlarged Canterbury 1777 It is rather an odd circumstance that this perambulation on paper was performed while the author was confined to his chamber by a tedious fit of sickness.—*Reuss's Register of Eng. Authors, Pref to Heated's Hist of Canterbury*

GOTTSCHED (JOHN CHRISTOPHER) a German author of the last century born at Koningsberg in 1700. He was professor of philosophy logic and metaphysics in the university of Leipzig and did much by the purity of taste exhibited in his dramatic writings, towards the re-animation of the German stage. In the composition of these pieces he derived considerable assistance from his wife herself a woman of great talent, who translated the 'Rape of the Lock' into Ger-

G O U

man, with much felicity of adaptation. The principal works of Gottsched are his tragedy of "The Death of Cato," an "Introduction to Dramatic Poetry," "Principles of General Philosophy," "Principles of the German Language," "Critical History of the Language, Poetry &c. of the Germans." "The German Poets," and some miscellaneous poems. He was also the author of several treatises on music among which are—"Re marks on the Origin and Antiquity of Music &c., On the Composition of Cantatas, and Remarks on the Opera." He survived his wife little more than two years, dying at Leipzig in 1765.—*Voss Dict. Hist.*

GOUDIMEL (CLAUDE) an eminent musician of Franche Comté much celebrated among the Calvinists in France for his church music. He appears to have been originally a Catholic, from the circumstance of his setting to music the *Chansons Spirituelles* of Muret, which were printed in 1553 at Paris. In 1565 however appeared his music of the Psalms of Marot, reprinted in 1607 for the use of the Calvinists in Holland. These are composed in fugue and are some of them so difficult that though much admired by those for whom they were written they seem to have availed little for general use. This work lost the unfortunate composer his life as he was one of those assassinated by the mob at Lyons in 1572 on the day of the memorable massacre of St Bartholemew.—*Hug Dict. of Mus.*

GOUFFIER (MARIE GABRIEL AUGUSTE LAURENT comte de Choiseul) a French nobleman of the same family with the duke de Choiseul who distinguished himself by his patronage of the fine arts, as illustrative of classical archaeology. He was born in 1752 and was educated in a manner becoming his station in society. At the age of twenty two he commenced a tour through Greece and the neighbouring islands and on his return to France he published a most splendid work, entitled "Voyage pittoresque de la Grèce" folio illustrated with engravings by artists of the first eminence. The merit of this production however is by no means confined to the plates as the text which accompanies them is replete with valuable information derived from the labours of historians, poets, and geographers ancient and modern as well as from the observations of the author. The reputation which the count de Choiseul Gouffier derived from this undertaking procured him admission into the Academy of Inscriptions and Belles Lettres, and likewise into the French Academy. But he had completed only one volume of his work which was published in parts, when in 1784 he was appointed ambassador to Constantinople. Intending to prosecute his design of illustrating the antiquities of Greece he took out in his suite several artists and literati, and established a printing press in the palace which he occupied in the Turkish capital. The occurrence of the French Revolution diverted his attention from the arts and sciences to politics. In January

GOU

1790 a letter was read before the National Assembly, which announced the patriotic donation of 12,000 livres from the French residents at Constantinople and also of an equal sum from a citizen, who professed a desire to remain unknown but it was well understood that the anonymous citizen was the count de Choiseul. In 1791 he was nominated ambassador to the court of London but he did not accept the appointment, and on the 22d of October 1792 a decree of arrestation was issued against him by the Convention for having held intercourse with the French emigrant princes. He then quitted Constantinople and went to Burma where the emperor, Catharine II gave him a most favourable reception and bestowed on him a pension as a member of the Academy of Petersburgh. Paul I in February 1797 made him a privy counsellor and he was also appointed director of the Academy of Arts and superintendent of the imperial libraries. His name having been erased from the list of emigrants he returned to France in 1802. He was elected a member of the National Institute in 1803 and resuming his literary under taking he published in 1809 part of the second volume of his Picturesque Tour in Greece and the remainder soon after. The publication of Le Chevalier's Voyage de la Troade and the Picturesque Travels of Camus, gave offence to M de Choiseul both those gentlemen having made their researches under his auspices. An appeal to the press was productive of a controversy of too personal a nature to be per manently interesting. On the re-establishment of royalty in France the subject of this article obtained a place among the peers of the realm. He did not enjoy this dignity many years, his death having taken place in 1817. Besides his great work he published papers in the Memoirs of the Academy of Inscriptions.—*Bug Uss Duct des H M du 18me S.*

GOUGH (RICHARD) an eminent English topographer and antiquary, who was the son of an East India director and was born in Winchester-street, Austin Friars, London in 1733. He was educated at home and the first fruits of his studies was a translation from the French of a history of the Bible produced when he was only eleven years old.—The par donable partiality of a fond mother induced her to have this monument of precocious talent printed only however for private distribution the edition being limited to twenty five copies. At the age of fifteen Mr Gough translated Fleury's treatise on the manners of the Iroquois, and this work was also printed for gratuitous circulation. As an additional proof of his application, it may be mentioned that he formed a laborious compilation, entitled "Atlas Renovatus, or Geography Modernized". In 1758 he entered as a student at Bennet college Cambridge and his academical pursuits appear to have been of a similar description with those which occupied his future life as it was during the time he remained at the university that he laid the plan of his very useful work entitled "Anecdotes of British Topography", pub-

GOU

lished in one volume quarto in 1798, and re printed with improvements in 2 vols. 1800. He left Cambridge without taking a degree, the exclusive nature of his literary researches having probably prevented him from following the accustomed routine of study. Engaging in no profession and being possessed of a competent income he was enabled to dedicate his time and talents to the cultivation of his favourite branches of science and the number and importance of his publications are creditable to his industry and have secured him no small share of reputation. He was chosen a fellow of the Society of Antiquaries and in the Archaeologia, or Transactions of that Society as well as in the Bibliotheca Topographica Britannica, and the Gentleman's Magazine he published many communications. He also produced a work entitled Sepulchral Monuments of Great Britain 1786 3 vols. folio, an enlarged edition of Camden's Britannia, 1789 5 vols. folio and one still more augmented in 4 vols. 1806 an Account of the Bedford Missal and the History of Pleshey in Essex. After having resided many years at Enfield in Middlesex, he died there February 20 1809 and was interred at Wormley in Hertfordshire. He bequeathed to the Bodleian Library at Oxford his collection of books and manuscripts relative to Saxon and North-ern literature and to British topography — *Nichols's Lit. Ann.*

GOUJEAU (CLAUDE PETER) a French writer was the son of a tailor and was born at Paris in 1691. He was educated in the Jesuit college and on taking orders he became a canon of the church of St Jacques do l'Hôpital in Paris. His works are very numerous, and display much erudition, the principal are—

L' Histoire du Collège Royal de France 12mo. — Hist. du Pontificat de Paul V in which he is by no means favourable to the jesuits. — Les Vies des Saints, 2 vols. 4to. — Supplement to Moreau's Dictionary displaying much industry but little judgment. — De l'Etat des Sciences en France 12mo. — Bibliotheque des Auteurs ecclésiastiques du XVIII Siecle 3 vols. 8vo.—*Auxv Duct. Hist.*

GOUJON (JEAN) a French artist in the reigns of Francis I and Henry II a native of Paris the elegance and correctness of whose works have procured him the honourable designation of the Correggio of Sculpture. Goujon was a Huguenot, and constituted one of the many victims who perished in the general massacre of St Bartholomew in 1572. The fine façade of the old Louvre was by him. — *D'Argenville.*

GOULET (NICHOLAS) a French architect was born at Paris in 1745 and died in 1820. He built or decorated many Parisian hotels and was the author of the following works —

Dissertations sur les Meurs des Quais sur les Trottoirs et les Fontaines de l'Paris. Sur les moyens d'éviter les inondations et d'économiser le bois dans la construction des Bâtiments. — Sur les inconveniens des Fossés d'assèche et les moyens à y supprimer. — Description des Fêtes à l'occasion du Mariage de

Napoleon," with the text of the "Description de l'Art et des Édifices," in the third volume of Landon's work; lastly the text of M. Kraft's work, entitled "Recueil d'Architecture civile." Goulet also cultivated elegant literature, and was the author of some agreeable songs and poetry.—*Biog. Univ. des Contemporains.*

GOURNAY (MARY LE JARS DE) a learned French lady was born at Paris in 1566. While very young she lost her father and was adopted by the celebrated Michael de Montaigne who called her his daughter of alliance. She was well versed in the learned languages and corresponded with most of the literary characters of her time by some of whom she was styled the "tenth muse" and the French sylva. Her style however was stiff and awkward and she was greatly attached to ancient phraseology. Her temper also was so violent and resentful that she made herself many enemies who attacked her in writings the principal of which were the "Remerciements Beurresnes" and the "Art Gournae." She published an edition of the Essays of her adopted father dedicated to cardinal Richelieu. Her works were collected and published in a quarto volume under the title of "Les Ains ou les Presens de la Demouelle de Gournay." She passed her life in celibacy and receiving a small pension from the court. She died in 1645.—*Bayle. Moreri. Nouv. Dict. Hist.*

GOUSSIER (JOHN JAMES) a French writer on mathematics and natural philosophy. He was a native of Paris where he died in 1800 at the age of seventy-eight. His principal production was a work entitled "La Physique du Monde" Paris 1780 7 vols 4to published in conjunction with M. Marvete. He was also the author of "A Prospectus of a Treatise on the Physical Geometry of France" 4to and he edited "Coedamne's" "Manoir on the Measurement of the first three Degrees of the Meridian in the Southern Hemisphere" &c. He was well acquainted with mechanics and invented some ingenious machinery for agricultural operations &c.—*Nouv. Dict. Hist.*

GOW (NELL) a native of Strathblane in Perthshire of humble origin born in 1727. He exhibited an early talent for music but appears to have been almost entirely self taught till his fourteenth year when he received some instruction from a Mr Cameron a musician in the employ of Sir G. Stewart of Grandtully. His progress towards excellence as a violinist was singularly rapid and he soon earned away a prize from some of the best performers in the country, the judge who was blind declaring he could distinguish the stroke of Neil a bow among a hundred players. The patronage of the Athol and Gordon families soon after introduced him to the notice of the fashionable world with which he continued a distinguished favourite till his death. This took place at Inver near Dunkeld in 1807. One peculiar excellence appears to have been a striking feature in

Gow's performance, the power with which he handled his bow particularly in what is called the upward or returning stroke. This was his excellence, and where the note produced by it was generally feeble in other hands, in his it was struck with a strength and certainty which never failed at once to delight and to astonish. In private life he was distinguished by a sound and vigorous understanding while his appearance exhibited no characteristics a model of the Highlander that his portraits have been multiplied all over the country. Four excellent originals of him are in existence three by Sir Henry Raeburn and the fourth by Allan who has introduced striking likenesses both of him and his brother, Donald Gow (who usually accompanied him on the violin cello) into his picture of "A Highland Wedding."—*Biog. Diet. of Mus.*

GOWER (JOHN) an ancient English poet of the fourteenth century said by Leland to have descended from a family settled at Settenham in Yorkshire. He was liberally educated and was a member of the society of the Inner Temple and some have asserted that he became chief justice of the Common Pleas, but the more general opinion is that the judge was another person of the same name. He particularly attached himself to Thomas of Woodstock duke of Gloucester uncle to Richard II and wrote his principal work at the desire of that unfortunate monarch. He appears to have been in affluent circumstances as he contributed largely to the building of the conventual church of St Mary Overy in Southwark. He lost his sight in the first year of the reign of Henry IV which misfortune he did not long survive dying at an advanced age in 1402. He was buried in the church to which he was a benefactor where his tomb is still to be seen. Gower takes a place among English poets, more in reference to antiquity than poetical merits. He abounded in the learning of the age but advances little claim to genius or invention, and is so uniformly grave and sententious even upon topics which might inspire vivacity, that his friend Chaucer styles him "the moral Gower." He was author of a tripartite work, entitled "Speculum Meditantis Vox Clamantis and Confessio Amantis," of which the first is a moral tract relative to the conjugal duties written in French rhymes the second a metrical chronicle of the usurpation of the commons under Richard II in elegiac verse and the third an English poem in eight books relative to the morals and metaphysics of love which alone has been printed and was one of the earliest products of the English press, being printed by Caxton in 1483. The most interesting part of this mighty work, in which he endeavours to display all his erudition is composed of a variety of stories, adduced as moral examples. The language of this early production is tolerably perspicuous, and the versification often harmonious. In his Latin style he aims at copying Ovid's Elegiacs, but had not surmounted the barbarism of monosyllabic rhymes.—*Warton's Hist. of Eng. Poetry* *y

G M A

GOZZI (*GASPARD*) count, was born in Venice in 1713, and died in 1786. He distinguished himself among modern writers by the purity of his language and style. His translation of the "Loves of Daphnis and Chloe" of Longus is much esteemed, but his tragedies and other dramatic works are inferior to those of his brother count Carlo. The "Observator Veneto," a periodical work which he brought out in imitation of the *Spectator* also enjoys a deservedly high reputation. His works were collected and printed in 12 vols. 8vo.—*Bog. Univ.*

GRABE (*JOHN EWART*) a learned divine and critic of the last century. He was born in 1666 at Königsberg in Prussia his father being professor of theology and history in the university there. After having gone through a course of study to qualify him for the clerical office, and taken the degree of MA he was led from perusing the writings of the fathers to adopt the opinion that an outward and uninterrupted succession of bishops is essential to the constitution of a true church. Dissatisfied with Lutheranism in which he had been educated, he was on the point of taking refuge in the bosom of the church of Rome when the arguments of M. Speiser a Prussian divine induced him to relinquish his purpose and seek a religious communion congenial with his views in the episcopal church of England. Coming to that country he was patronised by king William III who allowed him a pension of 100£ a year. He then devoted his talents chiefly to the illustration of the monuments of ecclesiastical antiquity. In 1696 he published the first volume of a collection of the smaller treatises and remains of the early Christian fathers and heretics entitled "Spicilegium SS Petrum," and the second volume of the work appeared in the following year. In 1700 he took deacon's orders in the church and was presented to the chaplaincy of Christchurch Oxford, which was the only preferment he ever held. He next edited some of the works of Justin Martyr and Irenaeus, and queen Anne on her accession having continued his pension, employed him in publishing the Septuagint version of the Old Testament, from the Alexandrian MS. In 1705 he issued proposals for a subscription in aid of his undertaking with specimens of the manner in which it might be executed. The university of Oxford testified approbation of his design by giving him a diploma of DD. In 1707 appeared the first volume of his edition of the Septuagint in folio and octavo. The expects of obtaining additional materials for the second and third volumes, induced him to postpone their publication till after the fourth, which issued from the press in 1709. He died in 1712 and the remainder of the work was published from his manuscripts in 1719 and 1720. Besides his literary labours already noticed, he edited the Latin works of bishop Bell, and wrote a tract against Whiston.—*John's G. Bog.*

GRACCHUS (*TIBERIUS SEMPRONIUS*) a highly distinguished Roman, was the son of a

G M A

father of the same name who, although of plebeian origin, had obtained the consulship. The happy disposition of Tiberius was cultivated with the most assiduous care, and he early distinguished himself for eloquence, sobriety, and political knowledge. In conformity with the Roman custom he passed his youth in military service, and as his influence increased stimulated by the abject condition of the lower classes of Roman citizens, he attempted to revive a modification of the Licinian law, in total contempt of which, the patricians and men of opulence had by a long series of usurpations appropriated to themselves all the public lands. The opposition of the superior orders was of course violent and strenuous and Gracchus who had procured himself to be elected a tribune of the people was not backward on his part, in rousing the people to an assertion of their rights. He was however defeated in the first instance by the negatives of his colleague, the tribune Cecina who although at one time the friend of Gracchus had been gained over by the patricians. He then took a step which the strange constitution of Rome allowed and suspended all the magistrates from the execution of their offices. This strong measure not availing he induced the people to deprive Cecina of his office upon which the agrarian law was passed without farther opposition and Gracchus, his brother Caius and Appius Claudius were appointed to see it put into execution. He also earned his attack upon the nobles still further by adding to his law a clause for recalling all usurpations from the republic, and passing another for distributing among the poorer citizens the treasures of Attalus king of Pergamus, who had made the Roman people his heirs. He also planned other regulations for abridging the authority of the nobles, until the latter determined to make a final stand, and on the day of the election for tribunes a violent affray took place which terminated in the assassination of Gracchus, and three hundred of his party by an armed factum led by Scipio Nasica. This storm of civil fury took place BC 133 before Gracchus had reached his thirtieth year. All have agreed in acknowledging the great talents and private worth of Tiberius Gracchus, and his memory has been regarded either as that of a martyr to patriotism, or a victim to personal ambition, according to the principles of those who have studied his history. The most candid however are disposed to credit the purity of his original intentions and to regard such of his actions as appear the most indefensible to the inevitable consequences of the nature of the influence against which he had to contend.—*Ptolemy, Vit. Grac.*

GRACCHUS (*CAIUS*) brother of the preceding and his junior by nine years. He enjoyed the same advantages of education which he so well improved that he became one of the ablest orators of his time. After the tragic end of Tiberius he passed some time in retirement, but subsequently accompanied the consul, Aurelius Orestes, to Sardinia, as his

G R E

G R A

questor. On his return he became candidate for the tribenanship and such was the zeal of the people that the Campus Martius could not contain the multitude which flocked from the Italian cities to support his election. He soon openly pursued the plan of his deceased brother and passed laws still more obnoxious to the patricians. By the arts of the senate however his influence was gradually undermined and he not only lost his third election for tribune but his professed enemy Opimius was chosen consul. The two parties at length came into open conflict and Fulvius, one of the partisans of Gracchus having seized upon mount Aventine Caius reluctantly set out to join him. On arriving at the spot, he sent proposals of accommodation to the consul which being rejected a formal battle ensued, and Caius who either from timidity or humanity had refrained from fighting was induced to retire from the city. Being pursued he reached a grove dedicated to the Furies where according to one account he ordered his slave to dispatch him and to another statement he fell beneath the weapons of his pursuers. His head was cut off and sold by his captors for its weight in gold, and his body was thrown into the Tiber but subsequently delivered to his mother for burial. Three thousand persons perished in this catastrophe which happened BC 121. The senate immediately abolished all the laws of the Gracchi whose names were long fondly cherished by the people, and held in equal detestation by the aristocracy. Caius has generally been regarded as more violent and less pure in his intentions than his brother Tiberius but the difference appears rather in the circumstances opposed to him than in original purpose.—*Ibid.*

GRACIÁN (BALTAZAR) an eminent Spanish writer was born at Calatayud in 1603 and entering among the Jesuits at the age of sixteen he became successively a teacher of belles lettres, of philosophy and of theology. He was also a preacher and was made rector of the Jesuits' college of Tarragona. He is much esteemed by his own countrymen and his works have been translated into French and other languages. They are *Agudeza y arte de Ingenio* 1642 a treatise on the different kinds of witty conceptions; *El Héroe* 1637, *El Político* D. Fernando el Católico 1641, *El Discreto*, *El Criticón*, a work treating of the errors to which man is liable; *El Consolador* 1655 a collection of meditations on taking the holy communion; *Oráculo Manuel y arte de Prudencia*, 1647, a manual for prudent conduct. He died in 1658.—*Morer. Nov. Diet. Hist.*

GRAEME (JOHN) a Scottish poet was born at Carnwath in Lanarkshire in 1748. He was the youngest of four sons of a petty farmer who on discovering his early capacity found means at a late period to have him classically educated, and in due time to remove him to the university of Edinburgh. His turn for elegant composition first appeared in the solution of a philosophic question proposed as a

college exercise which he chose to execute in the form of a poetic tale. This happened in 1769; and he fell a sacrifice to a consumption so early as 1772 leaving behind him some elegiac and miscellaneous poetry which was published in 1773 in an octavo volume.—*Anderson's Poets*

GRÆVIUS or GRAVE (John George) a learned classical scholar born at Naumburg in Saxony in 1432. Such was his ardour for study that while at school he sometimes passed the greater part of the night in reading the works of Homer and Herodotus. He then went to the university of Leipzig where he was the pupil of Andrew Rivinus and John Strauchius and he afterwards passed two years at Deventer. At the age of twenty four he obtained a professorship at Duisbourg and subsequently succeeded John Frederic Gronovius at Deventer. Thence he was invited by the states of Utrecht to become professor of politics history and rhetoric in their university which station he filled with great reputation during forty one years and he also held the office of historian to the king of Great Britain William III. He died in 1703. His literary productions consist of valuable editions of the Epistles and Orations of Cicero and of the works of Florus Caesar Suetonius Herodotus &c, besides two voluminous collections —

Thesaurus Antiquitatum Romanorum 12 vols folio, and *Thesaurus Antiquitatum Italorum* 6 vols folio afterwards continued by Peter Burman. Grævius displayed but little of the pedantry and arrogance which too often deform the character of the critic and was deservedly esteemed both as a man and a scholar.—*Stoll's Introd. in Hist Lit. Morez.*

GRAFFIGNY (FRANCES D'ISERBOURG née HAPFONCOURT) a literary lady was born at Nancy about 1694. She married the chamberlain to the duke of Lorraine De Graf figure a man of such brutal disposition that after living many years with him she was obliged to obtain a legal separation. She then went to Paris where she soon made herself known by her literary productions the first of which was a Spanish novel. This was soon followed by the *Lettres d'une Peruvienne* which work was much read and esteemed for its deve'lopment, of the delicacies and miseries of sentimental passion. She was also the author of a dramatic piece entitled *Cœus* which was considered an excellent specimen of the grave or pathetic comedy.

La Fille d' Aristotle, was less admired. She was an associate of the academy of Florence and received a pension from the court of Vienna. She died at Paris in 1758.—*Noz. Diet. Hist.*

GRAFTON (RICHARD) an English chronicler of the sixteenth century. He was a printer in the metropolis and is said to have written part of Hall's *Chronicles* entitled 'The Union of the Two Noble and Illustrious Families of York and Lancaster' of which he printed an edition in 1548. He also compiled a *Chronicle* at large of the Affairs of Englaund from the Creation of the World.

G R A

unto queen Elizabeth.' 2 vols. folio printed by Henry Deshayes, in 1569, when he had probably relinquished his occupation. He was alive in 1578, but the period of his decease is not known. *Grafton's Chronicle* was published in 2 vols. 4to, 1509.—*Dibdin's Typog. Antiq.*

GRAHAM (George) a celebrated clock and watch-maker and the most accurate artist of his day was born at Kirkhampton in Cumberland, in 1675. He was received into the family of the celebrated Tompion and became the inventor of several astronomical instruments, which much advanced the progress of science. He was a member of the Royal Society and constructed the great mural arch in the observatory at Greenwich. He also composed the whole planetary system within the compass of a small cabinet from which model all succeeding orreries have been formed. Several of his papers are in the Philosophical Transactions. He died in 1751.—*Hutchinson's Cumberland*

GRAHAME (James) a Scottish poet was bred to the bar but forsook the law to take orders in the church of England. He then entered upon a curacy in the neighbourhood of Durham when he died in the prime of life in 1811. His poetry is mostly of a meditative and religious character but animated, flowery and descriptive. His principal pieces are

The Sabbath The Bards of Scotland and British Georgics.—*Gent Mag.*

GRANGER (James) an English physician, who distinguished himself as a poet in the last century. He was born at Dunse in Berwickshire, in 1724. His father who after having sold an estate in Cumberland, had obtained the situation of an excise officer bestowed on him a classical education and placed him as a pupil with a surgeon at Edinburgh, where he also attended the medical lectures at the university. Having finished his studies he entered into the army as a regimental surgeon and served in Germany under the earl of Star till the peace of Aix-la-Chapelle, in 1748, after which he took the degree of MD and settled in the metropolis. His practice as a physician however was probably but trifling and he is said to have supported himself principally by writing for the press. An 'Ode to Solitude,' first published in Dodd's collection of fugitive poetry procured him deserved reputation in the literary world and among his more intimate acquaintance were Shenstone and Dr Percy afterwards bishop of Dromore. In 1759 he published a translation of the Elegies of Tibullus, which was respectably executed. Some critics on this production in the Critical Review involved him in a paper war with Dr Smellie. He then went to the West Indies, with a young gentleman to whom he had become tutor, and during the voyage he formed an attachment to a lady whom he married on his arrival at Basseterre in the island of St Christopher of which her father was governor. He engaged in medical practice at that place, and was

G R A

very successful. His leisure was still devoted to poetry, and he produced a kind of West Indian Georgic or didactic treatise in blank verse, entitled *The Sugar Cane* and

Bryan and Perseus, a ballad. The former he published in 1764, during a visit to England for the purpose of submitting the MS. to the criticism of his friends. He then returned to Basseterre where he died of an epidemic fever in 1767. The Ode to Solitude which as Bowell informs us, extorted the praise of that severe censor Dr Johnson is the only composition of Granger calculated to yield him durable fame though some passages in his Sugar Cane and the West Indian Ballad or occasionally find their way into collections of poetry.—*Hutchinson's Biog. Med. Atkin's G. Eng.*

GRAMAYE (JOHN BAPTIST) a Flemish traveller antiquary and historian of the seven teenth century. He was a native of Antwerp and studied at the university of Louvain where he obtained the professorships of law and rhetoric. He was subsequently historiographer to the Netherlands, provost of Arnhem and apostolical protonotary. Having made a tour through Germany and Italy he was proceeding by sea to Spain when he was captured by an Algerine pirate and taken to Barbary. After his return home he travelled into Moravia and Silesia, and at length was placed at the head of a college in the latter province. He died while on a journey at Lubec, in 1635. His works are numerous relating chiefly to the history and antiquities of his native country. Among the others are

Africa illustrata, Dianum Algernense and Specimen Literaturae et Linguarum universa Orbis bidentis Latin poems—*Foppens' Biblio. Belgic. Morel. Biog. Univ.*

GRAMMONT (PHILIBERT count of) son of Antony duke of Grammont. He served under the prince of Condé and Turenne but having rashly paid his addresses to a lady who was a well known favourite of Louis XIV he was obliged to quit France, and came to England two years after the Restoration. He was highly distinguished by Charles II possessing, with a great turn for gallantry much wit, humour, politeness and good nature. He seems to have been indebted for his support chiefly to his profits at play at which he was very successful. He married Miss Elizabeth Hamilton, daughter of sir George Hamilton and died in 1707. His celebrated Memoirs were written by his brother-in-law Anthony generally called count Hamilton who followed the fortunes of James II and afterwards entered the French service and died in 1730.—*Preface to Memoirs. Collins's Peerage*

GRAND (JOACHIM LE) a political and historical writer was born in 1653 at Thorigny in Normandy. He entered the congregation of the Oratory which he quitted in 1676 and went to Paris where he became tutor to two young noblemen and studied history under father Le Conte. His first work was A History of the Divorce of Henry VIII and Catherine of Arragon in which he attempts

G R A

to justify the jesuit Sanders, and to refute the two first books of Burnet's History of the Reformation. He also addressed three letters to the bishop, to which he replied. In 1692 he was appointed secretary to the abbé d'Estrees in his embassy to Portugal, and in 1703 he accompanied the same minister into Spain, where he remained about two years. He afterwards went into the service of the marquis de Torcy, minister of state. He was possessed of church preferment, and was for some time censor royal of books. He died in 1733. His works are *De la Succession à la Couronne de France*, A Translation of Lobo's History of Abyssinia. He also wrote the Life of Louis XI which was not published.—*Niceron vol xxvi.* —*Moreri.*

G R A N D (JOHN BAPTIST LA) a miscellaneous writer was born at Amiens in 1737 and was surnamed D Ausy. At the age of eighteen he entered the society of Jesuits and a few years afterwards he was elected to the rhetorical chœur at Caen. On the dissolution of the order he devoted himself to literature and was employed in the French Glossary projected by La Curie de Sainte Palaye. He next engaged with the marquis de Paulmy and the count de Tressan in the Bibliothèque des Romans after which he occupied himself in collecting translating and commenting upon the Fabliaux or tales of the old French poets. In 1770 he was appointed secretary in the direction of the studies of the military school and in 1796 conservator of the national library. He conceived the plan of a complete history of French poetry and had accomplished part of his design when he was seized with an indisposition which terminated his life in 1801. His works are *Fabliaux ou Tales of the Twelfth and Thirteenth Centuries*, *Contes devots Fables Romanes anciens pour servir de sujets aux Fabliaux*, "Histoire de la Vie privée des François", *Tour au Auvergne*, *Vie d'Apollonius de Tyane*. —*Dict. Hist.*

G R A N D I E R (URSIN) curate and canon of Loudon in France, famous for his intrigues and tragical end, was born at Bouviers near Sablé in the latter part of the fifteenth century. He was a man of reading and judgment, and an eloquent preacher for which he was much hated by the monks of Loudon especially as he urged the necessity of confessing in presence to the parochial priests at Easter. Being a handsome man and very neat in his apparel he was suspected of an improper attention to women and in 1629 he was accused of criminal intercourse with some of his own flock and condemned by his official to forfeit his benefices. An appeal to the parliament of Paris however acquitted him on which his monkish enemies induced some Ursuline nuns of Loudon to believe themselves bewitched and to charge Grandier with the sin of their possession. The accusation failed in the first instance on which the rancorous conspirators maliciously persuaded cardinal Richelieu, that Grandier was the author of a satire upon his person and family. That vindictive minister immediately countenanced a renewal

G R A

of the persecution and the result was, that on the most gross and absurd of all evidence, Grandier was declared guilty and ordered to be burnt alive which sentence he endured with great firmness and constancy on the 18th April, 1684. There is reason to believe that Grandier was a man of loose conduct but the very curious publication entitled "Histoire des Diaboles de Loudon" proves that the pretended possession of the nuns, was a horrible conspiracy against his life. As an author he is known only for a funeral oration which is said to possess considerable eloquence.—*Moreri. Nouv. Dict. Hist.*

G R A N E L L I (JOHN) a Genoese Jesuit distinguished as a divine orator and poet. He was educated at Venice and became professor of belles lettres at the university of Padua, where he acquired great reputation for eloquence. His superiors sent him to Bologna to study theology but the vivacity of his disposition did not exactly coincide with the course prescribed for him and he amused himself with poetical composition. He wrote for the public exercises of the jesuit colleges Latin tragedies, which were much admired. Having finished his theological studies, he became a preacher and after acquiring much distinction in Italy he was in 1761 invited to Vienna by the empress Maria Theresa, to become Italian preacher in that capital. The last twenty years of his life were divided between his clerical duties and those of his professorship of theology at Modena. He died in March 1770. His works are "Lessons morales historiques critiques et chronologiques sur l'Genèse &c.", and other religious publications, besides four tragedies *Sedeca*, *Manasses*, *Drose* and *Seila*.—*Bug. Univ.*

G R A N E I (FRANCIS) deacon of the church of Aix was born in 1692 at Brignoles in Provence but came early to Paris. He was employed by Desfontaines in his continuation of his *Nouvelles du Parnasse* entitled *Observations sur les Ecrits Modernes* until the king revoked the privilege. He then published *Réflexions sur les Ouvrages de Littérature* a journal that extended to twelve volumes. He learned English and translated an Isaac Newton's *Chronology* which he published at Paris in 1728. But one of his best editions is that of the works of Launcy and a *Launciana*, consisting of very curious articles. Moreri mentions many other editions to which he wrote prefaces and notes and he was also contributor to the "Bibliothèque Françoise". He died at Paris in 1741.—*Moreri. Dict. Hist.*

G R A N G E (JOSEPH DE CHANCELLER DE LA) a poet was born in Périgord in 1676. He went to the Jesuit school at Bordeaux where at the age of nine years he composed a comedy which was represented by the scholars. He was taken to Paris and placed as a page to the princess of Conti. His tragedy of *Jugurtha* was represented when he was only sixteen and was greatly admired. He continued writing for the stage but his most famous production was his *Philippines*.—*ibid.*

G R A

G R A

more is written against Philip, duke of Orleans, regent. It contained many infamous accusations against the duke and even went so far as to charge him with the crime of poisoning several of the royal family. This was published anonymously, but the author was soon discovered. He fled to Avignon but being pursued, he was taken and committed to the prison of St Marguerite. By some means however he contrived to escape and being invited by Augustus, king of Poland to his court he remained there some time but upon the regent's death he returned to France where he lived unmolested. His works were published in 5 vols. 12mo and consist of tragedies, operas and miscellaneous poems. The most esteemed tragedies are *Orestes* and *Pylades*.

Athenaeus , Amans Jugurtha ,

Ina, and Melicerte His cantatas are some of them good, but he wanted refinement. He died in 1758. He left a History of Périgord unfinished in MS.—*Ducat. Mem. Nov. Diet Hist.*

GRANGER (JAMES) a clergyman who distinguished himself by his researches relative to English biography. He was a native of Berkshire and was educated at Christchurch college, Oxford but left the university without a degree. Having taken orders in the church he obtained the vicarage of Shiplake in Oxfordshire. He employed himself in making a collection of portraits, which led him to form the design of compiling a complete catalogue of engraved portraits of Englishmen chronologically arranged and classified. This under taking he partially executed by the publication of his Biographical History of England 1769 2 vols 4to in which the sets of engravings were accompanied by short memoirs enlivened with anecdotes, particularly illustrative of the modes of dress and manners which prevailed in the country at different periods. Mr Granger subsequently produced a third or supplementary volume, and in 1775 a second edition of the whole work with large additions and improvements made its appearance, in 4 vols. 8vo. In the prosecution of his plan he derived assistance from Horace Walpole the rev R. Farmer the rev W Cole and other men of letters from whose correspondence and his own researches he accumulated materials for extending his catalogue beyond the reign of queen Anne at which the fourth volume terminates. His death took place April 15th 1776 in consequence of an apoplectic seizure the preceding day while administering the sacrament in Shiplake church, and which prevented him from proceeding with the work. A collection of his letters and those of his correspondents was published by James Feller Malcolm 8vo. A continuation of the Biographical History through the reigns of George I and George II by the rev Mark Noble appeared in 1806 three vols. 8vo.—*Ann. Reg. Chalmers's Biog. Biog.*

GRANT (CHARLES) an eminent East-India proprietor and director was born in Scotland in 1716. By the death of his father at the

battle of Culloden the care of his education rested upon his uncle, who sent him out in a military capacity to India. On his arrival however he found patronage in the civil service, and in 1770 returned to Scotland and married. In 1772 he was sent out to Bengal as a writer and was shortly after appointed secretary to the Board of Trade. While in the east he distinguished himself by his patronage of the Christian missions and on his return to England in 1790 obtained a seat in the East-India direction. He was also a member of the House of Commons where his opinion on Indian affairs obtained great attention. He soon after wrote a valuable tract entitled *Ob servations on the State of Society among the Asiatic Subjects of Great Britain* which in 1813 in the House of Commons caused to be printed, for the use of its members the result of which diffusion of his views was the foundation of an ecclesiastical establishment in India, and the appropriation of a sum for the education of the natives. Mr Grant who exhibited much practical philanthropy and benevolence, was one of the commissioners appointed by parliament to superintend the building of new churches, also a member of the society for promoting Christian knowledge and a vice president of the Bible society. He died Oct. 31 1825.—*Ann. Biog.*

GRANVILLE (GEORGE) viscount Lansdowne baron of Buddeford so created in 1711. He was born in 1667 of an ancient and distinguished family being second son to Barnard Granville esq brother to the first earl of Bath of that name and grandson to sir Bevil Granville (or Greenville) who fell in the cause at Lansdowne in 1643. He was sent on his travels while a mere boy and on his return entered at Trinity college Cambridge where he displayed such quickness and precocity of parts as to be admitted to the degree of AM in his fourteenth year. A strong inclination for a military life was checked by the caution of his friends and he remained inactive during the various and trying changes of the time employing himself in the cultivation of a vein of poetry to the indulgence of which an ardent but unsuccessful passion for the beautiful countess of Newburgh (whom he has celebrated under the name of Myra) mainly contributed. On the accession of Anne he made his first appearance at court and was graciously received his fame as a man of letters and talent being then established by the flattering success which attended his play called the *British Enchanters*. This piece under the auspices of Betterton had a run of forty nights and long continued to be highly popular. Mr Granville now turned his attention to politics and having become by the death of his father and elder brother the head of his family he took his seat in the House of Commons as member for Fowey. The party with which he connected himself coming into power after the trial of Sacheverell he in 1710 succeeded Walpole as secretary of state and in the year following formed one of the twelve peers whose simultaneous creation for party

G R A

perpetrates made so great a noise at the period. In 1715 he was made a privy counsellor and treasurer of the household, but on the queen's death he not only lost his post, but being suspected of disaffection to the Hanoverian succession, was arrested and sent to the Tower September 26 1715, where he remained in dungeon more than a twelvemonth. Although released he continued to be looked upon with jealousy by the court, and on his friend Atterbury's being accused of treason he thought it prudent to return to the Continent, where he remained ten years. He returned to England in 1726, and passed the remainder of his life as a private gentleman amusing himself by correcting and republishing his poems, and writing a vindication of his uncle sir Richard against the charges of Clarendon and Burnett. This he printed in two 4to vols. His death took place January 30 1755.—*Biog. Brit.*

GRATIAN a Benedictine of the twelfth century was a native of Chiusi, and was the author of a famous work entitled *Decretal* or "Concordantia discordantium Canonum," in which he endeavours to reconcile those canons that seem to contradict each other. He was however guilty of some errors which Anthony Augustine endeavoured to correct in his work entitled *De emendatione Gratiani*. Gratian's Decretal forms one of the principal parts of the canon law. The best editions are those of Rome 1582 4 vols. folio and of Lyons 1671 3 vols folio.—*Cave Dupin. Sacra Omnia.*

GRATIUS FALISCUS an eminent Latin poet supposed to have been contemporary with Ovid and pointed out by him in the last elegy of his fourth book *De Ponto*. He was author of a poem entitled "Cynogeticon" or the Art of Hunting with Dogs, the style of which is deemed pure but destitute of elevation. The first edition of the Cynogeticon was published in 1504, Bessar fol., but the best is that of London 1698 8vo.—*Voxus de Poet Lat.*

GRATIUS (*Orcutinus*) a native of Holthaus in the diocese of Munster who became head of the university of Cologne, where he died in 1542. He is famous not for what he himself wrote but for the wit and humour he elicited from others. His bigotry inducing Hutton and others to compose the celebrated Epistola obscenorum Virorum ad Domum Magistrum Orcutnum Gratium 1516 and 1517 4to a work of poignant satire of which a beautiful edition was printed at London in 1710 12mo and dedicated to the author of the Tailer.—*Mores Addin's O Bug*

GRATTAN (HENRY) an eminent Irish orator and statesman was born at Dublin about the year 1750 of which city his father was recorder. He finished his education at Trinity college whence he removed to England and became a student in the Middle Temple. He was called to the Irish bar in 1772 and in 1775 was brought into the parliament of Ireland on the borough interest of lord Charlemont. He immediately became highly distinguished in the ranks of opposition and infused that spirit into the country, which

G R A

in the course of two years arrested and dispelled 80,000 volunteers and finally prodded. In 1783 a reluctant assent on the part of the British ministry and parliament to a repeal of the statute of 6th Geo. I. That statute had enacted, that the crown of Ireland was inseparably connected with that of Great Britain, that Ireland was bound by British acts of parliament when named therein, that the Irish house of lords had no jurisdiction in matters of repeal; and that the dernier resort, in all cases of law and equity was in the lords of Great Britain, all which was now rescinded. For his share in the acquirement of this great concession Mr Grattan received addresses from all parts of the country and the Irish parliament voted him £0 0001, and a house and lands for him and his heirs for ever. Two or three sessions of great parliamentary exertion followed which were distinguished by the oratorical rivalry and political enmity of Messrs. Grattan and Flood which struggle however after a little temporary decline of popularity terminated in the confirmed ascendancy of the former who gradually became the leader of the country party in the house of commons and the head of the Irish wings. In 1790 although already avowedly zealous for concessions to the catholics Mr Grattan was returned for the city of Dublin and remained an active senator until the premature recall of earl Fitzwilliam. Disgusted by the policy which followed and by the unhappy Irish rebellion and its manifold horrors he temporarily seceded from parliament and lived in retirement. The grand project of a union being brought forward by Mr Pitt he once more obtained a seat in parliament, for the express purpose of opposing it. When carried however he did not refuse a seat in the united house of Commons, being returned in 1805 for the borough of Malton in Yorkshire. He supported the war policy of the administration, but the later years of his parliamentary attendance were chiefly occupied in a warm and energetic support of catholic emancipation. He may even be said to have died in the service of this important question for being unanimously called upon by the catholic body to carry their petition to England and to present and support it in the house of Commons when the exertions were represented by his friends as incompatible with his age and declining health he nobly replied, that he would be happy to die in the discharge of his duty. This event unfortunately took place soon after his arrival in London on the 14th of May 1820 at the age of seventy. His remains were interred with due solemnity and a very honourable attendance in Westminster abbey. In the political life of Mr Grattan there was nothing campaining or dubious, he was the zealous and unequivocal friend to Ireland and to what he deemed her best interests from first to last while in the way of mere party distinction he may be regarded as an aristocratical whig. In private life he was a warm friend and until years had softened his ardent temperament a bitter enemy. His

MAGNA

subordination always assumed a stately, mild, low, & composed air to severity and grandeur. As a public speaker he had to contend with a defective voice; and his eloquence was always bold, and commanding, combining strength with beauty, and energy and elevation with eloquence. In regard to figure and illustration, the taste of it was distinctively Irish, but his highly cultivated taste and sound discrimination kept him generally clear of that redundancy of trope and metaphor which is sometimes a conspicuous defect in the eloquence of his countrymen. He was at all times animated and occasionally altogether powerful. Mr Grattan married early in life a lady of the name of Fitzgerald, which union produced thirteen children, one of whom called after his father is the present representative of the city of Dublin.—*Amer. Biog.*

GRAUN (KARL HENRICH) an eminent German musician of the last century chapel master to Frederick the Great. He was born in 1719 at Wahrenbrück in Saxon and educated at Dresden. In 1733 he attracted the notice of his patron then prince-royal of Prussia, who sent him at his own expence to Italy for improvement and on his return two years afterwards placed him at the head of the magnificent theatre which he had just constructed. In this situation he remained till his death, in 1759. Gram who appears to have enjoyed in Germany a reputation scarcely inferior to that of Handel in England was the author of an almost innumerable variety of Masses, Oratorios, &c. The most celebrated of the latter is a "Te Deum" the best known of his compositions in this country, and "Der Tod Jesu," part of which together with some of his other compositions may be found in Latrobe's selection. A few more are printed in Dr Crotch's specimens. The overture and frame work of the opera of "Galatea" (to which Frederick himself composed many of the air) are also by him.—*Bug. Dict. Mus.*

GRAUNT (EDWARD) a man of learning in the sixteenth century was educated at Westminster whence he was removed to Oxford where he took the degree of BA in 1571 and of MA. the year following when he was appointed master of Westminster school. On regaining his mastership of the school in 1591 he was presented to the living of Barnet, in Middlesex and soon after to the rectory of Toppersfield in Essex. He died in 1601. He published the letters and poems of Roger Ascham to which he subjoined a piece of his own, entitled "Oratio de Vita, Obitur ac dictione elegantis Rogers Aschami cum adhortatione ad adolescentes," and "Gracius Longus Speculum," which was afterwards epitomised by his usher Mr William Camden and published in 1597 under the title of *Institutio Graeca Grammaticae compendiana in usum Regiae Scholis Westmonasterianae*. Gough, who appears, from several copies of which we have seen as excellent Latin poet.—*Arch. Tatton. Bathurst. Ely. Biog. Mag. Cam. Soc.*

G R A

GRAUNT (JOHN) a citizen of London, one of the first in England who turned his attention to political arithmetic, was born in London in 1620. He was a haberdasher, and became a freeman of the drapers' company and a common-councilman. The bills of mortality of the city of London coming under his observation, he conceived that several important inferences might be drawn from them, and he accordingly composed a work, in which he was assisted by his friend Mr William Petty, entitled "Natural and Political Observations made upon the Bills of Mortality," 1661, &c. This went through five editions and procured for Mr Graunt admittance into the Royal Society. The style of this work is plain, and the observations are not remarkable, but the numerous facts which it contains, and the manner in which they are disposed, made it of considerable service. On his giving up business in 1666 he obtained the management of the New River Company. Some time before his death he changed his religion and became a convert to popery. His death took place in 1674.—*Bug. Brit.*

GRAVELOT (HENRY FRANCIS BOURG AVON) a French artist, was born at Paris in 1699 and soon distinguished himself as a draughtsman. He went to St Domingo with La Rochardier the governor-general and there meeting with Fissier was employed by him on a map of the country. In 1745 he returned to France and applied himself to drawing but despairing of distinguishing himself there he came to London and was much employed by our artists in drawing ancient buildings tombs, and prospects, in which he excelled. He is compared by Vertue to Picart, and the same artist says that in composition and design he surpassed Hollar. He sometimes painted small histories and conversations and he designed and engraved some of the prints to Hammer's and Theobald's editions of Shakespeare, but his principal engraving is the large print of Kirkstall abbey. He returned to France at the commencement of the late reign and continued to execute designs for the booksellers of Paris. He died in 1773.—*Walpole's Amer. Nov. Dict. Hist.*

GRAVES (RICHARD) a clergyman who obtained distinction as a poet and novelist. He was born at Mickleton in Gloucestershire in 1715 and at the age of sixteen entered as a scholar of Pembroke college Oxford and in 1736 he was chosen a fellow of All Souls. He obtained the rectory of Claverton near Bath in 1750, and that pleasant sequestered village became his future residence. Mr Allen of Prior park by whom he was highly esteemed, built for him accommodation an apartment at the rectory as a school room, observing that when it had served the purposes of instructing boys it might be appropriated to the hospitable service of entertaining friends. To this gentleman he was also indebted for the living of Kilmersdon, to which he was presented in 1763. He was the intimate friend and correspondent of the poet Shakspeare, after whose death he published "Recollections of Pais-

G R A

G R A

Villain in the Life of Shakspeare." He was also the author of "The Vestals, or a Collection of Epigrams, with an Essay on their species of Composition," "Lesbifications in Prose and Rhyme," "The Spiritual Quixote a Novel," 3 vols.; "Columella or the Discressed Anchoret," 2 vols.; "Esphrysony, a Collection of Poems," 2 vols.; "Eugenius or the Golden Vale," 2 vols.; "Plempoon or the Aspiring Plebeian," 2 vols., "The Reveries of Solitude," besides a translation from the Greek of the Meditations of Marcus Antonius, sermons, a comedy and various miscellaneous productions, all which display more or less of ease sprightliness and a peculiar strain of pointed humour which has made them deservedly popular. But the Spiritual Quixote is the best of Mr Graves's works, of which it has been observed, that though it does not display so much wit as the compositions of Fielding nor so much humour as those of Smollett, yet it contains in a great degree the excellencies of both. It exhibits a faithful though necessarily somewhat satirical portraiture of the extravagancies of methodism as they appeared among the immediate followers of Whitfield and Wesley. It has been stated (though we cannot vouch for the accuracy of the information) that the author's son was the prototype of Mr Geoffrey Widgose the hero of the tale. Mr Graves employed his pen to the last and having published "The Invalid with the obvious means of enjoying life by a Nona-generant" he died in 1807 at the rectory at Laverton where he had dwelt nearly sixty years.—*Gent. Mag.*

GRAVESANDE (WILLIAM JAMES LE S.) an eminent Dutch mathematician and natural philosopher of the eighteenth century. He was born in 1688 at Bous le-Duc and studied the civil law at the university of Leyden where he took his doctor's degree in 1707. He settled at the Hague and practised as a barrister, but his attention was much engrossed by mathematics and physics on which subjects he published some dissertations in the Literary Journal of the Hague in the conduct of which he was concerned. In 1715 he was appointed secretary to the embassy sent by the states-general to England, to congratulate George I on his accession to the crown. On that occasion Dr S Gravessande formed an acquaintance with Sir Isaac Newton, and was chosen a FRS. Returning home he became professor of mathematics and astronomy at Leyden where he first taught the Newtonian philosophy. In 1731 he went to Cassel at the request of the landgrave of Hesse to examine the famous wheel of Orffyreus a professed exhibition of the perpetual motion.—(See *Orffyreus*).—To his labours in the cause of science as a lecturer he added the publication of several works which contributed to make known the discoveries of Newton, and extend the boundaries of knowledge. Among these were—"Physices Elementa Mathematica, experimentis confirmata, sive Introductio ad Philosophiam Newtonianam,"

which translated into English by Sir Charles Newton, "Mathematicos Universitatis Elementa," 1737 8vo, and "Introductio ad Philosophiam, Metaphysicam et Logicas confusa." In 1754 he added to his other professorships that of philosophy which he retained till his death in 1762.—*Allen's G. Eng.*

GRAVINA (JOHN VINCENT) an eminent jurist and man of letters, was born at Ronciano, a castle in Calabria, in 1666. He studied civil and canon law at Naples and visiting Rome, resided for some years with Paul Cesarini of Turin. He was one of the founders of the Academy of Arcadi, and drew up their laws in the style of the Roman tables. In 1698 he was appointed professor of civil law at the college of Sapientia, and five years afterwards he succeeded to the chair of canon law and to the expositions of the decretal. He gained great reputation by his writings which were numerous. The principal *Ornatus Juris Civilis* is considered a classical work replete with learning. To the Naples edition printed in 1713, was subjoined a treatise

De Imperio Romano also highly esteemed. He was also the author of *Institutes of Civil and Canon Law*, *Della Tragedia*, *Della Ragion Poetica* a treatise *De Instituitione Poetarum* and five tragedies, written upon the model of the ancients which were not favourably received. He was invited to Turin by the duke of Savoy and was preparing to go thither when he was seized with an illness and died in 1713 in the arms of his scholar Metastasio, whom he made his chief heir.—*Moreri*: *Tribosch*.

GRAVINA (PIETRO) a Latin poet was born at Palermo in Sicily of a family originally of Gravina a city in the kingdom of Naples. He was canon of Naples. Most of his works were lost in 1501 when the French went to Naples under Louis XII but the remaining pieces were published in 1532 and some were inserted in the *Carm. Illust. Poet. Ital.* Samazarus prefers his epigrams to those of his contemporaries, and Paul Jonius and others speak very highly of his poetry.—*Moreri*: *Diet. Hist.*

GRAY MD FRS. (EDWARD WHITAKER) an English physician and naturalist who was several years senior secretary to the Royal Society and keeper of the department of natural history and antiquities at the British Museum. He was the author of an Account of the Epidemic Catarrh of the Year 1782 in the first volume of Dr Duncan's *Medical Commentaries*. Observations on the Manner in which Glass is charged with the Electric Fluid and discharged," and Observations on the Class of Animals called, by Linnaeus, Amphibia, both published in the *Philosophical Transactions*. He died in January 1807 aged fifty-nine.—*Hutton's Abr. of Pt. Phil.*

GRAY (STEPHEN) a gentleman belonging to the Charter house, who in the early part of the last century distinguished himself by his researches concerning natural philosophy. Previously to the year 1753 he discovered the

G S A

method of communicating electricity to bodies not externally possessing it, by contact or conductivity with electricity. Hence he drew the conclusion that metals might be found to accumulate the electric fluid, and he thus led the way to professor Maccabrook's invention of the Leyden phial the formation of electrical batteries, &c. Mr Gray himself projected a kind of luminous orrery or electrical planetarium. He was the author of several papers in the Philosophical Transactions.—*Freestey's Hist. of Electricity.*

GRAY (THOMAS) a distinguished English poet, was the son of a money receiver in the city of London, where he was born in 1716. Being an only child, he was regularly educated and sent to Eton where he laid the foundation of his future intimacy with Horace Walpole and Richard West. In 1734 he removed to Cambridge as a student of St Peterhouse where he early obtained some reputation for literature and poetry. He quitted college in 1736 and entered himself at the Inner Temple with a view of studying law but was easily induced to accept the invitation of Mr Walpole to accompany him in his tour of Europe, towards the close of which they separated in consequence of some disagreement and Gray with his moderate resources finished the expedition by himself and returned to England in 1741. His father soon after died and leaving a very small property behind him Mr Gray wholly renounced the expensive cultivation of the law and returned to academic retirement at Cambridge. Here he occupied himself several years in laying literary schemes and plans of magnitude which he often admirably commenced but uniformly wanted energy to mature. So slow was he to publish, that it was not until 1747 that his *Ode on a Distant Prospect of Eton College* made its appearance before the public and it was only in consequence of the printing of a surreptitious copy that in 1751 he published his *Elegy written in a Country Church-yard*. This poem which was sent into the world without the author's name quickly ran through eleven editions was translated into Latin verse, and has secured lasting popularity. In 1757 on the death of Cibber the office of laureate was offered to Mr Gray who declined it, and the same year published his two principal odes, *On the Progress of Poetry* and

The Bard which although little calculated to attract the many tended materially to exalt his poetic character. In 1759 he removed to London where he resided for three years in the vicinity of the British Museum and in 1762 took a journey in Scotland, and was introduced to the most eminent men of literature of that country. In 1768 the duke of Grafton presented him with the professorship of modern history at Cambridge in consequence of which he wrote the *'Ode for Mischief'* for the installation of that nobleman as a fellow of the university the following year. It was the intention of Gray to do somewhat more than his predecessors, who had made the office a sinecure, although afford-

G R A

ing a salary of 300*l.* per annum, but his health soon after declining, he proceeded no farther than to sketch a plan for his inauguration speech. He died of the gout in his stomach on the 30th July 1771 in his fifty fifth year and was buried with his mother in the church yard of Stoke Poges in Buckinghamshire. As a poet Gray excels not in pure invention neither is he highly pathetic or sublime, but he is splendid, lofty energetic, and harmonious. Although lyric poetry was what he chiefly cultivated if a judgment may be formed from his noble fragment of *An Essay on the Alliance of Education and Government*, he would have excelled in the didactic. As a writer of Latin verse he is surpassed by few and his letters are esteemed very admirable specimens of the epistolary style. In his disposition he was peculiarly fraternal and delicate which gave an air of effeminacy and timidity to his manners, which subjecting him to much occasional ridicule, at the same time very singularly contrasting with the manly and mental strains of his poetry. In morals he was temperate, upright and constant friend to virtue, and such was his delicacy in pecuniary matters that he earned his fear of receiving favours to a blameable excess. Few men of equal reputation have exhibited less vanity and he bore all the critical attacks upon his reputation with easy negligence. According to the account of his many friends his general acquirements were very uncommon and it is to be lamented that a want of correspondent energy and perseverance rendered his extensive research less effective than it might otherwise have been —*Mason's Life of Gray* —*thus s Edition of Gray*

GRAZIANI (ANTON MARIA) bishop of Amelia, was born of a distinguished family at Borgo-san Sepolcro in Tuscany in 1537. He studied the law at Padua and in 1560 he visited Rome where he became intimate with Commendone afterwards cardinal whom he accompanied in all his journeys into Germany and Poland and refused to quit him though solicited by Henry of Valois. After the death of Commendone in 1584 he was made secretary to pope Sixtus V and in 1592 was created bishop of Amelia by pope Clement VIII who sent him as his nuncio to the Italian princes and states to unite them in a league against the Turks. After the close of his nunciature he returned to his see where he died in 1611. His works are— *De Vita Johannis Francisci Commendoni Cardinalis* 4to Paris 1669, *De Bello Cypro Lib V* 4to, Rome 1644 *De Vita Johannis Francisci Commendoni Cardinatis* *De Caibus Adversis Viatorum Illustrum* 4to; a collection of *Synodal Ordinances* and a curious posthumous work entitled *De Scriptis in via Minerva, ad Aloysium Fratrem Lib II* —*Mores Tiraboschi*

GRAZZINI (ANTONIO FRANCESCO) a Florentine poet of the sixteenth century born 1505. He was celebrated for the purity of his style (in which many considered him not inferior to Boccaccio) and was one of the original

G R F

G R E

members of the academy of his native city; a society one great object of which was to refine the Italian language. On this occasion he assumed the name of Lance and was appointed by the grand-duke superintendent of the incorporation. This however giving offence to some of the associates he retired in disgust and became one of the principal founders of the Della Crusca School. He published a series of novels which were much admired and reprinted at Paris in 1756. His other works are six comedies and a collection of miscellaneous poems Florence 2 vols 8vo. His death took place in 1583.—*Bog Univ.*

GREATRAKES (VALENTINE) a native of Apane near Waterford in Ireland born 1626. He was sent to England for education in his youth and on his return held an official situation in Cork for which county he was in the commission of the peace. His general character and the testimony which has been borne to the simplicity of his manners and the uprightness of his morals by Boyle and others induce an opinion that in the power which he pretended to possess of healing disorders by passing his hand over the part affected he was rather himself imposed upon by a diseased imagination than wilfully imposing upon others. The celebrity he acquired in his own country by his supposed miraculous cures induced him to come to London which he reached soon after the Restoration but although in some instances aided perhaps by the enthusiasm of the patients he succeeded yet the frequency of his failure soon lost him his popularity. His death took place in 1680 or according to Hearn, in 1682.—*Harr's Hist. of Ireland.*

GREAVES. There were three brothers of this name all eminent for their learning and abilities, who flourished during the first moiety of the seventeenth century. JOHN the elder and most celebrated was born at Colerne Hants in 1602 entered at Balliol college Oxford, in 1617 and obtained a fellowship at Merton college in 1624. He now directed his attention with great success to the cultivation of the sciences of mathematics and astronomy as well as of the Oriental languages and in 1630 was chosen geometrical professor in Gresham college. Five years after obtaining this appointment he left England for the Continent and travelled through the Netherlands, France and Italy. At Rome lord Arundel offered him a handsome allowance to attend him in a voyage to Greece which he declined from a wish of penetrating into Egypt. Arch bishop Laud liberally encouraged him in this design which was disconcerted by the citizens of London and commissioned him to purchase for the Lambeth library any rare manuscripts he might fall in with in his travels. Accordingly in the summer of 1637 Mr Greaves set off for Constantinople where Lucas the patriarch, to whom he was introduced by our ambassador sir Peter Wyche assisted him materially in making his collection. On the violent death of his new friend prudence compelled him to pursue his journey

sister that he had proposed, and he reached Alexandria in the September of the following year. He remained in Egypt till the succeeding April when he returned to England, and arrived in London in 1640 bringing with him a considerable number of gems, coins, medals and MSS. The disturbances under which the kingdom laboured, soon threw considerable difficulties in the way of his preparing his papers for publication. As a zealous royalist he excited the suspicions of the parliament, who deprived him of his professorship which the king endeavoured to compensate by presenting him with the Savilian professorship at Oxford. From this situation however he was ejected by the same influence in 1648, and retired to London where he married and employed himself for the remainder of his life in translating his manuscripts. His death took place October 8 1682. While in Egypt he had made an accurate measurement of the principal pyramids the result of his observations on which stupendous piles he gave to the world in 1646 under the title of *Pyramiographia*, and the year following published a *Dissertation on the Roman Foot and Denarius*, deducing from these two a comparative view of the other weights and measures of antiquity. He had also the merit of proposing a plan for the reformation of the calendar by omitting for the forty years ensuing the intercalary days, it was not however adopted, through the prevalence of the party to which he was opposed though sanctioned by the privy council.—THOMAS the second brother held a fellowship in Corpus Christi college Oxford together with the rectory of Benefield Norfolk and a stall at Peterborough. He was a good Orientalist and published a treatise on the Arabic language in one volume, 4to as also some remarks on the Persian version of the Pentateuch and of the Gospel.—EDWARD the youngest of the three attained considerable reputation as a physician and was the author of a useful treatise on epidemic disorders. After the Restoration he was advanced to a baronetcy and died in 1680.—*Bog Brit.*

GRELCOURT (JEAN BAPTISTE JOSEPH VILLART DE) a French ecclesiastic eminent as a wit and a poet born in 1683 at Tours, in which city he afterwards obtained the benefice of St Martin. As the liveliness of his parts was at least equalled by the laxity of his morals the restraints to which a residence in his preferment necessarily subjected him soon became intolerable, and he returned to Paris where he had received his education. In this capital he associated with most of the leading characters of his day and was a general favorite in the fashionable circles especially with the maréchal d'Estrees. He excelled in epigrams, tales, sonnets, &c. and of these a collection was made and published in three octavo volumes about twenty years after his decease, which took place in 1743.—*Bog Univ.*

GREEN (John) bishop of Lincoln, was born at Beverley (or as some assert, at Hull)

G R E

in Yorkshire, 1706; and became a fellow of St John's college, Cambridge. The patronage of the Seymour family obtained for him in 1744 the rectory of Borough Green near Newmarket, and his reputation as a theologian raised him four years afterwards to the divinity chair in the university of which he still continued a member. In 1750 he was elected master of Corpus Christi (Bene't) college and served his vice chancellorship in 1756. In the course of the same year the deanship of Lincoln was given him, and in 1764 he succeeded Dr Thomas in that see the valuable deanship of St Paul's, London being afterwards annexed to it in 1771. The regius professor of divinity in the university of Cambridge is familiarly denominated *Malleus Heterodoxum* his having once filled the situation does not however appear to have produced any intolerant opinions in the mind of Dr Green inasmuch as he is recorded to have been the only prelate who in 1772 voted in the house of Lords for the bill in favour of dissenters from the establishment. Of his writings the principal are—*The Academic treasure* or *Religious Entomology*, and a few sermons, together with some contributions to the *Athenian Letters*. His death took place at Bath April 25 1779.—*Gent Mag*

GREEN (MATTHEW) an original poet, born probably in London in 1696. Very little is known of his early life beyond the fact that his parents were dissenters of good repute and that he obtained a place in the customs, which he discharged with diligence and fidelity. His learning also extended to a little Latin and the religious austerity in which he was bred produced the frequent effect of outward compliance and internal scepticism. His conversation abounded with wit of the most ingenuous kind, and he was a man of great probity and sweetness of disposition. He was subject to low spirits which led to the composition of his principal poem *The Spleen* which work implies a practical philosophy soberly Epicurean and is otherwise a very original production. He was also author of

The Grotto, Verses on Barclay's *Apology* “The Seeker” and some smaller pieces none of which were published until his death, which took place in 1737 at the early age of forty five. An ornamented edition of the poems of Green was published, with some critical remarks by Dr Aikin in 1796 12mo.—*Dodslay's Collection. Europ. Mag for July 1785*

GREEN or GREENE (NATHANIEL) a general officer of the American United States during the war of independence. He was the son of a quaker who was an anchor-smith at Warwick in Rhode Island, and was born about 1741. When young he displayed an aptitude for learning and was particularly attracted by military history. Being nominated a member of the assembly of Rhode Island, he justified the confidence of his fellow-citizens. Hostilities taking place he relinquished the pacific principles of his sect, and, with the command of five regiments levied in

G R E

Rhode Island he marched to the relief of Massachusetts. In 1776 the congress appointed him major-general, and he distinguished himself on many occasions. In December 1780 he succeeded Gates in the command of the southern army in Carolina. This was an arduous situation and on the 7th of February 1781 he was defeated by lord Cornwallis, in an engagement near Guilford Court house, and on the 27th of April by lord Rawdon near Camden. He soon however recovered his superiority and established his fame as a military commander by the victory which he gained after a hardly contested battle at Eutaw Springs in Georgia, September 7th the same year. Green then returned to Rhode Island, where his counsels were as useful to the states as his courage had been in the field. He died June 19 1786 much regretted for his private worth as well as for his public character.—*Bug Univ.*

GREEN (THOMAS) a native of Ipswich born 1770. He was originally intended for the bar and received an education more especially directed to the study of the law but the easiness of his circumstances and a strong bias towards elegant literature induced him to decline practising in his profession although the habit of deep research which he acquired while prosecuting his enquiries in that particular department of science proved highly beneficial to his progress in his subsequent pursuits. Mr Green published *The Macbethian Poetical Ode* 1788 12mo., *An Examination into the leading Principles of Godwin's Inquiry concerning Political Justice* 1798 8vo reprinted in 1799, and

Extracts from the Diary of a Lover of Literature” 4to 1810. His death took place January 6 1825.—*Gent Mag*

GREEN (VALINTINA) an eminent mezzotinto engraver. He was born in Warwickshire and was intended by his father for the profession of the law. Consulting his own inclination he left the office of an attorney in which he had been placed and became pupil to an obscure line engraver at Worcester. He came to London in 1765 and set himself to study mezzotinto engraving in which he arrived at such excellence as to participate with Mac Ardell and Earlam the merit of having been the first artists, and who gave consequence and variety to that mode of engraving in 1789 Mr Green undertook to engrave the pictures of the Dusseldorf gallery, and in 1795 he published twenty two prints from that collection. The French invasion of Bavaria prevented the prosecution of his plan. In 1767 he was chosen a member of the incorporated society of artists of Great Britain, and in 1774 one of the associate engravers of the Royal Academy. On the foundation of the Royal Institution he was appointed keeper. He died in 1813 aged seventy four. He engraved many portraits after sir Joshua Reynolds, and historical subjects after West, besides other works. His merit was not confined to his productions as an artist, since he published a ‘Survey of the City of Worcester,’ 1764,

G R E

See, a "Review of the Politis Arts in France, under Louis XIV compared with their present State in England, 1723 4to, and "The History of the City of Worcester 1796 2 vols. 4to. He also was the author of papers in the *Archæologa*.—*Bryan's Dict. of Past & Eng. Ed.*

GREENE Mus. Doct. (MAURICE) an eminent English musician a native of London in which city his father the rev Thomas Greene, held the living of St Olave, Old Jewry. He was a pupil of Brind the organist of St Paul's cathedral and on the death of his old master in 1716 succeeded him in his appointment resigning for that purpose similar situations to which he had been previously appointed in the churches of St Dunstan in the West and St Andrew Holborn. In 1726 he obtained the place at the Chapel Royal vacant by the death of Dr Croft as organist and composer to the king. And four years afterwards took the degree of Doctor of Music at Cambridge on being elected to the musical professorship in that university. He died in September 1755 bequeathing his manuscripts to his friend Dr Boyce, who completed and published the admirable collection which he had made of church services and anthems in score now to be found in every cathedral. To Dr Greene also in conjunction with Festing is owing that excellent institution the charitable fund for the support of decayed musicians.—*Biog. Diet. of Mus.*

GREENE (ROBERT) an English author of the age of Elizabeth not more distinguished for the brilliancy of his wit than notorious for his profligacy of his life and manners. He was a native of Norwich born in that city in 1560 and educated at St John's college Cambridge which he afterwards quitted for Clare Hall where he graduated in 1583. Soon after he went to the Continent and took orders on his return but gave great scandal by his subsequent conduct, especially by the grossness and obscenity of his writings. Of these one only is now comparatively known. A Great's worth of Wit bought with a Million of Repentance a new edition of which has appeared within these two years. A surfeit brought on by eating too freely of salted herrings is said to have been the occasion of his death which took place in 1592. Previously to his decease he seems to have felt some remorse at the poverty disgrace and misery in which his conduct had involved himself and others, if the letter published by Cibber as one addressed by him to his wife, be genuine—*Cibber's Lives*.

GREGORY I (POPE) designated also The Great. He was born at Rome of a noble family about 544, and having received an education suitable to his rank he became a member of the Senate and filled other emoluments in the State. Italy was then subject to the emperors of the east and Justin II appointed him to the important post of prefect or governor of Rome, which after having held it for some time with great reputation he

resigned. The death of his father put him in possession of vast property, which he expended in the foundation of monasteries and charitable institutions. Disgusted with the world, or affecting to be so, he took the monastic vows himself and became a member of one of his own establishments. He was not suffered to remain in retirement, being sent by Pope Pelagius II on an embassy to Constantinople to apologize for an informality in the inauguration of that pontiff who rewarded the services of his envoy by making him papal secretary after his return to Rome. He had however again sought a retreat in his convent of which he was chosen abbot when on the death of Pope Pelagius in 590 he was chosen his successor by the general suffrage of the senate clergy and people. After a strenuous and apparently sincere opposition on his part, Gregory was seated in the pontifical chair. The remaining events of his life belong to the general history of the age in which he reigned and the most important can be but slightly noticed at present. He displayed great zeal for the conversion of heretics, the advancement of monachism, and the rigid enforcement of celibacy among the clergy. His contest for ecclesiastical supremacy with John patriarch of Constantinople laid the foundation of the schism between the Greek and Latin churches, which has subsisted to the present day, and though he experienced a temporary defeat under the government of the emperor Mauritz, he ultimately succeeded by flattening the usurper Phocas in his object of obtaining the fullest recognition from the imperial court of his exclusive right to the title of oecumenical or universal bishop. The conversion of the Anglo Saxons to Christianity was one of the projects of Gregory the Great honourable to his seal and abilities. [See St AUGUSTIN II.] He died in March 604. The works ascribed to this pope are very numerous, and have been frequently published. The most complete edition is that of the Benedictines of St Maur Paris, 1705 4 vols. folio under the superintendence of father Denis de St Martha, who in 1697 published a Life of St Gregory the Great. His genuine writings consist of a treatise on the Pastoral Duty Letters Scriptural Commentaries &c They exhibit a curious mixture of good sense worldly wisdom, religious zeal bigotry and superstition.—*Plutarch. Moren. Asius's Gen Biog*

GREGORY VII (POPE) a native of Soimo in Tuscany of low parentage whose proper name was Hildebrand by which he is frequently designated in history. He received a clerical education and after having passed through some inferior dignitutes he succeeded Alexander II in 1073 as bishop of Rome. His pontificate is memorable for the hostile contest which he carried on with the German emperor Henry IV on the subject of investitures or the right of the pope to dispose of all archbishoprics, bishoprics and other ecclesiastical benefices throughout Christendom. In this struggle for power he was at first very successful. The emperor having resisted

G R E

papal claim. Gregory issued against him a *dictatus of interdiction*, excommunicated the prince of Germany to rebellion, and reduced Henry to such extremities that he was induced to visit the pope at Canossa, in Italy and submit to the most degrading terms, in order to procure conditional absolution. The emperor repented of his weakness, and after over coming Rudolph duke of Swabia, who had been his rival for the imperial crown, he turned his arms against Gregory and set up against him an anti-pope, Guibert, archbishop of Ravenna, who took the title of Clement III. Fortune for a time favoured his arms, and marching into Italy he made himself master of Rome in 1065. Pope Gregory retired to the castle of St Angelo, where he was besieged by the imperialists and must have fallen into their power but for the valour of Robert Guiscard the Norman whom he had engaged in his interest, and made duke of Apulia. Rescued by that chief he took refuge under his protection, at Salerno where he died in 1085. This pontiff may be considered as the founder of the vast temporal power which the popes for several centuries exercised over almost every part of Europe. By the claim of investiture withdrawing ecclesiastics from the jurisdiction of secular courts of law and proferring the right of deposing princes and absolving subjects from their allegiance he established in every Catholic kingdom an imperium in imperio which rendered weak sovereigns vassals of the Romish See and often shook the authority of the wisest and most powerful. It ought not to be omitted that Gregory in the early part of his pontificate, annoyed by the lamentations of the Asiatic Christians, formed the design of conducting in person a crusade to Palestine but his disputes with Henry IV prevented the execution of his project. The personal character of this pope has been blackened by charges of incontinence and sorcery. It will easily be believed in the present age that the latter accusation has originated from the malicious invention of the partisans of his imperial antagonist, and it may be charitably concluded that the former had no better foundation.—*Naudé Apol. pour les gr. Hommes approuvés de Magie. Platina. Dugm. Aspin's G. Biog.*

GREGORY XIII (Pope) whose secular name was Hugo Brancampagni, was born at Bologna, in 1502. He studied civil and canon law in which he made great proficiency when young, and at the age of twenty-eight he was made judge of the court of commerce at Bologna. Removing to Rome he rose after various employments to be a cardinal and was sent legate into Spain by Paul IV. On the death of Paul V in 1572 he was elected to the papal chair. The reformation of the calendar which was effected through his patronage, in 1582, was the event which most favourably distinguished his pontificate. The want of correspondence between the solar and common year having introduced great irregularities into the computation of time particularly with regard to ascertaining the time of Easter and

G R E

other movable feasts of the church, it was proposed to correct such anomalies by leaving out ten days in the reckoning of time for the current year, with other necessary regulations as to the recurrence of future leap years; whence the distinction of the old and new style, in dates anterior to the year 1752, when the new style, or Gregorian calendar was adopted in Great Britain as it had previously been in the Catholic countries of Europe. Among the medals struck by pope Gregory XIII is one which to his infinite disgrace was designed to commemorate the massacre of Huguenots in France on St Bartholomew's day 1572 of which he otherwise expressed his approbation. He died in 1583. The labours of this pope as a canonist require some notice. He was employed, when cardinal among various learned men in preparing an edition of the famous *Decretal of Gratian* or epitome of canon law drawn from the decrees of councils, the letters of popes and the writings of ancient doctors, and the work was completed and published under his auspices in 1580 4 vols. folio. *Aspin's G. Biog. Butler's Hist. Jurisprud. Subsec.*

GREGORY bishop of Neocassara in the third century, called Thaumaturge, or the Wonder worker on account of the miracles which he is supposed to have performed. He was born at Neocassara in Pontus of gentle parents who were persons of fortune and respectability. He lost his father at the age of fourteen and after receiving a learned education he accompanied his sister and her husband to Casarea, in Palestine where he became the pupil of the celebrated Orogen, who had opened a school of philosophy in that city. Under him he studied logic physics geometry astronomy and ethics and was converted to Christianity. He appears also to have spent some time at Berytus in the study of law, and about 239 he returned to his native place having taken leave of Orogen after he had pronounced before a numerous auditory an oration in his praise which Dupuy styles one of the finest rhetorical compositions of all antiquity. A letter of exhortation from his tutor induced him to take on himself the office of a Christian pastor at Neocassara and he was accordingly ordered bishop of that city about the year 245. The church flourished under his care till the Decian persecution, in 250 when he thought it prudent to retire from the threatened danger. When the storm was blown over he resumed his station, and it is said converted almost all the Neocassarans to Christianity. He was present at the first council of Antioch where the heresy of Paul of Samosata was the object of enquiry and he concurred in the lenient measure adopted towards that prelate. Gregory died soon after in 265. His works, besides the *Panegyric on Orogen* comprise 'A Paraphrase on the Ecclesiastes' and a 'Canonical Epistles'. They were published together at Paris 1626, folio.—*Fabrizii Bibl. Graec. Lardner's Credibility. Aspin's G. Biog.*

GREGORY NAZIANZEN (St.) a cele-

igated, divine of the Christian church in the fourth century. He was born near the city of Nizanum, in Cappadocia of which his father was bishop. He received a liberal education at home, and then went for improvement to Cœnac, in Palestine, Alexandria, and Athens, at which last place he became acquainted with Julian subsequently emperor and with Basil, both students like himself and with the latter he formed an intimate friendship. Returning to Nizanum he was baptized when about thirty years old and afterwards joining his friend Basil in a retreat among the mountains of Pontus, he adopted the austereities of the monastic, or rather ascetic profession. During the period of his retirement, Julian having ascended the throne the Christians were subjected to various petty persecutions among which was a prohibition from using in their schools the works of the heathen classics. This illiberal edict gave Gregory an opportunity for displaying his talents in the composition of beautiful poems in various kinds of verse on moral and religious subjects. After having made several visits to his native place he at length became successor to his father in the bishopric and after the death of the old prelate in 372 he retired into a monastery at Seleucia. He was subsequently invited to Constantinople to oppose the Arians who were then very powerful in that metropolis. On his arrival Gregory found them in possession of all the churches and he consequently commenced preaching in a private house where he lodged. The influence of his zeal learning and eloquence procured him a multitude of hearers, and attracted the animosity of the dominant party. His prudence and perseverance however overcame all obstacles and at length he was chosen by the orthodox bishop of Constantinople. He was scarcely seated on the episcopal throne when his tranquility was disturbed by a schism in his own church occasioned by the attempts of Marimus a cynic philosopher whom he had baptised to support him in the see. Supported by the emperor Theodosius he defeated his opponent and his election was confirmed in the council of Constantinople held in 381. The difficulties of his situation however induced him shortly after to resign it when he retired to his paternal estate at Nizanum, and there lived in seclusion till 389 the period of his decease. Gregory was not only a man of pious, learned and talented, but also in other respects an estimable character displaying on most occasions more moderation and liberality than was usual among the divines of his age. His invective against the emperor Julian, which seem to have been dictated by personal animosity, must however be considered as deducting in some measure from this eulogy and his zeal for the orthodox doctrine of the Trinity was more conspicuous than his charity, when he excused the enmity of his successor Noctarius against the Apollinarists. The writings of this Christian father are remarkable for eloquence and purity of style, nearly approaching in excellence to the compositions

of the ancient Greek writers, especially Isocrates. His works consist of discourses or sermons, letters and poems of which the best collective edition is that published by Frederic Morel Gr. et Lat. Paris, 1609 2 vols. folio.—*Fabreti Bibl. Greg. Morel. Aitam's Ges. Bibl.*

GREGORY of Nyssa, (St.) Gregorius Nyssenus an eminent Christian divine of the fourth century younger brother of St Basil the friend of Nazarius. He was born in Cappadocia and after being liberally educated he became a professor of rhetoric and legal advocate. He attained great eminence in those pursuits, which he was persuaded to relinquish for ecclesiastical studies, and having taken orders in the church he distinguished himself as much in the pulpit as he had previously done at the bar. About 372 he was ordained bishop of Nyssa in Cappadocia by his brother Basil. The zeal which he displayed in this post against the Arians excited the resentment of the emperor Valens who belonged to that sect, and Gregory was consequently banished from his see and otherwise ill treated. After the death of his persecutor in 378 he was recalled by Gratian and restored to his benefice. In 381 he was present at the council of Constantinople when he was appointed to draw up the famous confession of faith termed the Nicene Creed designed as an explanation of the decision of the council of Nice. In 383 he attended another council at Constantinople, and in 385 he was appointed to deliver a funeral oration for the empress Flaccilla, as he had before done for her daughter the princess Pulchera. The time of his death is not exactly known though some writers state it to have taken place in 396. He had married early in life and continued to live with his wife after his advancement to the episcopal office. His works consisting of commentaries on parts of scripture sermons and funeral orations lives letters, &c were published at Paris in 1610 2 vols. folio to which was added an appendix in 1618.—*Fabreti Bibl. Gr. Justin's Eccl. Hist. Aitam's G Greg.*

GREGORY (GEORGIUS FLORENCE) com monly styled Gregory of Tours, an early Gallic historian and divine. He was born of illustrious parentage in Auvergne in 544, and was educated under his uncle Gallus, bishop of Clermont, and his successor Avitus. After finishing his studies he was ordained a deacon and acquired celebrity as a preacher. In 573 he was chosen bishop of Tours, and he discharged the duties of his office with zeal and faithfulness. In 578 he was present at the council of Paris, and he was subsequently employed as an ambassador by Gontran, king of the Burgundian Franks and by his nephew Childebert II. king of Austrasia. He made a pilgrimage to Rome in 594 and died there or after his return to his diocese in 595. His "History of the Franks in Ten Books," is much esteemed notwithstanding its defects, as a repository of original information. He also wrote legendary Lives of the Saints, and other works, published together by father

Lac. Dujon. Morrel.*

GREGORY (JAMES) a mathematician and philosopher, celebrated as the inventor of the reflecting telescope. His father was a master of the kirk of Scotland, and he was born at Aberdeen in 1638. He received his education at the Marischal College and after going through the usual course of academic studies he made himself acquainted with the works of Galileo, Kepler, Des Cartes, &c. The fruit of his application appeared in a treatise which he published in 1663 entitled "Optica Promota, seu abdita Radiorum reflexorum et refractoriorum Mysteria Geometrice enucleata," 4to. This book unfolded the idea of the telescope which bears his name, and in 1664 he visited London for the purpose of perfecting the mechanical construction of the instrument. Disappointed for the present by the difficulty of getting a specimen ground and polished of a proper figure, he suspended his design, and set off on a tour to Italy. He stayed some time at Padua, whose university was then famed for mathematical science. There he published in 1667 a treatise on the Quadrature of the Circle and Hyperbole, which added to his reputation and which he reprinted at Venice in 1668, with some additions. On his return to England he was chosen a fellow of the Royal Society whose transactions he enriched by some valuable papers. His treatise on the Quadrature of the Circle involved him in a controversy with Huygens, which he managed with rather too much asperity. In 1672 he published a small tract, entitled "The great and new art of Weighing Vanties under the pseudonym of M. Patrick Mathers," which was a satire on Professor Sinclair of Glasgow who had written against Boyle. Some invasions of sir Isaac Newton on the construction of the telescope, invented by Gregory, produced a controversy between those two great men, which for the honour of science was conducted with an exemplary degree of amenity and good faith. Previously to this occurrence he had been chosen professor of mathematics in the university of St Andrews, and during his residence there in 1669, he married the daughter of George Jameson, the painter who is styled by Walpole, the Scottish Van Dyck. In 1674 he was invited to fill the mathematical chair at Edinburgh, whether he removed, but held the situation only a short time for in October 1675 while engaged in pointing out to some of his pupils the satellites of Jupiter he was suddenly struck with total blindness, and died a few days after in the thirty-seventh year of his age. As a discoverer of mathematical truths, Gregory has had few equals, and, exclusive of Newton, he may be considered as the greatest philosopher of his age.—*King Brit. Marton's Biog Philos. Allam's G. B.*

GREGORY (DAVID) nephew of the preceding, and the heir of his splendid talents and emulator of his fame. His father, David Gregory, a gentleman of Kincardine, was a man of ability, and fond of mechanical pur-

G R E

suits. The subject of this article was educated at Edinburgh, where he took the degree of M.A. and in 1684 he was elected professor of mathematics in that university, and the same year he published a mathematical treatise from his uncle's papers with important additions of his own. He has the merit of having first introduced into the schools the Newtonian philosophy by his professorial lectures. He continued to fill his post with increasing reputation till 1691 when he visited London with the view to make interest for the Savilian professorship of astronomy at Oxford, on the expected resignation of Dr Edward Bernard. That event taking place he was chosen to the vacant chair though he had the celebrated Halley for his competitor a circumstance which laid the foundation of a friendly intimacy between these mathematicians. Gregory also formed a personal acquaintance with sir Isaac Newton and Flamsteed and he was elected a fellow of the Royal Society. In 1695 he published at Oxford "Catoptrics et Dioptrics Sphæricæ Elementa," 8vo in which he considers those branches of optics chiefly as respects the construction of telescopes, particularly those of his uncle and sir Isaac Newton. In 1697 he gave the first demonstration of the properties of the Catenarian Curve, and in 1702 appeared his most celebrated production "Astronomus physicus et geometrical Elements," folio. The object of this work is to explain Newton's geometry of centripetal forces as far as his discoveries are founded on it, and to exhibit in a more familiar form the astronomical part of the Principia. In 1703 he published an edition of the books of Euclid in Greek and Latin, and he afterwards engaged with Dr Halley in editing the "Comics of Apollonius," and being taken ill while thus employed he retired to Maidenhead in Berkshire where he died October 10 1710. He published mathematical papers in the Philosophical Transactions and left some treatises in manuscript, part of which were subsequently given to the public.—*Hutton's Mat Det. Atkin's G. B.*

GREGORY (GOZOOS) a clergyman of the church of England and writer on general literature. He was descended from a Scottish family but was born in Ireland where his father was prebendary of Ferns. On the death of that parent, when he was twelve years old his mother removed to Liverpool, and he is said to have spent some years in a counting-house at that commercial sea port. He however studied at Edinburgh, where he applied himself chiefly to mathematics and philosophy. Having taken orders, he obtained a curacy at Liverpool in 1778 when he published in a periodical work some essays against the slave trade. In 1782 he removed to London and became curate of Cripplegate, but resigned his office in 1785 on being elected morning preacher at the same place and he also officiated at the Asylum and elsewhere. At this time he made himself known by the publication of a volume of essays historical and moral. This was followed in 1789 by his

and the History of the English Church; a new edition of the *Saints Lives of the English*; while while serving the Duke of Gloucester, represented before the Privy Council, he wrote *Historical Discourse of the Reformation of the Church of England*, 1543; *A new Translation of Telescopius's History of the Economy of Nature*, 3 vols. 8vo., 1544; through the interest of lord Sidmouth, while administrator he had deposed, he was presented to the living of Westham in Essex, and having previously obtained a small prebend in St Paul's cathedral which he resigned, on being preferred to the rectory of Stapleford in Hertfordshire. In his retirement at Westham he superintended the publication of a dictionary of arts and sciences, 2 vols. 8vo., the labour of compiling which however, is said to have fallen to the share of the industrious Mr Jeremiah Joyce. His last literary undertaking was, preparing for the press "Letters on Literature and Taste" published after his death, which took place at Westham, March 12 1606 in the fifty-fourth year of his age.—*Miscell. Mag.* vol. xxv.

GREGORY MD (JAMES) professor of physic in the university of Edinburgh and a fellow of the Royal Society born at Aberdeen, 1733. He was the author of various works on literary and scientific subjects as well as on those connected with his profession. Among them are—a dissertation 'De moribus cunctis mutationibus medicinae,' 8vo 1774, *Conspicuum Medicinae theoriae*, 1780 2 vols 8vo which went through four editions. *Philosophical and Literary Essays*, 1792 4 vols. 8vo. Manuscript presented to the Managers of the Royal Infirmary of Edinburgh 4to 1800 "Cullen's first Lines of the Practice of Physick with Notes" 2 vols. 8vo. This latter work went through seven editions. He also published a paper in the Transactions of the Royal Society of Edinburgh on the theory of the moods of verbs. Dr. Gregory died April 2 1821.—*Anec. Biog.*

GREGORY (JOHN) a physician and writer on miscellaneous literature who was a native of Aberdeen where his father was professor of medicine at King's college. After studying in that seminary he removed in 1742 to Edinburgh, and afterwards to Leyden. Having had the degree of MD sent him from Aberdeen in 1745 he returned thither and obtained the professorship of philosophy. He resigned this post in 1749 to devote himself solely to medical pursuits. In 1753 he married the daughter of lord Forbes, and two years after he settled in London, and was chosen FRS. On the death of his brother he succeeded in 1755 to the medical chair at King's college. His professional and literary reputation now became extended, and in 1764 he published an ingenious tract entitled "A Comparative View of the State and Faculties of Man with those of the Animal World." The same year he removed to Edinburgh and in 1766 was elected professor of the practice of physic. The course of lectures which he delivered in this capacity, formed the basis of his treatise "On the Duties and Office of a Physician, and on the Method of prosecuting Physick."—*Spec. Discr.*—Vol. II

Principia in Philosophia, 1769; and of his "Elements of the Practice of Physick," 1771. He died February 9, 1772, aged forty-eight, leaving for the press "A Father's Legacy to his Daughters," a piece generally known and deservedly admired.—*Anec. Biog.*

GRESHAM (or THOMAS) a merchant of London, the son of Sir Roland Gresham, the a merchant and lord mayor of London, was born in 1519 and was educated at Gonville-hall in Cambridge. He was then bound apprentice to his uncle sir John Gresham, and in 1533 he was admitted into the Mercers' Company. His father was agent of the king's money shairs at Antwerp, and in this situation Thomas expected to succeed him, but he was disappointed. However the prince who was preferred to him having brought them into a bad condition Gresham was sent over in 1534, during the minority of Edward VI to retrieve them. He acquitted himself so well that in two years he paid off a heavy loan and raised the king's credit considerably. On the accession of Elizabeth he was deprived of his office but it was soon restored to him, with that of queen's merchant, and he was also knighted. In 1564 losing his only son to divers of grief he turned his attention to public undertakings, and persuading the city to purchase a piece of ground fit for the purpose, in 1566 he planned and erected a bourse or exchange for the merchants of London in imitation of that of Antwerp. In 1570 queen Elizabeth entered the city in procession and visiting the new building she solemnly proclaimed it the Royal Exchange which name its successor since the fire of London will continue to bear. The troubles in the Low Countries interrupting the loans from Antwerp to the crown sir Thomas advised the minister, Cecil to apply to the merchants of London, and though they at first refused by his influence he induced the money men to join in a small loan which was the commencement of the great advances since made from the same body. Sir Thomas next determined to found a college in London, and thus he carried into effect, notwithstanding the opposition of the university of Cambridge which endeavoured to prevent the establishment of a rival institution. He devised by will his house in Bishopsgate-street, for the purpose of being converted into habitations and lecture rooms for seven professors or lecturers on the seven liberal sciences, who were to receive a salary out of the revenues of the Royal Exchange. Gresham-college has since been converted into the modern general excise-office but the places are still continued, with a double salary for the less of the apartments, and the lectures are now given in the Royal Exchange. Sir Thomas expended a great sum upon his villa of Osterley-park near Brentford, and among his other edifices were corn, oil, and paper mills upon the stream of the Brent. He died suddenly in 1599, at the age of seventy.—*Biog. Brit.*

GRIEZET (Jean-Baptiste Lefevre) an eloquent French poet, was born at Aixois in 1709. He entered at the age of sixteen among

the favorite, and from that action suspended his music by the introduction of poems replacing all the easy and delicate pleasure of a man of taste. Some very ill-advised translation of "Le Vert," and pleasing epistles of "La Chartreuse," "Les Ombres," and others, the popularity which he obtained by these productions, induced him to quit the society in his twenty-sixth year, and settle in Paris. He then used his powers in dramatic composition, and by his "Méchant," represented in 1747 obtained great reputation. In 1748 he was admitted a member of the French Academy but his early education seems to have always left a secret impression in his mind against theatrical representations, and he soon after solemnly renounced the stage and retired to Amiens, where he married a lady of good fortune, and lived in a manner which ensured general respect. On the accession of Louis XVI he revisited Paris and received from the court letters of nobility the order of St Michael, and the appointment of historiographer of the order of St Lazare. He died of an abscess in the breast in 1777. The poetical name of Gresset is principally founded on his "Chartreuse," "Ver Vert" and Le Méchant, the first characterised by its philosophical freedom, the second by its ingenuous pleasure, and the third by accuracy of partiture and beauty of verification.—*Eloge de Gresset.* *New Diet. Hist.*

GRETRY (ANDRÉ ERNSTE MODÈRE) the son of a music-master of Lüge, where he was born in 1741. A strong predilection for the science which his father professed developed itself at a very early age and he astonished all the members of the choir of St Denis, in which he had been placed by the precocity of his talents and the sweetness of his voice. He soon after had the advantage of Moreau's instructions, whose only difficulty was in repressing the effervescence of his genius. In 1759 he walked to Rome where he completed his studies, and finally settled at Paris in 1768. Here he produced nearly thirty comic operas, all of which were attended with the most unqualified success and two of them, "Zazou et Azor" and "Richard Cœur de Lion," have been translated and brought out in London, where they were most favourably received. The taste of the Parisians, and the necessity of conforming to it in a certain degree, did much towards corrupting that of Gretry, while his compositions on the other hand, were almost equally efficacious in restringing them. During the Revolution he justified the popular principles both in politics and religion, as is evinced by a treatise which he published "De la Vérité, ce que nous faisons, ce que nous sommes, ce que nous devons faire." He died in 1813 at Montmorency.—*New Diet. of Music.*

GREVILLE (FOLK) lord Brooke, an accomplished courtier and ingenious writer, and a great Encourager of learning and learned men. He was descended of the ancient family of Greville, Beauchamp, and Willoughby, and was born in 1344 at Beauchamp Court,

Worcestershire, the family seat, then in the possession of his father, Sir John Greville. He went to Shrewsbury grammar school, Trinity college, Cambridge, and afterwards graduated for Oxford; having made the grand tour, prospected the coast, where he saw roses high and low, and Elizabeth, as well by his literary merit as by his skill in knightly accomplishments. From her hand he received the honour of knighthood and the valuable appointment of clerk of the signet in Wales, and at the nomination of her successor was admitted to the order of the Bath. James also presented him with Warwick-castle and would in all probability have further distinguished him by his favour had not the jealousy of Cecil taken alarm which induced Greville to resume from public life, till the death of that statesman restored him to the court. He now rose rapidly filling in quick succession the posts of under treasurer and chancellor of the exchequer and in 1580 obtained a barony. Under Charles I he continued to enjoy the royal countenance till the 30th of September 1638 when conversing with an old servant of the family one Ralph Heywood, respecting certain dispositions which he had made by his will the latter considering his legacy disproportionately to his services reproached to him with great insolence, and on his turning from him took the opportunity to stab him in the back of which wound he expired immediately, the assassin instantly committing suicide with the same weapon. This melancholy termination of a valuable life took place at his residence, Brooke house, Holborn, which then occupied the ground between the site of Fumival's-inn and Gray's-inn lane. Lord Brooke was the founder of an historical lecture at Cambridge and enjoyed the friendship of sir Philip Sidney, Camden, Spenser, Jonson, Shakespeare, Speed, Davenant and most of the master spirits of the age in which he lived, the bent of his own genius evidently led him to the study of poetry and history. An octavo volume of his miscellaneous writings was printed in 1670 and there is also extant a life of his friend Sidney by his hand. The envy of Cecil who denied him access to the necessary records prevented his carrying into execution an intention he had formed of writing a history of the wars of the Roses.—*Biog. Brit.*

GREY (lady JANE) a young and accomplished female of royal descent, whose disastrous fate as the victim of an unprincipled relative a ambitious projects has created an extraordinary interest in her favour and thrown an air of romance over her story. She was the daughter of Henry Grey, marquis of Dorset, afterwards duke of Suffolk, by the lady Frances, daughter of Charles Brandon, duke of Suffolk, and Mary, younger sister of Henry VIII, in whose reign lady Jane was born, according to the common account, in 1537. The place of her nativity was Bradgate hall, a seat belonging to her father in Leicestershire. She seems to have displayed uncommon precocity of talent and to the note

accomplishments of females, the skill of her mother with the learned languages, as well as French and Italian. The famous 'Roger Ascham' has related, that on making a visit to Hampton-court, where she resided, he found her mother, then a girl of fourteen, engaged in perusing Pinto's Dialogue on the Immortality of the soul, in the original Greek, while the rest of the family were stamping themselves with hunting in the park. She owed her early proficiency in literature in some measure to the anxiety and indulgent discipline of her learned tutor Aylmer, afterwards bishop of London; and from him she probably imbited a strong attachment to the principles of protestantism. The Oriental as well as the classical languages are said to have been familiar to her and she is represented as having been altogether a young person of uncommon genius and acquirements. But the latter are less singular than might be supposed by those who do not take into account the general taste for the cultivation of Greek and Roman law which prevailed among both sexes for some time after the revival of literature in Europe. Lady Jane Grey was a clever woman but not a prodigy, and Mrs Roper the interesting daughter of sir Thomas More with lady Burleigh and her learned sisters may be adduced as rivals in erudition of the subject of this article. The literary accomplishments of that unfortunate lady however had they been as peculiar as they were meritorious, would have done much less honor to her memory than that spirit of sedate and almost stoical philosophy with which she encountered the annihilation of her prospects of sovereignty and the disgrace and ruin of the dearest object of her affections. The tale of her elevation and catastrophe has been often related, in verse and prose and has furnished a subject for dramatic composition. The most material circumstances are her marriage with lord Guilford Dudley fourth son of the duke of Northumberland in May 1553, which though it originated in the ambitious projects of her intriguing and unprincipled father in law was yet a union of affection. The duke's plan was, to reign in the name of his near relation in whose favour he persuaded king Edward VI on his death bed to settle the succession to the crown. On the decease of the king soon after lady Jane had the good sense to refuse the proffered diadem, but unfortunately she afterwards consented to accept it, being influenced by the importunity of her husband. Her reign reigned had lasted but nine days when Mary the late king's elder sister was acknowledged queen and Jane exchanged a throne for a prison. She and her husband were arraigned, convicted of treason, and sentenced to death, but their doom was suspended, and they might perhaps have been allowed to expiate their impiadence by a temporary confinement, but for the ill-advised insurrection under sir Thomas Wyatt, in which the duke of Suffolk, lady Jane's brother, was weak enough to participate. The suppression of this rebellion was followed by the execution of lady Jane Grey and her hus-

band. Many plausibly suspended the execution of her cousin three days, to afford time for her conversion to the catholic faith; but the cause of charitable purpose was defeated by the consistency of lady Jane, who defended her opinions against the arguments of the Romish divines sent to reason with her and prepared herself with firmness for her approaching fate. She was beheaded on Tower-hill February 12 1554, her husband having previously suffered the same day. A book, entitled 'The precious Remains of Lady Jane Grey' &c, was published directly after her execution, and letters and other pieces ascribed to her may be found in Fox's Martyrology.—Baillard's *Mom. of Br. Ladies*. *Aikin's G. Brog*

GREY (RICHARD) a learned and ingenious scholar and divine of the church of England, who was born at Newcastle-upon-Tyne towards the close of the seventeenth century. He studied at Lincoln college Oxford where he proceeded MA in 1718-19. On leaving the university he became chaplain and secretary to Lord Crewe, bishop of Durham, who gave him the rectory of Hinton in Northamptonshire to which was added the living of Kinascote in Leicestershire, and a prebend in St Paul's cathedral. In 1730 he published his *Memoria Technica*, or a new Method of Artificial Memory applied to and exemplified in Chronology History Geography Astronomy also Jewish Genealogies, and Roman Coins Weights, and Measures, &c, with Tables proper to the respective Sciences, and Memorial Lines adapted to each Table &c. Dr Grey's system of mnemonics as developed in this work has been so frequently presented to the public in different forms, as to render it unnecessary particularly to describe it. Though not susceptible of such general application as the inventor imagined, it may be frequently used with advantage especially for memorizing dates, distances dimensions, and other objects of number. In 1731 he published 'A System of Ecclesiastical Law' extracted from the Codex Juris Ecclesiastici Anglicani of bishop Gibson for the use of university students, and his production was so much approved that the heads of the university of Oxford thought proper to reward him with the diploma of DD. He afterwards published several works intended to facilitate the study of the Hebrew language, and in 1746 the Book of Job divided into metrical verses with the Latin version and notes of the learned professor Schultens, and additional annotations of his own. In 1746 Dr Grey held the post of official and commissary of the archdeaconry of Leicester. He died in 1771 in the seventy-eighth year of his age.—*Aikin's G. Brog* *Nichol's Lit. Anecd.*

GREY (ZACHARY) an English episcopal clergyman, best known as a commentator on Butler's *Hedonism*. He was born in Yorkshire in 1697, and received his education at Jesus college, Cambridge, in which he took the degree of LLD in 1720. He obtained the rectory of Houghton Conquest in Bedfordshire, and the vicarages of St Peter's and St Giles's

Historical Disquisitions. Of nearly thirty volumes written by him, published, those relating to history and theology are chiefly enumerated. The most important among them is entitled "the improved Translation of Huet's History of the Puritans," 3 vols. 8vo. His edition of *Holland's*, with notes, 3 vols. 8vo, displays much ingenuity and industry in investigating the sources of the poet's allusions, and illustrating them by quotations from the writings of his contemporaries. Dr Grey published, on the same plan, "Critical and Historical Notes on Shakespeare" 3 vols. 8vo. He died at Asaphill in Bedfordsire, in 1766.—*Nichol's Lit. Anecd.*

GRIERSON (CONSTANTIA) an extraordinary woman, whose maiden name is not mentioned by her biographer, was born in the county of Kilkenny in 1706. Mrs Pilkington relates, that at eighteen years of age she was betrothed to her father to be instructed in madrigals; that she was then a perfect mistress of the Hebrew, Greek, Latin, and French, and far advanced in the study of mathematics; that her parents were poor illiterate country people, who had no means of giving her any advantages, so that her learning was deemed very extraordinary. Constantia married a Mr Gresham, for whom lord Carteret then lord Lieutenant of Ireland, obtained a patent, appointing her governess to the king, in which, to reward the merit of his wife, her life was in settled. She gave a proof of her knowledge of Latin in her dedication of the Dublin edition of *Taddeo*, to lord Carteret, and by that of *Taddeo* to her son, to whom she also addressed an elegant epigram. She likewise composed some English poems, asserted by Mrs Barber amongst her own. She died in 1733. Her son, who was instructed by herself, was also king's printer at Dublin and was a man of great learning, wit, and vivacity. He died in Germany at the age of twenty-seven.—*Baker's Misc. Cibber's Lives Preface to Mrs. Barber's Poem.*

GRIESBACH (JOHN JAMES) a German divine and erudit biblical critic who was a native of Busbach in Hesse Darmstadt, where his father was a Lutheran minister. He studied at the universities of Frankfurt, Tübingen, Halle, and Leipzig, and at length became extraordinary professor of theology at Halle. He devoted his talents to the correction and illustration of the Greek text of the New Testament. In 1774 he published at Halle in two volumes. 8vo an edition of the Historical Books of the Christian Scriptures, with a copious collection of various readings, completely cited and perspicuously arranged, in the margin of the pages containing a corrected text, in which the variations from that commonly received are distinctly pointed out. The remaining books of the New Testament were subsequently published in the same manner, and the learned critics proceeded, under the patronage of the *Leits doce obligatio*, an improved edition of the whole work in 4 vols. 4to reprinted in 2 vols. 8vo, in Germany and in England. Professor

Griesbach was also the author of "Handbuch Collection et suggestions et correspondances entre le Nouveau Testament et l'Antiquité," 1776—vol. 2 vols. 8vo, and other valuable works relating to biblical literature. He removed from Halle to Jena, where he became professor of theocologian, rector of the university, and proxy *consiliarius* for ecclesiastical affairs to the dukes of Saxe Weimar. He died in March 1812, aged eighty-seven.—*Bug. Univ.*

GRIFFITH (ELIZABETH) an ingenious lady was a native of Wales. She was married early in life to Richard Griffith a gentleman of small fortune in Ireland. Her first performance was entitled "The Letters of Henry and Frances," which is said to contain the genuine correspondence of her husband and herself before and some time after their marriage. She next wrote in conjunction with her husband, two novels in letters, 4 vols., the first and second, entitled "Dame's Distress" by Frances, the third and fourth, "The Gordian Knot" by Henry. Mrs Griffith was also the author of "Lady Burton," "Lady Julia Heylay" and some dramas which had various success. One of her most agreeable publications was "The Morality of Shakespeare's Drama illustrated." She likewise published some translations the "Letters of Niccol de l'Endos," "The Adventures of Pierre Vasse" &c. She died in 1793.—Mr Griffith was the author of a novel entitled "The Triumvirate or the authentic Memoirs of A. B. and C.", but of so free a kind that his wife would not venture to recommend it to the fair sex, but says that every gentleman will read it with pleasure.—*Genl Mag. Genl Biog. Dict.*

GRIMALDI (FRANCIS MARIA) a Jesuit, one of the best mathematicians of his time born at Bologna in 1613. After having taught the belles lettres during twenty-five years, he devoted himself to the study of the exact sciences, in which he made so much progress as to render it a subject of regret that he had not applied himself to them sooner. He assisted father Riccioli in his scientific pursuits, and gave a particular description of the spots on the disk of the moon, on which he imposed names different from those bestowed on them by Newton, and his nomenclature has been adopted by astronomers in general. He died at Bologna in 1663. He was the author of "Physico-mathesis de Lumine Colorebus, et Iride, aliisque accessoriis," libri II 1665 4to. This work contains some curious experiments and observations on light and colours, particularly relating to the inferior of the solar rays on approaching certain bodies, and their dilatation by the prism; but the discovery of the different refrangibility of the rays of light was reserved for Newton of whom however father Grimaldi may with justice be regarded as the precursor.—*Bug. Univ.*

GRIMALDI (JOHN FRANCIS) called Bolognese, an eminent painter was born at Bologna in 1606. He first studied under the Carracci to whom he was related, and distinguished himself particularly in landscapes. He went to Rome, where Pope Innocent X en-

and in the Windows and in the galleries of the Colosseum. His reputation soon became known to Paris by Cardinal Mazarin, who offered him a considerable position and engaged him in the Louvre. On his return to Italy he exhibited his pictures at Monte Carlo under Alexander VII, and Clement IX had the Academy of St. Louis twice named him their president. His composition was elegant, his colouring bold, and he possessed a light fine touch. He also understood architecture and etched forty two landscapes; five of which were after Titian. In private life he was universally esteemed for his amiable qualities and charity. He died of a dropsey at Rome in 1660.—*D'Argenville. Pellegrino. Strutt.*

GRIMBALD (Sr.) a learned ecclesiastic of the ninth century who was a native of Flanders. He was invited into England by Alfred the Great and bringing with him several other clerical scholars he settled at Oxford where he introduced a new mode of instruction. This innovation or some other cause of dissatisfaction arising between the strangers and the students before placed there occasioned such disputes that after the king had in vain interposed his authority Grimald was obliged to leave Oxford. He then retired to a monastery which Alfred had founded at Winchester where he probably passed the remainder of his life. He is supposed to have been skilful as an architect, and some writers ascribe to him the erection of the crypt of the church of St. Peter at Oxford, still remaining, which whether the work of Grimald or some other architect, is probably one of the oldest subjects remaining in England.—*Univers Brit. Eccles. Ante.*

GRIMM (FREDERICK MELCHIOR BARON DE) counsellor of state of the Russian empire grand cross of the order of Wladimir a man of letters whose great reputation has arisen from posthumous publications. He was born in 1723 at Ratisbon, of poor parents, who however bestowed on him a good education. His taste for literature manifested itself in his youth when he wrote a tragedy. Having finished his studies he went to Paris as governor to the children of the count de Schomberg. Soon after he was appointed reader to the duke of Saxe Gotha a place of more honour than profit. At this period he became acquainted with Jean Jacques Rousseau who introduced him to Diderot, d'Almbert, d'Holbach and other Parisian philosophers a piece of service which according to Jean Jacques, he repaid with ingratitude—[Confessions. vi. 8].—The count de Fries made him his secretary with appointments which rendered his circumstances agreeable and left him at liberty to pursue the best of his inclination. His vanity induced him to give himself the air of a man of gallantry, and as he attempted to repair the ravages of time by means of cosmetics, the Parisians bestowed on him the sobriquet of Tyrus le Blanc. In 1753 he published a pamphlet on titled "Le petit Prophet de Bechamschrode," in defence of the Italian opera, which was a

success prodigious. On the death of d'Almbert in Paris, Grimm was nominated principal secretary to the duke of Orleans. The Duke of the French interest with whom he was connected, led to his being employed, in competition with Diderot, as translator to the duke of Saxe Gotha an account of the writings friendship, quarrel, &c. of the authors of that period. Copies of this curious correspondence were also sent to the empress Catharine II. the queen of Sweden, Stanislaus king of Poland the duke of Deux-Ponts, the prince au-presso of Hesse Darmstadt, and the prince of Nassau Saarbruck. In 1776 he was appointed envoy from the duke of Saxe Gotha to the French court, honoured with the title of baron and decorated with several orders. On the Revolution breaking out he retired to the court of Gotha, where he found a safe asylum. In 1795 the empress of Russia made him her minister plenipotentiary to the states of Lower Saxony, and he was confirmed in that post by Paul I and retained it till ill health obliged him to relinquish it. He then returned to Gotha, and died there December 19th 1807. His grand work was published in different portions successively under the following titles—"Correspondance Littéraire Philosophique et Critique, adressée à un Souverain d'Allemagne, depuis 1770 jusqu'en 1782 par le Baron de Grimm et par Diderot, Paris 1812 5 vols. 8vo, "Correspondance Littéraire &c en 1775 1776 1782—1790. Troisième et dernière partie," 1813, 5 vols. 8vo, and "Correspondance Littéraire &c depuis 1783 jusqu'en 1790. Première partie," 6 vols. 8vo. A selection from this voluminous mass of literary gossip was published in 2 vols 8vo in French and English.—*Biblio. Univ. Biblio. des Contemp.*

GRIMOARD (count de) a French general, diplomatist, and man of letters equally estimable for his talents and personal character. He was descended from an ancient family which in the fourteenth century had produced a pope in the person of Urban V. The subject of this article was employed by Lewis XVI who entrusted him with a negotiation in Holland, and on his return he was charged with forming the plans for offensive and defensive operations in the campaign of 1792. After the 10th of August that year his papers were seized and deposited in the bureaux of the committee of public safety. The fall of the king interrupted his political career and he retired to private life devoting himself to the cultivation of literature. He died in 1815 at a very advanced age. His works include "Essai théorique et pratique sur les batailles 1775 4to, "Traité sur la constitution des Troupes légères, et sur leur emploi à la Guerre" 1782 8vo, "Recherches sur la force de l'armée Française, &c 1806 8vo, "Tableau Historique de la Guerre de la Révolution de France" 1808, in conjunction with general Servan of which work only 5 vols. were published, when it was suppressed by order of Bonaparte. He also edited and translated, military memoirs, letters and historical works.—*Biblio. Univ. Biblio. Contemp.*

GRIEVEDAL (Roderic) an English prelate, was born at Buntingford in Hertfordshire in 1500, and was sent to Merchant college whence he removed to Christ's college, and to Peterhouse-hall, Cambridge, where he was schola fellow and took his degree. In 1526 he was appointed vicar prior to the university, and the following year he was chosen lady Margaret's prebend. He became acquainted with Dr Ridley, bishop of London who appointed him his chaplain and elected him to the precentorship of St Paul's. He soon next made chaplain to the king, and in 1538 he obtained a stall in Westminster abbey. On the death of king Edward, to avoid the persecution of queen Mary he retired to Strasburg, and remained abroad until the accession of queen Elizabeth. He then returned and was employed with others in preparing the new liturgy which was to be presented to the queen's first parliament; and was soon after appointed one of her commissioners for the royal visitation in the north to require the oath of supremacy, to inspect cathedrals and the expenses of the clergy, to destroy the infra-structure of superstition, &c. In 1553 he was committed to the bishopric of London, vacant by the deposition of Bonner. He was then appointed one of the queen's ecclesiastical commissioners, and in conjunction with the archbishop of Canterbury reformed the calendar and enjoined that the ten commandments should be set upon the east wall of every church in the kingdom. In 1554 he was ordered by the queen and archbishop Parker to prosecute all those who did not comply with the act of uniformity. He obeyed the mandate but with such gentleness that Parker complained of him to the queen, who sent him a special letter commanding him to be diligent in punishing all recusants. In 1550 he was translated to the archbishopric of York, a charge which he found very laborious. On the death of archbishop Parker in 1558 he was advanced to the see of Canterbury, and the same year a convocation was held under him, in which some articles for the regulation of the church were agreed upon, entitled 'Articles touching the admission of apt and fit Persons to the Ministry, and the establishment of good Order in the Churches.' In 1576 he incurred the queen's displeasure by the encouragement he gave to what was called the exercise of prophecy. The rules of these prophecies were, that the numbers of a particular division, at an appointed time met at some church and each explained some portion of scripture, when a moderator made his observations on what had been said, and determined its true sense. The queen viewing them as seminaries of superstition, took a rooted dislike to them, and fearing their entire abolition gave orders to that effect to archbishop Grindal. In view of obeying her commands he wrote a letter to her, remonstrating with her and entreating her to leave religious affairs to the better and divines of the realm, without thereby upset them in the same pernicious manner as in civil affairs. This letter so dis-

pained Elizabeth, that after vainly remonstrating her commands, she caused an order to be sent to him from the star-chamber, which confined him to his house, and suspended him from his office for six months. Not choosing to comply, on an application from the lord treasurer, his suspension was postponed, and some thoughts were entertained of deposing him, which however were laid aside, but the legislation was not taken off until 1592 in which year having lost his sight, he resigned his dignity and obtained a pension of a pension from the queen, whose favour he never fully recovered. He died at Croydon in 1598. He was a prelate of great learning, piety, and moderation, mild, generous and affable and was universally respected by his protestant countrymen. He assisted the French protestants in obtaining permission to open a church in London which was the origin of the present French church in Threadneedle-street. He was the author of 'A Dialogue between Custom and Truth' published in Fox's 'Acts and Monuments,' —*Lif's by Sir George Baggs Hutchinson a Cumberland*

GRINGONNEUR (Jacques) a Parisian painter of the fourteenth century to whom has been attributed the invention of playing cards. His name is mentioned in 1392 in an account of the treasurer of Charles VI as having received fifty-six sols of Fane for three packs of cards, ornamented with devices of gold and various colours. Father Menestrier concluded from this passage that Gringonneur was the inventor of cards, but Bullet, in his

Recherches historiques sur les Cartes à jouer has shown that they are mentioned earlier than the date of the treasurer's account, and he concludes that they were first contrived in the reign of Charles V, about 1376 and that from France the use of these fascinating instruments of dissipation extended to Spain, Italy, England, Germany, &c. The abbe Rave ascribes their invention to the Spaniards, and Mr S W Singer, in his elaborate *Researches into the History of Playing Cards*, has shown that they are probably of Oriental origin.—*See Univ. Edit.*

GRONOVIUS (John Fransz) an eminent critic and classical editor of the seveneenth century. He was a native of Haarlem, and having received a learned education he travelled for improvement into Germany, France and Italy. He then obtained the professorship of the belles lettres at Dovester, and in 1655 on the death of Daniel Heinsius he accepted an invitation to become professor of Greek at Leyden, where he died in 1678. He published valuable editions of the works of Livy, Sallust, Plautus, Seneca, Pliny, Quintilian and Aulus Gellius; a treatise on the money of the ancients, "De Sestertii," and many other productions relative to criticism and philology.—**GROSEVOR** (James) son of the preceding and distinguished for his acquaintance with the same branches of literature. He was born in 1646, at Dovester, where he studied under his father, whom he soon surpassed in his classical requirements

GROSE, travelled England, and graduated at Oxford and Cambridge; forming acquaintance with some of the best in those universities as well as in the metropolis. He subsequently travelled in France and the Netherlands, and in 1672 he went to Spain, with Mr. Poole, ambassador from the Dutch government. Returning through Italy, he was induced to stay at Pisa, where the grand duke of Tuscany appointed him to a professorship. Two years after he returned to Duxford, and in 1679 he became professor of Greek and history at Leyden, where he remained, notwithstanding several advantageous situations were proposed for his acceptance elsewhere. In 1701 he was nominated geographer to the university. He died in 1716, leaving the character of a very learned, but not very liberal critic and scholar. He published corrected editions, with notes of the works of Macrobius, Polybius, Tacitus, Cicero, Annalium Maccianum, Quintus Curtius Sustonius and other Greek and Roman writers, besides which he was the author of critical and archaeological disquisitions controversial tracts, orations &c. But the undertaking which has contributed principally to his literary fame of James Grose is the 'Thesaurus Antiquitatum Graecarum,' Lond. Bat. 1697—1702 12 vols. folio.—GRONOVUS, (Abraham) the son of James, was like his father and grandfather, a professor in the university of Leyden and was eminent for his classical knowledge. He edited the works of Justin Meis Tacitus, Elian &c. His death took place in 1775.—GROOVUS (John Frederick) brother of the foregoing was born in 1690. He studied at Leyden where he took the degree of MD and practised as a physician. He was distinguished as a naturalist, and formed a museum, a part of which, relating to botany was purchased by sir Joseph Banks. He died in 1762. Among his works are—“Index Sappellochii Lapides, quam collegit in Classes et Ordines digestos, Specimen nonnumbus sive Synonyma illustrata,” Lond. Bat. 1740 8vo republished, with additions in 1750. He also was the author of a dinner-taxon on Camplor, Flora Virginica, Flora Gentilis, and papers on natural history in the Philosophical Transactions, and the Acta Upsaliensis.—GROSVENOR (Laurence Theodore) son of the last mentioned born at Leyden in 1730. He made the law his profession and took his doctor's degree in that faculty, but was chiefly eminent as a naturalist. He was, as well as his father, a magistrate of the city of Leyden; and he died there in 1777. His principal works are—“Museum Ichthyologicon Sistens Piscem tam Indigenorum quam exoticorum, quae in suo Museo asservatae voceruntur, descripciones etiam Systematice dispositae,” pars. Tpls. 1754—1756, 8 vols. folio; and “Bibliotheca Regia Animalium apud Leyden,” 1760 4to. Besides which he published a description of the Grosvenor Museum, and several disquisitions.—GROSE. Noun. Dict. West. Eng. Cyclop.

—GROSE (FRANCIS) an English antiquary

He was the son of a jeweller, and was born at Richmond in Surrey, in 1715. Having learnt a good fortune which he spent in dissipation, and having relinquished a situation which he had held for some time in the Hospital's college, he obtained a commission in the Surrey militia, where he was familiarly known by the title of Captain Gross. Having a taste for drawing he was induced to make sketches of such remarkable buildings and ruins as occurred to his notice, in the course of his tour in a military capacity through various parts of the kingdom. Hence originated his principal work ‘The Antiquities of England and Wales,’ 8 vols. 4to, the first of which appeared in 1773. After its completion he visited Scotland, to collect materials for a similar work relating to that country which he began publishing in 1790 and finished in 2 vols. 4to. He then went to Ireland to make a similar survey of the objects of curiosity in that island. In the midst of his undertaking he was seized with a fit of apoplexy and died at Dublin, in May 1791. Besides the works already noticed he was the author of a ‘Treatise on Ancient Armour and Weapons,’ 1786 4to, ‘A Provincial Glossary, with a Collection of local Proverbs and popular Superstitions,’ 1787 8vo ‘Military Antiquities,’ 1788 2 vols. 4to containing the history of the English army from the Conquest. ‘Rules for Drawing Canailleas, with an Essay on Comic Painting &c.’ ‘The Antiquities of Ireland,’ left imperfect at his decease, were completed and published by the rev. E. Ledwich 2 vols. 4to. Captain Gross, in the present day is considered as a somewhat superficial antiquary, and his engraved views of ancient edifices are beneath criticism; but notwithstanding his imperfections, he has the merit of having excited a taste for the study of architectural antiquities in this country and has preserved from oblivion some monuments of former times, which are now destroyed.—Envoy. Mag. Gent. Mag. Edit.

GROSSETESTE (ROBERT) bishop of Lincoln an English prelate of great learning and integrity in the 13th century born in 1175 at Scrobbrook Suffolk of poor parents. He pursued his studies at Oxford, and afterwards at Paris, and distinguished himself by his proficiency as a Hebraist. On his return to the former university his reputation as a theologian procured him many scholars, till having been appointed successively archdeacon of Chester and of Wilts, he was in 1235 raised to the see. In the administration of his diocese, his firmness in resisting the encroachments of Rome, drew down on him the displeasure of the Pope, who sent six legates to Lyons, but the causes then pronounced against him, had not the effect of inducing him to alter the line of conduct which he thought it his duty to adopt. His death took place at Buckden in 1253. He was the author of a commentary on some of the works of Aristotle, as well as of many other tracta, a list of which may be found in Tanner, the only two which appear to have been printed

Mr. W. D. Christie, Legislator, &c., of the United States.

GROTIUS (Hugo). He destined name of Hugo de Groot, a distinguished Dutch scholastic of the 17th century. His father was a burgomaster of Delft, one of the creators of the university of Leyden; and his mother was an accomplished woman, descended from one of the first families in Holland. He was born at Delft, April 10th, 1583, and manifesting in his early years a strong inclination for learning, every facility was afforded for the cultivation of his talents. He was placed under the tuition of Uitenhaged, a learned Armenian minister at the Hague, and in his twelfth year he was removed to Leyden where he studied under Francis Junius. At the age of sixteen he maintained public theses in mathematics, law, and philosophy, and his early proficiency excited the astonishment of the Dutch Senate, and gave earnest of his future distinction in the republic of letters. In 1596 he went to France with the famous Baneveldt, ambassador extraordinary from the states-general, when Grotius was introduced to Henry IV who presented him with his picture and a gold chain. He took the degree of doctor of laws during his residence in France, and received many attentions from persons of eminence. Returning to Leyden, 1600, he commenced his career as a barrister, and the same year he made himself an author by the publication of a translation of the treatise "De Nuptiis Philologiae et Mercurii," of Macarius Cepelia, which he is said to have prepared for the press before he went to France. This was followed by a Latin translation of a treatise on antiquities, by Simon Stevin, and in 1600 he published the "Phenomena of Aratus with annotations of the Greek text." He also cultivated Latin poetry and produced, besides some shorter pieces, three tragedies on sacred subjects, "Admetus Enravished," "Chaste Prometheus," and "Sophonisbaeum" on the story of Joseph. He was now chosen interpreter to the United Provinces, and he also obtained the professional post of advocate-general of the treasury for Holland and Zealand. In 1606 he married Mary Ruygerovry, daughter of the burgomaster of Voor, a lady whose devoted attachment and heroic conduct fully justified his choice. The next year he published an elaborate treatise in defence of the general freedom of the seas entitled "Mare Liberum," the particular objects of which were to vindicate the right of the Dutch to trade to the East Indies in spite of the encroachments of the Portuguese, and to fish in the north seas, where the English asserted their rights respectively. Selden wrote his "New Comment" in answer to this work. Another patriotic publication of Grotius was his book "De Antiquitate Republicae Batavae" for which he received the thanks of the states. In 1613 he was chosen provostship of Leyden, a position of importance, in which he cost in the sum of 12,000 ducats, and rewards in the assembly of the states-

general. Despite having other interests the Dutch and English governments relative to the "Grauezel Incident" Grotius was sent to the court of London to witness a negotiation on the subject; where he was treated with much respect by King James I, though his character does not appear to have been properly appreciated by the English clergy. The liberality of his sentiments, both in religion and politics, proved sadly detrimental to his interests on his return to Holland. Two parties then divided that country; the Calvinists or Gomarists, and the Arminians or Remonstrants. The stadtholder, Maurice, prince of Orange supported the Gomarists, who were more numerous and powerful than their opponents; Grotius, with Hoogstraten, and the grand pensionary Baneveldt, espoused the side of the Arminians, and endeavoured to thwart the measures of the prince, who had them all three arrested in August 1618. The national synod of Dordrecht or Dore, then sitting, having completed the triumph of the Calvinists, by condemning the principles of the Remonstrants and deposing or banishing their principal ministers, Baneveldt was first arraigned, condemned and executed. The trial of Grotius followed, in May 1619, and being very irregularly conducted, it terminated in his conviction of treason against the government, and a sentence of imprisonment for life and the confiscation of his estate. The place appointed for his confinement, was the castle of Loosveldt near Gorcum in South Holland where his wife obtained permission to share his fate. In this situation he remained nearly two years, devoting the time to literary pursuits. The grand fruit of his studies, was a treatise in Dutch verse "On the Truth of the Christian Religion" which formed the ground work of his celebrated Latin production on the same subject. Grotius at length was liberated from prison, through the ingenuous fidelity and fortitude of his wife. He had been permitted to borrow books from his friends, which when consulted he was accustomed to send back to Gorcum in a chest which served to convey him a supply of linen from his laundry. This vehicle was at first regularly searched, but at length the custom was discontinued. The wife of Grotius then persuaded him to allow himself to be confined in a chest, in which she informed the commandant a lady, whose husband was absent, that she was going to send away a large load of books, to prevent Grotius from impeding his health by study. At the time appointed he entered the chest, in the top of which holes had been made for the admission of air, and was then conveyed down a ladder by two soldiers. One of them observing its weight, said in jest, 'there must be an Amsterdam in it.' 'These are Amsterdam books said, replied the wife of Grotius. This did not quite satisfy the man who went to inform the governor's lady of the circumstance before the chest was allowed to leave the fortress. Misled by previous information, she directed its removal unexamined. Grotius was conveyed

In safety to the house of exiled at Geneva. Microscopic unceasing information of humanity, received where she had done, in consequence of which she was at first detained in close custody, but a petition to the states-general protested her innocence. Grotius sought an asylum at Paris, and obtained the protection of the French king, Louis XIII who bestowed on him a pension of three thousand livres. While in France he composed his treatise entitled "De Jure Belli et Pacis," which was finished and published at Paris, in 1625. His literary reputation is in a great degree founded on this production, which became the object of general admiration, and was commented on, criticised and translated into several languages, becoming a general text-book for lectures on international policy. Under the ministry of cardinal Richelieu, Grotius was solicited to engage actively in the service of France, and his refusal offending that powerful statesman, his situation became unpleasant, and he determined on removing elsewhere. The stadholder Henry Frederick, who had succeeded his brother prince Maurice in 1625 had not consoled in the persecution of the Arminians, and was believed to be favourably disposed towards the illustrious exile who after waiting in vain for a recall from banishment at length resolved to brave all danger and he returned to Holland without permission. Towards the close of the year 1631 he went to Rotterdam, and then to Amsterdam; but his enemies were still so powerful and his friends so cold or timid that he found it prudent to retreat and accordingly removed to Hamburg, where he resided about two years. At length becoming acquainted with Salvius, vice-chancellor of Sweden he was recommended by him to the prime minister of that country count Oxenstiern, who invited him to a conference at Frankfort-on-the-Main. The result of this meeting was the appointment of Grotius to the post of Swedish ambassador to the court of France, with the title of counsellor to Christina, queen of Sweden. He set out on his embassy in the beginning of 1635, and soon reached Paris, where he made his public entry the second of March after having over come some obstacles arising from the opposition of cardinal Richelieu to his reception. He continued to exercise his diplomatic function with credit to himself, and advantage to the government he represented, till the spring of the year 1645, when he was recalled at his own request. Being disappointed in his expectation of obtaining some new employment of importance, and finding that his health suffered from the severity of the climate of Sweden, he determined to go to Lubec. After an audience of the queen, who presented him with a considerable sum of money and a month's plate, he embarked on board a vessel provided for his voyage. A violent storm obliged him to go on shore near Dantzig whence he set off for Lubec in an open wagon. The bad weather continuing, he was so much impeded when he arrived at Rostock, that he could proceed no further. His illness

increased so rapidly as to deprive him of his recovery and he died August 20, 1645. His remains were removed to Delft and interred in the family vault. Besides his literary works already mentioned, he was the author of two "Dissertations on the Origin of the Ancient Nations;" "A History of the Goths, Vandals and Lombards;" "Anals of the Affairs of Religion;" all in Latin and the last-mentioned published posthumously. He likewise distinguished himself by his Commentary on the Old and New Testament, and published an edition of Lucas's Pharsalia, and the works of Tacitus exclusive of less important productions. He left three sons, two of whom adopted the profession of arms, but the second, PERSE was tried to the law and became pensionary of Amsterdam and deputy to the states-general.—His brother WILLIAM Grotius, was likewise a lawyer and a man of learning and abilities.—*De Burigny's Life of Grotius.* *Adair's Gen. Biog.*

GROUCHY (SOPHIE) sister of marshal Grouchy and widow of Condorcet, was carefully educated and cultivated literature with success. She was the translator of two works of Smith into French viz "The Theory of Moral Sentiments," and "Dissertations on the Origin of Languages." The latter also contains eight Letters on Sympathy, in which Madame Condorcet supplies numerous annotations of the author whom she considers indefinite, and often combats. Her translation is remarkable for the elegance and purity of its style the ideas and severity of philosophical language. This lady composed a treatise for the education of her daughter which remains unpublished.—She died in 1822 universally regretted.—*Bug Uss des Contemporains.*

GROVE (HAWRY) a learned nonconformist divine and eminent tutor was born at Taunton in Somersetshire, in 1663. He was educated by the reverend Mr Warren of Taunton, a nonconformist, and completed his theological studies under the rev Mr Rowe in London. After passing two years in London he entered the ministry at the age of twenty two and upon the death of Mr Warren in 1706 he was chosen to succeed him as tutor in the academy of Taunton. He also officiated to two small congregations in the neighbourhood of Taunton, and had several invitations to places of note, but from his love of retirement and independence he declined them all and his extreme moderation exposed him to the censure of some of his brethren, who represented him as being insufficient to the truths of the gospel. He however made no change in his conduct, and he gave his reasons and convictions in "An Essay on the terms of Christian Communion." Mr Grove died in 1737-8 of a fever. He was the author of a great number of sermons, essays, treatises, &c. and of a "System of Moral Philosophy," all of which were much esteemed.—*Biog. Brit.* *Adair's G. Biog.*

GRUTER or GRUPERUS (JANUS) the son of a burgomaster of Antwerp where he was born in 1566. His father being banished for

among the scholastic pretenders the duchess of Bourgogne brought him up, took him to England, and at the court of King Edward IV he was admitted to the Inner Temple. His education was however completed at Leyden, where circumstances admitted of his passing summing to the Constantine. Having graduated as LL.D. he went first to the Inner City but quitted it again propterius to the Hague 1564 and having filled successively a professor's chair at Haarlem and Delft, and declined another offered him at Padua, settled finally at Heidelberg where he died after an illness of only ten days duration September 10, 1567 and was buried at St Peter's church in Heidelberg. The most celebrated of his works is a large and valuable collection of Roman inscriptions, published originally in two folio volumes, but afterwards enlarged to four and dedicated to the emperor Rodolph II, who distinguished the author with his favour and even entertained an intention of conferring on him a patent of nobility. His other writings are—
Florilegium magnum seu Polyantica, fol.
"Deicorum Pustorum Gallorum Italorum Bellicorum 8vo, 9 vols., *Chronicon Chronorum* 8vo, and *Thesaurus Cronicus* 6 vols., 8vo, reprinted in 7 vols. He also published some annotations on the Latin histories and an edition of the works of Cicero in two folio volumes.

GRYMUS (SIMON) a divine and philosophical writer of the sixteenth century who was a native of Silesia. He studied at Pforzheim, where he became acquainted with Melanchthon and afterwards at Vienna, in which city he became professor of Greek. He next removed to Buda in Hungary and for some years filled the office of rector of the seminary in that capital. Having adopted the doctrines of Luther he was persecuted and imprisoned at the instigation of the monks, but at length obtaining his liberty he returned to Wittenberg. In 1533 the elector palatine made him Greek professor at the university of Heidelberg, whence he removed in 1539 to undertake the professorship of theology at Basel. In 1531 he visited England for the purpose of examining the libraries, and was much noticed by sir Thomas More to whom he had been recommended by Erasmus. In 1540 he assisted with Melanchthon Bucer Calvin and others, at the famous conferences at Worms. He died of the plague at Basel the following year aged forty-eight. His publications consist of the *Almagest of Ptolemy* in Greek, 1530; *Euchd.* 1533; *Plato with the Commentaries of Proclus* 1534; *Commentaries on the Topics of Aristotle*, the *Lies of Chosippus* &c.—*Bagle. Mowbr.*

GRYNEUS (JOHN JAMES) grand-nephew of the preceding, was born at Bern in Switzerland, in 1540. He was instructed in classical literature by his father after which he studied at Basel, and then at Tübingen, where he took the degree of DD in 1564. The next year he succeeded his father as pastor of Reichenau, and while in that situation was engaged in superintending editions of the

Bible, and other works published at Basel where he obtained a professorship in 1565. He afterwards spent two years at Heidelberg, as professor of history and moral literature, but returned to Basel in 1566, having been chosen principal minister of the city, and professor of history and theology in the university. He died in 1617. His writings include notes on the works of Origen, Irenaeus, and Eusebius, expositions of the Scriptures, an ecclesiastical history &c.—*Melch. Adam. Mowbr.*

GRYPHIUS (ANDREW) a German dramatic poet, who was born at Glogau in 1616. He studied at Fraustadt and Danzig, after which he became tutor to a nobleman's children. In 1633 he went to Leyden, where he formed an intimate acquaintance with Salmasius and Heinsius. After refusing invitations to become professor at Heidelberg Frankfort-on-the-Oder and in Sweden he at length accepted the post of syndic to the senate of Glogau. In 1664 he was appointed co-deputy to the fiscal council when he died the 16th of July that year. His tragedies which have been preferred to those of any contemporary German writers, were published with other poetical pieces at Breslau 1698 8vo. He also wrote comedies which are much esteemed by his countrymen who have termed him the German Corneille and Moliere.—*Sieben Introd. zu Hist. Lat. Novis. Duct. Hist.*

GRYPHIUS (CHRISTIAN) son of Andrew was born at Fraustadt in 1649. After prosecuting his earlier studies at Glogau and other places he finished his education at Jena and Strasburg. He then became professor of rhetoric at Breslau in 1674 principal and professor at the Magdalene college in that city in 1686 and afterwards librarian to the university. He published poems and orations in the German language and wrote dramas which were not printed. His classical acquirements were very considerable and he was intimately acquainted with the Greek language. His works exclusive of those just noticed are—a *History of the Orders of Knighthood*. The *German Language formed by Degrees, or a Treatise on the Origin and Progress of that Language*.

Apparatus, see *Dissertatio Logagogica de Scriptioribus Historiarum Sec. xvi. illustratae, &c.* He also wrote in the Leipzig Journal. His death took place March 6, 1706 owing to apoplexy just after he had delivered a sacred ode of his own composition set to music, to be performed in his chamber.—*Idem.*

GUARINI (BATTISTA) a celebrated Italian poet was born at Ferrara in 1587, and was descended from the ancient family of Guarini or Guarini. He was for some years professor of Italian letters in the university of Ferrara. At the age of thirty he entered the service of Alfonso II duke of Ferrara, who created him a cavalier and employed him in various embassies, and in 1613 he nominated him his secretary. He died at Venice in 1622. His fame rests principally upon his famous dramatic pastoral, the "*Pastor Fido*," which stands fast in that class of Italian comedy.

GUE

and it followed much time and trouble about it, and it was first represented at Turin in 1603, by despatch of the nephews of Charles Emmanuel, duke of Savoy with Catherine of Austria. It was printed two years afterwards, and editions multiplied throughout Italy. It is still regarded as one of the standard productions of Italian poetry. He was also the author of "Il Segretario, or the Art of Letter Writing," a comedy entitled "Idiopio Latin oaths, letters, poems, &c.—Moreri. Firenzuoli.

GUARINO surnamed Veronese was born at Verona about 1370 and learned the Latin language from John of Ravenna; but he went to Constantinople to learn Greek of Manuel Chrysolorus. On his return to Italy he taught at Florence Bologna, Padua, Trent, Verona, Venice and Ferrara. His last and longest residence was at Ferrara where in 1439 he was invited as preceptor to Leonello d'Este son of the marquis Niccolò III and in 1436 he was appointed professor of the learned languages. He died there in 1460. He had many distinguished scholars and to him may be attributed in great part the restoration of ancient elegance in the Greek and Latin languages in the fifteenth century. He employed himself in translating the ancient Greek authors into Latin; he gave versions of many of Plutarch's Lives and at the command of pope Niccolò V he translated the first ten books of Strabo's geography. His other works consist of grammatical treatises on the Greek and Latin languages, commentaries upon ancient authors' orations, Latin poems, letters, &c. He was the first discoverer of the poems of Catullus and at least he corrected them so as to be read.—His son, Battista wrote comments upon Lucan, Catullus and Cicero's Epistles and was the author of several translations from the Greek. He died after 1494.—Firenzuoli. Trithemius.

GUERCINO an eminent painter whose proper name was John Francis Barberi was born at Cento in the duchy of Ferrara, in 1590. He acquired the principles of his art from Cremesini and Gennari, but adopted two or three styles in succession the best of which is grounded on that of Caravaggio improved by a consultation of the schools of Venice, Bologna, and Rome. Guercino was invited to the latter capital by Gregory XV and after spending two years there returned home whence he could not be withdrawn by the solicitations of the monarchs of France and England. Christina, queen of Sweden in passing through Bologna, sought in vain to induce him to leave Italy. As an artist he is less distinguished for ideal beauty than by a vigour or brilliancy of colouring. He received the honour of knighthood from the duke of Mantua; and died a bachelor in 1666, very rich, notwithstanding his expenditure of large sums in building chapels, founding hospitals and other acts of charity and devotion. The most celebrated pictures of Guercino are his St. Petronilla, his Aurora, his St. Philip of Neri, and a fine picture of the Resurrection

G.U.I

the most celebrated figure painting in the highest perfection in the great dome of Florence. He painted with extraordinary facility, having executed one hundred and six other pieces for churches, and one hundred and forty-four historical pieces, besides his performances in fresco.—D'Argenville's *Vies des Peint. Bryen.*

GUERICKE or GUERNICHE (Otto or Orno) a natural philosopher of the seventeenth century famous as the inventor of the air pump. He was born in 1602, and after pursuing his studies at Leipzig, Helmstadt, Jena, and Leyden, he travelled in France and England. He then settled at Magdeburgh, and after filling various public situations he became council or burgomaster of the city, and counsellor to the elector of Brandenburg. He died during a visit which he made to Hamburg in 1686. His researches concerning pneumatics, particularly in relation to the pressure of the atmosphere are contained in a work entitled *Experiments Magdeburgicae*, which he published in 1672. He was the author of several other philosophical treatises, which show him to have been a man of an ingenuous and speculative disposition.—Stella in *Hist. Lit. Hutton's Mod. Diet.*

GUEVARA (ANTONY DE) a Spanish writer was born in the province of Alaba, towards the end of the fifteenth century and was brought up at the court of Ferdinand and Isabella. After the death of the latter he became a Franciscan monk and subsequently preacher and historiographer to Charles V who made him bishop successively of Grasda and Mondosedo. He died in 1548. Guevara was much admired for his eloquence and parts, but his style is extravagantly figurative, and in writing history he vindicated the propensity of falsifying what he pleased which licence he curiously exemplified in his famous "Hall of Princes or Life of Marcus Aurelius Antoninus" which is a work of mere fiction although translated into most of the languages of Europe. He was also the author of *Epantes* which have been much admired, although greatly deprecated by Montaigne. Many of Guevara's remarks have been borrowed and given in a different form among which is the celebrated saying that Hell is paved with good intentions. —Moreri. Antono Babb. Hist.

GUEVARA (see VELAS)

GUIBERT (JACQUES ANTOINE HYPOLITE) a distinguished French officer and writer on military subjects, was born at Montauban in 1743 and was the son of an officer of rank. At the age of thirteen he accompanied his father to the war in Germany and obtained the rank of colonel for his services in the action of Poste Nuovo in Corsica. In 1770 he published his "Essai Général de Tactique" a work generally admired but which procured him enmity from its concealed style and sweeping censures. After making a tour in Hungary and Germany he returned to France, and produced a tragedy entitled "Le Comte de Bourbes;" and afterwards two others, "The Gracchi," and "Anne Bullion." He also composed numerous catalogues of Ca-

and the Minister of War, and the Duke of Parma." He was next appointed a member of the council of war, formed by Charles V. to advise him in the French army, and prepared a new code, but his opposition failed, and attacked and opposed him from all quarters. At the commencement of the Revolution sheltering himself under the assumed name of Raynal he published a work entitled "De la Force Publique considérée sous tous ses Rapports," in which he maintained the principle of a concurrence of the legislative and executive powers in deciding upon war and peace, and pointed out the means of securing the constitution against the influence of the army. He died in 1790. The regiment of Neustria, which he commanded fourteen years, gave a handsome testimony of their esteem in a letter to his widow who published his "German Tour" in 1803.—*Let's prefer to his German Tour*

GUICCIARDINI (FRANCIS) an eminent Italian historian was born of an ancient and noble family at Florence in 1482. After finishing his studies at Pisa, Bologna, and other universities, he was engaged at the age of three-and-twenty to read lectures on the Institutes in his native city. A few years afterwards he quitted the chair and engaging in political life, was sent ambassador from Florence to Ferdinand the Catholic. In 1518 he was deputed to meet pope Leo X at Cortona, whom that pontiff was so impressed with his talents, that he committed to him the government of Modena and Reggio then under ecclesiastical dominion. He was afterwards made governor of Parma, which city as well as that of Reggio he successfully defended against the French. In 1523 pope Clement VII conferred upon him the presidency of all Romagna, and afterwards made him lieutenant-general of the papal army. From 1531 to 1534 he was governor of Bologna, and during that time strenuously exerted himself to restore the Medicis in Florence. On the death of Clement VII he returned to Florence and was made a counsellor of state to duke Alexander, after whose death he applied himself to ensure the succession of Cosmo but not deeming himself sufficiently considered by that prince, he retired to his villa of Arcetri and employed himself in the composition of his celebrated history which he had nearly concluded when he was interrupted by death in May 1540 in the fifty ninth year of his age. Guicciardini was a man of great gravity of temper and demeanour and displayed much political sagacity and love of justice in the administration of the important offices still entrusted to him. His great work the "History of Italy during his own Time" did not appear until many years after his death, in consequence of the severity of his strictures upon several persons of powerful families still living. In 1563 the first sixteen books were published by his nephew, Agnolo, but it did not till the Italian edition, various parts were omitted, until that of Friburg, 4 vols., 1616, 1735, printed from the author's own

MS. in the Magliabechian Library at Florence. The history of Guicciardini, although accurate and poetical, is generally allowed to be one of the most valuable productions of its own class in that age. His practical tact, both in style and narrative, is, however, discredited. Guicciardini also wrote poetry, and some of his verses are preserved by Cesarechi.—*Movet, Tribussoni.*

GUICCIARDINI (LEWIS) nephew of the preceding was born at Florence in 1521 and was learnedly educated. For what reason it is not known he took up his residence in the Low Countries and resided chiefly at Antwerp until his death in 1589. He wrote various works in Italian of which the most valuable is "A Description of the Low Countries," Antwerp, 1567—1588. His other works are—

Commentaries on the Affairs of Europe from 1529 to 1560; "Remarkable Words and Actions of Princes," Hours of Amusement, and a collection of the proverbs and maxims of his eminent kinsman.—*Ibid.*

GUIDO RENI, a very celebrated painter was born at Bologna in 1575 where his father was an eminent musician. Displaying an early taste for design he was placed in the first instance with Calvart but in his twentieth year he became a student in the school of Ludovico Carracci being at that time so handsome that his master made him the model of his angels. The strong manner of Caravaggio was then in vogue but being advised that a reputation might be obtained by adopting one directly the reverse he took up the clear and delicate manner of imitating the beautiful in nature and acquired that grace elevation and facility of touch by which his works are so much distinguished. He accompanied Albani to Rome, and notwithstanding the opposition and jealousy of Caravaggio and others soon established his reputation. Pope Paul V chose him to paint his private chapel of Monte Cavallo and often came to see him work which he was accustomed to do splendidly habited, and served by his disciples who ranged round him in respectful silence. No artist held higher notions either of the art or of himself than Guido, he returned no visits paid him by the great which he received as intended only to his talents. Discontented with the pope's treasures while painting his chapel he secretly withdrew to Bologna and when persuaded to return the cardinals sent their coaches to meet him, as if he had been an ambassador. He might have accumulated wealth as well as fame but for an unfortunate propensity to gambling which dissipitated his magnificent remuneration as rapidly as he received it. Owing to this pernicious habit, in his advanced years he was reduced to paint for his immediate wants, whence the great inferiority of his later performances. He lived to see out his friends and patrons, and died in a melancholy condition at Bologna in 1642, in his sixty-seventh year. This great painter read little, and wrote less, his sole amusement being his harpsichord. Few names in the art stand higher than that of Guido, while

and the expression is clearness and picturesqueness and beauty they are contemplated, and according to some connoisseurs they want strength and expressiveness. The beau ideal of Guido, in respect to sacred subjects, was admirable, and the religious character so peculiarly impressed on his figures, strongly attests his genius. The works of this great painter have employed the gravers of the ablest masters.—*D'Argenville Vie de Peint.*

GUIGNES (JOSEPH DE) an eminent Oriental scholar who lived in the last century. He was born at Pontouze in France in 1721. The learned Orientalist, Stephen Fourmont, assisted him in his studies at Paris in which he made so much progress, that in 1741 he received the appointment of royal interpreter. In 1753 he was chosen a member of the Academy of Inscriptions and Belles Lettres, and in 1757 he distinguished himself by the publication of an erudit work entitled *Histoire générale des Huns, des Turcs des Mongols et des autres Tartares Orientaux*, 5 vols. 4to. He was likewise the author of

Abrégé de la Vie d'Etienne Fourmont, 4to. *Essai historique sur la Typographie Orientale et Grecque* 4to., besides papers in the *Journal des Savans*, and in the *Mémoirs of the Academy* of which he was a member. He suffered in his finances during the revolutionary troubles in France and died at Paris in 1800.—His son who cultivated the same branches of literature distinguished himself as a Chinese scholar and published besides other works *Voyages à Péking Manille et l'Isle de France faits dans l'inter valle de 1784 à 1801* 3 vols. 8vo Paris 1808.—*Nous Diet Hui Biog Univ.*

GILLIM (Joey) an English herald born in Herefordshire of a Welsh family in 1565. He received his education at Brasenose college Oxford, and became a member of the Herald's college in which he obtained the appointment of rouge croix pourvaire in 1617. For the possession of this situation he is generally considered to have been indebted to a work published under his name in 1610 entitled the 'Display of Heraldry'. There are however strong grounds for believing that he only corrected the treatise in question, which was in reality the composition of dean Barkham. It went through a number of editions and in 1679 captain Loggan published a supplement to the fifth under the title of 'A Treatise of Honour Civil and Military'. A sixth appeared in 1724. Gillim died in 1621.—*Biog Brit.*

GUISSCHARD (CHARLES GOTTLIEB) an able writer on military tactics was a native of Magdeburg. After studying at the universities of Halle, Marburg and Leyden he entered into the service of Holland and while thus employed found leisure to prepare materials for his *Mémoires Militaires sur les Armées et les Romains* which appeared in 1757 in 2 vols. 4to, and met with great a popularity. The same year he entered a volunteer into the allied army, and acquired the esteem of prince Ferdinand of Brunswick, who recommended

him to the king of Prussia. Frederick chose him near his person in order to instruct him on the art of war, and bestowed upon him the name of Quentus Icilius, the commander of Caesar's tenth legion in compliment to his military knowledge. Besides the work already mentioned, he was the author of *Mémoires Critiques et Historiques sur plusieurs points d'Antiquité militaire*, 4 vols. 8vo upon which work Gibbon bestows very high encomiums. Gusschard died in 1775.—*Nous Diet Hui Biog Univ.*

GUNTER (EDWARD) an English mathematician born in Herefordshire in 1581. He was sent to Westminster school whence at the age of eighteen he was elected a scholar of Christchurch college Oxford where he took his degree in arts, and having entered into holy orders, proceeded BD in 1615. Before this time he invented the sector a mathematical instrument of which he wrote a Latin description never published. In 1615 he contrived a small portable quadrant for astronomical purposes and his reputation becoming established in 1619 he was elected professor of astronomy at Gresham college London. The next year he published his

Canon Triangulorum, exhibiting a table of the Logarithms of the Sines and Tangents of all the degrees and minutes of the quadrant serving greatly to facilitate mathematical computations. In 1622 he discovered that the declination of the magnetic needle or variation of the compass is not constant or regular, as was previously supposed which important phenomenon was afterwards further elucidated by Gellibrand who succeeded Gunter as Gresham professor. The latter next invented his famous 'Rule of Proportion,' which affords an easy method of combining arithmetic and geometry admirably adapted for popular use and this invention has perpetuated his name as in its mechanical form it is styled 'Gunter's Rule or Scale'. Of this and his other improvements he published an account in 1624 under the title of 'The Cross-Staff in three Books' 4to. In the same year appeared a tract containing the Description and Use of his Majesty's Dials in Whitehall Garden 4to in the construction of which he had been employed by order of James I. He died 10th December 1636 at Gresham college and was buried in the church of St Peter le Poor in Broad-street. His works have been repeatedly published.—*Wer's Lives of Gresham Professors. Martin's Biog Philos. Aikins's Gen. Biog.*

GUSTAVUS VASA or **GUSTAVUS I** KING of Sweden was the son of Eric Vasa, duke of Gripsholm allied to the royal family and was born in 1490. He was distinguished in his youth for his courage and accomplishments, and Sweden being under the dominion of the Danes, Christian II of Denmark in 1518, took Gustavus and other nobles to Copenhagen as hostages for the peace of the country. Christian failing in his endeavours to attach Vasa to his cause committed him to prison, and afterwards to the guardianship of

a Danish adventurer, who treated him with great severity, impeded, however, by a wish to free his country from a foreign yoke, Gustavus made his escape from his keeper, and assisted the Swedish province of Södermanland in victory. His first attempts to excite the spirit of patriotism among the Swedes were unsuccessful, and he himself narrowly escaped destruction. At length he took refuge among the nations of Dalecarlia, where, after securing fresh dangers, he roused the people to action and overthrowing the descendants of Christian in the northern provinces, he assembled the states of Sweden at Vadstena, and was unanimously elected administrator of the kingdom. In 1563 he was raised to the crown, and soon after obtaining possession of Stockholm, he restored peace to the country. In his endeavours to relieve his subjects from the accumulated burdens produced by a long period of usurpation and anarchy, Gustavus was opposed by the clergy who were by no means willing to submit their benefits to that equalized taxation which the king proposed to establish. Hence sprang the Reformation in Sweden, where the Lutheran religion was established and the church freed from its dependence on the Pope. This may be considered as the principal measure in which Gustavus was concerned after he attained the sovereign power. Having reigned in prosperity thirty-seven years, he died in 1596 leaving the crown to his eldest son, Eric. *Med. Univ. History.*—**GUSTAVUS ANOLEFRAE**, grandson of the preceding and son of Charles IX., whom he succeeded in 1611 at the age of eighteen when he had already acquired some military reputation. Having chosen for his prime minister the chancellor Oxenstiern, he assembled the states in the beginning of 1613 and resumed all crown grants to provide funds for the war in which Sweden was involved with Denmark, Russia, and Poland. His contests with those powers were terminated to his own advantage and after a few years of warfare he strengthened his own dominions by judicious government and external conquests, and established his fame as a successful general and a wise and politic prince. The emperor of Germany Ferdinand II. having offended him, by giving aid to his enemies, the Poles and in other respects shown a hostile disposition, he resolved on the bold scheme of invading the dominions of that prince. He was supported by the co-operation of the protestant princes of Germany who looked up to him as the champion of their cause, and by the friendship of England and France. Thus instructed, he embarked on this great enterprise in June 1630 with an army of sixty thousand men and a fleet of seventy sail. He speedily took the isle of Usedom and passing through Pomerania and Mecklenburg penetrated into Saxony, baffling all opposition by the boldness and promptitude of his operations. His splendid career belongs to the history of antiquity rather than to the memoirs of his successor as a talented individual. Success

generally, though not uniformly, attended his proceedings. He gained the battle of Lützen, September 7, 1631; against count Tilly, who was defeated and killed in a subsequent engagement. He was then opposed by Wallenstein, who commanded the imperial army, in an action which took place on the plain of Jena, November 16th, 1632, when the Swedes were victorious, but their heroic sovereign fell in the field. He left by his queen the daughter of the elector of Brandenburg one child the celebrated Christina, what became her successor.—*Harte's Life of Gustavus Adolphus Gen. Biog.*

GUSTAVUS III. king of Sweden the son of Adolphus Frederick, born January 24, 1746. He was educated under count Tessin whose published letters to his pupil are highly creditable to his talents. In 1771 he succeeded his father, being then on his travels at Paris. The royal authority was at that period very limited, the kingdom was divided into two political parties or factions one of which, denominated the bonnet, was supported by the influence of Russia and England, exerted through their ambassadors, and the other, called the hat, by that of France. The former having the ascendancy in the national diet, expelled the latter and attempted to set narrower bounds to the king's power. Gustavus with great coolness and prudence contrived to counteract their designs and produce a revolution in his own favour. Captain Helladius, a military officer in concert with the young monarch by a pretended revolt, afforded him a pretext for assembling his troops. On the 19th of August, 1770 Gustavus having secured by his eloquence the fidelity of the guards and the soldiery brought to Stockholm by the states, had the chief of the senate arrested, proceeded to the assembly of the states and caused an act to be passed abolishing all the laws made since 1680 to fetter the regal power and procured the transfer of sovereignty to himself as king, with the command of all the forces of the realm. The legislative powers alone, and the right of making war or peace were still vested in the states conjointly with the king. During the reign of Gustavus the army rose to greater consideration in Sweden than before, the population of the country increased, the national character was improved, and arts, sciences, and commerce flourished under his auspices. When the French Revolution occurred, the Swedish monarch was one of the first who took the alarm, and in 1791 he went to Spa, as it is asserted, with a design to head an army for the deliverance of Louis XVI. In the beginning of 1793 he attempted, without success, to raise ten millions for the execution of his purpose. He was adopting arbitrary measures, when he became the victim of a political conspiracy, falling by the hand of an assassin, March 25, 1792.—[See *Ackermann in Appendix.*]—This prince possessed considerable learning and talent. He published, in the Swedish language several dramatic pieces, which, as well as his speeches to the diets, and his

which have been translated into French, and printed at Stockholm, in 5 vols. 8vo. He also wrote a manuscript history of his own times, which was preserved at Upsal, with directions that it should be published fifty years after his death.—*New Dict. Hist.* *Abbe's G. Bag.*

GUTHRIE (WILLIAM). There were two of this name, both natives of Angus, at which county the elder was born in 1620, at Fifeburgh. He was educated at the Scotch Kirk, in the university of St Andrews, and in 1644 was placed as minister in the parish of Forres, but after holding his preferment twenty years was ejected as a nonconformist. His zeal in defence of the presbyterian cause placed him in the production of a treatise entitled *The Christian's great Interest*, which is still held in great esteem by those of the persuasion. His death took place in 1665. The second was born at Breichien in the same county in 1708 or as some say in 1701, and after passing through a course of classical study at Aberdeen, quitted his native country in consequence of a disappointment of a tender nature and came to London. Here he commenced author by profession and published a *History of England* in 3 vols. folio; "A Translation of Quintilian in 2 vols. 8vo; as also one of some of Cicero's works. *The Friends*, a novel, 3 vols. and *Remarks on English Tragedy* 8vo., the popular *Geographical Grammar* which goes under his name is said to have been compiled by Knox a bookseller in the Strand. A "History of Scotland" in ten volumes, a

History of the Peerage 4to, and a *Universal History* in 23 vols., are also generally ascribed to him but he is considered to have had but little share in their composition and only to have lent his name to them. Mr Guthrie obtained a pension from the government and was in the commission of the peace for Middlesex but it is believed never acted as magistrate. His death took place in 1770.—*Chalmers's Biog. Dict.*

GUTTENBERG (JOHN). The reputed inventor of the art of printing was born at Meutz, of noble and wealthy parents, in 1400. In 1427 he resided at Strasburgh as a merchant but returned to Meutz in 1430 and between that time and 1439 (as is inferred from the proceedings in a process between him and one to whom he had promised to communicate the secret) he proceeded to make some trials of the art of printing with metal types. Some authors however doubt if these types were of metal. It was in 1446 that he entered into partnership with Fust the result of which was the publication of the celebrated bible of six hundred and thirty-seven leaves, the first important specimen of printing with metal types. Gutenberg died in 1467.—*Dilke's Typographical Antiquities.*

GUY (THOMAS). The founder of Guy's hospital was the son of a lighterman in Southwark and born in 1644. He was brought up a bookseller, and kept a shop in the angle formed by Cornhill and Lombard-street. His death largely in the importation of bibles from

Holland, and afterwards contracted with the king for these printed at that university, left his principal gains even from the disproporionate purchase of several prime-dickens, in Queen Anne's war and by South Sea stock, in 1712. By these speculations and practices, aided by the most prodigious habits, he amassed a fortune of nearly half a million sterling of which he spent about 200,000*l.* in the building and endowing his hospital in Southwark. He also erected almshouses at Tavistock, and benefited Christ's hospital and various other charities, leaving 80,000*l.* to be divided among those who could prove any degree of relationship to him. He died in December 1726, in his eighty-first year after having dedicated more to charitable purposes than any private man in English record.—*Nichols's Ann.*

GUYON (JEAN MARIE BOUVIERE DE LA MORTE). a celebrated female enthusiast, was born of a good family at Montargis in 1642. She married a native of the same place of the name of Guyon but became widow with three children at the age of twenty-eight. Instead however of bringing up her family she relinquished a large part of her fortune for the support of her children and gave herself up to the cultivation of mystical devotion which has obtained the name of Quietism, the leading distinction of which is a passive abandonment to what are deemed divine impulses, and a complete renunciation of self, the silence of the soul, and the annihilation of all earthly cares and emotions. The fame of her conversions and doctrines having reached Paris, calumny made such a representation of her conduct, that in 1688 she was shut up by the king's order in a convent. Through the intercession of Madame Maintenon, who became her friend, if not her disciple she soon obtained her liberty and even appeared at Versailles and St Cyr. Such were the attractions of her insinuating eloquence and tender and ardent devotion that several of the first ladies of the court began to profess her opinions, and she ended in the conquest of the illustrious Fenelon (see his article). His patronage however could not protect her from the rigid ecclesiastics headed by Bossuet, who caused thirty-four articles to be drawn up in condemnation of the system of Quietism, which in 1695 she was obliged to sign in her retreat at the monastery at Meaux. She however returned to Paris where her zeal again leading her to make proselytes, she was finally confined in the Bastille from which she was liberated in 1702 and retired to Blois, where she passed the rest of her life in the private exercise of a devotion which, although the result of a heated imagination was certainly sincere. Her works are—*Cantiques Spirituels, ou Emblemes sur l'Amour Divin,* five volumes, twenty volumes of the Old and New Testament, with *Reflections et Expositions concernant la Vie intérieure*. *Discours Chrétiens*, 2 vols., *Letters to several Persons*, 4 vols., "Her Life," written by herself in 3 vols., "Visitations," 2 vols., "Opuscules," 2 vols. The first in the language

G U Y

ing list is the name of Gouy, interwoven in a mystic chain. He died in 1717. Some of her poems have been translated by the gifted Bretonney of Chatelet, and appear in the 4th edition of his *Vermes*. (Paris, 1820, 2 vols. 8vo.)

GOUY (Pierre Averaere) a French writer and merchant, was born at Marseille in 1710. By trading to the Levant he obtained a considerable knowledge of the modern Greeks, and conceived the idea of comparing the ancient and modern nation. Accordingly he made frequent excursions from Constantine through Asia Minor to Greece with Homer in his head, and the fruit of his observations appeared in a work entitled "Voyage littéraire de la Grèce;" for which the modern Greeks showed their gratitude by giving him a diploma as citizen of Athens. This is his chief work; he however wrote a "Relation Abrégée de son Voyage en Italie et dans le Nord;" a translation in verse of the elegies of Tibullus; an essay upon the antiquities of Marseille; and the elogue of Duquau Trouin.

—*Dart's Hist.*

GUYTON MORVEAU (Lewis Bazeaux) a celebrated French chemist. He was the son of a lawyer, and was born at Dijon in 1737. Adopting the same profession, he became advocate-general in the parliament of Dijon, and attorney-general of the Côte d'Or Previously to the Revolution in France, he distinguished himself by the study of chemistry and natural philosophy. In 1777 he engaged in a mineralogical tour in the province of Burgundy, in the course of which he discovered a valuable lead mine. He was a contributor of articles on chemistry to the *Encyclopédie Méthodique* and he had a share in the researches which led to the foundation of the atomic theory of chemistry; was one of the authors of the reformed chemical nomenclature, and by his individual discoveries he promoted the improvement of science. He relinquished his office of advocate-general, after having published his pleadings at the bar. At the commencement of political disturbances he joined the revolutionary party; and in September 1791 he was sent as a deputy from the department of Côte d'Or to the Legislative Assembly, and was afterwards a member of the National Convention. He seized all opportunities to display his enmity to the royalists, the king's ministers, the clergy, and the emigrants; and in September 1792 he voted for the death of Louis XVI. He figured in the committee of public safety, nominated at the commencement of April 1793, and in that formed after the fall of Robespierre. He subsequently proceeded so far as to accuse the abbé Sieyès of moderation and royalism. Being a member of the council of five hundred, he left it in May 1797. Buonaparte made him a member of the legion of honour, and a baron of the empire. He was likewise one of the first members of the National Institute, a director of the polytechnic school, and admiral of the mint. He died December 21, 1803. Amongst the works already noticed, he

G Y L.

published "Éléments de Chimie, éléments de physique," Dijon, 1777, 3 vols. 8vo. "Discours Académique, ou Rapport sur quelques Soins de l'Académie Châlonnaise," M. 1781; and Mémoires in the *Annales de Châlons* and other periodical works.—*Dart's Hist. of H. M. in 1803. S. Journal of the Royal Society.*

GWINNE, MD (MATTESON) a physician of some eminence in the earlier part of the seventeenth century, born in London of Welsh parents, and educated at Merchant Taylors school, whence he proceeded on a foundation fellowship to St. John's college, Oxford. He was the first professor of medicine at Sir Thomas Gresham's foundation; and acquired the favour of James the First as well by his masque of "Vertumnus," performed before that monarch at Oxford, as by his essay against tobacco. He also wrote another play, entitled "Nero;" an "Elegy on the Death of Henry Earl of Derby;" "Aurum non Aurum," some poems, travels, orations, &c. and died in 1627.—*Ward's Greek Professors.*

GWYLYM (DAVID AP) one of the most famous Welch bards, was born at Brogyain in Cardiganshire, in 1340. He was brought up in the family of Llewelyn ap Gruffyd Fychan, lord of Cardigan, at Elinyn, and afterwards he became steward and private tutor in the family of Iorveth. He visited different parts of Wales, and was generally known by the name of David of Gwylmogen, and the nightingale of Towy vale, in Cardiganshire. He died about 1400. His poems consist chiefly of lively descriptions of nature, written in pure Welsh, and were published in 1792, by Mr Owen Jones, and Mr William Owen, who think, that in harmony, elegance of language, and invention, he has not been excelled by any of his successors.—*Life prefixed to his Poems.*

GYLLENBORGB (CHARLES, count) a Swedish nobleman, who resided for several years in England as ambassador from the court of Sweden. In 1716, Charles XII, irritated against George I for purchasing Bremen and Verden from Denmark, formed a project for invading Scotland from Gottingen, and placing the pretender on the throne of Great Britain. This plan was concerted with the English malcontents by Count Gyllenborg; but the ministry intercepting the correspondence, that nobleman was arrested in 1717, and sent out of the kingdom under a suspension of the habeas corpus act. On his return home he was taken into great favour, and finally became high chancellor of Sweden. He died in 1746, leaving behind him the character of a great connoisseur of learning. His valuable cabinet of natural history was remarkable for a great number of amphibia productions and corals, which have been described by Linnaeus under the title of *Ampibilia Gyllenborgiana*. Count Gyllenborg translated Sherlock on Death into the Swedish language, as also some English comedies; and was concerned in a periodical paper entitled *The Argus*.—*Steeves's Log of Linnaeus.*

HAWNER (M.) a native of Holland, who died in Amsterdam, in 1622. After his death, was published a Work entitled "Voyages dans le Peninsula Orientale et les Plaines et dans Plaine de Ceylon," 2 vols. 8vo, Paris, 1811, which publications attracted notice for a sprightliness not usually expected from Dutch authors.—*Bibliotheek Brussel.*

HAAK (Tobias) a learned German, born at Worms, in the Palatinate, A. D. 1565, and who died 1620. He is author of Dutch Annotations upon the Bible, London, 1567, 11 vols. fol. the Translation of the Bible ordered by the Synod of Dort, and first published in 1637; several books of practical English Divinity, and a part of Milton's *Paradise Lost*. He is said to have suggested the weekly meetings of the Royal Society of London, and to have been one of its first members.—*Ibid.*

HAAREN (WILLIAM VAN) a Dutch nobleman, born in the province of Frisia, in 1700. He distinguished himself by his services to the state but he is chiefly known as a poet. He published a poem, entitled "Leontidas;" and an epic "The Adventures of Franco King of the Gangarides and the Praesutes," of which last a French prose translation appeared in 1751, 2 vols. 8vo. Van Haaren, in his heroics, imitated the Henrionde Voltaire, who complimented the Batavian bard in a copy of verses commencing with the line

"Démocrité au conseil, et l'Inde au
Parnasse."

Van Haaren died in 1763.—*Nouvel Dict Hist Clement Les Cinq Années Littéraires*

HAAREN (ONNO ZWIJK VAN) a noble Frisian, of the same family with the subject of the last article. He filled several honourable situations in the service of his country; but notwithstanding his virtues and integrity he was subjected to the most virulent accusations, which were supposed to have originated with the field-marshal, the duke of Brunswick, who procured the exclusion of Van Haaren from the assembly of the states-general, of which he was a member. He was the author of an epic poem, entitled "The Beggars' besides tragedies, and other poetical productions. He also wrote some pieces in prose one of which, relative to the state of Christianity in Japan, was translated into French, and is said to afford some very curious details. He died in 1779 aged sixty-six.—*Nouvel Dict Hist Belgique*

HAAS (WILLIAM) an ingenious letter-founder at Basel, where he died in 1800. He improved the art of printing by many useful inventions; such as a balance-press, systematic sets of lines and spaces; a method of printing geographical charts and maps with moveable types, &c. The last-mentioned discovery however is ascribed to Breitkopf, a printer of Leipzig. Haas published a description of his printing press.—*Nouvel Dict Hist*

HABERCORN (Peter) a learned Ger-

man Lutheran divine, born in Wittenberg, 1563, and became professor at Göttingen, where he died in 1676. He was author of many voluminous controversial works much esteemed by those of his communions.—*Bibliotheek Brussel.*

HABERLIN (Marcus Dominus) a learned German antiquary and historian of the eighteenth century. He was a native of Strasburg, and became professor of history at Hohenstadt, where he died in 1787. His most valuable production, "The History of the German Empire," 24 vols. 8vo, was left imperfect, in consequence of his death.—**HANOVER** (CHARLES FREDERICK) son of the preceding, was a celebrated civilian. He held the office of professor of jurisprudence in the university of Hohenstadt, and published several works on the public law of Germany. He died in 1808.—*Nouvel Dict Hist*

HABERT (Gaston) a French poet of the seventeenth century, was abbot of Notre Dame de Corne, and one of the first members of the French Academy. He died in 1653, leaving several poems, the most admired of which is entitled "Métamorphose des Yeux d'Ins changés en Astres," 1639, 8vo. He also wrote the "Life of Cardinal de Bérulle," 1646, 4to, and paraphrased some of the Psalms.—His brother PHILIP HABERT killed at the siege of Kummerich, in 1637, was also one of the first members of the academy, and wrote an elegiac poem, called "The Temple of Death, which was once much admired.—There was also a celebrated doctor of the Sorbonne, canon and theologian of Paris, named ISAAC HABERT, who distinguished himself by several controversial works on Grace, in confirmation of Jansenius, and by his Latin poetry. He was made bishop of Valence in 1645, and died in 1668.—**Louis HABERT**, another French ecclesiastic of note, and also a doctor of the Sorbonne, was born in 1637 and died in 1718. He is author of a "Complete Body of History," in Latin, 7 vols. 12mo, 1706, which being accused of Jansenism, produced a violent controversy.—*Moreri Neapol. Dict Hist*

HABINGTON (Thomas) a gentleman possessed of landed property in Worcester-shire, who employed himself in collecting materials for a topographical history of that county in the early part of the seventeenth century. His manuscript, which remained unpublished, formed the basis of the history of Worcestershire, by Dr. Tredaway Nash. The subject of this article is however chiefly remarkable for having been engaged in political controversies against the government of his country, without suffering the penalty of his detected treason. Mr. Gough says, that Thomas Habington of Abington, esq. of Haugh, in Worcestershire, was implicated in the designs of Buckingham, and the earl of Essex against queen Elizabeth, and in the Gunpowder plot, and convicted, but reprieved, by condition of confining himself in the castle of Worcester, in consequence of his having

how the policies of queen Elizabeth. His sonington, who was succeeded to lord Hunsdon, failed to have written the expressives letters to that nobleman which led to the discovery of the Babington conspiracy, and to the circumstances may be attributed the tenay assault of towards her father Hunsdon died in 1647, at the age of eighty seven, and was buried at Hemip—*Gough's British Topographer*.

HABINGTON (WILLIAM) son of the preceding, eminent as an historian and a poet. He was born in Worcestershire, probably at Headip, in 1605 the memorable year of the gunpowder plot. After having studied at the college of St Omer's, he completed his education among the jesuits at Paris. Returning to England, he married the daughter of lord Powis whom he has celebrated in his poetical compositions. He died in 1654. His works consist of "The Queen of Aragon" a tragedy—"Observations on History" history of Edward the Fourth," 1640, folio, and "Castara," a collection of poems first published in 1635, which, after having been twice repriested during the author's life were republished with notes and a biographical memoir, by Mr Elton, Bristol 1812, 12mo. Sir Egerton Bridges says, that the poems of Habington, entitled "Castara," possess much elegance, much poetical fancy, and are almost every where tinged with a deep moral cast, which ought to have made their fame permanent.—*Campbell's Spec. of Brit. Poet.*

HACKETT (Dr JOHN) bishop of Lichfield, a learned and magnificent English prelate of the seventeenth century, born in London, September 1, 1592. He received at Westminster school the rudiments of an education which he completed at Trinity college Cambridge. He was chaplain in succession to bishops Andrews and Williams, and afterwards, through the patronage of the latter to James I. In 1623 he was presented to a stall in Lincoln cathedral, a piece of preferment which was in a short time followed by the valuable livings of Chichester in Surrey, and St Andrews Holborn together with the archdeaconry of Bedford. In 1641 he exchanged his stall at Lincoln for a rectoryship of St. Paul's, but on the success of the parliamentarian party he was compelled to consult his personal safety by adopting a life of the strictest retirement at Chichester. On the re-establishment of the royal family he again emerged from obscurity, and received the bishopric of Lichfield and Coventry. The cathedral belonging to his diocese having suffered considerable dilapidation from the effects of puritan zeal the new bishop applied himself earnestly to restoring it, and expended upwards of £20,000, nearly the whole of which he gave up with great liberality from the revenues of his see. He was also a liberal benefactor to the college of which he had been a member and died October 21, 1676. Of his writings the principal are a life of his patron, Williams, archbishop of York; and some time lord keeper, "A history of Burghs," and "Loyalt," a

comedy written in Latin, which was often performed at the university before James I. His handsome monument was erected to memory by his son in Lichfield cathedral, where he lies buried.—*Bug. Brit.*

HACQUET (BALTHASAR) an eminent naturalist, born at Conques, in Biscay, in 1740. When young he left France for the states of Austria, whence he travelled, penetrating into the most remote parts of the country. He then became professor of zoology at the Lyceum of Laybach, in Carniola, adjoint-secretary of the Imperial Society of Agriculture and the Arts in that city. In 1788 the emperor of Germany made him professor of natural history at the university of Lemberg and member of the council of mines at Vienna. He died in 1815. He produced several works containing much curious information relating to natural history and the state of the countries he explored. Besides travels in the Alps and Carpathian Mountains, and a great number of memoirs in periodical works, he was the author of *Oryctographia Carniolica* or the Physical Geography of Carniola, Istria, and parts of the neighbouring countries, Leipzig 1778—1789 4 vols. 4to.—*Bug. Univ.*

HADDICK (ANDREW COUNT DE) a military officer who was a native of Hungary and who rose to the rank of field-marshal in the service of the emperor of Germany. He distinguished himself much during the seven years war with Prussia; and his high reputation occasioned his appointment, in February 1789 to the chief command of the Austrian forces against the Turks. He joined the grand army in May but his advanced age and declining health obliged him almost immediately to give in his resignation. He died at Vienna in 1790, in his eightieth year. He was renowned no less for courage than for military skill, and was never seen to more advantage than when leading the onset. As a commander of cavalry he had but few equals.—*Dict des H. M. du 19me S. Bug. Univ.*

HADDON LL.D (WALTER) an eminent English lawyer of the sixteenth century a native of Buckinghamshire born 1516. He was educated at Eton whence he removed to King's college Cambridge on the foundation, and having duly graduated obtained the professorship of civil law in that university. On the deprivation of Gardiner bishop of Winchester, from the mastership of Trinity hall, king Edward selected him as a staunch supporter of protestantism, to fill the vacant situation, which he held till 1556, when he resigned it for the presidency of Magdalen college Oxford. Under Mary he was compelled in his turn to submit to a degradation from office and found it convenient to hide himself in obscurity during the whole of her reign. The succession of Elizabeth once more restored him to court favour and he obtained from her a mastership of the Court of Requests and a seat on the bench, as judge of the prerogative Court. In 1556 a treaty of peace was being then on foot between England

to and the Netherlands. Dr Hadley was one of the three commissioners who met at Bruges to arrange the terms of the negotiation. On his return to England he was principally concerned in drawing up the noted ecclesiastical code, which was published in 1571 in 4to, under the superintendence of John Fox. It is written in the Latin language and bears the title of "Reformatio Legum Ecclesiasticarum." His other works are, a defence of queen Elizabeth against the attacks of Orson; a variety of poems composed in Latin and a collection of miscellaneous pieces printed in 1567, in 1 vol 4to, under the title of "Lecubrations." His Latin is much admired for its purity and elegance, qualities for which it is mainly indebted to his incessant study of the works of Caesar, on whose model he endeavoured successfully to form his style. His decease took place in 1572.—*Bog Brit.*

HADLEY (—) an English engineer who was a man of talent in the last century. He made many improvements in the machinery of the water works at London Bridge lately removed, preparatory to the demolition of the structure itself. He likewise contrivred an instrument for taking observations at sea, and Marland styles him a great master of hydrostatics. The time of his death is not known but he appears to have been alive in 1763.—*Maitland's History of London*—See Monzares (Peter).

HAEN (ANTHONY DE) or Van Haen professor of medicine in the university of Vienna, was a native of Leyden where he studied under the celebrated Boerhaave. After having graduated he settled as a physician at the Hague and practised with great success for several years. At length baron Van Swieten induced him to remove to Vienna, that he might co-operate in a plan which the baron had projected for reforming the medical faculty of that metropolis. He became medical professor at Vienna in 1754, and died there in 1776 aged seventy two. Grauer in his Medical Almanack for 1782 speaks highly of Van Haen as a man of great learning and professional experience but he censures him for his opposition to new opinions, particularly in his disputes with Haller on sensibility and irritability, with Tralles on inoculation, and baron Von Stoerck on the use of vegetable poisons in medicine. He also showed his proclivity for popular notions in a treatise on Magic, and another on Miracles, in which he appears as the advocate of vulgar superstition. His medical works however are numerous and valuable.—*dictio. Gen. Biog. Neue Diet. Hist. Biog. Unis.*

HAFEEZ (KHODJA SCHAMSEDDEIN MOHAMMED) the most popular of the Persian poets. He flourished in the fourteenth century, and resided chiefly at Schiraz. His poetry consists chiefly of lines or songs which mingle levity with love and sentiment, in the spirit of Ariosto, and now and then of Horace. His practice was in the spirit of his theory, as he recited the invocations of the sultan Ahmed, who earnestly pressed him to visit Bagdad.

"Two affectionate friends," dictio. *Adventures of Harpoone*, two glasses of old wine, a tranquil indolence a book and a shady grove, are blessings which I would not sacrifice for all the happiness of this world or the next." He died at Schiraz, where a sepulchral monument was erected for him, which has been often described by travellers. In October 1622 an earthquake happened at Schiraz which overthrew many of the public buildings in that city and destroyed the celebrated tombs of Hafes and his countryman Sadi, another famous Oriental votary of the muse. The date of the death of Hafes has been differently stated, but it most probably may be fixed in 1389. Some idea of his style and sentiments may be found through the medium of translatresses. Sir William Jones presented to the public two of his odes in an English dress which are extremely beautiful. Besides which may be noticed Note: "Select Odes of Hafes translated into English verse, with the original text, 1757 4to, and Hindley's Persian Lynch, from the Divan—I. Hafes with Paraphrases in verse and prose 1800 8vo. The sprightly ease and Anacreonic festivity of the bard of Schiraz have for more than five hundred years been the delight and pride of his countrymen.—*Bog Umo. Della Valle's and Nebuh's Travels*

HAGEDORN (FRIEDRICH) an eminent German poet who was a native of Hamburg. His father was Danish minister for the circle of Lower Saxony and he was born in 1708. He received a good education and displayed talents for poetry when young but becoming an orphan at the age of fourteen he found himself dependent on his own exertions for support. He however continued studying in the Gymnasium at Hamburg till 1725, when he removed to the university of Jena as a law student. In 1729 he published a small collection of poems, and the same year he went to London in the suite of the Danish ambassador baron Von Solenthal with whom he resided till 1731. He obtained in 1733, the appointment of secretary to the English factory at Hamburg, which placed him in easy circumstances. Soon after he married the daughter of an English tailor a lady who was neither young nor handsome and whose fortune disappointed his expectations. It was not till 1736 that he again appeared before the public as an author when he printed the first book of his Fables, which were much admired. In 1740 he published The Man of Letters, and in 1743 his celebrated poem on "Happiness," which established his reputation as a moral writer. The second book of his "Fables" appeared in 1750, and he afterwards produced many lyric pieces in the style of Prior. He died of dropsy in 1754. Hagedorn was the first of the German poets who aimed at correctness and elegance of expression, whence Wieland, in the preface to his poetical works, terms him the German Homer.—*dictio. Gen. Biog.*

HAGEDORN (CHRISTIAN LEWIS) brother of the preceding, was born at Hamburg in 1717. He held the rank of counsellor of leg-

ties, and was director-general of the universities in the duchy of Savoy. As a connoisseur of the fine arts he manifested considerable merit, and distinguished himself by the publication of "Researches on Painting," 2 vols. 8vo. A Letter from an Amateur of Painting, for His died at Dresden in 1780.—*Asar. Diet. Hist.*

HÄGER (Johann von) a learned German scholar who was professor of the Oriental languages in the university of Pavia. He first distinguished himself in the literary world by the discovery of the fraud of a Sicilian monk, who had attempted to impose on the court of Palermo by some forged documents relative to the history of Sicily. Häger left Palermo for England, where he in vain endeavoured to excite the attention of the public in favour of his researches concerning Chinese literature. His pretensions as an Oriental scholar were questioned by Dr Antonio Montucci, an Italian resident in this country who was engaged in similar pursuits. Häger published

"An Explanation of the Elementary Characters of the Chinese, with an Analysis of their Symbols and Hieroglyphics" London 1801 folio and "A Dissertation on the newly-discovered Babylonian Inscriptions" 1801 4to. He then went to Paris, where he produced the following works— "The Monument of Yu the most ancient inscription in China to which are added the thirty two forms of ancient Chinese characters with remarks on the inscription and the characters," 1802 fol., "A Description of the Chinese Medals in the Imperial Cabinet of France preceded by an Essay on Chinese numismatics and observations on the Commerce of the Greeks with China, and on the precious Vases of that country" 1805 4to, "The Chinese Pantheon, or a comparison of the Religious Rites of the Greeks with those of the Chinese with additional evidence to prove that China was known to the Greeks and that the Serica of Classical Authors is China," 1806 4to. From Paris Häger removed to Milan where he published in Italian "Illustrations of an Oriental Zodiac preserved in the Cabinet of Metals at Paris, and which was discovered near the site of ancient Babylon" 1812 folio. He died at Milan, June 27th 1820.—*Watt's Biblio. Brit. Eng. & des Contempn.*

HAGUE Miss. Doct. (CHARLES) an eminent musician born at Lancaster, Lancashire, in 1709. At ten years old having manifested a talent for music, he was sent to Cambridge, where his brother then resided, for the purpose of instruction, and became the pupil of Martin and the elder Holland. In 1728, he proceeded to London, where he had the benefit of Salmon's instructions, as well as those of Dr Cooke, and in 1739 having taken the degree of Mus. Doc. four years previously he succeeded Dr Handel in the professorship of music at Cambridge. In this capacity he set up the professor of modern history a chair for the instruction of H. H. the Duke of Cambridge as chancellor of the university. His other compositions consist of an anthem—"By

the Waters of Babylon," and a great variety of glee, &c., all evincing for the quality of their harmony and the pleasing simplicity of their style. He is also known as the musical instructor of Dr Croxall. Mr Hague died June 18, 1821.—*Eng. Diet. of Mus.*

HAILLANT (Hervard de Lapeyre, Bézeno) a native of Bourgogne born 1515. He devoted himself at an early age to literature and published several poems, the principal of which is his "Vision of the Prince." In his twenty-first year he accompanied the French embassy to London as the capacity of secretary and on his return applied himself seriously to the study of the history and antiquities of his country. The fruits of this new direction which he had given to his studies soon appeared in a valuable treatise "On the State of France," which procured him the personal notice of Charles IX who conferred on him in 1571 the appointment of historiographer royal. Five years afterwards he produced the first complete history of France which had ever appeared in the language of that country commencing with the reign of Pharamond and bringing down the narrative to the close of that of Charles VII. Although this work procured him the favour of Henry III who gave him substantial proofs of his regard at yet excited considerable enmity among the French literati who were not sparing of their censures, while the author replied with no little acrimony. Henry IV extorted a promise from him that he would confine his work down to the latest possible period but a dread of giving offence finally induced him to shrink from his engagement. A supplement was however afterwards added by other hands continuing the history to the year 1627. This book is generally esteemed for its impartiality and accuracy although both the sentiment and the language are occasionally too inflated a cast. The other works of this writer are translations of Ciceron's Offices, Euterpus, and Ennius Probus. Though bred a Calvinist he followed the fashion of the court in renouncing the reformed religion and died at Paris November 23 1610.—*Notes. Diet. Hist.*

HAINES (Joseph) a theatrical performer towards the close of the seventeenth century. He was of obscure descent, but appearing to possess talents which deserved cultivation some friends raised contributions to enable him to study at the university. He was accordingly sent to Queen's college Oxford, where his pleasant manners gained him the friendship of sir Joseph Williamson afterwards secretary of state. His patron being appointed British minister at Ryswick took Haines with him as Latin secretary. This situation he forfeited by his imprudence in betraying some political secrets. His chance of preferment being thus terminated he went to pursue his studies at Cambridge whence he eloped to join a company of strolling players at Stamfordshire. He was now in his element, and immediately avenged past insults by an engagement at Drury lane theatre, he "or soon this delighted the town by his drollery and humour in low comic

unconscious. He afterwards went to Flanders in the habit of an English minstrel, and it is probable he did acquire the sobriquet of Saint Haines, by which he was familiarly known. He again returned to the stage and dying in 1701 was interred in the church of St Paul Covent-garden.—*Lamprays's Union Biog.*

HAKEM RAMBLILAH a sovereign remarkable for his extravagancies was the third of the Fatimite caliphs of Egypt, and succeeded his father Ans in the year 996 at the age of eleven. It is reasonable to suppose that a number of the frantic acts which distinguished his reign were the result of occasional insanity. This is the more probable as after founding mosques and colleges, and affecting an extraordinary seal for the propagation of the Koran, a fancy seized him of establishing a religion of his own. He styled himself the visible image of God upon earth claimed the honours of adoration to his person, and caused the mysteries of his worship to be performed on a mountain near Cairo. What is still more curious this absurd religion struck root and the Druses of Mount Lebanon, to the present day retain a conviction of the existence and divinity of the caliph Hakem. Under the character of God's vicegerent, he persecuted the Jews and Christians, both in Egypt and Palestine, and demolished the famous church of the Resurrection at Jerusalem although in a fit of repentance he rebuilt it, and allowed the liberty of worship as before. He undertook the far more dangerous task of reforming Mahometanism and suppressed pilgrimages to Mecca, and the fast of Ramadan. This impiety proved his destruction and he perished in a conspiracy of his subjects, headed by his sister in 1020.—*D Herklot. Gibson.*

HAKEWILL (Gozzez) a learned English divine of the seventeenth century. He was a native of Exeter, and after being educated at a grammar-school in that city he entered as a commoner at Alban hall Oxford whence he was elected a fellow of Exeter college. Having taken his degree in arts, he entered into holy orders, and in 1611 he was admitted DD. He was next appointed chaplain to prince, afterwards Charles I and also made archdeacon of Surrey. He lost his chaplaincy in consequence of writing a tract against the marriage projected between the prince and the Infanta of Spain, which gave great offence to the king or rather to his favourite the duke of Buckingham. Some time after he obtained the rectory of Heytesbury, near Blandford, in Dorsetshire, and in 1641 he was chosen rector of Exeter college. He died in 1649 when about seventy years of age. His works, relating to theology and ecclesiastical history exhibit to advantage his learning and liberality of sentiment, but those are still more conspicuous in a treatise entitled "An Apology, or Declaration of the Power and Privileges of God in the Government of the World, proving that it doth not decay, &c. in four books," 1627 folio, of

which an enlarged edition appeared in 1648. Dr Whinewill in this production exhibits an opinion prevalent among his contemporaries that a general deterioration was taking place in the physical and moral world, and he reasons on the principles of inductive philosophy, in a manner not unworthy of a follower of his great countryman, Lord Bacon.—*Wood's Attest. Oxon. Prover's Worthies of Devon.*

HAULKYNT (RICHARD) one of the earliest English collectors of voyages and maritime history, was born in 1553, and commenced his education at Westminster school. While there he acquired a taste for maritime history and geography by visiting his cousin, Richard Hacklbyt, of Ryton in Herefordshire, then a student at the Temple who occupied himself much with such pursuits. Removing to Christchurch college Oxford he became so eminent for his acquaintance with cosmography that he was appointed public lecturer on that science. In 1582 he published a small Collection of Voyages and Discoveries which formed the basis of a subsequent work on a larger scale. About 1588 he went to Paris, as chaplain to the English ambassador sir R. Stafford and stayed there five years. During his absence he was nominated to a prebend at Bristol cathedral and after his return home he was chosen by sir Walter Raleigh, a member of the corporation of counsellors assistants and adventurers to whom he assigned his patent for the prosecution of discoveries in America. In consequence of this appointment he prepared for the press his grand work a collection of "The principal Navigations Voyages and Discoveries of the English Nation made by Sea, or overland within the compass of these 1500 years." The first volume in folio was published in 1598 and the third and last in 1600. Besides narratives of nearly two hundred and twenty voyages these volumes comprise patents letters instructions and other documents, not readily to be found elsewhere. In 1605 Haklynt was promoted to a prebend at Westmuntor which with the rectory of Wetherington in Suffolk was his only ecclesiastical preferment. He died in 1616, and was interred in Westminster abbey. He published several geographical works besides those already mentioned among them are—Virginia richly valued by the Description of Florida London 1609, 4to a tract which is both scarce and curious a Histone of the West Indies, translated from Peter Martyr, a translation of Leo's Description of Africa and Antonio Galvano's History of Discoveries from the Portuguese. The manuscript papers of Hacklynt, were used by Purchas another geographical collector. The name of our author has been perpetuated by a contemptuous navigator, Henry Hudson who gave the name of Haklynt's Headland to a promontory on the coast of Greenland.—*Micay Brit.*

HALDE (JOHN BAPTISTE DE) a learned Jesuit, was born at Paris in 1674. He wa

decorated by his order with the title of collector and arranging the letters sent by the society's members, from the various parts of the world. He was also secretary to father Le Tellier, predecessor to Louis XIV. He died in 1719, much esteemed for his mildness, tact, and patient industry. He is usually known as the editor of the *Lettres adresses à l'Amour*, "from the ninth to the twenty sixth collections" to which he wrote useful prefaces, and also for his compilation entitled *De Description Historique Géographique et Physique de l'Empire de la Chine et de la Tartarie Chinoise*, 4 vols. folio Paris, 1735. The latter work which with some retouchments has been translated into English is deemed the most complete general account of that vast empire which has appeared in Europe.—*Nous Diet Hist.*

HALE (MR MATTHEW) an English judge and constitutional lawyer of the seventeenth century. He was born at Alderley near Wootton Underedge, in Gloucestershire in 1609. His father, who had been a barrister, had quitted the profession on account of some conscientious scruples and retired to a small estate which he had at Alderley where he died in 1614. The son received his early education under a puritanical clergyman and afterwards became a student at Magdalen hall, Oxford, whence he removed, in his twenty first year to Lincoln s-inn. So unremitting was his application to literary pursuits, that he is said to have studied sixteen hours daily, attending his researches to natural philosophy, mathematics, history and divinity as well as the sciences more immediately connected with his profession. His assiduity and intelligence procured him the friendship of the learned Sheldon, who made him his executor. He was called to the bar previously to the commencement of the civil war, and in the conflict of parties which took place, his conduct was marked by a tempering kind of policy which accommodated as it was by personal integrity and skill in his profession secured him the esteem of both royalists and parliamentarians in his own time, whatever may be thought of it at present. Imitating Atticus rather than Cato he adhered to the triumphant faction in the state and scrupled not to take the covenant, or become a lay-member of the famous ecclesiastical assembly at Westminster yet he acted as counsel for the accused on the trials of the earl of Strafford, archbishop Laud, and even of the king himself. In 1653 he was placed on the committee appointed to consider of the propriety of reforming the law. In 1654 he became a judge of the common bench, (the former king's bench,) in which station he displayed firmness of principle and learnt to give offence to the Protector; and failing he could not retain his office with honour, he refused to preside again on criminal trials. After the death of Oliver Cromwell his political foresight induced him to refuse a new commission from his son and successor. He was a member of the parliament which overthrew Charles II, and he was one of the

members most active in passing the bill of indemnity. In November 1660 he was knighted, and made chief justice of the court of exchequer. While in this post he was visited by a nobleman of high rank, who had a suit pending before him, relative to the merits of which he wished to enlighten the judge by some private information; when sir Matthew unscrupulously told him, that he never intended to give parts statements, and that he should therefore decline all communication on the subject. The nobleman was offended and complained to the king, who could praise the virtue he was incapable of imitating and bade the courtier rest satisfied, for he had no doubt the judge would have treated him in the same manner if he had made a similar application. The sentiments of humanity and uprightness by which he was amanuently actuated, were however stifled in his breast by the prejudices of education and habit, when he presided at the condemnation of some persons arraigned for witchcraft, at Bury St Edmunds in 1664, and he possessed the ignominious distinction of having been the last English judge who sanctioned the conviction of culprits for that imaginary crime. He was raised to the chief justiceship of the king's bench, in 1671 where he sat till 1675, towards the end of which year he died of infirmities of the chest. The only professional work published by sir Matthew Hale was a tract entitled *London's Liberties* but after his death appeared his more important productions, "The History of the Pleas of the Crown," "The Jurisdiction of the Lord's House," and "The History of the Common Law of England," of which there have been repeated editions improved by the comments of succeeding lawyers. He left a very valuable collection of manuscripts relating to history and jurisprudence which are preserved in the library of Lincoln's Inn. sir Matthew Hale wrote on a variety of subjects besides law. The following pieces proceeded from his pen. An *Essay touching the Gravitation of Fluid Bodies*, 1674, "Deficiens Natura, or Observations concerning the Torricellian Experiment, &c." 1674, "Observations touching the Principles of Natural Motion &c." 1677, "The primitive Origination of Mankind considered," 1677, and *Contemplations moral and divine with Directions touching keeping the Lord s-day and poems on Christmas-day* 1676—79. Several of his religious publications also appeared posthumously.—*Life by Bishop Burnet*. *British Biography*.

HÄLES (ALEXANDER DE) was a celebrated "Irrefragable Doctor," an English ecclesiastic, celebrated among the controversialists of the thirteenth century. The honor of having given him birth is disputed by the counties of Norfolk and Gloucester. He studied at the universities of Oxford and Paris, in which latter city he took the vows as a Franciscan, and died there in 1245. A great variety of Peculiar traits are ascribed to him, but all on doubtful authority, with the exception of a *Commentary on the Proverbs*, an edition of

H. A. L.

which was printed in 1628, at Newbury.

HALLE (John) a learned English Scholar and divine, who was born at Ruth in 1594. He was educated at Corpus Christi college, Oxford, where he took the degree of B.D., and distinguished himself, especially by his proficiency in Greek literature. In 1605 he was elected a fellow of Merton college, through the influence of the warden, sir Henry Savile whom he assisted in preparing for the press his edition of the works of St Chrysostom. In 1613 he was appointed professor of Greek at Oxford, having previously delivered lectures on that language. He pronounced the funeral oration for sir Thomas Bodley in 1615, and the same year he was made a fellow of Eton college. In 1618 he went to the Hague as chaplain to the English ambassador, sir Dudley Carleton. While in Holland he attended the sessions of the Synod of Dort of the proceedings of which assembly he wrote an account. The debates which he witnessed occasioned his conversion from Calvinism to Arminianism, as appears from a letter of his friend, Mr Anthony Fawcett, who says, 'that in his younger days he was a Calvinist, and even then when he was employed in that Synod, and at the well pressing of St John III 16 by Episcopate there he had John Calvin good night, as he has often told me.' In 1639 he was made a canon of Windsor but he held the office only till the beginning of the civil war in 1642. He afterwards remained for some time in seclusion in private lodgings at Eton, and having in 1646 been deprived of his fellowship because he refused to subscribe to the covenant, or take the oath of engagement to be faithful to the commonwealth then established, he was obliged to sell his library to obtain the means of subsistence, and according to some accounts was afterwards reduced to great distress. This latter circumstance however is not reconcilable with the fact of his having made considerable bequests in his will, dated the day of his death May 19 1656. He published nothing of importance during his life, but in 1659 a collection of his writings appeared entitled "Golden Remains of the ever memorable Mr John Hales, of Eton college," &c. which shows him to have been a liberal and enlightened scholar.—*Aikew's G. B.
Bog.*

HALES (Dr STEPHEN) an English clergyman, grandson of the first baronet of that name, eminent as a botanist, chemist, and experimental philosopher. He was a native of Bekenbourn, Kent, born 1677, and received his education at Corpus Christi college (Bengt's) Cambridge of which society he was chosen fellow in 1703. Here he became acquainted with Dr Stukely, and in conjunction with that gentleman applied himself with great interest to the study of natural philosophy in its various branches. About the same time he invented a machine of brass similar in its effect to that afterwards constructed by Mr Bradley, under the name of an Orrery for the purpose of demonstrating the planetary mo-

H. A. L.

tions. In 1723 his doctor's degree was conferred on him by the university of Oxford. In 1741, having been previously elected a fellow of the Royal Society, he communicated to that body his method for clearing prisons, ships, &c. of foul air by means of ventilation; and several other useful projects and inventions of his are to be found among the Philosophical Transactions of the society. Frederick, prince of Wales, distinguished him by his favour, and on the decease of that prince the princess dowager made him her chamber and clerk of the closet. Under such patronage Dr Hales might have looked forward with confidence to the highest dignities in the church, his moderation however induced him to decline a canonry of Windsor which was offered to his acceptance, and to content himself with the living of Teddington Middlesex which he held with that of Farningdon in Hampshire. He died January 4 1761. Besides the writings already alluded to, he was the author of four volumes of *Statistical Essays*, a treatise on the ill consequence of drinking spurious liquors, "Vegetable Statics," and *Vegetable Essays*, 8vo, 2 vols. A handsome monument is erected to the memory of Dr Hales, in Westminster abbey.—*Eleg. B.
Bog.*

HALI BRIGH, first dragoman or interpreter at the court of the grand Seraglio, about the middle of the seventeenth century. He was a native of Poland, whose original name was Bobowski but being taken a prisoner very young by some Tartar in a predatory excursion into Poland, he was sold to the Turks who educated him a Mathematician in the Seraglio. He had an extraordinary talent for the acquirement of languages and could converse in eighteen different tongues. At the request of Dr Smith chaplain to the English embassy at the Porte, he wrote a curious treatise concerning the literature of the Turks of which a Latin version was published by Dr Hyde, in the appendix to Penitoli's *Itinerarium Mundi*. At the desire of Mr Baillie in 1653, he translated the Liturgy of the church of England into the Turkish language and some time after the whole of the bible which was sent to Leyden to be printed, but remains still unprinted among the MSS. in the library of that University. Sir Paul Rycaut's "Present State of the Ottoman Empire," was much indebted to him and he furnished Messrs Neustell and Galland with a "Treatise on the Seraglio," composed in Italian and with various other MSS. among which was a considerable portion of the book of Psalms in Turkish verse with musical notes. It was his intention to have returned to the profession of Christianity but he died before he could fulfil this intention.—*Bog.*

HALIFAX (SAMUEL) bishop of St Asaph the eldest son of an apothecary of Chesterfield, was born January 18, 1733, at Mansfield, Derbyshire. From Jesus college, Cambridge, where he distinguished himself as first medal list of his year, he removed on a fellowship to Trinity hall, in the same university. In

HALL had graduated in 1603, and seven years later obtained the professorship of *Ancient*, which in 1670, he resigned for that of civil law. In 1673 he was admitted to the rectory of *Worle*, in *Gloucestershire*, on which occasion he took the degree of doctor of divinity by mandate, and was made king's chaplain. In 1701 he gave up all his preferments, being raised to the see of *Gloucester*. In 1709 he was translated to the more valuable diocese of *St Asaph*, which he held till his death in March 1790. Bishop Hallifax was a prelate of deep erudition and much esteemed for the benevolence of his disposition and the general amity of his manners. He published a variety of sermons printed singly or in octavo volume containing twelve on the prophecies. His other works are—an *Annius of Butler's Analogy* in 4to, and another of the Civil Code of the *Rosam* in 8vo. He also superintended the publication of an edition of Ogden's works.—*Nichols's Letters*.

HALS. The name of two brothers and eminent in a different branch of the art of painting, natives of *Mechlin*. Francis the elder, was born in 1584, and as a portrait-painter was considered inferior only to *Vandyke*. An anecdote is told of a visit paid by the latter to Hals incognito, whom after viewing his performances, the disguised artist requested the use of his palette for a moment, as he was convinced he could paint as well himself. Hals accommodated him, but was so struck with the rapidity and truth with which his own portrait was in a few minutes sketched by his guest that he at once detected him as *Vandyke*. An intimacy ensued between them and *Vandyke* endeavoured to prevail on his friend to accompany him to England but without success. His death took place in 1666. **Tobias** or **Durk** as he is more commonly called, the younger was born in 1589. He excelled in humorous pieces, something in the style of *Teniers*, and died in 1656.—*Pilkington*.

HALL (ANTHONY) an English clergyman and antiquary of the last century. He was a native of *Cumberland* and studied at Queen's college, Oxford where he took the degree of *B.A.* in 1704, and obtained a fellowship in 1706. He was presented to the living of *Hawthorn Poyle*, in *Oxfordshire*, and proceeded *D.D.* in 1726. His death took place in 1753. Hall is known in the literary world as the editor of *Leland's work*, *De Scriptoribus Britannicis*; and *Travers's Annales sex Regum Angliae*. He also wrote the account of *Berkshire*, in the *Magna Britannia*.—*Gent. Mag.*

HALL (JOHN) a poet of the seventeenth century. He was born at *Durham* in 1627,卒于1658年。他生性急躁，不善交际，但有诗才。他曾学法律，但未获律师执照，后在 Gray's Inn 受训并成为律师。他的诗作以政治讽刺见长，如《对暴政的哀歌》等。

He was descended from "Hans Vacve, or Eastye,"¹ a *Peasant*'s translation of *Longinus* on the *Saints* and member of the *Community of *Havelock** or the *Golden Verses of Pythagoras*.—*Cambridge Spec of Brit Poets*.

HALL (JOHN) a learned divine of the church of England who was born at *Ashby-de-la-Zouch* in *Leicestershire*, in 1574. His father held an office under Henry, earl of Huntington president of the north, who had a seat near that town. This son became a scholar and afterwards a fellow of *Eton* college Cambridge where he took the degree of *B.A.* and read lectures on rhetoric. He was ordained and when he had resided six years at the university, he was presented to the rectory of *Halsted* in *Suffolk*. Previously to this period in 1597 he published his *Vergi deuarium* or a Gathering of Rods in six books first three of toothless satyrs poetical, academical and moral and in the following year the three last books of biting satyrs reprinted together in 1599. These productions display wit and strength of sentiment and expression but are like those of his contemporary Dr Donne deficient in the lighter graces of composition. He represents himself as the *earliest English satyr poe* a claim which is not strictly correct though he appears to have been the first writer of professed satires, not of a personal nature. A new edition of Hall's Satyres was published by Warton at Oxford in 1753, and another by Mr. S. W. Storer in 1824 from the Chiswick press. Our author in 1605 went to *Spa* with Edmund Bacon, where he held a conference with a jesuit, and distinguished himself as a protestant champion. Some time after he returned home he was made chaplain to Henry prince of Wales, and in 1612 was presented to the living of *Waltham* in *Essex* about which time he had the degree of *DD.* In 1616 he was appointed chaplain to lord Doncaster English ambassador at *Paris* and while there he was promoted to the deanery of *Worcester*. Next year he waited on the king as chaplain during the royal visit to *Scotland*. In 1618 he was one of the English divines deputed to the synod of *Dort* before which body he delivered a Latin sermon and was presented with a valuable gold medal. He refused the bishopric of *Gloucester* offered him in 1624 but in 1627 was induced to accept that of *Exeter*. In his new station he experienced much vexation from the overbearing influence of archbishop *Laud* whose violent measures against the puritans he refused to adopt in his diocese. On other occasions he acted as a conscientious advocate for episcopacy. In 1641 he was translated to *Norwich*. He joined with several of his brethren in the protest of December 30th of that year, against the validity of laws made during their forced absence from the houses of *Lord*. For this, he, with other protestants, was committed to the Tower; but he was released on bail in June 1642. He subsequently suffered imprisonment as a royalist, and after experiencing various injuries

HALL

and antiquities, he resided from the bishopric up to his marriage near Norwich, where he owned a small estate. He died there September 25, 1666. His theological books, which are much valued, consist of contemplations, epistles, sermons, paraphrases of the Scriptures, &c. which have been often published collectively and separately. The style and manner of his composition have procured him the title of the English Seneca.—*Actor's G. Bag. Eng. Brit.*

HALL, M.D. (ROBERT) an army surgeon of great talent and skill in his profession descended from the ancient family of the Halls of Houghhead in Roxburghshire at which place he was born in 1763. After passing the usual number of years in the acquirement of classical literature at the grammar school of Jedburgh and having duly qualified himself for the medical department of the navy he sailed as first mate of the Ruby seventy four to the West Indies and at the conclusion of the war returned to England acting surgeon on board a frigate. The solicitations of an uncle then induced him to quit the service, and to repair to Edinburgh where he graduated as M.D. and took up his abode in London where he distinguished himself both as a contributor to several periodical works connected with medicine and as the editor of others till the injury which his pecuniary affairs received by a breach of confidence induced him once again to turn his attention to the service as a means of provision and to obtain the situation of an army surgeon. In this capacity his duties occupied his time almost exclusively for about twelve years when the expedition by land and sea, for the exploration of the Niger which cost so many lives being determined on Dr Hall was appointed to accompany the military division as the medical officer. Unfortunately an injury sustained by an accidental fall into the hold of the vessel while outward bound, acted in conjunction with the unhealthiness of the climate of Senegal so strongly on his constitution, that after a few weeks he was compelled to be sent to Middens as the sole chance of preserving his life. Dr Hall returned to Europe but his health was never fully re-established, and his death took place in the year 1824. He was the author of a great variety of medical tracts, the principal of which are—"An Essay on Pemping", another "On Insanity" in which he recommends the application of cold water to the head of the patient, with translations of Spallanzani's work on the circulation of the blood and Guyton Moreau's on the means of purifying infected air and arresting contagion. His other works are—treatises

On the Cow Pox On the Plague and Pestilential Fevers; On Hydrocephalus; another on the same subject, with a translation of Sebastian's Cases On the Chicken Pox; "A Vindication of Dr Johnston's Claim to the discovery of Medical Acad Fumigations," with various other papers published in the London Medical and Physical Journal, between the years 1800 and 1810, translations

HAL

of Colletier on "Tubercles," and "Inflammation on Respiration," with an introduction to the study of the Linnaean system. He also left behind him several useful manuscripts, among which are some valuable remarks on the medical geography of Senegal.—*Gent. Mag.*

HALL or HALL (EDWARD) an English chronicler, whose works rank with those of Hesiod and Stow. He was a native of London, and was a lawyer by profession, having attained the rank of a serjeant and the office of a judge in the sheriff's court. He had a seat in the house of Commons and was a zealous catholic though he lived at the period of the Reformation. His death took place in 1547. Hall's "Chronicle" was published in 1548 by Richard Grafton who is reported to have written the latter part of it.—[See GRAFTON]—The work is curious, as affording delineations of the manners, dress, and customs of our ancestors.—*Chas. Bag. Eng. Diet. Duden*

HALLER (ALBERT VON) a celebrated Swiss physician distinguished not only for his acquaintance with the physical sciences but also for his general knowledge of literature, and his talents as a poet. His father Nicholas von Haller was an advocate and citizen of Berne where the son was born in October 1708. The early display of his abilities was most extraordinary, and it is related, that when but ten years old he could translate from the Greek, that he compiled a Chaldee grammar and a Greek and Hebrew dictionary for his own use and gave other proofs of his devotion to literary studies. He was sent to a public school after his father's death in 1721 and in 1723 he was removed to the house of a physician at Basme for the study of philosophy. Here he pursued a somewhat desultory course of reading and exercised himself in poetical composition. However at the close of the year last mentioned, having chosen the medical profession, he went to the university of Tübingen where he studied comparative anatomy under Duvernoi, and in 1725 he removed to Leyden then the first medical school in Europe Boerhaave and Albinus being among the professors. He took his degree at Tübingen, whether he went for that purpose and sustained a thesis De Ductu Salivari Cochlearia, which topic he farther pursued in another thesis at Leyden in 1727. That year he visited England, and formed an acquaintance with sir Hans Sloane Cheseilid, Dr James Douglass, and other eminent men. Thence he went to Paris, and dissected under Le Dran but he was obliged to leave that metropolis rather prematurely in consequence of having procured subjects for dissection to be brought to his lodgings, a piece of indiscretion which attracted the notice of the police. He then went to Basle, to study mathematics under James Bernoulli, continuing at the same time his anatomical investigations. Here he first exhibited a thesis for botany and laid the plan of a work which he long after published on the plants of Switzerland. Here too he indulged his predilection for poetry, and in the

and, however, continued his speculations on the properties of nerves, pain, sensibility and irritability, and on the propagation of motion, which he had previously made in Germany, and which still remained to his native city, and entered on his professional career as a public teacher of anatomy. He did not, however, always escape his constituents that encouraged him, which, as talents deserved, owing, in some measure, to a natural spirit, which conspicuously displayed itself in his poetical compositions. In 1736 he made botanical excursions among the mountains of Jura and the Alps, and in the marshes of Switzerland, in the course of which he also applied himself to the study of mineralogy and zoology. Soon after he was invited by George II. of England, to accept the professorship of anatomy, surgery and botany in the newly founded university of Gottingen, in his majesty's electoral dominions. He accepted this offer, but his removal to Hanover was attended with a domestic misfortune, the death of his wife whom he had married in 1731 and to whom he was much attached. He endeavoured to alleviate his sorrow by close application to scientific pursuits. Through his instigation, the university was enriched with a botanical garden, an anatomical theatre, a school for midwifery and a college of surgery. His own researches in physiology alone were enough to immortalise his name. After the death of his master Boerhaave, in 1738 Heller published his "Prælectio[n]es with much original matter in six volumes, which appeared successively from 1739 to 1745. But his own discoveries and improvements tended to render this work obsolete, and in 1747 appeared the first edition of his *Præcis Linæa Physiologica*, a synopsis of his own system of that important branch of medical science as subsequently developed in a larger work. This is a truly valuable production, which long after the death of the author was used as a text-book in schools of medicine, and has only been superseded since the extraordinary scientific discoveries of our philosophical contemporaries. In 1752 he first advanced his opinions on the properties of sensibility and irritability as existing in the nervous and muscular fibres of animal bodies, doctrines which attracted much attention and excited great controversies in the medical world. He was, in 1748 elected a member of the royal society of Stockholm, and of that of London in the following year. He had also bestowed on him the title of physician and counsellor to king George II., at whose request Francis I gave him a patent of nobility, as a baron of the German empire. After seventeen years' residence at Gottingen he was seized with that inclination for home, which seems to be a characteristic passion of the Swiss nation. In 1753 he took a journey to Bern, where his countrymen received him with all the respect due to his great fame and talents. He studied again among them, and soon after was elected a member of the sovereign council of the state, he soon obtained by lot one of the magistracies, and entered with

much on the side of violence. He often risked his scientific popularity. In 1770 he resided at Lausanne, or "Fribourg" (which he wrote with facility) — some minister to hospitality and sociability, and on the motion of the blood. In consequence probably of these publications, however, he died in 1776, one of the foreign associates of the Parisian academy of Sciences. In 1758 he accepted of the appointment of director of the public works at Bex and Aigle with a salary of 3000 francs per annum, whence it may be supposed his fortune had not kept pace with his fame. He resided six years at La Roche; and in the course of his superintendence he introduced many improvements in the manufacture of salt. While thus engaged, he began the publication of his "Elementa Physiologiae Corporis Humanæ" the first volume of which made its appearance at Lausanne in 1757 and the last in 1766. His next important literary labours were the "Bibliotheca, containing chronological catalogues of works of every age country and language, relative to subjects connected with medical science, with concise analyses and notices of peculiar and important facts and opinions. These libraries of professional knowledge were published in the following order: "Bibliotheca Botanica," 1771, 2 vols. 4to, "Bibliotheca Anatomica," 1774, 2 vols. 4to, "Bibliotheca Chirurgica," 1774, 2 vols. 4to, "Bibliotheca Medicinae Practicae" 1776—1788, 4 vols. 4to, the last two volumes having appeared posthumously. On his return from La Roche, he was chosen member of the chamber of appeal for the German district, of the council of finance and of other committees, and also perpetual assessor of the council of health. His various duties as a statesman a physician and a medical teacher occupied his attention till his death, which happened December 19th 1777. He had previously suffered much from illness, but his last moments were peculiarly tranquil. Placing his finger on his wrist, to observe the motion of the artery he suddenly exclaimed to his physician, "My friend I am dying my pulse stops," and he immediately expired. The professional character of Heller may be estimated from his labours, the most important of which have been noticed; but independent of his medical talents, he enjoyed high literary reputation. He is reckoned one of the greatest German poets of the eighteenth century. His philosophical and descriptive poems display depth of thought and richness of imagination. He had to contend with a language which was then imperfect, and to the polishing of which his writings contributed. His style is not however wholly faultless, for in aiming at conciseness and compression he sometimes becomes obscure. He wrote, in prose, three philosophico-political romances, "Utopia," "Alfred the Great;" and "Julius and Cato," designed to exhibit the respective advantages of different forms of government. His "Letters to his Daughters, on the Truth of the Christian Religion," were translated into English, and he also wrote

H. L.

H. L.

letter on the subject, designed to elicit the judgment of French theological philosophers, who had received arguments in favor of their opinions from the physiological theory of Helvetius. *Philos. Med. et Phys. Gen. Phys. Biog. Univ.*

HÄDLER (CONRAD) MARCH 1720. VON son-of-the foregoing, born at Nyon in the canton of Berne in 1720. He devoted himself to the study of numismatics and of the history of his native country. His principal publications are a "Library of the History of Switzerland and of every thing relating to it, systematically arranged, and in chronological order." Berne 1785-97 6 vols. 8vo to which was added an Index-revised in 1788, and a "Cabinet of Swiss Coins and Medals." He also wrote articles for the Encyclopedie, published at Yverdon, and for other works. He held the office of bailiff of Nyon, and died in 1786.—*Aden s-G Biog. Nouv. Duct. Hist.*

HALLEY (EDWARD) a mathematician and astronomer of the first rank in the eighteenth century. He was born at Haggerston in the parish of St Leonard Shoreatch, now a part of London in the year 1656. His father being a person in affluent circumstances, he was sent for education first to St Paul's school and then to Queen's college Oxford, of which he became a commoner in his seventeenth year. He had then acquired not only a competent knowledge of classical literature, but was also well skilled in the sciences in which he was destined to excel. Before he was nineteen he published "A direct and Geometrical Method of finding the Aphelia and Eccentricity of Planets" which supplied a defect in the Keplerian theory of planetary motion. He made some curious observations on an eclipse of the moon June 17 1675, and still more important observations on a spot which appeared on the sun's disk in July and August, 1676 by means of which he established the certainty of the motion of the sun round its own axis, a phenomenon which was not before fully ascertained. August 21st the same year he fixed the longitude of the Cape of Good Hope by his observation of the occultation of Mars by the moon. Immediately after he went to St Helena, where he staid till 1678 making observations on the fixed stars of the southern hemisphere, which he formed into constellations. Having returned to England he was made M.A. at Oxford by mandate and chosen a fellow of the Royal Society. In 1679 he published "Catalogus Stellarum Australium, sive Supplementum Catalogi Tychoi, &c." which procured him the appellation of the southern Tycho. He then went to Denmark to adjust a dispute between the English philosopher Hooke and the famous Horologian relative to the use of optical instruments in astronomical researches deciding in favor of the latter. In 1680 he set off on a continental tour in company with Nelson, so eminent for his piety who had been his school master. Between Cesis and Paris Halley first saw the remarkable comet which appeared that year. At Paris he made acquaintance

with Celsius; and after visiting Italy in 1681 he returned to England. Having married in 1683 the daughter of Mr Tolles, author of the Encyclopaedia, he settled at Islington where he fitted up an observatory for his astronomical researches. In 1685 he published his "Theory of the Variation of the Magnetical Compass;" in which he endeavours to account for that phenomenon by the supposition of the whole globe of the earth being one great magnet, having four circulating magnetical poles, or points of attraction. His theory though unsatisfactory in common with those of later enquirers is at least very ingenious. The doctrine of Kepler relative to the motions of the planets next engaged his attention, and finding himself frustrated in his endeavours to obtain information on the subject from Hooke and sir Christopher Wren he went to Cambridge where Newton, then mathematical professor satisfied all his enquiries. To this interplay the world is indebted for the publication of the Principia Mathematica Philosophiae Naturalis which appeared in 1686 with a preliminary discourse and an elegant copy of Latin verses from the pen of Halley. Previously to this in 1682 he had been chosen assistant secretary to the Royal Society. In 1691 he was a candidate for the Savilian professorship of astronomy at Oxford which however was obtained by Dr David Gregory. According to Whiston he lost this office in consequence of his character as an infidel in religion. In 1692 he resigned his appointment of assistant secretary to the Royal Society and in 1696 on the establishment of five mints for the re-coining of the silver currency he was made comptroller of the mint at Chester where he resided two years. One of his grand undertakings was a voyage to make farther observations relative to the variation of the compass. For this purpose he was appointed in 1696 commander of the Paramour pack a vessel fitted out by government in which he embarked in November but was obliged to return home in June 1699 in consequence of a dispute with his lieutenant, and the insubordination of his men. Not disengaged he set sail again about three months after and having traversed both hemispheres of the globe he touched in his way home at St Helena and many other places, and arrived in England in September 1700. On the spot at St Helena where he erected a tent for making astronomical observations, a telegraph was placed some years since, and the eminence is distinguished by the appellation of "Halley's Mount." As the result of his researches, he published a general chart showing at one view the variation of the compass in all those seas where the English navigators were acquainted. He was next employed to observe the course of the tides in the English channel, with the longitudes and latitudes of the principal headlands, in consequence of which he published a large map of the channel. In 1703 he was engaged by the emperor of Germany to survey the coast of Dalmatia; and returning to England in November that year

H A E

he had elected Savilian professor of geometry in the death of Dr Whiston, and he was also honoured with the degree of LL.D. He subsequently published a Latin translation from the Arabic of a treatise of Apollonius Pergeus, a Greek geometer to which he made additions to supply the place of what was lost. He soon assisted his colleague Dr Gregory, in preparing for the press Apollonius on conic sections. In 1713 he succeeded Sloane as secretary of the Royal Society, and Flamsteed dying in 1720 he received the appointment of astronomer royal at Greenwich where he afterwards chiefly resided. He resigned the secretaryship to the Royal Society that he might devote his time to a favourite object completing the theory of the motion of the moon, which, notwithstanding his age, (for he was then sixty three) he pursued with enthusiasm and ardour. In 1721 he began his observations and for the space of eighteen years he scarcely ever missed taking a meridian view of the moon when the weather was not unfavourable. On the accession of George II he obtained the particular notice and patronage of queen Caroline who procured him half pay as a captain in the navy. In 1729 he was chosen a foreign member of the Academy of Sciences at Paris. His health was almost uninterruptedly good till about 1737 when he had a paralytic attack, from which he recovered sufficiently to pursue his studies and it was not till the end of 1739 that he closed his Lunar Observations. His death took place January 14th 1741—2 at Greenwich and he was interred at the church of Lee in Kent where an inscription was placed to his memory. He possessed, says Fontenelle "all the qualifications necessary for the astro nomer the naturalist the scholar and the philosopher abundantly sufficient to merit the approbation of princes and the applause of the learned. To his great extent of knowledge was added constant presence of mind and a freedom of expression at once pertinac jacious and sincere. He was naturally of an ardent temper and a generous disposition open and punctual in his transactions, candid in his judgment, simple and blameless in his manners affable communicative and disinterested." In 1732 appeared his "Astro nomic Tables with Precepts both in English and Latin for computing the Places of the Sun Moon Planets and Comets" 4to and he was the author of a vast multitude of papers in the Philosophical Transactions.—Martin's Biggs *Philos. Eng. Brit. Atkin's G. Biggs*

HAILORAN (SYLVESTER O') an Irish antiquary of considerable eminence. He was born in 1728, and was educated for the profession of chirurgery which he studied both at Paris and London. After completing his education he became surgeon to the county hospital at Limerick, and he was subsequently chosen a member of the physico-chirurgical society of Dublin besides which he was a fellow of the royal college of surgeons. He died at Cork in 1807. He was the author of a treatise on the cataract, or glaucoma,

H A M

another on goutstone and sphacelosis, with a new method of amputation, besides various surgical papers in periodical works which are creditable to his professional character. But he is chiefly known in the Republic of letters as a Hibernian antiquary and historian. In 1773 he published "An Introduction to the Study of the History and Antiquities of Ireland" &c, which was followed by a "General History of Ireland" 3 vols. Mr. O'Halloran was a member of the royal Irish academy in whose Transactions he published an ancient Erse poem with a translation and notes.—*Biggs Univ.*

HAMBERGER. There were two German of this name father and son, both eminent scholars and men of science. The elder, George Albert, was a native of Bayreuth in Franconia, born 1662. He studied at various German universities, and gained great reputation for his skill in mathematics of which science he became eventually professor at Jena as well as of natural philosophy. He was the author of some valuable treatises on hydraulics, optics &c &c and dying in 1726 was succeeded in his mathematical professorship by his son GEORGE EDWARD. The latter soon after resigned that chair for that of Medicine in the same university where his character for skill and erudition equalled that acquired by his father. He published a variety of works, chiefly on professional subjects among the principal of which are his treatises on Venescion and Respiration another on the Structure of the Human Frame, two on Medical Physiology. The Elements of Physic; The Art of Healing &c &c. His death took place in 1753.—*Moxon's Cyclop.*

HAMFL (JEAN BAPTISTE DU) a French ecclesiastic curé of Neuilly sur Marne. He was a native of Vire in Lower Normandy born about the year 1624 and applied himself early in life to the study of mathematics with great success. Having completed his studies at Caen and Paris he took orders and remained for ten years attached to the congregation of the oratory until he at length obtained the benefice above mentioned. On the establishment of the Royal Academy of Sciences in 1666 Colbert recommended him to the king as secretary to that society. He afterwards visited England in the suite of the French ambassador and availed himself of the opportunity to commence an acquaintance with Boyle, Willis Ray and other philosophers of the period. On his return he obtained the appointment of regius professor of philosophy in the Mazarine college a post in which he was succeeded by Père Varignon. Among his works, which are mostly written in Latin and are much admired for the purity and classical elegance of their style are "Astronomia Phisica," "Philosophia vetus et nova," 1678 4 vols. 17mo, reprinted 1681 in 6 vols., "Regis Scientiarum Academie Historia," 4to, and an edition of the Vulgate Bible with notes, selected from the works of the ancient commentators and tables chronological and geographical which he published in 1704.

His death took place at Paris in the August of the same year, at a very advanced age.—

HAMEL DU MONCEAU (1688-1752) was a eminent French agriculturist and natural philosopher. He was born at Paris in 1701 and died in the same city in 1752. His whole life was dedicated to the cultivation of useful science and from the year 1728 he distinguished himself by his writings in the memoirs of the Academy of Sciences, of which he was a member as he likewise was of the Royal Society of London, and other literary associations. He was as remarkable for his modesty as for the extent of his acquirements. A young officer having once asked him an embarrassing question he simply replied to it, "I do not know." "Of what use then said the young man, is it to be a member of the Academy?" Soon after the officer displayed his own ignorance, by talking at random. "You may now see," retorted the philosopher, "what is the use of being an academician, it prevents a man from talking of what he does not understand." Du Hamel held the office of inspector of the marine and was, at the time of his death, dean of the Academy. His works are extremely numerous including "Traité de la Culture des Terres" 6 vols 12mo; "Traité des Arbres et Arbustes qui se cultivent en France en pleine terre" 2 vols. 4to; "La Physique des Arbres" 2 vols. 4to; "De l'Exploitation des Bois" 2 vols. 4to; "Traité des Arbres Fraîchis" 2 vols. 4to; "Éléments de l'Architecture Navale" 4to and "Traité des Pêches Maritimes, &c." Besides which he wrote descriptions of a multitude of arts and manufactures.—*Amer. Diet Hist. Biog. Amer.*

HAMILTON (ALEXANDER) an ingenious physician and professor of midwifery at Edinburgh. He published "Elements of the Practice of Midwifery" 1776 8vo and a "Treatise on Midwifery" 1781 which last was translated into German by J. P. Fehling. Besides another elementary work he edited

William Smellie's "Anatomical Tables with Explanations and an Abridgment of the Practice of Midwifery" 1787 folio. He was also the author of "Select Cases in Midwifery" 1793 8vo and a treatise "On the Complaints of Females" 1797 8vo. Dr Hamilton who was a fellow of the Royal Society and long eminent as an obstetrical lecturer at Edinburgh died in 1802.—*Rees's Reg. of Eng. Auth.* A D H

HAMILTON (ARTHUR) count a poet coarster, and man of letters in the seventeenth century. He was descended from a younger branch of the family of the dukes of Hamilton in Scotland but was born in Ireland about 1640 his mother being a sister of the duke of Ormonde. His parents were catholics and royalists in consequence of which they removed to France after the death of Charles I and young Hamilton became domiciled in that country. He however made frequent visits to England in the reign of Charles II. His sister, who was one of the ornaments of

that gay monarch's court, was married to count Grammont. It is said that the count, after having paid his addresses to the lady who was accepted, changed his mind, and set sail from London for the continent. Her brother followed the recreant lover and overtaking him at Dover, asked him if he had not forgotten something to be done previously to his leaving England? "O yes," replied Grammont, "I forgot to marry your sister" and he immediately returned and fulfilled his engagement. When James II was obliged to contend for his crown in Ireland, he gave count Hamilton a regiment of infantry and made him governor of Limerick, but on the run of the royal cause he accompanied James to France where he passed the rest of his life. His wit and talents secured him admission into the first circles, where he was generally esteemed for his agreeable manners and amiable disposition. He died at St Germain in 1720. Count Hamilton is chiefly known as an author by his "Mémoirs of Count Grammont" a lively and sprightly production exhibiting a free and in the general outline a faithful delineation of the voluptuous court of Charles II. The count's other works are—

Poems and "Fairy Tales," which as well as the Mémoirs, are in French and display elegance of style and fertility of invention.—*Amer. C. Biog. Amer. Diet Hist.*

HAMILTON (CHARLES) a native of Ireland who became an officer in the service of the East India Company on the Bengal establishment and was distinguished for his acquaintance with the laws and literature of the Hindoos. He was one of the first members of the Asiatic Society of Calcutta, in whose researches he published a description of the Mahawh or Maduca tree. He was the author of an "Historical Relation of the Origin Progress and Final Dissolution of the Government of the Rohilla Afghans in the northern provinces of Hindostan, from a Persian MS" 1787 8vo. The directors of the East India Company subsequently employed him in editing the "Hedava" or Guide a commentary on the Mussulman Law printed in 1791. He died in 1792.—*Gent. Mag.*

HAMILTON (ELIZABETH) a lady of considerable literary attainments, a native of Ireland being born at Belfast in that country 23rd July 1708. Having become an orphan at an early age she was brought up under the care of her uncle who resided near Stirling in Scotland, and during her residence in his family made herself intimately acquainted with those national peculiarities which she afterwards delineated so admirably in her "Contagions of Glenbervie." Besides this little work which attracted much attention she was the authoress of "The Letters of a Hindoo Rajah," 2 vols. 8vo, "The Life of Agrippina," 3 vols. 8vo and "Mémoirs of Modern Philosophers" works which under the popular form of novels are replete with sound sense and information. Her other writings are "Hints for Public Schools" "Popular Essays," 2 vols. 8vo, "Rules of

the Society of Friends, &c., & "Essays on Human Knowledge," 12 vols., "Letters on the Promotion of the Religious and Moral Principle," 2 vols.; and "On the Elementary Principles of Education." Miss Haughton was never married, but enjoyed an extensive acquaintance, especially among the talents of her own sex, one of whom, Miss Bangor, when her fortune, prestid a solicitor from her correspondence, with a promissory note of her life and habits. Her death took place at Margate in Yorkshire, July 23, 1846.—*Memoirs by Miss Bangor.*

HAMILTON (Paracelsus) a Scotch ecclesiastic of the Aton family through which he was connected with the blood-royal of the kingdom. He was born in 1503, and after going through the usual course of education at the university of Edinburgh, travelled on the continent, when he became a convert to the opinions of Luther. On his return to Scotland, James V made him superior of the abbey of Fome in Ross-shire but on his fearlessly asserting the truths which he had learned, stored cardinal Beaton then archbishop of St. Andrew's, caused him to be apprehended and tried upon a charge of heresy. Far from yielding to the storm, Haughton defended the reformed religion with great courage and constancy and fell the first Scotch martyr to Lutheranism, being brought to the stake in front of the college of St. Salvador in the twenty third year of his age. He exhibited the most unshaken fortitude while undergoing his sentence, which was carried into execution on the 1st of March 1537. After his death John Fyfe published his Confession of Faith, together with a treatise written by him, and entitled, "Patrick's Pictures," the latter of which is to be found in Fox's *Martyrology*.—*Fox's Acta and Nov. Mart.*

HAMILTON (WILLIAM) a Scotch poet, usually designated Hamilton of Bangour from the place of his birth Bangour in Ayrshire where his family had an estate. He was one of the Caledonian party who joined in the last attempt to restore to the throne the family of Stuart; and he was present at the battle of Culloden, after which he narrowly escaped being made a prisoner. He then became an exile from his native country but was at length reprieved. His death took place in France, in 1754, aged fifty. As a poet, Hamilton displays vividness of imagination and delicacy of sentiment, but no great elevation of style or manner, so that he may without injustice be reckoned as one of "the mob of gentlemen who write with ease." His poems were published by Foulis, at Glasgow, in 1758, 12mo, and also at Edinburgh, in 1760.—*Chalmers' Gen. Biog. Dict.*

HAMILTON (Sir WILLIAM) K.B. was born in Scotland in 1731. His mother having been sister to George III, that prince, before his accession to the throne, extended his patronage to young Hamilton, and made him his equerry. In 1756 he received the appointment of ambassador to the court of Naples, where he remained during the long period of thirty-six years,

extending to August 1800. A considerable part of this time was comparatively free from political topics, during which his chiefest function of the British envoy was less very important. He devoted his leisure to science, making a number of observations on Vesuvius, Etna, and other volcanic mountans of the Mediterranean, and the result of his researches is detailed in papers in the Philosophical Transactions and in his "Camp Philaeus, or Observations on the Volcanoes of the Two Sicilies," 2 vols. folio. His communications to the Royal Society were also well published, with notes, in 1772 8vo. He drew up a curious account of the discoveries made in the subterranean city of Pompeii printed in the fourth volume of the *Archæologia*, and he collected a valuable cabinet of antiquities, of which a descriptive account was published by d' Hancarville. The occurrence of the French Revolution interrupted the repose of Europe and gave rise to a treaty of alliance between his Britannic majesty and the king of the two Sicilies, which was signed by sir W. Hamilton as minister plenipotentiary of that country July 12 1793. By this treaty the Neapolitans engaged to furnish 6000 troops, four ships of the line &c. for war against France in the Mediterranean, but Ferdinand IV made peace with the French republic in 1796 without having taken any active part in the contest. On this occasion and in the subsequent events of 1798 and 1799 when the court emigrated to Sicily sir William appears to have acted but a secondary part as a political agent, and he was recalled not long after. He died in London April 6th, 1803. He presented to the British Museum many books, manuscripts, and geological curiosities and after his death his unrivalled collection of antique vases was purchased by parliament for the same national institution.—*Gen. Mag. Ans. Reg.*

HAMILTON (WILLIAM GERRARD) a statesman and parliamentary orator of the last century who on account of the extraordinary impression produced by the first and almost the only speech he ever delivered in the English house of Commons, obtained the appellation of Single Speech Hamilton. His father was a barrister of Lincoln's Inn, where he was born in 1729. He was sent to Winchester school, whence he removed to Oriel college, Oxford, and then studied at Lincoln's Inn, but was never called to the bar. In 1754 he obtained a seat in parliament, when he made his memorable speech, and he subsequently was made one of the lords of trade and plantations. On the appointment of lord Halifax to the vice-royalty of Ireland, Hamilton went thither as his secretary and he was accompanied by the celebrated Edmund Burke as his own secretary. In the Irish parliament he supported the reputation he had previously gained as an orator; and for many years he held the office of chancellor of the exchequer in that kingdom. He relinquished that post in 1786, and spent the latter part of his life in literary retirement. His death took place

in 1796. A posthumous publication of his works, including a tract entitled ' Parliament and Liberty,' &c., appeared in 1808. The Letters of James have been attributed to this gentleman, but no probable arguments were adduced in support of the conjecture.—*Life prefixed to his Works.* Edinburgh Review.

HAMPOND (Haway DD.) a learned and eloquent divine of the seventeenth century born August 12, 1605 at Chertsey Surrey and christened after his Godfather Henry prince of Wales, (son to king James I.) in whose household his father held the situation of first physician. Being intended for the church, he was sent at an early age to Eton, whence he removed to Magdalen college, Oxford, and became a fellow of that society in 1625. In 1633 the then earl of Leicester presented him to the rectory of Penshurst, Kent, where he resided till 1645, having graduated as DD in the interval. Being nominated archdeacon of Chichester, and soon named to attend the assembly of divines his predilection for the royal cause induced him positively to refuse his presence. This open avowal of his opinions occasioned his proscription by the parliamentarian party who offered 100£ for his apprehension notwithstanding which he contrived to escape in disguise to Oxford, where the following year under the sanction of Dr Potter he published his 'Practical Catechism.' At the treaty of Uxbridge, Charles I deputed him to attend on his part, when he distinguished himself in an active contest with Richard Vane. For his services on that occasion he obtained a canonry of Christchurch in 1645 and was soon after chosen public orator. During the captivity of the unfortunate Charles he attended in the capacity of chaplain at Woburn, Hampton, and Cansbrook castle, till his compulsory dismissal in 1647 when he again retired to Oxford. The following year he was himself ordered into confinement by the parliamentarian visitors, who deprived him of all his preferments. After enduring an imprisonment of some months he obtained his liberty and took up his residence at Westwood park Worcestershire the seat of sir John Packwood who protected him till the re-establishment of monarchy again introduced him to court favour. In 1660 he was called in to assist in restoring the church establishment, and was nominated by Charles II to the bishopric of Worcester but died before his consecration of a fit of the stone on the 25th of April in the same year. Beside the treatise already mentioned he was the author of a paraphrase of the New Testament with notes and had finished the Book of Psalms with a view to the public cause of a similar illustration of the Old Testament, when death hindered the completion of his design. His works were collected after his decease, and printed in four folio volumes.—*Life by Bishop Fell.*

HAMPOND (James) an English eloquent poet of considerable reputation. He was the son of Anthony Hampsone, esq; of Somer-

shire place, in Nottinghamshire, who attained some eminence in the early part of the last century as a statesman, and a man of leisure; though, after having had a seat in parliament, and been a commander of the navy he died a prisoner in the Fleet in 1739. His son born in 1710 received his education at Westminster school, where he formed an intimacy with lord Cobham, Chesterfield, and Lyttelton, and others afterwards distinguished in literature. He was appointed usher to Frederick prince of Wales, and in 1741 was chosen MP for Truro. He died the following year at Stowe, the seat of lord Cobham, his health, if not his intellects having been disordered by an unfortunate attachment to a young lady who rejected his addresses. Not long after his death a small volume of his

Love Elegies was published with a preface by lord Chesterfield. They are chiefly imitations of Tibullus, and are obviously the fruits of a highly cultivated taste and warm imagination in one or two of his compositions the author displays more originality of sentiment. In spite of the depreciating armed versions of Dr Johnson these elegies have been generally read, and much admired.—*dicta s; G. Bigg Campbell's Spec. of Brit Poets.*

HAMPDEN (John) celebrated for his patriotic opposition to taxation by prerogative, was descended from an ancient family settled at Great Hampden, in Buckinghamshire. He was born in London in 1594 and at an early age was entered a gentleman commoner at Magdalen college Oxford. On leaving the university he took chambers in one of the inns of court, in order to study law but the death of his father putting him in possession of an ample estate he indulged in the usual unrestrained career of country gentlemen until the aspect of the times and the natural weight of his connexions and character produced greater strictness of conduct without any abatement of his cheerfulness and affability. Being cousin-german by the mother's side to Oliver Cromwell he like his kinsman attached himself to the party in opposition to the court. He entered into parliament in 1628, and soon after married a lady of the Foljamby family. Although for some years a uniform opposer of the arbitrary practices in church and state, and one of those who in 1637 had engaged a ship to carry them to New England, he acted no very distinguished part in parliament. Hume whose partiality in respect to the transactions of this period has long ceased to mislead, speaks at the motives to this intended emigration, as merely perfidious, but the conduct of Hampden in regard to the demand for ship-money, which immediately followed the prohibition to deport the kingdom, forms a conclusive answer to this assertion. His resistance to that illegal impost, to use the language of lord Clarendon "made him the argument of all tongues" especially as it was after the decision of the judges, in favor of the king's right to levy ship money that Hampden resolved to pay it. Being prosecuted in the

most of audacious, he himself, aided by his adherents, got the side against the crown supporters for twelve days, before the twelve judges; and although it was decided against him by eight of them to four, the victory in a popular sense was in his favor. From this time he received the title of the patriot Hampden; and his temper and his modesty on that great occasion acquired him as much credit for his courage and perseverance. Henceforward he took a prominent lead in the great contest between the crown and the parliament and was one of the five members whom the king so impudently attempted in person, to seize in the house of commons. When the appeal was to the sword, Hampden acted with his usual decision by accepting the command of a regiment in the parliamentary army under the earl of Essex. His military career was however short, and only allowed time to prove that his courage in the field because his general character Prince Rupert having beaten up the quarters of the parliamentary troops, near Thame in Oxfordshire, Hampden eagerly joined a few cavalry that were rallied in haste, and in the skirmish that ensued, received a shot in the shoulder which broke the bone, and after much suffering his wound proved fatal six days after its infliction on the 26th June, 1643. It is said that the king testified his respect for him by sending his own physician to attend him. His death was a great subject of rejoicing to the royal party and of grief to his own. That the joy of the former was misplaced there is now much reason to believe as he would have proved a powerful check upon the unprincipled ambition of his relative, Oliver Cromwell sums up an elaborate character of this eminent leader by a sentence implying that, like Catiline "he had a head to contrive a tongue to persuade and a hand to execute any mischief." This language divested of party spirit, merely implies that acting upon his own theory he was a man of extraordinary talents and vigour. No doubt he went to the extreme in his opposition to prerogative, but his character and conduct, from first to last, avince his conscientiousness and he has taken his rank by acclamation on the one side, and tacitly on the other very high in that list of genuine English patriots, the mention of whose names excites involuntary respect.—Clerendon. *Hans. Eng. Brit.*

HAMZAH, the principal founder of the sect of the Druses, under the infatuated Caliph Hakem [see his article] in the eleventh century. The number of Hakem, as already shown, did not extinguish his sect, which flourished under the direction of Hamzah, and still exists. One of its fundamental principles is the incarnation of the Devil in the person of the caliph Hakem; and in other respects the doctrine seems to be a compound of Mahometanism, gnostic Christianity, and absurd and licentious notions of mysticism. The work held in the highest respect among them, was composed of 12 volumes, and is entitled "The Book of the Initiates to the Mysteries of the Gentry,"

a copy of which was found in the house of Narending, one of the chief priests of the Druses, towards the close of the eleventh century, and lodged in the king's library at Paris. A French version of this book was published by M. Petre de la Croix.—D'Herbelot. *Mores.*

HANCARVILLE (PIERRE FRANCOIS HUARD) a French writer on philology and classical antiquities. He was a native of Nancy, and died at Paris in 1798. Besides a Descriptive Account of the Antiquities in the Cabinet of sir W Hamilton he published a work entitled "Recherches sur l'histoire, l'origine, l'esprit, et les progrés des Arts de la Grèce," 3 vols. the last part of which has been translated into English.—*Nous. Diet. Hist.*

HANDEL or HAENDEL (GEORGE FARNACE) this celebrated composer was a native of Halle in the duchy of Magdeburg in Lower Saxony where his father practised with considerable reputation as a physician and surgeon. He was the offspring of a second marriage and was born February 23, 1684. His father in tendering him for the law discouraged as much as possible the strong passion which he evinced early in life for the science of music, and even forbade him to practice. But although no instrument was allowed to be in the house, the young musician contrived to secrete a small clavichord in a garret, where he amused himself during great part of the night after the rest of the family had retired to rest and made such progress, that on paying a visit to the court of Saxe Weissenfels, where his brother held a subordinate situation in the household, he seized the opportunity to play on the church organ, with such power and effect, that the duke, who accidentally witnessed his performance, used his influence successfully with his father to permit him to follow the bent of his inclination. He was accordingly placed under the tuition of Zachau, organist of the cathedral, and at the age of nine was so far advanced in the practical part of the science, as to be able to officiate occasionally as deputy to his instructor while his theoretical proficiency actually enabled him to compose a service or Spiritual Cantata, weekly for nearly three years. On the death of his father in 1703 he repaired to Hamburg, then celebrated for the excellence of its musical performances, and procured an engagement in the orchestra at the opera there. At this period of his life he commenced an acquaintance with Mattheson the composer, which though untoward in its commencement, ripened into a strict friendship. A breach of etiquette during the performance of the latter's opera of Cleopatra on the 4th of December 1704 produced a quarrel between the young men, which terminated in a duel. Fortunately Mattheson's sword broke against one of Handel's buttons, which ended the recontre, and reconciliation took place. On the 30th of the same month Handel brought out his first opera, "Alcina," which in the February following was succeeded by his "Nero," Mattheson performing the principal character in each. Having at length

H A N

sured enough to warrant him in making a journey to Italy, he proceeded in succession to Florence Vessna, Naples, and Rome, in which latter capital he formed an acquaintance with Corelli at the house of cardinal Ottoboni. On his return to Germany in 1710 he entered the service of the elector of Hanover afterwards George I of England as chapel master, but having received pressing invitations from several of the British nobility to visit London he with the permission of that prince, set out for England where he arrived in the latter end of 1710. The flattering reception which he met with in this country induced him to break his continental engagement in violation of a positive promise which he had given to return within a specified time and he was in consequence on the accession of his royal patron to the throne of these realms in much disgrace till the good offices of baron Kilmessenge not only restored him to favour but procured him an increase of the pension of £200 granted him by queen Anne to double that amount. From 1715 to 1718 Handel resided with the earl of Burlington, and then quitted that nobleman for the service of the duke of Chandos who entertained him as maestro di capella to the splendid choir which he had established at his seat at Cannons. For the service of this magnificent chapel Handel produced those anthems and organ fugues which alone would have been sufficient to immortalise him. After two years dedicated to this munificent patron the Royal Academy of Music was instituted and this great composer whose fame had now reached its height, was placed at its head, and this for a short period may be considered as the most splendid era of music in England. The warmth of his own temper however called into action by the arrogance and caprice of Carestini Cuzzoni and others of his principal Italian singers gave birth to many violent quarrels and public opinion becoming to a certain extent enlisted in favour of his opponents his popularity began to wane and after ten years' duration the operas under his direction were abandoned. In 1741 he brought out his *chef d'œuvre* the oratorio of the Messiah. This sublime composition was not however duly appreciated at its first representation a circumstance which may be accounted for by the offence which its author had just given in refusing to compose for Senesino who had insulted him. Disgusted at its reception Handel set out for Ireland towards the close of the same year where it was much more successful. Mrs Cibber's execution of the song He was despised eliciting especially a very strong sensation and when after an absence of nine months which had turned out most profitably both to his purse and fame he returned to London the hostility against him had much abated and his oratorios were constantly received at Covent-garden theatre with the greatest approbation by overflowing audiences the Messiah in particular increased yearly in reputation. Some time previously to his decease he

H A N

was afflicted by that most serious among human calamities total blindness but this misfortune had little effect on his spirits, and he continued not only to perform in publick but even to compose. His own air however from the oratorio of Samson Total Eclipse is said always to have infected and agitated him extremely after this melancholy privation. On the 6th of April 1759 he was as usual at his post in the orchestra, but expired after a very short illness on the 13th of the same month. His habits of life were regular and although in his contests with the nobility he lost at one time the whole of his savings amounting to 10,000*£* yet he afterwards recovered himself and left 20,000*£* at his decease. His appetites were coarse his person large and ungainly his manners rough and his temper even violent but his heart was humane and his disposition liberal. His early and assiduous attention to his profession prevented him from acquiring much literary information but he spoke several modern languages. His musical powers it is scarcely possible to estimate too highly he was never exceeded in the strength and boldness of his style, and while fugue contrivance and full score were more generally revered than at present was unrivalled. Although his vocal melodies may not be more polished and graceful than those of his countryman Hasse or his rivals Bononcini and Porpora his instrumental compositions exhibit a combination of vigour spirit and invention which has never been exceeded and his choruses in grandeur and sublimity have not been equalled since the invention of counterpoint. A very honourable tribute of applause was given to Handel in 1785 by a musical commemoration at Westminster abbey in which pieces selected exclusively from his works were performed by a band of 500 instruments in the presence of their late majesties and family and the principal nobility and gentry of the three kingdoms. This great composer who never married was buried in Westminster abbey where a monument by Roubiliac is erected to his memory.—*Burney's Hist. of Mus. Eng. Diet.*

HANGER (GEORGE) lord Coleraine better known by the title of Colonel Hanger distinguished alike by his talents and his eccentricities. Being a younger son of a noble family he was destined for the army and a commission was procured for him at an early period of life. He served in America during the whole of the war with the United States but he was never afterwards able to obtain employment as a military man. The highest rank he reached was that of major of the British legion of cavalry. In 1789 he published An Address to the Army in reply to strictures by Rodene Mackenzie on Trelatton's History of the Campaigns of 1780 and 1781. "Svo." Though accustomed to mingle much in gay and fashionable society and in indulge in convivial pleasures and general dissipation he contrived to devote much of his time to reading and was usually well prepared

H A N

with topics for conversation, so as to be a very agreeable companion. Free in his manners, he was yet never disposed to give intemperance of fence, and the peculiarity of his behaviour and apparent naivete of disposition disarmed resentment, so that mirth rather than anger was the common result of his most extravagant mirths. On the death of his elder brother in 1814, he succeeded to his title which however he refused to assume, and when addressed by it he was not at all pleased with the compliment. He died at his house near the Regent's-park in 1824 aged seventy three. Among a considerable number of publications which proceeded from his pen, the most interesting and amusing is his *Life Adventures, and Opinions 1801* 2 vols. 8vo. If any proof of his eccentricity were required, it might be found in the fact, that in one of his books he introduced a portrait of himself suspended *a la lanterne*.—*Anec. Reg.*

HAMMER (or THOMAS) son to a younger brother of sir John Hammer a Shropshire baronet, was born in 1676 and succeeded his uncle in his title and the family estate of Hammer in the above-named county. He was removed from Westminster school to Christ-church, Oxford, and having completed his education in that university entered parliament as knight of the shire for the county of Suffolk in 1713 in despite of opposition, and intimate acquaintance with the forms of the house procured him to be chosen speaker. This distinguished office he filled during the remainder of a parliamentary career of more than thirty years duration from its commencement. Towards the close of his life he withdrew altogether from public business, and occupied himself in elegant literature, the fruits of which succession appeared in a corrected edition of Shakespeare's dramatic works, which he published in six quarto volumes, illustrated and ornamented with engravings. The copyright of the work he liberally presented to the university of Oxford where it was printed in 1744. Sir Thomas survived its publication little more than a year, dying at his seat in Suffolk in 1746.—*Biog. Brit.*

HANNEMAN (ADRIAN) an historical and portrait painter was born at the Hague in 1611. He formed his taste and style by copying the works of Vandyke in such a manner that many of his copies pass for originals. Although usually employed as a portrait painter he sometimes designed historical and allegorical subjects of which a large picture, representing peace as a beautiful woman seated on a throne and holding a dove on her knee in the hall of the States of Holland, is much admired. He came to England in the reign of Charles II where he remained for sixteen years, and on his return to Holland, became the favourite painter of the princesses of Orange afterwards queen Mary II. There are portraits by Hanneman at Windsor, Woburn, and other places.—*Walpole's Anecd.*

HANNIBAL, a celebrated Carthaginian leader, the son of Hamilcar, and one of the

H A N

most famous generals recorded in ancient history was born in the year of Rome 236, and BC 230. At the age of eight years his father caused him to swear before the altar eternal enmity to the Romans. He acquired the art of war in Spain under Hamilcar and at the age of twenty two commanded the cavalry in the army of his brother-in-law, Asdrubal. On the death of that leader he was nominated his successor by the acclamation of the troops, and proceeded on the plan of his predecessor to extend the Carthaginian dominions in Spain and contrary to treaty laid siege to Saguntum. After achieving several conquests in Spain, he planned the invasion of Italy and in the fulfilment of that daring scheme ascended the formidable ridge of the Alps, which had perhaps never before been crossed by a regular army. Having defeated Cornelius Scipio Sempronius and Flaminius in the celebrated battles of Ticinus, Trebia, and in the ambuscade near the lake Thrasimene he was at length checked by Fabius. The famous victory of Cannae over the consuls Varro and Aemilius Paullus BC 216 being the most disastrous defeat ever endured by the Romans carried his fortune to its greatest height. The immediate consequence of this battle was the defection of most of the Roman allies in that part of Italy and the surrender of the opulent city of Capua. Weakened however by his victory he was obliged to remain for some time inactive during which interval the Romans recovered from their panic and when the Carthaginians were at length encamped before Rome BC 211 their appearance excited no alarm. Perceiving the hopelessness of the attempt, Hannibal marched back as far as Rhegium and Capua again fell into the hands of the Romans. From this time the sole theatre of the exploits of Hannibal in Italy was confined to the southern extremity of it, where he maintained the war with fluctuating success until the complete defeat of his brother Asdrubal by the consul Claudius, quite crippled the Carthaginian. This disaster added to the fact of the invasion of Africa by Scipio obliged Hannibal reluctantly to quit Italy in the seventeenth year after entering it and his departure was celebrated at Rome by public rejoicings. His arrival in Africa induced the Carthaginians to violate a truce which they had made with Scipio and gave a temporary revival to their interests, yet so sensible was he of the impending danger that he made proposals of accommodation to the Roman leader, which were rejected. The famous battle of Zama BC 202 terminated the contest, he was obliged to fly from a field covered with slaughtered troops, and declaring to the Carthaginian senate that peace was necessary on any terms, the first Punic war terminated. He did not however lose his credit with his countrymen, and although precluded by the conditions of the peace from remaining at the head of the army he was chosen praetor and displayed great abilities in the rectification of affairs, until the Romans found it convenient to accuse him of

H A N

encountering hostilities against them with king Antiochus. Under these circumstances he deemed it necessary to withdraw from the storm and quitting the city in disguise he joined Antiochus, with whom he held many conferences concerning his meditated war against the Romans. On learning this event, the Romans sent ambassadors to Antiochus who endeavoured to render Hannibal suspected, whose plans were otherwise rendered abortive by the weak presumption of the Syrian king and the jealousy of his ministers. When Antiochus was driven to make peace with the Romans, one of their leading conditions was that Hannibal should be given up to them. Foreseeing thus result, he first retired to Crete and subsequently according to some writers, to Armenia. His last asylum was in the court of Prusias king of Bithynia who preparing to give him up on the demand of the Romans he swallowed poison which he always carried about him against such an emergency and died BC 163 at the age of sixty three. Thus perished a man accounted by the ancients one of the most consummate masters of the art of war. The Romans have loaded his memory with every imputation of cruelty and perfidy but although profuse of human blood and unscrupulous as to the manner in which he obtained his ends he could scarcely be more so than many of the Roman leaders themselves, and it appears from several instances, that he was not incapable of generosity of sentiment. It speaks highly of the talents of Hannibal that he nearly balanced the fortunes of Carthage and Rome and inflicted wounds upon the latter to which its poets and historians never allude without horror.—*Polybius Livy Corn Nepos.*

HANNO a Carthaginian naval and military commander famous for his maritime discoveries. He is supposed to have lived about 445 BC and he is said by Pliny to have been employed by the republic in the circumnavigation of Africa, which he completed from the straits of Gibraltar to those of Babehmandel at the mouth of the Red Sea. He drew up an account of his voyage in the Punic language which was translated into Greek and probably served as the basis of a treatise styled the *Periplus of Hanno*, still extant. The authenticity of this tract has been doubted but Dr Robertson and others have shown that some of the most singular circumstances contained in it are supported by the testimony of later voyagers. The *Periplus* has been repeatedly published and an English translation of it, by Falconer, appeared in 1797 8vo.—*Vetus Maris.*

HANRIOT or HENRIT (FRANCIS) one of the most unprincipled among the French revolutionary leaders under the despotism of Robespierre. He was born at Nantes about 1761, and, after having been a manual servant and a custom house officer in both which situations he is said to have behaved with dishonesty he became a spy for the police. The revolution afforded ample scope for his talents, and attaching himself to the Jacobin

H A N

party he first distinguished himself in plotting and directing the massacres, which took place in the Parisian prisons September 2nd 1793. Continuing his career of cruelty, he was appointed commander of the national guards. Instructed by the prevailing faction, and seconded by Marat on the 2d of June, 1793 he surrounded the Convention with an armed force and obliged the members who would have closed their sitting to return and pass decrees of accusation against the Girondists. He acted on all occasions as a faithful partisan of Robespierre whom he in vain endeavoured to support, when accused in the Convention in July 1794. Hanot deserted by his troops when he would have led them against the national representatives, was arrested and suffered with his chief under the axe of the guillotine July 29th 1794. Unlike his pusillanimous accomplices, he displayed on the scaffold a courage worthy of a better cause.—*Dict des H. M. du 18me. S. Bag Unit.*

HANVILL (JOHN) a monk belonging to the abbey of St Albans in the twelfth century who distinguished himself as a writer of Latin poetry. According to some accounts he studied at the university of Oxford and after having travelled over a great part of Europe and resided a long time at Paris, he returned to England, and entered into the order of St Benedict. His principal production is a kind of mock heroic poem in which he describes the travels of his hero Archrenius, and satirizes the vices and follies of the world. This work which is much superior in point of elegance to most contemporary compositions, was published at Paris in 1517 but the book is of rare occurrence. Some specimens of Hanvill's poems were also published in Waterton's history of English poetry Epistles, epigrams, &c. by the same author are preserved in MS. in the Bodleian library.—*Leland de Script Br. Berkshir 1a Bag 1a*

HANWAY (JONAS) a merchant and traveller distinguished for his active benevolence, was born at Portsmouth in 1712. At an early age he was apprenticed to a merchant at Lisbon and in 1743 became a partner in the English house of Dingley at Petersburgh. The concerns of the partnership rendering a journey into Persia desirable it was gladly undertaken by Mr Hanway, who went to Astrabad with a cargo of English goods, which were lost, in consequence of the English factory being plundered in a rebellion against Nadur Shah. He underwent much fatigue in his exertions to obtain restitution but was thereby enabled to acquire a knowledge of the manners and events of Persia, an account of which he published in 1753 in a work entitled *An Historical Account of the British Trade over the Caspian Sea &c. with the particular history of the great usurper Nadur Kouhi.* 4 vols. 4to. This performance abounds with curious and instructive matter but is somewhat prolix in style and moral reflection. In the same year he engaged in the controversy concerning the naturalization

H A R

H A R

of the Jews, and published "A Review of the proposed Naturalization; by Merchant," a third edition of which appeared the same year. From this time Mr. Heywood continued publishing on a variety of topics, all relating to points of public good, or schemes of charity and utility. He was the principal instigator of the Marine society, and the Magdalen charity first planned by his partner Mr. Dingley was much indebted to his activity for its establishment. He had some concern in the institution of Sunday schools, and he also did all in his power to alleviate the condition of the poor chimney sweepers. His fellow citizens entertained such a sense of his merits, that a deputation of the principal merchants of London waited upon lord Bute to request that some public mark of favour might be conferred upon a man who had done so much service to the community at the expense of his private fortune. He was in consequence made a commissioner of the navy which post he held for twenty years and on resignation was allowed to retain the salary for life. He died in 1786 and a monument was erected to him by subscription. He was a man of some harmless peculiarities in dress and manners, but eminently upright, sincere and phalanx tropical. His knowledge was extensive and his numerous writings were highly useful although rating low as literary compositions. A list of them may be found in our authority.—*Pugh's Life of Heywood*

HARDBERG (CHARLES AUGUSTUS DE) an eminent modern statesman was born at Hanover in 1750. He received his education at Göttingen and afterwards resided some years in England. He subsequently took a share in the administrations of Hanover and of Anspach, and finally composed a part of that of Berlin. In 1795 he opened the negotiations at Basle and signed the treaty of peace between Prussia and the French republic. In 1804 he became minister of foreign affairs and advocated a system of great energy but was not duly supported. He retired after the battles of Jena, but resumed his functions on the resignation of Zastrow. He was again obliged to retire after the battle of Friedland being disagreeable to Napoleon when he took up his residence at Haga whence he emerged on the change of that warrior's fortune and as the prime minister of Prussia had the satisfaction of signing the treaty of Paris in 1814. He visited London with his sovereign the same year, previous to which he was created a prince. He afterwards acted for Prussia in the congress for arrangement of the affairs of Europe and died at Genoa November 26 1822. Prince Hardenberg was the author and patron of some very salutary reforms in the domestic government of Prussia although falling far short of the promised introduction of an adequate system of representation into that kingdom.—*Cont. Mag.*

HARDI (ALEXANDER) a French dramatic poet, in the early part of the seventeenth century. He has been reckoned the father of

the French stage, and previous to the appearance of Corneille he was considered the best tragic writer of his time. He also wrote comedies, in which he seems to have taken for his model the works of the Spanish dramatists, his pieces displaying fertility of invention but abundance of magnificence and extravagance. He rivalled Lope de Vega in the number of his plays, amounting to six hundred. A selection from the dramas of Hardi was published in 6 vols. 8vo 1682. He died at Paris in 1630.—*Moreri's Note Dict. Hist.*

HARDICANUTE, king of England and Denmark was the son of Canute by Emma daughter of Richard duke of Normandy. He succeeded his father on the Danish throne in 1038, and at the same time laid claim to that of England which had devolved to his elder and half brother Harold. A compromise was effected by which the southern part of the kingdom was for a while held in his name by his mother Emma and on the death of his brother he succeeded to the whole. His government was violent and tyrannical, he revived the odious tax of Danegelt, and punished with great severity the insurrections which it occasioned. The death of this despotic prince in consequence of intemperance at the nuptials of a Danish nobleman brought his reign to an early termination, to the great joy of his subjects in 1041.—*Hume's Hist. of Eng.*

HARDING (THOMAS) an English ecclesiastic, a native of Combe-Martin, Devonshire, where he was born in 1512. He was educated in the Romish faith at Winchester school, whence he removed in due course to New-college Oxford on the foundation and became fellow of that society in 1536. Six years afterwards he was chosen Hebrew professor and being appointed domestic chaplain to the duke of Suffolk that nobleman employed him to superintend the education of his daughter the lady Jane Grey. At this period Hardinge was a staunch protestant, and instructed his pupil in all the doctrines of the reformed church but on the accession of queen Mary he abjured his former tenets, and embraced the religion of the court to the great dissatisfaction of lady Jane who remonstrated with him on this abrupt change of opinion. When Elizabeth came to the throne he was deprived of his stall at Winchester and the treasurership of the chapter at Salisbury to which valuable appointment he had succeeded in the preceding reign. He now found it convenient to return to Lowayne where he entered into a long polemical controversy with bishop Jewel against whom he wrote seven treatises in defence of the religion he had embraced. His death took place in 1572 or as others say 1572.—*Wood's Princes & Worthies*

HARDING or HARDING (JONIE) a learned esquire of the north of England, in the fifteenth century. He was in the service of the famous Henry Percy called Hotspur, whom he accompanied in his scismatic expedi-

HATTON. In 1415 he attended Henry V to the siege of Harfleur, and he afterwards was with the duke of Bedford, in his engagement with the duke of the Burgundy. He is said to have encountered great personal hazard to procure for the king certain records from the archives of Scotland. He wrote a chronicle of English history, in verse which is absolutely destitute of poetical merit, but possesses some value as a register of former times and manners. If, as is supposed, he was employed by Edward III it is not probable that he was living so late as 1481 the alleged date of his death.—*Andrew's Hist. of Gr. Brit.*

HARDINGE (NICKOLAS) an English gentleman, educated as a lawyer and who held some political situations, but was most distinguished for the cultivation of the belles lettres. He studied at Eton and Cambridge after which he kept his terms at the Middle Temple, and was called to the bar. In 1731 he obtained the office of chief clerk to the house of Commons, in 1752 he was made joint secretary of the Treasury, and he was twice elected MP for the borough of Eye in Suffolk. He died in 1758 aged fifty-seven. His published works consist of some English poetry and a volume of Latin poems.—
HARRISON (GEORGE) son of the preceding born in 1744. After finishing his preparatory studies at Eton school he went to Trinity college Cambridge where Dr Watson afterwards bishop of Llandaff was his tutor. In 1769 he was created by mandate master of arts and he was called to the bar the same year having like his father been a student of the Temple. The interest of his mother's brother lord Camden procured him the rank of sergeant-at-law and he subsequently was appointed solicitor-general to her majesty queen Charlotte. In 1787 he was made a Welch judge and two years after the queen's attorney-general. He died in the execution of his judicial duties, at Presteign, in Radnorshire April 26th 1816. He was a man of cultivated talents, possessing much wit and humour as well as good sense and knowledge of the world. His speeches in parliament and in the courts of law have been published as well as several contributions to miscellaneous literature including three sermons. These have been collected and printed with his letters, and an account of his life by Mr John Nichols.—*Lit. Anec. Illustrations of Literature.*

HARDION (JAMES) a native of Tours born 1686. His literary attainments which were considerable obtained him the situation of royal librarian at Paris, and a seat in the Academy of Inscriptions, among the transactions of which society are to be found many interesting papers from his pen. He was also the author of an universal history in eighteen duodecimo volumes and a work entitled "Histoire Poétique" in three volumes 17m. His death took place in 1766.—*Noz. Dist. Hist.*

HARDOUIN (JOUIN) a learned French Jesuit, less celebrated for his intimate

acquaintance with the classical authors of antiquity, than remarkable for the singularity of his opinions respecting the authenticity of their writings. He was born in 1647, at Quimper in Brittany and died at Paris September 3, 1729. The work by which he is principally known is his *Chronologie ex nummis antiquis restituens prolatione de maxima Heracliodum* in which he supports the extraordinary hypothesis, that almost all the writings under the names of the Greek and Roman poets and historians are the spurious productions of the thirteenth century. His exceptions to this sweeping denunciation of the antinomians are scarcely less curious, as he admits the genuineness of the works of Cicero and Pliny as well as of some of those attributed to Horace and Virgil contending at the same time that the two latter are allegorical writers who under the names of Lalage and *Aeneas* have represented the Christian religion and the life of its founder. This singular treatise which appeared in 1693 printed in two quarto volumes not only produced able refutations from the pens of Le Clerc and La Croze but excited the animadversion of his clerical superiors, who condemned and proscribed the book. The author was also called upon for a public recantation of his errors, which in fact he made but probably with no great degree of sincerity as he afterwards repeated his offence in other publications. His other works are—*Nummi Antiqui populi romani et urbium illustris* 1684 an edition of Themistius folio produced in the same year, one of Pliny's natural history in usus Delphini, 5 vols. 4to 1685, and another in twelve folio volumes of "The Councils" 1705. On this latter work he expended a great deal of time and labour but when completed it proved obnoxious to the parliament, which ordered its immediate suppression. A selection from father Hardouin's works comprising most of those which had fallen under the censure of the Romish church, appeared in 1700 at Amsterdam, and a folio volume containing some of his posthumous writings on miscellaneous subjects was printed at Paris about the year 1731 under the title *Johannes Hardouin Opuscula*. De Boza in describing the character of this extraordinary man speaks of him as being in credulity a child in sincerity a youth and in mental delicacy an old man.—*Moreri.*

HARDT (HERMAN VON DER) one of the most learned philological writers Germany ever produced. He was born in 1660 at Melle in Westphalia, where his father was director of the mint to count Tecklenbourg. He prosecuted his studies at Jena and at Leipzig where he distinguished himself by the extraordinary strength of his memory and attached himself chiefly to the acquisition of the Oriental languages. He established at Leipzig a Philological Academy for the express cultivation of sacred literature, but he was prevented from co-operating long with the institution in consequence of the duke of Brunswick having made him his librarian. In 1640

H A R

he was chosen professor of the Oriental languages in the university of Helmstadt, to which academy of learning he induced the dukes to present his library. In 1709 he was elected rector of the gymnasium of Marburg where he employed every moment he could spare from the duties of his station in preparing for the press those learned works which have established his reputation. Among these are—*Autographia Lutheri aboriorum celebriorum virorum ab anno 1517 ad annum 1546 reformatiōis statim et historiam egrēpū ilustrant, 3 vola. 8vo.*, *Magnum Concilium Constantiense de universalis Ecclesiae reformatiōis unione et fide 1697 3 vola. fol.* 1700—1742 6 vola. fol. undertaken by order of the duke of Brunswick, *Memorabiliis Bibliothecae novae Rodolphini Historia literaria Reformationis, 1717 5 vols. folio.*

Tomus primus in Jacobo Historiam populū Israëlis in Assyriaco exilio Samaria overat et regna extincto illustrans Helmstadt 1728 folio the remainder of this work was never published. He died in 1746 leaving in MS a History of the Reformation and other eruditæ collections.—*Dug Uss*

HARE (FRANCIS) bishop of Chichester an English prelate in the reign of Anne a native of London. He was elected from Eton school to a fellowship at King's college Cambridge on the foundation where he distinguished himself by his literary attainments, and was selected to superintend the education of the first marquis of Blandford, son of John Churchill the great duke of Marlborough. Under the patronage of this noble family his rise in the church was rapid. The interest of the duke who was then at the head of the army first procured him the appointment of chaplain general to the forces and afterwards in succession the deaneries of Worcester in 1708 St Paul's 1726 and the bishopric of St Asaph 1727 whence he was translated to the more valuable see of Chichester in 1731 still retaining his deanship of the metropolitan church. A short time previous to the death of the queen, he published a remarkable pamphlet under the title of “The Difficulties and Discouragements which attend the Study of the Scriptures in the way of private Judgment.” The object of this treatise is to prove the indispensable duty of Christian communities to remove such discouragements but the levity of style with which the bishop has conducted his argument, has given occasion to some of his opponents to charge him with scepticism. In the celebrated Bangorian controversy he expressed the side of the question opposed to that which was maintained by Hoadley who became the main object of his attack. His other works are a quarto edition of Ference with annotations critical and explanatory and a treatise on Hebraical rhythm in which he professes to have restored the original metre to the Book of Psalms. In both these works his economy as a critic is strongly impeached, in the first by his old antagonist in polemics Bentley, and in the second by bishop Lowth, whose refutation of his positions is generally

considered to be complete. Bishop Hare's death took place in 1740.—*Chalmers's Biog. Diet.*

HARDBECK (FRANCIS) an eminent literary lawyer king's counsel, and member of the Society of Lincoln's-inn. He was also recorder of Liverpool but distinguished himself more as a consulting counsel than as a pleader. He is the author of several legal works which are in high esteem the principal of them are—*The Case of Somerett the Negro*, “Collection of State Trials” 11 vols. folio, *Argument in Defence of Literary Property*, “Collection of Law Trials,” 2 vols. folio, *The Jurisdiction of the Lords House of Parliament* by Judge Hale with a Preface “Judicial Arguments and Collections &c.” In 1813, Parliament, in compliance with a proposal from himself passed a vote for the purchase of his library for the sum of 8000*l.* the whole of which has been added to that of Lincoln's-inn. He died 21st of August, 1821 in his eighty first year—*See Biog.*

HARINGTON (Sir JOHN) an English courtier poet and man of letters in the reigns of Elizabeth and James I. He was descended from a respectable family settled at Kelston near Bath and was born about 1561. His father had been imprisoned in the reign of queen Mary for holding a correspondence with her sister Elizabeth on whose accession to the crown he was naturally regarded with favour and she stood sponsor for the son at the baptismal font. He was educated at Eton and afterwards at Cambridge where he took the degree of MA. Making his appearance at court he distinguished himself not only by his satirical and sprightly wit displayed in jests and epigrams but also by a translation of the tale of Alcina and Rugiero from the Orlando Furioso. This poetical effort reached the eye of the madam queen who fearing herself offended at the hoen tuneness of the story imposed on Harrington the task of translating the whole poem. This he executed to her majesty's satisfaction and published the work in 1591. But that peasant did not check the prurient imagination and satirical temper of the young courtier. In 1596 he published two tracts entitled *A new Discourse on a stale subject called the Metamorphosis of Ajax*, and *An Apologie for Ajax*. These pieces are said to be the first specimens of the Rabelaisian satire of which our literature could boast they are replete with that kind of humour which distinguishes the writings of the French Lucian and partake of their grossness. The extreme rarity of these once popular trifles renders it doubtful whether Swift or Sterne were acquainted with them, though there are passages in the writings of both those authors which render it probable that they had seen Harrington's volumes. The indecency of the ideas which serve as the basis of these satires probably accorded too well with the taste of the age to have given offence but the personal ridicule in which the satirist indulged, started up a

H A R

H A R

host of esteemed among his contemporaries, and to the partiality of the queen he owed his escape from a Starchamber prosecution though it is said he had not spared even her favourite Leicester. In 1599 Hervington accompanied the earl of Essex to Ireland and received from him the honour of knighthood a circumstance which gave offence to the queen. This probably induced him to retire from court to his seat near Bath. On the accession of James I he was made a knight of the Bath and he was favoured with the correspondence of that learned monarch, though it does not appear that he obtained any more substantial marks of favour of which he stood in need, having through the carelessness of his disposition considerably lessened his estate. He died in 1612. A volume of his Most elegant and witty Epigrams was published in 1625, and other pieces of his including A brief View of the Church of England to the year 1608 were printed in the *Nugae Antiquae*. —*Warren's Hist. of Bath.* *Atlas: G. Brog.*

HARINGTON (HARVY) a descendant of the preceding an eminent physician at Bath. He was born in 1723 and after previous tuition he went to Queen's college Oxford where he took the degree of Master of Arts. He then engaged in a course of medical study with a view to professional practice and in 1762 he obtained the degree of Doctor of Physic. Leaving the university he settled at Wells whence he subsequently removed to Bath. There he distinguished himself not only by his medical talents but also by the cultivation of general literature and by his fondness for music and his skill both as a performer and a composer. He instituted a musical meeting at Bath styled the Harmonic Society for which he wrote many glee's and other compositions which have been much admired. He also composed anthems of extraordinary merit. While at Oxford in 1769 Dr Harrington published the first volume of the interesting work entitled *Nugae Antiquae* a collection of original Papers, written in the Reigns of Henry VIII queens Mary Elizabeth &c. A second volume appeared in 1775 and the collection was republished in 3 vols. 1779. Among the other productions of Dr Harrington are — An Ode to Harmony an Ode to Discord, the Witch of Wokey a Ballad, and he was also the author of The Geometrical Analogy of the Doctrine of the Trinity. He died January 10th 1816.—*Bretton's Hist. of Bath Abbey Ann. Reg.*

HARIBI (AUB MOHAMMED AL CAASIM) a celebrated Arabian writer of the twelfth century. He composed a work which is regarded among his countrymen as a model of literary taste and eloquence. It consists of fifty discourses on moral subjects illustrated by apposite narratives, in the Oriental taste — *D'Herbelot.*

HARLES (THEOPHILUS CHRISTOPHERUS) an eminent Greek scholar and critic who was a native of Culmbach in Swabia. In 1764 he

was appointed adjunct of the faculty of philosophy at Erlangen and the following year he obtained the chair of Greek and Oratatio literature in the gymnasium of Cobourg. In 1770 he returned to the university of Erlangen with the title of director of the philosophical seminary librarian and professor of rhetoric and poetry. His first publication was an essay De Frisoconam apud Gracios officio 1764 which was followed by his dissertations De Pedantismo philologico Cobourg, 1765, and De Galantissimo aesthetico et philologico 1768. He also wrote the lives of eminent philologists in Latin an interesting work of which the second edition was published at Bremen 1770 72. Besides editions of several of the Greek and Roman classics, he produced a Greek and a Latin poetical anthology and introductions to the history of Greek and Latin literature. But the most important of his labours is the second edition of the *Bibliotheca Graeca* of Fabrianus published at Hamburg 1790—1809 12 vols. 4to. He also edited many dissertations and tracts of other learned men and wrote many pieces which appeared in periodical journals. His death took place November 2 1814 at the age of seventy-six. —*Bigg Univ.*

HARLEY (ROBERT) earl of Oxford and earl Mortimer a distinguished minister of state in the reign of queen Anne. He was born in London in 1661, and was the son of sir Edward Harley a Herefordshire gentleman, who had been an active partisan of the parliament during the civil war. The subject of this article though of a presbyterian family adopted Tory principles in politics and joined the high church party. After the Revolution he sat in parliament for the borough of Tragway and in the reign of William III he seems to have acted with the Whigs, for in 1694 he had the charge of bringing in a bill for the frequent meeting of parliaments. But after the accession of Anne he as well as his more celebrated colleague St John afterwards lord Bolingbroke deserted the party with which they had acted and became leaders of the Tories. Harley was chosen speaker of the house of Commons in 1702 and afterwards was secretary of state. He resigned his post in 1708. The cabals of their political opponents having effected the removal of the duke of Marlborough and his friends from office Harley was nominated a commissioner of the treasury and chancellor of the exchequer in 1710. In the following year he narrowly escaped losing his life by the hand of an assassin. The marquis of Guiscard, a French catholic who had been taken up on suspicion of designs against the state while undergoing an examination before the privy council at Whitehall stabbed Mr Harley with a penknife. The man was sent to Newgate where he died shortly after, and an act of parliament was passed making it felony to attempt the life of a privy counsellor engaged in his official duties. In 1711 Harley was raised to the peerage and constituted lord high treasurer. After the peace of Utrecht in

H A R

1711, the Whig statesmen, having no longer any apprehensions of danger from abroad began to quarrel among themselves, and the two chief, Oxford and Bokngbroke especially appear to have become personal and political foes, actuated by different views and sentiments. The former resigned the treasurary just before the death of the queen in 1714. Whatever projects may have been formed by others of the party there seems to be no ground for believing that lord Oxford had engaged in any measures to interrupt the protestant succession. Early in the reign of George I he was however impeached of high treason by the house of Commons and was thereupon committed to the Tower. He remained in confinement till June 1717 when at his own petition he was brought before the house of Peers and, after a public trial acquitted of the crimes laid to his charge. The rest of his life was spent in comparative seclusion, and in adding to the literary stores in the collection of which he expended a considerable portion of the wealth which his public employments had enabled him to accumulate. He died May 21st, 1724. His patronage was extended to Swift Pope and other literary men who repaid his favours with their eulogies. Pope thus celebrates him "A soul supreme in each hard instance tried Above all pain all anger and all pride The rage of power the blast of public breath, The lust of lucre and the dread of death" Lord Oxford was himself an author having published— A Letter to Swift for correcting and improving the English Tongue, An Essay on Public Credit, An Essay upon Losses, and A Vindication of the Rights of the Commons of England —He was succeeded in his titles by his son Edward who augmented the collection of printed books and manuscripts formed by his father. On the death of the second earl of Oxford in 1741 the library of printed books was sold to Osborne a bookseller who published a catalogue of them, compiled by William Oldys and Samuel Johnson 4 vols. 8vo 1743 The MSS are preserved in the British Museum, where they form the Bibliotheque Harleiana.—*Collins's Lives of the Earls of Oxford.*

HARMAR (John) a learned English clergyman of the seventeenth century born at Chelchidown, Gloucestershire, 1594 and educated at Winchester grammar school of which foundation his father, of the same name was warden. Having completed his education at Magdalen college Oxford where he graduated in 1617 he accepted the head mastership of the foundation school at St Albans, but in 1650 was chosen professor of Greek in the university of which he still continued a member. Nine years afterwards he obtained the living of Ewhurst Hants, but having distinguished himself during the progress of the civil wars and the protectorate by his adherence to the republican party he was deprived, on the restoration of monarchy of his benefice as well as of his professorship. He was an elegant writer, and remarkable for

H A R

the purity of his Latinity of his works the principal are— "Jama Lingarum;" "Pistic Grammatica, 8vo, a Latin translation of some cantos of Hesiods and an encomium in the same language on Cromwell and his affection. He also published an etymological lexicon of the Greek tongue. His death took place in 1676.—*Wood. Calamy.*

HARMER (Francis) an erudit orientalist, a native of Norwich in which city he was born in 1715. He received his education at a private academy in London but dissenting from the doctrines of the church of England, was of course precluded the benefit of an university education. His progress in the languages of the East was very considerable ample proofs of which are especially evinced in his annotations on Solomon's Song. His other works are An Account of the Jewish Doctrine of the Resurrection and Observations on divers parts of Scripture illustrated by the accounts of Travellers in the East 4 vols 8vo, a treatise which has gone through several editions since its first publication in 1764. He died minister of a dissenting congregation at Wakesfield Suffolk, in 1788.—*Gent Mag.*

HAROLD I surnamed Harefoot king of England succeeded his father Canute in 1035 notwithstanding a previous agreement that the sovereignty of England should descend to the issue of Canute by his second wife the Norman princess Emma. His countrymen the Danes, maintained him upon the throne against the efforts of earl Godwin, in favour of Hardicanute but Harold gaining over that leader by the promise of marrying his daughter a compromise was effected and they united to effect the murder of prince Alfred son to Etheldred II. After a reign of four years in which nothing memorable occurred, Harold died in 1039.—*Hume's Hist. of Eng.*

HAROLD II king of England was the second son of the potent Godwin earl of Kent. He succeeded his father in his government and great offices, and upon the death of Edward the Confessor in 1066 stepped without opposition into the vacant throne without attending to the more legal claim of Edgar Atheling or the asserted bequest of Edward in favour of the duke of Normandy. The latter name directly called upon him to resign the crown and upon his refusal prepared for invasion. He also instigated Harold's brother Tostig who had retired in disgust to Flanders to infest the northern coasts of England in conjunction with the king of Norway. The vast fleet of these chiefs sailed up the Humber and landed a numerous body of men, who defeated the opposing forces of the earl of Northumberland and Mercia but were totally routed by Harold whose brother Tostig fell in the battle. He had scarcely time to breathe after this victory before he heard of the landing of the duke of Normandy at Pevensey, in Sussex. Hastening thither with all the troops he could muster, a general engagement ensued at Hastings October 14, 1066 in which this spirited prince, after ex-

A R

making every effort of valour and military skill, was slain with an arrow, and the crown of England was the immediate fruit of William's victory.—*Ibid.*

HAROUN or AARON AL RASHID a famous caliph of the Saracens, was the second son of the caliph Mahudi. He succeeded his older brother Hadi, in the caliphate AD 786 and was the most potent prince of his race ruling over territories extending from Egypt to Khorasan. He obtained the name of Al-Rashid, or the Just but his claim to the title must be regarded with considerable allowance for Eastern notions of despotic justice. One of his noblest qualities was his love of learning and science; he caused many Greek and Latin authors to be translated and dispersed throughout his empire and even made his subjects acquainted with the Iliad and the Odyssey. He eight times invaded the Greek Empire, and on the refusal of the emperor Nicephorus, in 802 to pay tribute addressed to him a singularly arrogant epistle and followed it up by an intrusion into Greece which terminated in the defeat of Nicephorus who was obliged to pay an augmented tribute and agree not to rebuild Heraclea and the other pillaged and dilapidated frontier towns. During these transactions the ruin of the family of the Barmecides exemplified the despotic rigour of Haroun's character. Yusa, the head of it, had superintended his education and of his four sons the eldest was a successful general the second the caliph's prime minister Giaffer and the third and fourth in dignified stations. The generosity munificence and affability of the Barmecides rendered them the delight of all ranks of people and Giaffer was so much in his master's graces, that the caliph in order to enjoy his company in the presence of his sister Abasah to whom he was equally attached formed a marriage between the princess and vizier but with the capricious restriction of their bearing the privileges of such an union. Passion broke through the unjust prohibition [see article ABASAH] and the caliph in his stern revenge publicly executed Giaffer and confiscated the property of the whole family. A decree was even made forbidding all mention of the names or actions of the Barmecides which a grateful old man venturing openly to disobey with the capricious magnanimity of a despot was not only pardoned but rewarded. Haroun attained the summit of worldly power and prosperity and the French historians mention a splendid embassy which he sent to Charlemagne which among other presents, brought a magnificent tent, a water clock, an elephant, and the keys of the holy sepulchre at Jerusalem, implying a permission for European pilgrims to visit it. Haroun was seized with a mortal distemper while proceeding to march to put down a rebellion in the provinces beyond the Oxus; and retiring to Tous in Khorasan, expired in the forty-seventh year of his age and twenty third of his reign. The popular shape of this caliph is evinced by the Arabian Nights Entertainments, in which

H A R

Haroun, his wife Zobeida his vizier Giaffer and chief eunuch Memar are frequent and conspicuous characters.—Morgan's *Hist. of the Caliphs*. Gibbon.

HARPALUS. There were two of this name one a Greek astronomer who corrected the Cycle of Cleostatus, about four hundred and eighty years before the Christian Era. This alteration from a revolution of eight to one of nine years, was in the fourth year of the eighty second Olympiad again improved by Meton who increased the Cycle to a period of sixteen years. The other Harpalus, was one of the captains of Alexander the Great, who being entrusted by that conqueror with the superintendance of the plunder of Babylon absconded with a considerable portion of the treasure.—Fabric. Bibl. Greec. Arc. Univ. His.

HARPE (JEAN FRANCOIS DE LA) a French dramatic poet, critic and philosopher of the last century born at Paris November 20th, 1739. His father a Swiss officer in the French service dying in indigence Assehn president of the college of Harcourt, received him into that seminary where he enjoyed the benefit of an excellent education. A lampoon on his benefactor which was in all probability without foundation attributed to him, occasioned the temporary confinement of the suspected atheist. This circumstance disgusted him with his situation and at a very early age he threw himself on his own talents as an author for support. His first production was the tragedy of Warwick 1763, which was very beneficial to him in a pecuniary point of view as well as in procuring him considerable reputation. Some others which followed from his pen met with less success but a series of odes on Charles V Catinat, Fenelon Voltaire and Henri Quatre (especially the latter) gained him at last an equal degree of credit, though in a different department of literature. On the breaking out of the revolution La Harpe embraced the principles of republicanism but during the reign of terror his moderation rendering him an object of suspicion to those then in power he was thrown into prison in 1793 and while in confinement is said to have owed his conversion to Christianity to the arguments of his fellow-captive the bishop of St Brieux. Though sentenced to deportation the changes of the times finally restored him to liberty and he passed the remainder of his days in literary retirement, till 1803 when he departed this life in his sixty fourth year. His principal work is "Lyceum or a complete course of Literature" five 12 vols., among the rest are—Gustave Van "Timoleon", "Pharamond" and "Philoctetes," tragedies the latter an elegant translation from the Greek of Sophocles; "Tangu et Felune," a poem 1779; Translations of Camoens' Lusand 2 vols. The Psalms of David and the works of Suetonius, 3 vols.; A Commentary on the dramatic works of Racine" 7 vols. &c. The Correspondence of the Czar Paul the First, 4 vols. &c., and a refutation of

H A R

the opinions of Helveticus-Durk. Hist. of
Socys.

HARPOCRATES (VALERIUS) of Alexandria, a rhetorician, the age of whose existence is variously fixed at 180 and 360 years posterior to that of Christianity. A lexicon of his, " Of the ten Orators of Greece," is yet extant. Of that work there are two excellent editions, the Venetian one of 1603, printed by Aldus, in folio, and that by Gruterius, Leyd. Edit. 1696, 4to. The latter is however by far the most valuable — *Fabrius Bel. Grec.*

HARPSFIELD There were two brothers of that name ecclesiastics of the sixteenth century born in London. They were both educated at Winchester school whence in due course they removed on the foundation to fellowships at New college Oxford in 1534. John the elder became chaplain to bishop Bonner who presented him first to the rectory of St Martin Ludgate in the city of London and afterwards to that of Layndon, Essex with the archdeaconry of London. He was subsequently appointed dean of Norwich, but on the restoration of Protestantism under Elizabeth, lost all his preferment, and was committed close prisoner to the Fleet. He was the author of a system of chronology from the deluge down to the year 1559 and of a volume of homilies. He recovered his liberty a short time previous to his death which took place in 1578. Nicholas, the younger of the two, was archdeacon of Canterbury and held a stall in St Paul's cathedral but the same event which deprived his brother of his liberty and preferment operated in a similar way upon his own prospects. He underwent a long imprisonment in Lambeth palace and died in 1579 or as others say in 1583. He published a history of Wickliffe's Heresy an Ecclesiastical History of England, and six dialogues against the impugners of the pope's supremacy &c.—*Wood. Bag. Brit.*

HARRINGTON (JAMES) see Appendix.

HARRIOT (THOMAS) an English mathematician and astronomer of the beginning of the seventeenth century. He was born at Oxford in 1560, and received his education at St Mary Hall, at that university where he took the degree of BA. in 1579. He afterwards became an inmate in the family of sir Walter Raleigh, and his tutor in mathematics. In 1585 he was sent to Virginia by that gentleman, with the colony which went out under sir Richard Grenville to settle the country. He remained there about a year and on his return published at the result of his observations: "A brief and true report of the new found land of Virginia, of the commodities there found and to be raised, &c." 1588, 4to. He was then introduced by sir Walter to the earl of Northumberland, who received him into his family and settled on him a pension of £300. or, according to other accounts, £300. per annum. He passed much of his time with his patron, who, as well as Raleigh, was kept a prisoner in the Tower. Harriot also resided several years at Spyn col-

H A R

lege, where he died in consequence of a cancer in the lip, July 2nd, 1621. Harriot was intimately acquainted with mathematical science, and his knowledge was the subject of general envy among his contemporaries. He was the inventor of the present improved method of algebraical calculation, first made publick in his posthumous work, entitled "Arithmeticae Praxis ad Equeationes Algebraicas novas, expedita, et generali methodo re solvendas" 1631. The improvements in this work were adopted by the celebrated French philosopher Des Cartes and published as his own Dr Wallis, in his treatise on Algebra, vindicated the claims of Harriot, and the same task has been more recently performed by Zach astronomer to the duke of Saxe Gotha, in the Astronomical Ephemeris of the Academy of Sciences at Berlin for 1788. He has also shown that Harriot had much merit as an astronomer. A tract of his on that subject, entitled "Ephemeris Chrysometria," is said to be preserved in the library of Saca college — *Bag. Brit. Ailen's G Bag*

HARRIS (GRANOS) a writer on civil law. He was the son of Dr John Harris bishop of Llandaff and was educated at Orsi college Oxford. In 1750 he took the degree of JUD and was admitted a member of the College of Advocates. He died in 1796. He published a translation of the Four Books of the Institutes of Justinian, with notes, and a preface 4to. The translation says Butler is excellent, and it is much to be lamented that the preface is not longer and the notes more copious. Dr Harris was also the author of Observations on the English Language 8vo—*Cotes's Catalogue of Civilians. Butler's Home Juridice Subsecione*

HARRIS (JAMES) a learned writer on philology and the philosophy of language. He was born at Salisbury in 1709 and was nephew to lord Shaftesbury author of the Characteristics. Having passed through his preliminary studies he entered as a gentleman commoner of Wadham college Oxford at the age of sixteen after which he became a probationer at Lincoln's Inn. The death of his father put him in possession of an independent fortune at the age of twenty three, on which he retired to his native place to dedicate his time to classical literature. In 1744 he published a volume containing three treatises, On Art, on Music and Painting, and on Happiness. This was a prelude to the most celebrated of his productions, "Hermes or a Philosophical Enquiry concerning Universal Grammar." This work displays much ingenuity and an extensive acquaintance with the writings of the Greek poets and philosophers, but the author's ignorance of the ancient dialects of the northern nations has caused him to take an imperfect survey of his subject and though on minor topics his illustrations are often happy, his general system is unsatisfactory. In 1761 he was chosen MP for the borough of Christchurch, and the next year he was appointed one of the lords of the admiralty, which office he exchanged in 1763

H A R

for that of a kind of the treasury. On the change of ministry in 1763, he was obliged to retire, but in 1774 he was made secretary and comptroller to the queen in which post he continued during the remainder of his life. Literature still occupied much of his time, and in 1775 he published "Philosophical Arrangements" part of a systematic work which he had projected as an illustration of the Logic of Aristotle. His concluding work "Philological Inquiries" was completed in 1790 but was not published till after his death which event occurred December 22, 1790. A collective edition of his works was published by his son the earl of Malmesbury 2 vols 4to 1801.—*Memoirs original to his Works*

HARRIS (JAMES) see MALMESBURY

HARRIS (JOHN) a natural philosopher of the last century who deserved notice as the compiler of a work which may be considered as the prolific parent of the class of books called Encyclopedias. He was educated at Cambridge for the clerical profession and in 1698 he obtained the degree of D.D. He held at different times several church preferments notwithstanding which he died in as different circumstances in 1719 aged about fifty-two. His principal literary labour was,

Lexicon Technicum or a Universal Dictionary of Arts and Sciences 2 vols, folio 1708 afterwards augmented to 3 vols. He also compiled a collection of voyages and travels 2 vols folio 1703 and a History of the County of Kent folio 1719 besides several mathematical works.—Rees's Cyclop

HARRIS (WILLIAM) a dissenting clergyman of some note as an historian or biographer. He was a native of Salisbury and was educated at an academy kept by the rev Henry Grove at Taunton. After having officiated as a minister at other places in the west of England he settled at Honiton in Devonshire where he died in 1770. His principal publications are—*An Historical and Critical Account of the Life and Writings of James I* 1754 8vo similar accounts of Charles I 1758 8vo, Oliver Cromwell 1762 8vo and of Charles II 1767 2 vols 8vo republished in 5 vols. 8vo 1814. These biographies are written in professed imitation of Bayle, the text being made subservient to the notes. As to politics and religion the principles of the writer approach to republican re-echoing the sentiments of his patron Mr Hinde.—Acton's *G Bag*

HARRISON (JOHN) a most skilful mechanician noted as the inventor of the famous time-keeper for ascertaining the longitude at sea, and also of the quadrant pendulum. He was born at Foulby near Pontefract in York shire in 1693, and was the son of a carpenter or builder, who brought him up to the same occupation. His education was very confined a circumstance which not improbably strengthened his inventive faculties as an artist. In 1700 he removed with his father to Barrow in Lincolnshire where he acquired some knowledge of mathematics by studying a MS.

copy of professor Savardson's lectures. The bent of his genius led him to devote himself to mechanics and especially to horology. Before he had attained the age of twenty one, he without instruction found out how to clean clocks and watches, and made two clocks, chiefly of wood work. He at length employed himself solely in contriving improvements in chronometry, and in 1728 he visited London with descriptive drawings of a machine for determining the longitude at sea in expectation of being engaged to make one for the board of longitude. His invention being examined by Graham the celebrated mathematical instrument maker he advised Hornsby to execute his machine before he applied to the board of longitude. He accordingly went home and in 1735 he returned to London with his first machine the merit of which he proved in a voyage to Lisbon. In 1739 he completed a second machine more simple and superior to the former and in 1749 he made a third machine which erred only three or four seconds in a week and which he was disposed to consider as the *ne plus ultra* of accuracy. He then turned his attention to the improvement of pocket watches in which he succeeded so well that he was induced to make a fourth machine or time keeper in that form which he finished in 1759. This chronometer in two voyages having been found to correct the longitude within the limits required by the act of parliament of the 12th of Queen Anne Harrison applied for the proposed reward of 20 000*l* which he received. This ingenious artist employed the latter part of his life in constructing a fifth improved time-keeper on the same principle with the preceding one. Thus he executed so well that after a ten weeks trial in the king's private observatory at Richmond in 1772 it was found to have erred only four and half seconds. He died at his house in Red Lion square, London March 24, 1776. He was the author of a tract entitled a Description concerning such Mechanism as will afford a nice & true Measurement of Time 1775 8vo. His unremitting pursuit of an exclusive object prevented him from acquiring literary knowledge, and the disadvantage he thus laboured under is sufficiently obvious in the publication yet it is asserted that in conversation he expressed himself with distinctness and propriety conveying his ideas on professional subjects in a clear and intelligent manner.—Noothouse's *Historical and Classical Dict Histoy's Methode Part 2nd Ann. Rep.*—HARRISON (WILLIAM) FRS son of the foregoing. In early life he was engaged in the same pursuits as his father whom he materially assisted in his chronometrical discoveries. He made two voyages with the time-keeper to Jamaica and Barbadoes in the course of which he incurred great danger from tempestuous weather. He subsequently obtained a seat in parliament for the county of Moamouth for which he served the office of high-sheriff in 1791. He was also for many years an active governor of the Foundling Hospital, and supported the cha-

rester a useful and public-spirited member of society. He died at an advanced age April 24. 1815. Both father and son were interred in the church-yard of Hampstead.—
Guy.

HARTE (WALTER) an English poet and dramatist was the son of another clergyman of the establishment of the same name who at the revolution relinquished all his preferments rather than take the oath to king William. He was born about 1697 and received his education at the free-school of Marlborough whence he was removed to St Mary's Hall Oxford, where he took his Master's degree in 1730. In 1737 he published a volume of poems, which he dedicated to the earl of Peterborough and among the list of the subscribers to which appears the name of Pope. In 1737 he published his *Essay on Satire* and in 1735 an *Essay on Reason*, in which he was maternally assisted by Pope. He subsequently became vice principal of St Mary's Hall and obtained so much reputation as a tutor that he was recommended by lord Lyttelton to the earl of Chesterfield as a travelling and private preceptor to his natural son with whom he made the tour of Europe from 1746 to 1750. On his return the last mentioned nobleman with some difficulty procured him the canonsry of Windsor. In 1759 he published his *History of Gustavus Adolphus* which although faithful and accurate as to authorities and facts failed chiefly owing to the pedantry and bad taste of the style. His last work was a collection of poems, entitled "The Amaranth" which appeared in 1763, with engravings designed by himself. As a poet he exhibited more information than genius, but is by no means unentitled to attention. He died in 1774, at St Austell in Cornwall of which place he was vicar. Besides the works already mentioned, Mr Harte was author of *Essays on Husbandry —Johnson and Chalmers's English poets*.

HARTLEY (DAVID) an English physician principally celebrated as a writer on metaphysics and morals. He was the son of an episcopal clergyman at Armley near Leeds in Yorkshire, where he was born in 1705. At the age of fifteen he was sent to Jesus college Cambridge, of which he became a fellow after he had taken his degrees in arts. He was intended for the clerical profession but having conceived doubts of the truth of the doctrines contained in the thirty nine articles his scrupulous conscience induced him to relinquish all thoughts of entering on an office in which his profession must have been preceded by subscription to the articles in question. He therefore engaged in the study of medicine and commenced practice as a physician at Newark in Nottinghamshire. Thence he removed to Bury St Edmunds in Suffolk and subsequently to London. When Mrs Stephen, a female empiric professed to have found out a specific for the stone, Dr Hartley patronised her nostrum and contributed greatly towards her obtaining the grant of £1000 from Parliament for her discovery. In

H A R

1736 he published "Observations made on ten Persons, who have taken the Medicament of Mrs Stephen, &cvo; and this pamphlet was followed by others on the same subject. Subsequent experience has not proved favourable to this medicament (which is composed of soap and lime-water) and Dr Hartley himself after having taken as much of it as contained two hundred pounds weight of soap as said to have fallen a sacrifice to the disease for which it was recommended. He spent the latter part of his life at Bath and died there August 28 1757. He wrote in defence of inoculation for the small pox and also some papers which appear in the Philosophical Transactions, but his reputation as a philosopher and a man of letters depends on his work entitled *Observations on Man his Frame his Duty and his Expectations*, in two Parts, 1749 2 vols. 8vo. This treatise exhibits the outlines of connected systems of physiology mental philosophy and theology. His physiology is founded on the untenable hypothesis of nervous vibrations, and is so far quite inconsistent with the inferences to be drawn from modern discoveries in science. As a metaphysical writer he appears to more advantage. The doctrine of association which he has adopted and illustrated tends to elucidate the phenomena of intellectual philosophy and this part of Hartley's work has been published by Dr Priestley in a detached form, under the title of the *Theory of the Human Mind* 8vo. The second part of the Observations, relating to morals and religion has been commented on by Fustonius a German or Polish divine whose remarks are included in the edition of Dr Hartley's book published in 4to, 1791 and afterwards in 3 vols. 8vo.—*Athenæ G. Blag.*

HARTLEY (DAVID) son of the foregoing distinguished as a politician and an ingenuous projector. He was for some time MP for the town of Kingston upon Hull, and in his conduct as a senator he uniformly displayed liberal and enlightened views, if his sentiments were not very striking or profound. His steady opposition to the war with the American colonies led to his being appointed one of the plenipotentiaries to treat with Dr Franklin at Paris, and some of his letters on that occasion were published in the correspondence of that statesman in 1817. In the house of Commons Hartley was one of the first promoters of the abolition of the slave trade. His scientific knowledge was exhibited in many useful inventions and particularly in a method of girding buildings from destruction by fire. This benevolent philosopher died at Bath December 19 1813 aged eighty four.—*Bug. Univ.*

HARTLIB (SAMUEL) a learned man, who was of Polish origin, and many of whose ancestors had been privy counsellors to the German emperors and other princes. He came to England about 1650 and in 1661 he published in London a narrative of the attempts made to bring about a religious union among the protestants. During the civil war which fol-

H A R

hewed he was exclusively occupied in scientific pursuits and projects for the improvement of agriculture, manufactures, and education. A work relating to the agriculture of Flanders and Brabant, by Robert Child, which he revised and published in 1652 attracted the notice of Cromwell who bestowed on Hardib a pension of 100*l.* a year. He applied himself with ardour to the practice of agriculture which then began to be a subject of general concern. He founded a school for the instruction of gentlemen's sons which probably occasioned Milton to address to him his tractate on Education. He published other works, but neither his writings nor his projects appear to have tended to his own emolument. He was supported by the government and his pension was augmented to 300*l.* But this ceased at the Restoration and Hardib reduced to distress presented a petition to the parliament the result of which is not known neither have any memorials been preserved of the date or circumstances of his death.—Warton's Edit. of Milton's Poems Engg Univ.

HARTMANN (PHILIP JAMES) a German physician of the seventeenth century distinguished for his researches concerning natural history and comparative anatomy. He published *Succini Præstica physica et civits Historia Francof* 1677 8vo and other works relative to the natural history and medical properties of amber. Several interesting papers written by him are extant in the *Miscellanea Curiosorum Naturæ* chiefly relating to the anatomy of animals, but one of them refers to the nature and origin of aérolites or substances projected from the atmosphere a subject then very imperfectly understood. Hartmann's essay is entitled *Exercitatio de generatione Mineralium Vegetabilium et Animalium in Aere occasione Anomiae et Tempestatis delapsae anno 1686 in Curonia.* — Graecus Bab. Regn. Animal. et Lapid.

HARTSOEKER (NICHOLAS) an eminent Dutch mathematician and natural philosopher was born at Gouda in Holland in the year 1656. His father a remonstrant divine intended him for the ministry, and discouraged his attention to the heavenly bodies and similar pursuits, by stating the necessity of a due proficiency in the mathematics, in order to succeed in them. Convicted of this truth Hartsoeker saved his boyish allowance and presents of money and applied to a teacher of the mathematics under whom he made a rapid progress and also learned to grind optic glasses. At length, partly by accident he was led to the construction of single microscopes, by the means of which he discovered annuli in semina humano and laid the foundation of a new theory of generation. He subsequently spent some years at Leyden and Amsterdam in the study of the belles-lettres, Greek philosophy and anatomy until 1672 when he resumed his microscopic discoveries which he communicated to Huygens, who published them in the *Journal des Savans.* In 1673 he visited Paris, and proceeded to and glasses of all descriptions, until at

length he constructed one of 600 feet focus with which he would amusest. In 1679 he returned to Holland, and married, but again visited Paris in 1684 where he continued twelve years and in 1694 published his first work under the title of "Essai de Dioptrique" in which he demonstrates the whole theory of that science as far as regards spherical glasses and also proposes the first principles of natural philosophy. Encouraged by the success of this work he two years afterwards published his "Principes de Physique," in which he further explains his theory. In 1699 he was elected a foreign associate of the French Academy and after declining an invitation from Peter the Great to visit Russia in 1704 he went to the court of the elector palatine who appointed him his mathematician and professor of philosophy at Heidelberg. Here in 1707 and 8 he published his lectures, under the title of "Conjectures Physiques" in which he embraces the notion of plastic souls. He then set out on a tour through Germany and at Hanover was presented to Leibnitz. In the years 1710 and 1712 he published two volumes entitled "Eclaircissements sur les Conjectures Physiques" containing answers to the objections of that work in which he attacks with indeferable virulence several names of the highest respectability in the scientific world including those of Newton Huygens and Leibnitz. He died at Utrecht in 1725 in the sixty ninth year of his age and after his death his

Course of Natural Philosophy was published at the Hague in one volume 4to. Hartsoeker's theory of plastic souls is not unlike that of Dr Cudworth except that he attributes intelligence to these plastic natures, and endeavours to revive the exploded notions of the ancients by giving them to planets and even to celestial bodies.—Edge by Fontenelle

HARVEST (GEORGE) an English clergyman respectable for his learning and abilities, but more distinguished for the eccentricity of his habits and manners. He received a liberal education and took the degree of MA at the university of Cambridge where he became a fellow of Magdalen college. In this situation he displayed so much inattention or absence of mind in the most common as well as in the most important affairs of life as to render his behaviour whimsical and absurd. Among the many anecdotes of him in circulation is the following.—He paid his addresses to a lady and being accepted the day was fixed for the wedding. Early in the morning he took his rod and line and went to amuse himself with the sport of angling never once thinking of his engagement till it was too late for the marriage to take place. The lady was too much offended to accept his apologies and he lost his bride. He was the author of *The Grounds and Reasons of Temporal Judgments considered* a rebellion sermon 1746 8vo; a *Collection of Sermons*, preached occasionally on various Subjects, 1763, 8vo; and a tract on the reasonableness and necessity of subscription to the thirty-nine articles, 1773,

H A R.

Stn. He appears to have had at one time the impugnate rectorcy of Drayton in Middlesex He died in 1776.—*West's Bibl. Brit.*

HARVEY (GARVY) a writer of the sixteenth century principally known at present as the bitter opponent of Robert Greene and Thomas Nash, two profligate wits and satirists of the Elizabethan age and as the friend and panegyrist of the poet Spenser. If Nash's satire is to be credited Harvey was the son of a rope-maker. He was however educated at Cambridge and became a fellow of Trinity hall in that university. He adopted the profession of a civilian and having obtained the degree of doctor at Oxford he practised as an advocate in the prerogative court. He died in 1630. He was the author of *Three proper Letters touching the Earth quake*, *Two Letters touching artificial Verifying*, and some Latin orations and verses. As an English poet his works though few are by no means unimportant. They consist of the well known copy of verses signed

Hobmial prefixed to Spenser's *Faery Queen*, and Sonnets, touching Robert Greene and others in one of which the author's wrath vents itself in a sublimity of expression and sentiment calculated to inspire respect for his abilities. But he sometimes attacked his adversaries with lighter weapons. Nash wrote a tract against him, entitled

Have with you to Saffronwelden or Ga-nell Harvey a Hunt is up. Containing a full Answer to the eldest Sonne of the Halter maker. This appears to have been a reply to Harvey's piece called *Pierces Supererogation or a new Praye of the old Ashe*. A Preparative to certaine larger Discourses in tituled *Nashen S. Fane* 1593 4to Both these are among the rarest of scarce books, each being marked 25*t* in a bookseller's catalogue for 1814.—Gabriel Harvey had two brothers, JOHN and RICHARD who seem to have shared with him the literary enmity of the wits. The former was the author of several tracts on judicial astrology a subject of general attention among the learned in the sixteenth century. Richard Harvey also wrote on the same fashionable science, and he likewise published a book entitled *Philadelphus* or a Defence of Brates and the Brutus His story London 1593 4to.—D'Israeli's *Quar rels of Authors*. Ed.

HARVEY (WILLIAM) an English physician, celebrated as the discoverer of the circulation of the blood. He was of a respectable family and was born at Folkestone, in Kent April 2nd, 1578. He was sent to a grammar school at Canterbury, and in 1593 removed to Caius college Cambridge. At the age of seventeen he went abroad for improvement and after visiting France and Germany he stayed some time at the university at Padua, where Medicina ab Aripendente and other commentaries, were professors of the medical sciences. He took the degree of MD in 1602 and returning to England obtained a similar distinction at Cambridge. Having settled in London in 1606 he was admitted a licentiate

H A R.

of the college of physicians, and three years after a fellow. He was also chosen physician to St Bartholomew's hospital. In 1615 he was appointed to read lectures at the college on anatomy and surgery and in the course of thus undertaking he developed the discovery which has immortalized his name. It was not till 1620 that he gave general publicity to his new doctrine of the circulation of blood by committing to the press his treatise entitled

Exercitatio Anatomica de Motu Cordis et Sanguinis in Animalibus. In a prefixed address to the college of physicians, he observes that he had frequently in his anatomical lectures declared his opinion concerning the motion of the heart and the circulation of the blood and had for more than nine years confirmed and illustrated it by reasons and arguments grounded on ocular demonstration. It speedily excited the attention of anatomists in every European school of medicine, and the theory of Harvey having been triumphantly defended against all objections, attempts were made to invalidate his claim to the discovery. To the famous father Paul of Venice to the Spanish physician Servetus whom Calvin had burnt for heresy and even to Hippocrates, attempts were made to transfer the honour of the discovery. The reputation of our countryman however has not been diminished by such attacks and it is now admitted that whatever hints may be found in the writings of his predecessors, Harvey first clearly demonstrated the system of sanguineous circulation and thus produced one of the greatest revolutions in medical science. The love of singularity or some motive equally frivolous may prompt cavillers to raise objections but it is a curious circumstance that a work was published in 1816 entitled *Observations on the Harveian Doctrine of the Circulation of the Blood* by George Kerr 12mo. the design of which was to prove that the arteries, as was supposed before the time of Harvey contain nothing but air or ethereal spirit. Harvey was appointed physician extraordinary to James I and in 1632 physician in ordinary to king Charles by whom he was much esteemed. Adhering to the court party on the occurrence of hostilities, he attended his majesty on his removal from London. He was with him at the battle of Edge Hill, and afterwards at Oxford where, in 1642, he was incorporated MD. In 1645 he was by the royal mandate created warden of Merton college in the place of Dr Brent, who had taken the covenant, and left the university. On the surrenders of Oxford to the parliament in the following year Brent was restored and Harvey returned to the vicinity of London. In 1651 he published his *Exercitationes de Generatione Animalium, quibus accedit quadruplicis Parte de Membranis ac Humoribus Uteri, et de Conceptione*, 4to. This is a curious work and it would have been still more interesting had not the plunder and destruction of the author's museum by his political adversaries, while he was in the king's service, deprived him of the fruits of some of

his astronomical researches, especially relative to the generation of insects. In 1656 his brethren of the college testified their sense of his merits by erecting his bust in their hall with an inscription recording his discoveries. He in return built for the college a combustion room, library and museum. He was elected to the presidency in 1654, but he declined accepting the office on account of his age and infirm state of health. He gave an additional testimony of his regard for his professional associates by presenting to the college his paternal estate of 561 a year for the institution of an annual festival and other purposes. Hence has originated the Harveian oration. In his old age he was subject to distressing attacks of the gout, which contributed to shorten his existence so much that he is said to have shortened his days with a dose of opium. He survived however to complete his eightieth year and whatever may have been the immediate cause of his dissolution he maintained to the last the esteem and respect of his contemporaries and has secured the admiration of posterity. He died June 3rd 1658, and was interred at Hampstead in Essex his funeral being attended by all the fellows of the college. A splendid edition of his works was published in one volume quarto, in 1766 with a prefixed account of his life from the pen of Dr Lawrence.—*Bug. Brit. Hutchinson's Bug. Med. Aikin's G. Bug.*

HARWOOD (*sur Burse*) an English physician and anatomist who was a native of Newmarket and studied at the university of Cambridge. After having improved himself by attending the hospital practice of the metropolis, he obtained a surgeon's commission in the army with which he went to the East Indies. There he was lucky enough to cure one of the native princes of a dangerous wound, which raised him to fortune and reputation. Returning to England he was chosen a fellow of the Antiquarian and Royal Societies, and in 1785 he obtained the professorship of anatomy at Cambridge where in 1790 he took the degree of M.D. He was appointed in 1800 professor of medicine at Downing college and he received the honour of knighthood in 1806. He died November 10th 1814. His works are—A Sketch of a Course of Lectures on Anatomy and Physiology 1786, 8vo and A System of Comparative Anatomy and Physiology the first part of which only was published.—*Bug. U. S.*

HARWOOD (EDWARD) a dissenting minister and ingenious writer on classical literature. He was born at a village in Lancashire in 1799. After being instructed at grammar schools in the country he was placed in one of the institutions for educating dissenting clergymen which were supported by the bequests of Mr Coward. In this seminary he continued five years, and on quitting it was employed as an usher at Peckham, near London, preaching occasionally at different chapels in the city. During this period he added to his knowledge of classical literature, and he was favoured with the friendly atten-

tions of Benson and Landor, two of the most learned among the dissenting clergy of the metropolis. In 1754 he removed to Congleton in Cheshire where he preached and kept a school and in 1765 he became pastor of a presbyterian congregation at Bristol. In 1768 he procured, through the interest of Dr Samuel Chasdier whose daughter he had married, the diploma of D.D. from the university of Edinburgh. After remaining about five years at Bristol he was forced to resign his situation in consequence of the diminution of his audience and his salary owing as he alleged to calumnious accusations of heresy. But he was also charged with immoral conduct, and on this point he never produced any satisfactory exculpation. He then removed to London and endeavoured but in vain to obtain an office in the British museum. He supported himself for some time by writing for the press and by acting as a private tutor. But in 1780 he suffered an attack of palsy which reduced him to so helpless a state that during the remainder of his life he was chiefly supported by the contributions of the benevolent, and he was one of the first individuals to whom the benefits of the Literary Fund were extended. He died in 1794. His principal publications were—An Introduction to the Study of the New Testament 2 vols. 8vo 1767 1771, A liberal Translation of the New Testament 1768 2 vols. 8vo

A View of the principal editions of the Greek and Roman Classics 1775 8vo, which was his principal work, and an edition of the Greek Testament with English notes 1776 2 vols. 8vo, besides which he was the author of some tracts of divinity and other pieces of little importance.—*Aikin's G. Bug.*

HASSAN PACHA a native of Africa who became grand vizier of the Ottoman empire. He served when young in the Algerian navy, and being taken by the Spaniards he was sent prisoner to Naples. Having after a time obtained his liberty he went to Constantinople where he entered into the service of the grand seignior. He was at the memorable battle of Ischemé fought against the Russians, in which he saved himself when his ship was set on fire by throwing himself into the sea, and swimming with his scymtar between his teeth to the shore. He was soon after appointed caputan pacha, or high admiral, in which post he maintained himself some years by his courage and talents. He vanquished the Egyptian insurgents, re-established order and tranquillity at Smyrna, in 1775 took Gaza, Jaffa, and Acre and beheaded the famous Daher sheik of the latter city who had for years braved the power of the Ottoman empire. After a glorious expedition to Egypt, Hassan returned to Constantinople with immense treasures and high renown. The boys of that country having again revolted, he returned to Egypt in 1786 landed at Alexandria, and gained a signal victory over the rebels. In 1788 war was renewed between the Turks and Russians, and the chief command of the forces by sea and land was entrusted to Hassan.

No want of energy was manifested on his part, but the season was unfavourable for military operations, and bloody battles were fought without any decisive advantage. Okmehow was at length taken by the Russians and this misfortune occasioned the dismissal of the commander-in-chief. He was not however as was customary strangled or disgraced but was sent to Iamali with the rank of a pacha of three tada. Defeat still attended the Ottoman arms, and he alone was thought capable of retrieving their fortunes. He was made grand vizier in 1789 but age had impaired his abilities and his appointment had but little effect. He died in March 1790 at the age of eighty seven.—*Bieg. Nouv des Contemp.*

HASSE (GIOVANNI ADALFO) surnamed Il Sassou a native of Bergedorf near Hamburg born 1699. He was educated in the rudiments of music at Hamburg and eventually became one of the ablest composers as well as most scientific singers of his day. Having completed his professional studies at Naples, under Porpora, he accepted in 1727 the situation of chapel master at Lince where he became acquainted with and ultimately married the celebrated Faustina Bordoni. After a variety of professional tours through the principal cities on the Continent Haase came to London in 1773 where his opera of

Artaserse performed for the debut of the well known Farnesii attained great popularity being represented above forty nights. The schism which distracted the musical world in England at that period, and the disputes then at their height between Handel and the singers soon caused him to return to Germany in disgust. His compositions are numerous consisting of eleven operas besides church and other music all as remarkable for the judgment displayed in them as for the genius of the composer. His wife Faustina, was no less eminent in her way and may be said to have invented a new method of singing by running divisions with astonishing neatness and precision. During the latter part of their lives they resided at the court of Dresden where they both died in 1789 the lady having attained to the age of ninety.—*Bieg. Dict of Mus.*

HASSELQUIST (FREDERICK) a Swedish naturalist was one of the most eminent among the disciples of Linnaeus. He was born in the province of Ostrogotha, in 1722. The death of his father who was vicar of a parish leaving him without the means of support, he exerted his faculties and obtained friends by whose assistance he was supplied with the means of instruction. In 1741 he went to the university of Upsal where his talents and industry drew the attention of Linnaeus. In 1747 he published a dissertation *De Viribus Plantarum*. Soon after he engaged in the scheme of making researches on the spot into the natural history of Palestine, and the university having furnished him with pecuniary resources, he embarked for Smyrna in August 1748 and arrived there about the end of No-

ember. After exploring the environs of that city he went to Egypt whence, in March 1751 he took the route to Palestine, as Damietta and Jaffa. He stayed some time at Jerusalem and afterwards visited other parts of the country. Returning to Smyrna, he brought with him a most noble collection of plants, minerals fishes reptiles, insects, and other natural curiosities. He was about to transport himself and his treasures to Sweden, when he was taken ill and died at Smyrna the 9th of February 1752. The expenses of his travels not having been liquidated his creditors would have seized his collections, but the Swedish queen, Louise Ulrica prevented this injury to science by purchasing the whole of Hasselquist's acquisitions which were deposited in the castle of Drottningholm. There Linnaeus had access to them and from the papers and specimens of natural history collected by his pupil he prepared for the press the *Iter Palastinum*, or Travels in Palestine with Remarks on its Natural History Stockholm 1757 8vo which work has been translated into English and other European languages.—*Bieg. Univ. Aikins Gen. Biog.*

HASTED (EDWARD) historian of Kent was the only son of Edward Hasted esq. of Hawley in that county who descended paternally from the noble family of Clifford. He was born in 1732 and was no doubt liberally educated but no account exists of his early life. At one time he possessed a competent landed property and acted as chairman at the quarter sessions at Canterbury. He subsequently fell into difficulties in consequence of some litigation in regard to his Kentish property and lived obscurely in the neighbourhood of London. A few years before his death he removed to the hospital at Cosham Wiltshire to the mastership of which he had been presented by the earl of Radnor, and soon after by a decree in Chancery recovered his estates in Kent. His laborious *History of Kent* (4 vols folio) employed his attention for upwards of forty years. It exhibits more research than taste and is chiefly valuable as a faithful record of the property of the county and of its genealogical history. He died 14th January 1812.—*Gen. Mag. vol lxxxii*

HASTINGS (WARREN) was born in 1732 or 1733 at the village of Churchill in Oxfordshire where his father was clergyman of the parish. He was educated at Westminster school, and in 1750 went out to Bengal as a writer in the East India company's service. After having filled some of the principal offices under the British government and made himself acquainted with Oriental literature and public affairs he returned to England in 1765, with a moderate fortune. At this period he became acquainted with Dr Johnson at whose recommendation he proposed the establishment of a professorship of the Persian language at Oxford but the plan was not carried into execution. In 1768 he received the appointment of second in council at Madras, and in 1771 he was removed to Bengal to the pre-

ministry of which he was dismissed the following year. In 1773 he was appointed by the legislature of Great Britain to the station of governor-general of India. Three years after the minister to whose influence he had owed his promotion wished to displace him, and his deposition was actually voted for by thirteen of the East India directors forming a bare majority of the court, but this vote was rescinded and Mr Hastings remained in authority. In 1778 the commission, by which he held his office expired, but it was renewed first for a single year and in 1781 for ten years longer; lord North who had endeavoured to remove him in 1776 thinking it afterwards desirable to retain him in his post. When the coalition took place between Mr Fox and lord North, the censures of the ministerial party were cast on Mr Hastings for his conduct in his government and especially for his treatment of the native princes and population of Hindostan. Mr Fox brought forward his famous India bill which the friends of Mr Hastings united with Mr Pitt in preventing from being carried, and the measure hastened the overthrow of the coalition ministry. Mr Hastings returned from his government in 1786 to meet an impeachment of high crimes and misdemeanours before the first tribunal of his country. Our national histories must be referred to for the particulars of this celebrated trial, in which all the talents and influence of a powerful party were arrayed against the accused. After the proceedings had been protracted through a period of nine years, he was acquitted. He then retired, with the wreck of his fortune and an annuity from the East India company to Daylesford, in Worcestershire where his family had formerly held an estate. He was made a member of the privy council but he interested himself little in public affairs and closed a life, the evening of which had been devoted to literary pursuits August 22 1818. He published some pieces relating to India, Speeches and Papers in defence of his conduct, and some fugitive poetry.—*Ann. Reg. Ann. Boe.*

HATFIELD (THOMAS) bishop of Durham, to which see he was elected in 1346 in consequence of the especial favour of Edward III. He was an able and magnificent prelate and distinguished himself by his abilities in civil affairs. He aided lord Percy to repel the Scots soon after his consecration and acted as commissioner to treat for the ransom of the king of Scotland who fell into the hands of the victors. He was the founder of Trinity college, Oxford, which was at first called Durham college. Durham-house in the Strand was also built by bishop Hatfield for himself and successors and he likewise founded a Carmelite friary at North Allerton in Yorkshire. He died in 1381 and was buried in his own cathedral of Durham where his effigies are still to be seen in tolerable preservation.—*Hutchinson's Hist. of Durham.*

HATTO, or ATTO VERCELLENSIS, bishop of Vercelli in Italy was born at Piedmont in the tenth century and was promoted

Bioe Dict.—Vol. II

to the episcopacy in 945. His works are—“*Labelius de pressum Ecclesiasticis*,” inserted in D' Achen's *Spatulagium*, which treatise on the grievances of the church is spoken of by Mosheim as curiously illustrative of the spirit and complexion of the times. He also wrote *Epiſtola* and *Canones Statuque Vercellensis Ecclesie* which are included in the same collection. His entire works, however including many other productions were published in 1768 at the *Complete Works of Hatto* 2 vols. folio.—*Bioe Uau*

HATTON (Sir CHRISTOPHER) an eminent statesman and lawyer in the reign of queen Elizabeth was the third and youngest son of William Hatton of Holdenby in Northamptonshire. He was entered a gentleman commoner of St Mary Hall Oxford, but removed without taking a degree to the Inner Temple not to study law but to enlarge his knowledge of the world. He came on one occasion to court at a masque when queen Elizabeth was so much struck with his graceful person and dancing that an introduction to her favour and its consequences was the immediate result. He began by becoming one of the queen's pen scribes from which he was successively promoted to be a gentleman of the privy-chamber captain of the guard vice chamberlain and privy counsellor by which very unusual gradation he reached the possession of the seals in 1587 as lord chancellor. His inexperience created much prejudice against him in the first instance but his sound natural capacity rapidly supplied his deficiency of information and study and his decisions were seldom found defective either in judgment or equity. He did not long enjoy his high office dying unmarried on the 20th September 1591 and if true as usually reported that he fell a victim to a broken heart in consequence of the stern demand by Elizabeth of an old debt, which he was unable to pay his history will form another example of the precarious advantage of court favour. He was a liberal patron of learning and averse to persecution and while vice-chancellor of Oxford from 1588 to the time of his death did much to reform the modes of education and discipline in that university. He is presumed to be author of *A Treatise concerning Statutes or Acts of Parliament* and the exposition thereof London 1677 4to, and Warton attributes to him the fourth act of the tragedy of *Tancred and Sigismunda* which bears at the end *Compositi Ch. Hat.* This play was the joint production of five students of the Inner Temple and was acted at that society before the queen. It is reprinted in the second edition of *Doddsley's old plays*.—*Laws of Lord Chancellors. Lloyd's Worches. Hume's Hist. of Eng.*

HAUKSBEE (FRANCIS) an English philosopher of the last century. He applied himself particularly to the study of electricity and he was the only experimentalist between the time of Otho Guericke and Stephen Gray who added to our knowledge of that science. He observed that a glass tube closed at one end, being rendered electric by friction, at

H A U

tracted from a certain distance metallic leaves and again forcibly repelled them. He made many other curious experiments the details of which he published in the Transactions of the Royal Society. He collected his own discoveries, and published them in his *Physico-mechanical Experiments on various subjects, touching light and electricity producible on the attraction of bodies*, with an explanation of all the apparatus used in the experiments London, 1709 4to, republished in 1719 and translated into Italian and French. He also published *Proposals for a Course of Chemical Experiments*, London, 1731 4to.

An *Essay for introducing a Portable Laboratory* 1731 8vo. These appear to have been his latest publications. The time of his death is not known.—*Biog Univ.*

HAUTEFEUILLE (JOHN) an ingenious French mechanist born at Orléans in 1667. He exhibited great skill in mechanics generally but especially in clock and watch making. He found out the secret of moderating the vibration of the balance by means of a small steel spring which obtained for the watchee thus constructed the name of pendulum watches. Huygens having perfected this invention claimed the honour and profit of the discovery, but was resisted by the abbé Feuill, who defended the right and priority of Hautefeuille. This ingenious mechanist wrote several small pieces on mechanical subjects, some of which, although brief are deemed very curious, as his *Perpetual Pendulum*, "New inventions," "Art of Breathing under Water;" "On Machines for raising Water;" "On the appearance of the Moon," "On the Longitude;" "A new System of the Flux and Reflux of the Sea, &c."—*Hutton's Math Dict.*

HAUY (RANDE JUER abbé) an eminent French natural philosopher celebrated for his discoveries in crystallography the whole theory of which is founded on his observations. He was the elder of two sons of a weaver in the little town of St Just in the department of Oise, where he was born February 28 1743. He was in the first instance brought up to the study of music, as a chorister in a church of the faubourg St Antoine at Paris and made considerable proficiency in the art, but being afterwards removed to the college of cardinal Lemoine he there contracted an acquaintance with the celebrated berbilist L'Hommede which induced him to apply himself to the study of botany, a pursuit in which the vacancy of his college to the Jardin des Plantes materially assisted him. Here too he had an opportunity of attending Daubenton's lectures on mineralogy a branch of science to which he afterwards devoted himself. The accidental fall of a beautiful specimen of calcareous spath, crystallized into prisms, led him to discover in some of the fragments the form of the crystalline rhombohedrae of the Iceland spath, and from this casual circumstance the whole of his theory respecting crystals, the means of examining and describing them, &c. took its origin. Being admitted a member of the Academy of Sciences in 1783, he continued

H A V

his mineralogical researches with great interest till the breaking out of the Revolution when refusing to take the oath to the ecclesiastical constitution he was deprived of all his emoluments and imprisoned. The interest of his friends having at length procured his liberation he was afterwards appointed a conservator of the mineralogical cabinet Domanieu, who had succeeded his old tutor Daubenton in his professorship dying Haüy was appointed to the vacant situation and lectured with great ability and effect, distinguishing himself as much by the kindness and benevolence of his disposition, which rendered him ever accessible to the humblest class of students as by the depth and variety of his erudition. Besides other scientific appointments he was named by the executive directory one of the forty members who formed the basis of the National Institute. Under the consulate he was professor of mineralogy at the Museum of natural history and after Napoleon became emperor Haüy was made professor of the faculty of sciences, at the academy of Paris. Though a favourite with the ruler of France he does not appear to have compromised his character by any unbecoming flattery, and the gratuities which he received were the just rewards of his labours in the cause of science. After the re-establishment of monarchy in France the Russian princes, Michael and Nicholas, attended Haüy's course of lectures on mineralogy. They wished to have purchased his mineralogical cabinet, for which he refused 600 000 francs, because it was still necessary for the prosecution of his researches. He died at Paris June 3 1822. His principal works are—*Essai sur la Théorie et la Structure des Cristaux* 1784
Traité de Minéralogie 1801 4 vols. 8vo,

Traité élémentaire de Physique, 1803 2 vols 8vo, *'Tableau comparatif des remèdes de la Crystallographie* 1809, *Traité des Caractères physiques des Pierres précieuses*, 1817, *Traité de Crystallographie* 1822 2 vols 8vo with an atlas. He also published papers in the *Journal des Mines*, and other periodical works.—*Biog Nouv des Contemp.*

HAVERCAMP (SIGMUND) a classical editor of considerable fame was born in Holland in 1684. In 1718 he was preacher at a village in the island of Overijsche and the same year published *Tertullianus Apologetum*, with a commentary. In 1721 he was appointed professor of Greek in the university of Leyden and afterwards filled the chair of history and rhetoric. He died in that city April 25 1742. His principal works besides Tertullian, are—"Dissertatio de Alexandri magni summisate," "Oratio de actione Oratiss sive Corporis eloquentiae Series su successorum Antiquorum Hen Adrani a Mark," "Thesaurus Morellianus," "The History of Asia, Africa, and Europe" in Dutch, "Regum et imperatorum Romanorum vasa et monumenta," "Lucretius" 2 vols. 4to, "Josephus," "Enteropae, 8vo, "Dionysius Periegates," 8vo, "Sallust," 2 vols. 4to.—*Moreri.*

H A W

MAYERIS (CLOPPEN) MD FRS an English anatomist, of whose life no particulars are recorded. He was the author of *Osteologia Nova* or some Observations on the Bones, &c. Communicated to the Royal Society in several Discourses, read at their Meetings, London 1691, 8vo. This work contains many important observations on the bones, marrow and periosteum, which show the writer to have been an industrious and skilful investigator of the animal structure. To him also we are indebted for a description of those glands which secrete a mucilaginous fluid which serves to lubricate the surfaces of the articular cartilages, and thus facilitate the motion of the joints. He was the editor of the *Anatomy of Man and Woman* from M Specher and J Remmelin London 1702 folio and he also published in the Philosophical Transactions an account of an extraordinary bleeding of the lachrymal gland and a discourse of concoction of the food.—*Hutton's Abt of the Phil. Trans.* *Watt's Bibl Brit*

HAWES (SIRPHUS) an English poet who flourished about the end of the fifteenth century was a native of Suffolk and educated at Oxford. He appears to have travelled in France Italy and Scotland and afterwards held a situation in the household of Henry VII who much valued his conversation. The principal work of Hawes is his *Pasture of Pleasure* first printed by Wynkyn de Worde in 1517 with wooden cuts. In the judgment of Mr Warton the personifications in this poem are often happily sustained and indicate the writer's familiarity with the Provençal school an opinion which is controverted by Mr Ellis. His other works are—*The Temple of Glass* in imitation of Chaucer's *Temple of Fame*. *The Converysyon of Swertes*, and a few other productions described in our authorities.—*Watson's History of Eng Poetry* Ellis's Specimens.

HAWES (WILLIAM) an English physician and founder of the Humane Society was born at Islington November 28 1736. He was educated at St Paul's school, and was brought up to the profession of an apothecary which he practised in the Strand until 1780 when he took his degree as a physician. In 1773 he became deservedly popular by his zealous exertions in the establishment of the Humane Society to the benefit of which institution he may be said to have dedicated the whole of his after life. In the first instance Mr Hawes paid the rewards for the recovery of drowning persons out of his own pocket, but was at length, by the zealous assistance of Dr Cogan enabled to engage the attention of the public and to form the society. This highly benevolent physician died at Islington on the 5th of December 1808. He was the author of *An Account of Dr Goldsmith's last Illness* whose death he attributed to an improper administration of James's powders.

An Address on Premature Death and Post mortume Interment, *'An Examination of the Rev John Wesley's Primitive Physic* being at once an ironical and serious exposure of

H A W

the absurdities of that production, *'An Address to the Legislature on the Importance of the Humane Society*, *An Address to the King and Parliament of Great Britain with Observations on the general Bills of Mortality*, *Transactions of the Royal Humane Society* from 1774 to 1784, dedicated by permission to the King.—*Gent Mag* vols. xxvii and xxix.

HAWES (THOMAS) an English divine was born at Truro in Cornwall in 1734. He was brought up an apothecary but afterwards went to Christchurch college, Cambridge and took the degree of BA. On taking orders he became assistant to Mr Medas at the Lock church at whose recommendation he obtained the living of Aldwinkle in Northamptonshire on the express stipulation that he would at a certain time resign it. This engagement he however refused to perform, and much scandal and controversy followed, until a compromise was effected by the interference of the countess of Huntingdon and he held the living until his death. Mr Hawes was also entrusted with the care of the chapels and seminary for students in divinity founded by the same lady. He died in February 1820. His principal works are a volume of *Sermons* *A Commentary on the Bible* 2 vols. folio *History of the Church* 3 vols. 8vo *Life of the Rev William Romane* 8vo *State of Evangelical Religion throughout the World* 8vo.—*Gent Mag*

HAWKE (EDWARD lord) a celebrated naval commander of the last century. His father a member of the English bar in compliance with the strong predilection which his son evinced at an early age for a sea-faring life procured him a midshipman's birth aboard a king's ship. After going through the usual gradations he was appointed in 1734 to the command of the *Wolf* and served with great credit under Mathews Lestock Rowley &c. Being promoted to the command of a sloop in 1747 he fell in with the French fleet which he totally defeated taking six large ships of the line. For this service he was presented with the vacant red ribbon and promoted to be vice-admiral of the blue. In 1759 being then vice-admiral of the white he was sent in pursuit of the Brest fleet, which he came up with off Belleisle and gave the enemy a second defeat not inferior to the first. These successes were rewarded with a pension of 2000. voted him by Parliament and in 1765 he reached at length the head of his profession being appointed vice-admiral of Great Britain and first lord of the admiralty. In 1776 he was further advanced to a seat in the house of Lords, but survived this accession of dignity little more than four years, dying at Shaperton in the county of Middlesex, in the autumn of 1784.—*Collins's Peerage*

HAWKESWORTH, LL.D. (John) the son of a watchmaker, of Bromley in Kent, where he was born in 1715. His father apprenticed him at an early age to his own trade. His taste to the business however soon proved insuperable, and he became clerk to a writing

stationer. In this humble situation the literary bent of his disposition betrayed itself in the production of various essays and other short miscellaneous pieces in the Gentleman's Magazine. This circumstance introduced him to the acquaintance of Cave the original projector of that work, who, on the succession of Johnson, placed him in his situation as compiler of the debates in both houses of Parliament. In 1752 there appeared from his pen the first of a series of essays, which he continued through that and the two following years with the assistance of his friend Joseph Warren and other occasional contributors. These when completed were collected and published in four vols. 12mo, under the title of *The Adventurer*. Archbishop Herring was so much pleased with the performance that notwithstanding the author's principles did not accord with those of the establishment, his grace conferred on him a Lambeth degree of doctor of laws. Having failed in an attempt to get admitted as a member of the college of advocates, he undertook a commission from government to arrange and digest the discovery voyages of Byron, Wallis, Carteret and Cook in the Pacific. This task he completed not altogether to the satisfaction of the public in 1773 when the work appeared in three 4to volumes. The compilation indeed seems to have tended much more to his advantage in a pecuniary point of view than as regards his literary reputation his employers permitting him to appropriate the whole proceeds of the work amounting to six thousand pounds to his own use. The value of the recompence was not however in his eyes an adequate compensation for the cold reception which his book experienced a neglect which is said to have materially affected his health and spirits and, according to some to have even tended to the shortening of his life. The interest of a female friend of high connexions in the East, procured him soon afterwards a seat as one of the directors of the East India Company, he did not however long survive his appointment, but died at Bromley, November 16, 1773. His remains he burned under a handsome monument, bearing an inscription taken from his own works, in the parish church belonging to that village. Beside the writings above-mentioned, Dr Hawkesworth was the author of *Almoran and Hamet*, an Oriental tale, 2 vols. 12mo 1761; a new edition of Swift's works, 1765; a few miscellaneous poems and plays and a translation of *Telemachus*, 1768. *Elog. Brit.*

HAWKINS (Sir JOHN) a renowned English sea commander of the sixteenth century. He was a native of Plymouth, and was the son of captain William Hawkins a naval officer. He made several voyages in his youth and thus acquired much maritime experience. In 1569 he projected an expedition the object of which was to procure negroes on the coast of Africa and convey them for sale to the West Indies. In this plan he was successful, and he is recorded, on the page of history as the first Englishman after the discovery of America,

who made a merchandise of the human species. He made two subsequent voyages for the purpose one of which proved very profitable, and he was rewarded for the supposed benefit conferred on his country by the addition of a crest to his coat of arms, consisting of a demi moor proper bound with a cord. The third expedition was unfortunate for having endeavoured to carry on a contraband trade with the Spaniards, his small fleet was attacked by an overpowering force, and only one of his ships and a bark escaped being taken or destroyed and after undergoing great hardships, he reached home in January 1568. He afterwards filled the office of treasurer of the navy, and he appears to have been much consulted on maritime affairs. In 1588 he was appointed vice-admiral of the squadron sent out against the Spanish armada and he received the honour of knighthood for his conduct on that occasion. His last service was in 1595 when he was sent with sir Francis Drake against the West Indian settlements of the Spaniards. The two commanders differed in opinion and their consequent want of success occasioned so much chagrin to sir John Hawkins that it is supposed to have hastened his death which took place at sea, November 21, 1595 in his seventy fifth year.—HAWKINS (sir RICHARD) son of the last mentioned and brought up to the same profession. He commanded a ship in the action with the Spanish armada, and distinguished himself much on that occasion. He was repeatedly engaged in expeditions against the Spanish settlements in America, and in the last, which took place in 1593 he was made prisoner and detained two years in Peru. He died in 1622. After his death was published *Observations of Sir R. Hawkins sent in his Voyage to the South Sea AD 1593*, folio—*Ackar's Geog. Big.*

HAWKINS (sir JOHN) a lawyer and miscellaneous writer of the last century. He was born in London in 1719. His father who was a surveyor and builder designed him for the same occupation, but this plan was relinquished and he was articled to an attorney. In this situation he not only acquired a knowledge of his profession but also made himself acquainted with general literature by studying at his leisure hours. He practised as a solicitor with reputation for some years, writing also for the periodical press. A taste for music induced him to become a member of a musical society, and of the Academy of Ancient Music, and in 1744 he composed the words of some cantatas which were set to music by Mr Stanley. In 1749 he was chosen a member of a club established by Dr Johnson, with whom he formed an acquaintance which lasted during their joint lives. He married in 1753 a lady possessed of a handsome fortune which was so greatly augmented on the death of her brother in 1759, that Mr Hawkins gave up his practice as a lawyer, to live upon his income and became a magistrate for the county of Middlesex. In 1760 he published a new edition, with notes, of

H A W

Isaac Walton's 'Complete Angler,' a work which has proved exceedingly popular. In his magisterial capacity he distinguished himself by vigilance and activity, and he published 'Observations on the Highways,' with the draught of a bill for repairing them which served as the model of some subsequent acts of Parliament. In 1765 he was chosen chairman of the Middlesex quarter sessions and in 1772 he was made a knight. He contributed some notes for Johnson and Steevens' edition of Shakespeare, and for some years he was engaged in preparing for the press a 'General History of the Science and Practice of Music' which he published in 1776 in 5 vols. 4to. Sir John Hawkins having accepted the office of executor to Dr. Johnson he was employed by the booksellers to draw up a memoir of that celebrated writer to accompany a posthumous edition of his works. Neither as editor or biographer does he appear to advantage. Some pieces not written by Johnson are printed among his works and the 'Life' which forms a bulky octavo seems to have served the writer as a receptacle for the contents of his common place book. His death took place May 21 1789.—*Athenæus G Bigg.*—His son JOHN SIDNEY HAWKINS and his daughter LETITIA MATILDA HAWKINS have both distinguished themselves by their literary productions.—Ed.

HAWKSMOOR (NICHOLAS) an English architect, who was a pupil of sir Christopher Wren. He was employed under his celebrated master as deputy-surveyor of the buildings of Chelsea college and clerk of the works at Greenwich hospital. Some of the churches erected in pursuance of the act of Parliament passed in the reign of Anne for building fifty new churches in the metropolis were designed by Hawksmoor, whose works display nothing of the taste and little of the science which distinguished those of Wren. Among his productions are the churches of St Mary Woolnoth Lombard-street St George's in the east St Ann's Limehouse and St George's Bloomsbury the last of which has provoked the satirical remarks of Walpole. He died 1736 aged seventy.—*Walpole's Anecdotes.*

HAWKWOOD (sr JOHN) a celebrated military adventurer of the fourteenth century who by his valour and conduct as a commander raised himself from a humble origin to rank and reputation. The father of this officer was a tanner of Little Hedingham in Essex where he was born and if Fuller is to be credited, at the usual age apprenticed to a tailor the truth of this latter assertion has however been questioned. It is certain that having entered in the humble capacity of a private soldier into the English army then preparing for the invasion of France with Edward III and the Black Prince at its head his courage and military abilities soon procured him a command, and the honour of knighthood from the hands of the sovereign. In 1360 on the conclusion of the peace of Brétigny sr John joined himself with some other soldiers of fortune whose revenues were un-

H A Y

equal to the support of their rank and character in times of tranquillity. These associates, under the name of 'Les ard' vassus,' continued notwithstanding the cessation of national hostilities, to harass and plunder their old enemies the French and even extended the scope of their depredations to Italy. After leading a marauding life of this description for nearly four years he once more took regular military service under the republic of Pisa, and signified himself with his accustomed bravery in the wars carried on by that government against the petty states in the neighbourhood. Having carried arms under this banner for three and twenty years, he in 1397 exchanged the Pisan service for that of the Florentines, by whom his talents as a bold and fortunate commander were duly appreciated. In such estimation were his abilities held by those in whose cause he fought that when on the conclusion of peace in 1399 the remainder of their troops were disbanded a body of a thousand men at arms with sir John Hawkwood as their leader was kept up as a standing army. He survived till the 6th March, 1399, when he died at Florence at a great age, and was honoured with a public funeral in the church of Santa Reparata in that capital all the public authorities attending. In England an equal degree of respect was paid to his memory by his heirs who erected a handsome tomb with a panegyrical inscription at He di ngham the place of his birth. Part of the wealth which he had acquired in his campaign was,—a thing not unusual with the warriours of the middle ages—devoted to charitable purposes, in particular an English hospital for the reception of poor travellers at Rome was long a standing monument of his munificence.—*Lifo by Gough.*

HAY (WILLIAM) a political writer of the last century born in 1695 at Glyndebourne Sussex. He was educated at Headley school and spent a short time at Oxford but without graduating there entered himself of the Temple. He commenced his parliamentary career in 1734 as member for Seaford which borough he continued to represent for the remainder of his life. Sir Robert Walpole gave him the appointments of record-keeper in the Tower and a place at the vaunting board in consequence of his taking a decided part with his party in favour of that statesman's ministry. Besides a variety of pamphlets on temporary questions he was the author of a treatise 'On the Poor Laws;' and another 'On Civil Government.' He also wrote 'An Essay on Deformity' in which he trifles with some humour on his own personal disadvantages, an octavo volume entitled 'Reliqui Philosophi 'Mount Caburn';' a poem and translations of Hawkins Brown's Latin poem on the immortality of the soul, and a selection of Martial's Epigrams. In 1796 many years after his decease, which took place in June 1755 his writings were collected and published by his daughter in two quarto volumes. A son of his fell a sacrifice to the cruelty of Cléopâtre Ali Cawa, in India, in 1762.—*Gent Mag.*

H A Y

HAYDN (FRANCIS JOSEPH), an eminent German musician, born in 1732, at Rohrau a small town in Austria, about forty miles distant from Vienna, where his father a wheelwright, filled also the humble occupation of sexton, his mother being a female domestic in the family of count Harrach. His parents, though themselves were fond of music and their occasionally singing duets together in his hearing, may be attributed the strong predilection which their son shewed even in infancy for the science. A relation named Frank, who was a schoolmaster at Hünburg and himself no inferior musician observing the precocious talents of the child, not only gave him some instruction but eventually succeeded in placing him under Reuter, in the cathedral at Vienna, with whom he continued till he was thirteen, at which age he had already composed a Mass. The celebrated Porpora coming about this period into Germany in the suite of the Venetian ambassador, young Haydn was fortunate enough to attract his notice and received from him the most valuable assistance. Of this he became the more in need, inasmuch as a boyish frolic in cutting off the skirt of a fellow chorister's gown caused his abrupt dismissal from the cathedral in his eighteenth year and he was thus thrown penniless upon the world without any other resources than his own genius. For a while he supported himself by teaching a few pupils in the lower ranks of life at very reduced charges, judging in the mean time at a barber's (whose daughter he afterwards married) till the success of a little opera which he composed entitled the Devil on two Sticks and brought out by the well known Buffo Bernardo Corte put him in possession of £12. After a severe struggle with poverty for more than six years, he obtained a situation in the household of count Morzin where, in 1761 he attracted the attention of prince Anthony Esterhazy in whose service and in that of his successor prince Nicholas he afterwards remained. On the death of the latter nobleman he visited England for a short period in 1791 and again in 1794, when he was presented by the university of Oxford with the honorary degree of Mus. Doct. During his stay in this country he made by the exertion of his musical abilities about £4000, with which in 1796 he returned to Germany. Soon after he received a communication from the French Institute informing him that they had elected him a member of their society, one of the unsuccessful candidates on this occasion being Richard Brinsley Sheridan. In his sixteenth year Haydn commenced his celebrated oratorio the "Creation," a work which he completed in 1798, and which is considered a musical chef-d'œuvre. His friend, Baron von Swieten two years afterwards induced him to write another, entitled the "Four Seasons," the subject of which is taken from the English poet Thomson. This, with the exception of a few omissions, was his last original composition. Haydn died at the advanced age of seventy-eight, May 26th, 1809, in the possession of

H A Y

great and merited reputation and was buried at Grumpendorff Vienna, being then in the occupation of the French. His heir a blacksmith, received from him a bequest of about 30,000 florins. He had one brother Michael Haydn who died before him, and was himself no mean musician — *Bog Doct. of Mus. Ross's Cyclopaedia*.

HAYES. There were two eminent musical composers of this name, father and son. The elder, Dr. William Hayes was born in 1708 and at an early age obtained the place of organist in St. Mary's church at Shrewsbury. The reputation which he acquired in this situation procured eventually his election to a similar one at Christchurch Oxford where he graduated in music and obtained the university professorship of that science. He was a sound musical scholar as well as an excellent performer and assisted Dr Boyce in collecting those valuable scores of cathedral music printed under his superintendance. A variety of his own compositions consisting of services, anthems &c are to be found in manuscript in the choir of different colleges for whose use they were written and a few of his glees catches, and other lighter pieces have been printed as also a series of English ballads, set by him while organist of Shrewsbury. When Charles Avison of Newcastle made his attack on Handel pronouncing that great master to be inferior as a musician both to Geminiani and Marcello, Dr Hayes answered his book with some acrimony not only refuting his charges but accusing Avison himself of ignorance of counterpoint. He continued at Oxford directing the concerts and other music meetings there till his death in 1779 when his son PERCY who was born 1739 and brought up in the chapel royal at St James's, succeeded him in his professorship having taken the degree of Mus. Doct. for that purpose. This gentleman ably supported the character for musical talent which he inherited from his father. He was supposed to be the most corpulent man in England of his day, nearly equaling in size and weight the celebrated Edward Bright, of Malden. He died suddenly in London whether he had come for the purpose of preaching at the festival of the Musical Fund, March 19th, 1797 and was buried in St Paul's cathedral. — *Bog Doct. of Mus.*

HAYGARTH (John) an English physician who practised his profession at Chester and afterwards at Bath. He was a member of the Medical Society of Edinburgh of the American Academy of Philadelphia and a fellow of the Royal Society. He was the author of several ingenious productions, chiefly relating to medicine. Among these are — "Inquiries into the Means of preventing the Small Pox" 1784 8vo, "A Sketch of a Plan for entirely extirpating the Small Pox and introducing Immolation" 1793 4 vols 8vo, "Observations on Inflammation considered as a Remedy for Diseases of the Body" 1800 8vo the object of which was to expose the quackery of Perkins's Metallic Tract, "A Letter to Dr Percival, on the Means of

H A Y

Preventing Contagious Fevers, 1801, 8vo, "The Clinical History of Diseases, part the First," 1805, 8vo, and "A Letter to the Bishop of London on the Education of the Poor," 1812 8vo, to which may be added many professional memoirs in periodical works. He died in 1813.—*Bug News for Contemp.*

HAYLEY (WILLIAM) a poet of some eminence in the last century more recently distinguished as a writer of literary biography. He was born at Chichester in 1745 and after receiving a part of his education at Kingston upon Thames and Eton, graduated at Trinity college Cambridge. After quitting the university he settled at Eastham in Sussex where he possessed landed property devoting his time principally to the cultivation of literature. His first production which was published appears to have been "A Poetical Epistle to an eminent Painter" [G. Romney] 1778, which was followed by two other small poems. In 1780 appeared his "Essay on History in three [poetical] Epistles to Edward Gibbon," 4to which in the dearth of talent existing at that period procured the author a considerable share of reputation and which was considerably increased by his "Triumphs of Temper" 1781. He next published "An Essay on Epic Poetry" 1782 but this, like his "Essay on Painting," "Triumphs of Music" and "Essay on Sculpture" obtained but little notice except among his professed admirers. He also wrote Plays of which as well as his Poems, lord Byron says—

In many marble-covered volumes view
Hayley in vain attempting something new,
Whether he spin his comedies in rhyme
Or scrawl at Wood and Barclay walk, gaunt
time,
His style in youth or age is still the same,
For ever feeble and for ever tame
Triumphant first, see Temer'r's Triumphs
shine!

At least I'm sure they triumph'd over mine
Of "Music's" triumphs all who read may
swear

That luckless muse never triumph'd there.

Eighth Birds and Scott's Reviewers. The most popular work which Hayley produced next to the "Triumphs of Temper" was a prose "Essay on Old Maids," 3 vols. 1800, illustrated by a series of fictitious narratives, chaste satirical. He also wrote a novel entitled "Cornelia Sedley or the Young Widow" 3 vols. 1800. In 1803 he published the life and correspondence of the poet Cowper 2 vols. 4to, to which he added a supplement in 1806. The death of a natural son, Thomas Alphonso Hayley, to whom he was warmly attached induced him about the beginning of the present century to remove from his seat at Eastham to Felpham, in the same county where he died November 12 1820.—*Dr Johnson's Memoirs of the Life and Writings of Hayley*, 2 vols. 4to. *Miller's Bug Stories of Hist. Characters recently deceased*.

HAYM (NICHOLAS FRANCIS) a musician,

H A Y

who was a native of Rome, and early in the antedict century settled in London. In conjunction with an Englishman named Cottonton and Despart a Frenchman he endeavoured to establish an Italian opera, but the arrival of Handel and other causes rendered the scheme unprofitable, and Haym who had previously composed music, was employed to write the words for some of his competitor's musical compositions. He engaged however in many other literary undertakings, one of which was a history of music from the earliest period to his own time which failed for want of encouragement. He also was a picture dealer and collector of coins medals &c and in that capacity was employed by sir Robert Walpole and others. He published a work on ancient Greek and Roman medals, entitled *Tesoro Britannico*, London 1719 1720, 2 vols. 4to, another on Italian bibliography *Natura dei Libri rammella Lingua Italiana*, London, 1736, 8vo, and two tragedies. He died in 1730.—*Adams's G. Bug Musical Biog.* vol. ii.

HAYMAN (FRANCIS) an English painter who was one of the first members of the Royal Academy. He was born in 1708 at Exeter, and coming to London when young, he obtained employment as a scene painter at Drury lane theatre. He afterwards made designs for illustrative engravings of scenes from the works of Shakespeare Milton Pope, Cervantes &c. The principal productions of his pencil are historical paintings, with which some of the apartments at Vauxhall are decorated. He was made libraman to the Academy and died in 1776.—*Edwards's Anecd. of Paint.* *Lst Gaz.*

HAYNE (THOMAS) a learned schoolmaster was born at Thrusington in Leicestershire in 1581. He received his academical education at Lincoln college Oxford, and after taking his bachelors degree became one of the ushers of Merchant Taylor's school, London. He was subsequently employed in the same capacity at Christ's hospital, and was much esteemed by Selden as an excellent critic and linguist. He died in 1645. He bequeathed his books to the library at Leicester and gave 400l. for the purchase of lands to maintain a schoolmaster in his native village. He also furnished two scholarships at Lincoln college for students from the free-schools at Lincoln and Melton. His works are—"Grammaticae Latinae Compendium," 1627—1649, 8vo, "Linguarum Cognitio," 1639, 8vo, "Par in Terra, 1639 8vo, "The equal Ways of God in reviving the unequal Way of Man," 1639 8vo, "General View of the Holy Scriptures," 540 folio, "Life and Death of Dr Martin Luther," 1641 4to.—*Nichols's Leicestershire* vol. iii.

HAYNES (HORACE) a learned and able antiquarian, of whose birth and education no accounts have been recorded, beyond the fact that he was born 1678. In 1696 he was employed in the royal mint in which he rose to the office of king's assay-master. In the year 1748, becoming infirm, he was allowed to re-

H A Y

ture upon his salary. Besides his situation at the mint, he discharged the office of principal tally writer at the exchequer for forty years. He died in 1749, at the age of seventy-seven. The result of his convictions in regard of the Trinity, he threw into the form of a popular treatise entitled 'The Scripture Account of the Attributes and Worship of God, and of the Character and Offices of Jesus Christ.' The author died while this work was in the press, and owing possibly to the objections of his son who was brought up to the church a small impression only was printed and privately circulated until a second edition was printed by the rev Theophilus Lindsey in 1790. Since the appearance of which other editions have followed, and it has been widely dispersed.—His son SAMUEL HAYNES was educated at King's college, Cambridge, where he took his degree of DD in 1748. He was tutor to the earl of Shrewsbury by whom he was presented to the valuable livings of Hatfield and Clothele which he held together by dispensation; he was also a canon of Windsor. He published a collection of state papers relating to affairs in the reigns of Henry VIII Edward VI Mary and Elizabeth from 1542 to 1570 transcribed in the Cecil MSS. Dr Haynes died in 1755.—*Nichols's Lit. Anecd.*

HAYTER (JOHN) a learned divine was educated at Eton whence he removed to King's college Cambridge, where he obtained the degree of BA in 1778, and that of MA in 1788, between which dates he was presented to the college living of Hepworth in Suffolk. On the offer of his present majesty then prince of Wales to be at the expense of travelling and decyphering the Greek MSS. discovered in the ruins of Herculanum, Mr Hayter was appointed to superintend the experiment, and in consequence took up his abode at Palermo for some years. He returned in 1810 and the MSS. were presented to the university of Oxford, but the result did not answer expectation. He soon after went to France where he died of an apoplectic shock November 29 1818. He published a report on the Herculanum MSS. entitled 'Observations on the Herculanum,' 4to.—*Gent. Mag.*

HAYWARD (Sir JOHN) an English historian who flourished in the reigns of Elizabeth and James I. He received his education at Cambridge, and graduated there as LLD. His first publication was a history of "The first Part of the Life and Reign of King Henry IV" which appeared in 1599 with a dedication to the earl of Essex. Some passages in this work, respecting hereditary right in matters of succession, gave great offence to the queen, who threw him into prison, from which he did not obtain his liberation till after he had undergone a tedious confinement. On the accession of James he resumed his literary labours, and was appointed by that monarch in 1610, historiographer of Cheshire college. Three years after he printed 'The Lives of the three Norman Kings of England William I, William II, and Henry I' 4to. This book

H E A

was dedicated to the prince of Wales. In 1619 he obtained the honour of knighthood, and continued to receive proofs of court favour during the remainder of his life. His other works are—"The Life and Reigne of Edward VI, with the beginning of that of Elizabeth," &c., and a treatise "On Supremacy in Affairs of Religion" besides a few tracts of a devotional nature such as 'Christ's Prayer on the Cross' 'David's Tears,' 'The Sanctuary of a troubled Soul &c.' 12mo. Sir John Hayward died June 27, 1637.

HEADLY (Hawry) an English author of the last century born 1766, at Instead near Norwich, in the grammar-school of which city he received his education under Dr Park. At the age of sixteen he entered himself of Trinity college Oxford where he graduated as AB. On quitting the university he married, and retired to Matlock in Derbyshire. Besides a variety of essays on miscellaneous subjects, printed in the Gentleman's and other Magazines, the Olla Podrida &c. he published the Select Beauties of Ancient English Poetry 1787 2 vols. 8vo with notes, a volume of original poems and the *Lucubrations of Abel Slug*. He was always of a consumptive habit, and falling at length into a rapid decline died at Norwich in 1798. His lecture from ancient English poetry certainly assisted the new direction given to public taste by Warton and others.—*Laf's preface to Keat's Edition of the Beauties.*

HEARD (Sir ISAAC) Garter principal king-at-arms, to which office he was appointed by patent dated May 1 1784 having previously filled those of Bluesmantle purvainier Lancaster herald, Norroy king-at-arms, gentleman usher of the scarlet rod to the order of the Bath Brunswick herald, and Clarenceux king-at-arms. Sir Isaac was born at Ottery St. Mary in Devonshire 10th of December (old style) 1730. In the early part of his life he had served in the royal navy as a volunteer on board the *Lynx* and the *Blandford* man of war, in which last ship being carried overboard by the mainmast in a tornado off the coast of Guinea he narrowly escaped drowning through the gallantry of the late admiral sir R. Kingmill with whom he maintained an uninterrupted friendship until his death. The peace of 1751 affording no encouragement to a naval career he quitted the service and engaged in commerce at Bilbao in Spain, till the breaking out of the war between that country and Great Britain in 1757 frustrated his speculations and induced him to return to England. In 1759 he obtained the notice and patronage of Thomas earl of Effingham then exercising the office of earl marshal for Edward, duke of Norfolk through whose favour he received on the 5th of December in that year the first of his appointments in the herald's college. In 1813, when the emperor Alexander of Russia was elected a knight-companion of the order he was allowed in consequence of his advanced age, and the ill state of his health to appoint a deputy for the occasion, nevertheless, at the

HEA

conclusion of the war in 1814, he was enabled to proceed to Brussels and to Vienna in person to perform the same office for the king of the Netherlands and the emperor of Austria. It being the duty of the garter king-at-arms to proclaim at the funeral of any member of the royal family of England the style and titles of the deceased sir Isaac in the course of his long life performed that melancholy ceremony to no fewer than six generations of the house of Brunswick viz. from the funeral of George II to that of the late princess Charlotte of Wales and her infant. Until within the last two years of his life he continued in the personal discharge of all the active duties of his situation, proclaiming George IV at Carlton palace on the 31st of January 1820. He was not however able to go through the fatigue of officiating at the coronation but received a gold medal on the occasion sir George Nayler Clarenceux king-at-arms acting on that occasion as his deputy. He died in London April 29 1822 and is buried in St George's chapel at Windsor having received the honour of a public funeral.—*Ann. Biog.*

HEARNE (SAMUEL) an English traveller who made some discoveries in the arctic regions of North America. He was a native of London and was sent to sea as a midshipman in the royal navy in 1756 being then eleven years old. He never obtained any promotion having early engaged in the service of the Hudson's Bay Company. Being of an active and enterprising disposition he was employed in 1769 to explore the north western part of the American continent. This undertaking he completed in 1772, but the narrative of his researches was not published till after his death which occurred in 1792. The work is entitled

A Journey from the Prince of Wales's Fort in Hudson's Bay to the Northern Ocean 1795 4to of which a French translation in 2 vols 8vo was published at Paris.—*Europ. Mag. Biog. Univ.*

HEARNE (THOMAS) an antiquary historian and classical editor distinguished for his learning and industry. His father was parochial clerk and school master at White Waltham in Berkshire where he was born about 1678. After acquiring some knowledge of Latin and Greek he was taken into the house of Mr Cherry of Shottesbrooke with whom the celebrated scholar Henry Dodwell then resided to whose instructions Hearne appears to have been considerably indebted. In 1696 he was sent to Edmund-hall Oxford where he manifested a taste for archaeological pursuits and was employed by Dr Mill and Dr Grabe in the collation of biblical MSS. He obtained his degrees in arts and in 1701 he was made assistant to Dr Hudson the keeper of the Bodleian library when he augmented and improved Hyde's catalogue of that literary collection. In 1712 he was appointed second librarian and in 1715 architypographer and esquire herald of the civil law, but he soon after resigned these offices through scruples of conscience which prevented him from taking the oath of allegiance to George I. He never-

Biog. Dicr.—Vol. II

HEA

dales continued to reside at Edmund-hall, occupying himself in editing the literary productions of the ancient and middle ages. He died June 10 1733. Hearne's literary labours were almost exclusively those of an editor, in which character he merits praise for accuracy and fidelity. He published editions of Livy Justin and Eutropius, but most of his publications consist of the monastic and other ancient chronicles of our national history. Among the rarest of his productions is the *Acts of the Apostles* in Greek and Latin from a MS. in the Bodleian library. Hearne was one of the pioneers of literature and the use which others have made of his accumulated stores shows that he was an industrious, though not a very discriminating collector.—*Biog. Brit.*

HEARNE (THOMAS) an artist of considerable talents as a topographical designer. He was born in 1744, at Mansfield in Gloucestershire, but his parents during his infancy removed to Brinkworth in North Wiltshire whence he has been represented as a native of that place. He was sent to London and apprenticed to Woollett the celebrated engraver, but soon after the expiration of his indentures he relinquished the graphic art to become draughtsman to sir R Payne, afterwards lord Lavington who being appointed governor of the Leeward Islands took Hearne with him to the West Indies. In 1776 he returned to England and soon after commenced the publication of a work entitled The Antiquities of Great Britain in conjunction with Byrne the engraver. The drawings were entirely executed by Hearne who contributed many of the compositions of his pencil towards the embellishment of other collections of engravings, but the best of his works are those which are in private cabinets. Landscape painting in water colours in which so many artists of the present day excel was first practised with success by Hearne who may be almost considered as the original source of all which is truly great in that art. His death took place in London April 13, 1817.—*Genl. Mag.*

HEATH (BENJAMIN) an eminent lawyer of the last century and recorder of Exeter who acquired some distinction as a scholar and an author. He acquired great popularity in his native county by writing a pamphlet against the cider tax which did much to promote its repeal. His other publications are—An Essay towards a Demonstrative Proof of the Divine Existence, Unity and Attributes, to which is premised a short Defence of the Argument commonly called a priori. This publication is ranked among the ablest defences of the hypothesis of Dr Samuel Clarke.

Note my lectures ad Tragorum Graecorum veterum 1752 4to 'A Revision of Shakespeare's Text, wherein the alterations introduced into it by the more modern Editors and Critics are particularly considered. He died March 31 1762.—The brother of this author **THOMAS HEATH** an alderman of Exeter published in 1755 an *Essay towards a new Version of the Book of Job*.

H E B

This gentleman was father to the late judge Heath and Dr Heath master of Exon school.—*Nichols's Lit. Anec.*

HEATH (JAMES) a much English historian was born in 1689 being a native of London, where his father was king's cutter. He was educated at Westminster school and was elected to Christchurch Oxford in 1646 whence he was ejected in 1648 for his adherence to Charles I. He then lived upon his patrimony and on the Restoration being prevented by marriage from returning to the university to maintain his family he commenced author and corrector of the press. He died of a consumption in August 1664 and left several children with no other reliance than parish support. His works are—A Chronicle of the late War" &c which sells high in consequence of the portraits the same work was afterwards published in folio, The Glories and Triumphs of the Restoration of Charles II 8vo Flagellum or the Life and Death of Oliver Cromwell 8vo A New Book of Loyal English Martyrs &c 12mo Heath has little merit in respect to style or argument, but frequently relates facts unnoticed by others which throw a light on the history of the times.—*Athen. Oxon.*

HEATHCOTE (RALPH) a learned and ingenious clergyman who deserves to be noticed as a principal author if not the projector of the General Biographical Dictionary. He was born in Leicestershire in 1721 and was educated at Jesus college Cambridge After taking orders he had a curacy at Leicester together with the vicarage of Barkby Before he left the university he published a tract entitled Historia Astronomica and he subsequently wrote A Sketch of Lord Bolingbroke's Philosophy and other pieces on religious controversy which occasioned his introduction to Dr Warburton who nominated him his assistant preacher at Lincoln &c &c He was Boyal lecturer at Bow church in 1763, and in 1765 he succeeded his father as vicar of Saleby in Leicestershire He afterwards obtained other preferments and in 1768 he was collated to a prebend in the collegiate church of Southwell in Nottinghamshire of which he likewise became vicar general when he took the degree of DD He died in 1795 Besides the works already mentioned he published The Irenarch or Justice of the Peace's Manual "Sylva or the Wood" a series of anecdotes which he intended to have continued, besides several sermons and tracts on divinity.—*Nichols's Lit. Anec.*

HEBENSTREIT (JOHN ERNST) a German physician of the last century He studied some time at the university of Jena and then repaired to Leipzig where he proceeded MA in 1728 He soon after obtained the degree of MD and in 1731 he engaged in an expedition to the north of Africa, under the patronage of Augustus king of Poland He explored the ruins of Carthage and the neighbouring country, and returned in 1733 bringing back many rare animals and other natural curiosities which he had collected. Soon after his return

H E B

he was made professor of medicinae at Leipzig where he published several ingenious works among which are the following "De Ute Partium, Carmen ; see Physiologia metrica" 1739 8vo "Pathologia metrica sive de Morbis Carman 1740 8vo Museum Richterianum continens Fossilia, Animalia Vegetabilia et Marina illustrata Iconibus et Commentariis 1743 folio He was also the author of a Methodus Plantarum or botanic system deduced from the fruit besides other works, and after his death appeared his poem De Homine Sane et Aegroto in which he treats of the different branches of medicine. His death took place in 1757 at the age of fifty four —*dikin's G Bing Novi Dict. Hist. Engg Univ.*

HEBENSTREIT (—) a German officer who became the victim of his own intrigues as a politician. He was of a noble Austrian family and was born in 1760 After having served in the army he filled the office of lieutenant de place at Vienna, where in 1795 he was convicted of being the author of a conspiracy against the government of his country and was condemned to suffer death by hanging which sentence was executed on the 8th of January that year Hebenstreit had introduced into Austria the French official journal the Moniteur at a time when that paper was prohibited and he had translated it into Latin to circulate it in Hungary as well as otherwise propagating revolutionary principles He was likewise the author of a satirical song against the government and the inventor of a kind of war-chants with which the French and the Poles, to whom he had communicated his alleged discovery would according to his account be able to annihilate the cavalry of the allies He underwent his ignominious fate with great firmness, but he was said to have acknowledged to the ecclesiastics who attended him that the abuse of his talents had occasioned his destruction *Dict. des H M du 18me S. Biog. Nouv. des Contemp.*

HEBERDEN (WILLIAM) a physician distinguished for his skill and learning He was born in London in 1710 and pursued his studies at St John's college Cambridge where he proceeded MA and obtained a fellowship. In 1739 he took the degree of MD and engaged in practice as a physician at Cambridge giving at the same time courses of lectures on the Materia Medica to the university students In 1748 he removed to London where he had been admitted a fellow of the college of Physicians as he was shortly after a member of the Royal Society Through his suggestion a periodical work entitled Medical Transactions was commenced in 1766 under the auspices of the College of Physicians to which work Dr Heberden was a valuable contributor, and he also published papers in the Philosophical Transactions In 1776 he was chosen a foreign associate of the royal society of medicine at Paris. He passed the summer season in the latter part of his long life in a country retreat at Windsor, and dying May 17th, 1801, he was interred in the parish

HEB

HED

church of that place. The only separate work of importance of which Dr Heberden was the author, is his "Medical Commentaries on the History and Cure of Diseases," published by his son, after his death both in Latin and in English. He cultivated polite literature and was a writer of some of the Athenian Letters, and contributed towards the notes in Grey's edition of Butler's Hudibras.—*Akin's Gen. Biog. Nichols's Lit. Acc.*

HEBERT (JAMES RENE) chief of one of the factions which arose in the state during the progress of the French Revolution. He was born at Alençon in the department of the Orne about 1755. Being of an active disposition, and possessing an ardent imagination with but a small share of learning he lived at Paris previous to the Revolution supporting himself by very dishonest methods. Employed as a chequer taker at the theatre de Variétés he was dismissed for dishonesty; after which he lived with a physician whom he ungratefully robbed. The troubles in the state afforded him a ready opportunity to make use of his disposition for intrigue, and in 1789 he commenced political demagogue. He soon attracted notice by a journal entitled *Le Père Duchesse* which owed its success to the warmth and virulence with which he advocated the popular cause and abused the court and the monarchy. On the 10th of August, 1792 he became one of the members of the municipality of Paris which self-created and installed was organised to produce the insurrection of that day and which contributed to the massacre in the prisons in September and particularly to the assassination of the princess de Lamballe. Hebert was soon after nominated deputy of the national agent of the commune, and it was then that connecting himself intimately with Choumette and Pache he employed all his influence in forwarding a project to establish the authority of the commune on the ruins of the national representation. Intoxicated with power this faction plunged into all manner of excesses and amidst feasts of reason atheistical discourses and notorious processions the metropolis was in a state of perpetual agitation. The Hebertists rejected the advances of the Orleans party and separated from the Cordeliers of whom they had hitherto formed a part. The Girondists who were at that period contending against the Mountain or more violent party, had credit enough to procure the arrest of Hebert, May 24th, 1793. He was defended by Marat in the convention, the deputies of all the sections spoke in his favour at the bar on the 25th and on the 27th after a tempestuous session he was again restored to liberty. Prompted by revenge as well as other motives, he assailed with all his power and influence in the proscriptions of the Brissotina. Their downfall hastened his own. Danton and Robespierre suspended their mutual jealousies to accomplish his destruction, and Hebert, with the greater part of his associates was arrested, and condemned to death March 24th 1794. Besides his journal

he was the author of some other political pieces of a similar description. Among the most atrocious crimes of this man were the calumnies with which he assailed the character of the unfortunate queen of France.—*Dict des H. M. du 18me S. Biog N des Contemp.*

HECHT (CHRISTIAN) a German protestant divine was born at Halle in Saxony in 1696 and became minister of Eissa in East Friesland where he died in 1748. He is author of several treatises on the Latin and German languages the most esteemed of which are his *Commentatio de Secta Schismatis*, and *Antiquitas Karborum inter Iudeos in Polonia et Turcia Imp. regiomibus florentis secte &c.*—*GODFREY HACHT* thought to be a brother of the preceding was born towards the latter end of the seventeenth century at Interbach and educated at Wittemberg. In 1711 he was appointed rector of the college of Luucca where he died in 1721. His principal works are *Germania Sacra et Literaria*, 1717 8vo, *De Henrico Guelphico Leonis Commentarius* 1755 8vo, *Vita Joannis Teuchi Memoria Joannis Lacani*. —*Mores.*

HECQUET (PHILIP) an eminent French physician who was a native of Abbeville. He studied at Paris, and afterwards at Rheims, where he graduated in 1684 and then settled in his native city. He soon removed to Paris, and in 1688 was made physician to the Port Royal society. He afterwards engaged in general practice and being distinguished for the severity of his manners and of his religious principles he was in high repute among the Jansenists. He was appointed physician to the hospital of la Charité, and in 1712 he was made dean of the faculty of medicine. He died in 1737. Of his numerous writings none deserve particular notice except a tract which he wrote against the pretended miracles of the abbé Pans entitled *The Natural History of Convulsions*, which making allowance for his religious prepossessions, shows that he had much liberality of sentiment. *Le Sage* in his *Gil Bias* has satirized Dr Hecquet with more wit than justice under the character of Dr Sangrado.—*Mores.* Now *Duct. Hist.*

HEDELIN (FRANCIS) a French advocate born in 1604 at Paris. He became tutor to two nephews of cardinal Richelieu, and was presented by that minister with the valuable abbey of Aubignac and Meunier, in recompence of his services. Hodelin though a scholar and acute was possessed of a haughty and overbearing a temper that he was perpetually involved in quarrels with the wits and poets of his time among whom were Pierre Corneille madame Scuderi &c. He was himself the author of a tragedy *Zenobie*, which appears to have possessed no great merit a novel in two volumes 8vo called *Macarade. Histoire du tems sur relation du royaume de Coquetterie* 12mo *Apologie des Spectacles*, *Terence Justifié*, *Conseils d'Anista à Celsus* 12mo, and a treatise in two octavo volumes, entitled *Principes du Theatre* the severity of which, rather

H E D

than any better quality carried it rapidly through four editions. Medelin died in 1676 at Nancourt.—*Nous. Dict. Hist.*

HEDERICH or HEDERICUS (BEWYSEN) a learned lexicographer of Grossen Hain in Münster, where he was born in 1675. He is recognized as the author of the useful lexicon of the Greek language which goes under his name. This work was first published in 1722 at Leipzig, in octavo and has since been re-printed in England by Patrick Young and Morell. It was also much improved by Krause, and published at Leipzig in 1767. He is also author of *Notitia Auctorum* 8vo an edition of Empedocles treatise *De Sphaera* 4to and many other works. His death took place in 1748.—*Nous. Dict. Hist. Sacri Omos.*

HEDWIG (John) a German botanist, celebrated for his researches concerning the fructification of cryptogamic vegetables. He was born of a Saxon family at Crotzdorf in Transylvania in 1730. After studying at Pressburg he went to Zittau in Lusatia and in 1752 he became a student in the university of Leipzig where he attended lectures on philosophy mathematics and medicine. He assisted professor Ludwig in regulating his library and botanical museum and botanic garden and in 1756 he was admitted into the family of Caspar Buse, the professor of botany for whom he prepared plants for demonstrations and attended patients in the public hospital. In 1759 he took the degree of MD and settled at Chemnitz in Saxony as a physician. All his leisure was dedicated to botanical researches, and having examined all the perfect plants which he could collect in his excursions he turned his attention to the mosses and other cryptogamic vegetables whose natural properties had been comparatively but little investigated. He procured a microscope and studied the art of drawing, and thus assisted he pursued his researches with such assiduity and success as led him to the important discovery of the organs of fructification of the Bryum polystachys, a species of moss, which was the prelude to a further development of the structure of those organs in other plants of the same tribe. He published an account of his experiments and observations in a Leipzig journal of natural history in 1778. He removed to Leipzig in 1781, and there he published his *Fundamentum Historiae Naturae Muscorum Frondosorum partii 1782 pars u. 1783 4to*, in which, from his own observations he has given an accurate history of mosses, illustrated with plates of their flowers fruits seeds, external and internal structure with a new method of arranging them in genera. In 1784 he obtained the prize offered by the academy of Petersburg, for the discovery of the flowers of cryptogamous plants on which he published a dissertation entitled *Theoria Generations et Fructificationis Plantarum Cryptogamicarum Linnae*.

His theory has been generally adopted by botanists though at first opposed by Necker Gaertner and others in 1785 Hedwig was appointed physician to

H E G

the town guards and in 1786 he was chosen extraordinary professor of medicine at the university and three years after professor of botany and superintendent of the physic garden. He continued his researches into the structure of plants till his death which occurred February 7th 1799. Besides the works already mentioned and several in the German language he was the author of *Descriptio et Adamantio microscopico analytica Muscorum frondosorum nemor. aliorum vegetum tunc s. classis cryptogamicarum Linnae* 1786—1799 4 vols folio, and since his death appeared *Species Muscorum frondosorum descriptae et Tab. Aen. 77 coloratae illustratae; Opus posthumum editum cum Supplemento a F. Schwagmichen* Lapa. 1801—1816 3 vols. 4to. Hedwig was a member of several scientific associations and was a man of great modesty candour and purity of manners. His name has been very properly preserved in the appellation *Hedwigia bilobiflora* given to an evergreen tree found in Hispaniola. He was twice married and left two sons—one an eminent painter at Magdeburg and the other ROMANUS ADOLPHUS HEDWIG distinguished as a botanist by his *Theoria Generations et Fructificationis Plantarum Cryptogamicarum Linnae* Lips 1798 4to, and other works.—*Adams G. Eng. Eng. Univ.*

HEERE (LUCAS VAN) a Dutch painter the son of a statuary of Ghent born 1534. He displayed a predilection for the art in which he afterwards excelled at a very early age being no doubt excited thereto by witnessing the performances of his mother Anne Smyfers, herself no mean artist in landscape painting. Having studied for some time under Flora, he visited France and England in which latter country especially he distinguished himself by the admirable portraits which he drew of many of the principal nobility. On his return to the continent he executed several historical pieces which added much to his reputation and adorned the churches of his native city with many fine paintings of scriptural subjects. His death took place in 1584.—*Walpole's Anec.*

HEERKENS (GERARD NICHOLAS) a modern Latin poet and ingenious scholar who was a native of Groningen in Friesland. He passed some years at Rome where he was chosen a member of the Academic academy and where he published 'Mare Curuli Groningensis Satyrus'. He returned to the Netherlands in 1764 when he published under the title of *Notabilia*, anecdotes of the Italian literati and other information collected during his travels. His poetical productions, for which he is chiefly distinguished, are 'Ares Fratres' Rottord. 1767 8vo in which he describes some of the birds of Friesland in Latin verse, and *De Valentino Literaturam lib. iu. Groning. 1790* 8vo. M. Hoerikens died in 1810.—*Nous. Dict. Hist.*

HEGESIPPUS an ecclesiastical historian of the second century. He came to Rome while Anacetus was bishop, and lived in friendship and communion with that prelate, and Soter and Eleutherius his successors. He

H E I

wrote an ecclesiastical history from the commencement of the Christian era to his own time of which a few fragments only have been preserved by Eusebius. Five books on the Jewish wars once ascribed to Hegesippus, are now attributed to a later author. He is thought to have died about the year 180.—*Cave Dupin.*

HEIDEGGER (JOHN HENRY) a learned Swiss Protestant divine of the seventeenth century. He was born near Zurich, in 1633 and after studying at the university there and also in Germany he became professor extra ordinary of Hebrew and professor of philosophy at Heidelberg. In 1659 he removed to the college of Steinfurt, in Westphalia where he held the chair of theology and ecclesiastical history. He was made professor of moral philosophy at Zurich in 1665 and two years after he obtained the professorship of divinity. In 1673 he was employed to draw up a confession of faith for the Protestant church of Switzerland in opposition to the doctrines of Moses Amyrauld, and this was established as the national creed under the title of the *Form of Concord*. Heidegger published many works on biblical and ecclesiastical history and divinity, some of the former of which are still occasionally consulted. He died at Zurich in 1696.—*Moreri. Mosheim Hist. Ecc.*

HEIDEGGER (JOHN JAMES) a Swiss adventurer, who took up his residence in England in the earlier part of the eighteenth century. He arrived in this country about 1708 and obtaining a commission in the guards was known in fashionable society by the appellation of the Swiss count. An opera, entitled *Thomyns* which he produced meeting with success gained him so much credit, that he was enabled to undertake the management of the opera-house. In his conduct of that establishment he was very fortunate added to which by giving concerts masquerades, &c. under the patronage of the court, he accumulated a handsome income which he is said to have expended in keeping a hospitable table and relieving the unfortunate Heidegger was a great favourite with king George II who often visited a villa which the Swiss had at Barnes in Surrey. He was a sort of butt for the wits of his time, and having a very peculiar visage, he is reported to have made a bet with lord Chesterfield that he could not produce an uglier man throughout the metropolis and to have won the wager. He died in 1749 aged ninety.—*Noorthouck's Hist. and Class. Diet.*

HEINECILIUS (JOHANN GOTLIEB) a German author who flourished about the commencement of the last century and wrote on logic, jurisprudence and ethics. He was born in 1681 at Eisenberg and studied at Halle where he afterwards obtained a professor's chair in the sciences of philosophy and law. In 1724 he quitted Halle for Franeker and remained there till 1727 when he accepted an invitation given him by the king of Prussia to settle at Frankfort on the Oder

Here he continued to reside upwards of six years when, becoming dissatisfied he resumed his old situation at Halle. His works were collected and published at Geneva in eight quarto volumes three years after his decease which took place in 1744. The principal are—

Antiquitatum Romanorum Jurisprudentiam illustrantium Syntagma, *Elementa Juris Civilis*, *Elementa Philosophiae Rationalis et Moralis*, *Historia Juris Civilis Roman et Germanici*, *Elementa Juris Naturae et Gentium*, translated by Turneill "Fundamenta stylis cultissima" and several academic dissertations. He had one brother JOHANN MICHAEL, the author of a treatise on the state of the Greek church and of a topographical account of Goslar (where he was an ecclesiastic) and its antiquities. He died before his brother as early as 1722.

HEINECKEN (CHRISTIAN HENRY) a child greatly celebrated for the premature development of his talents was born at Lubeck February 6 1721. He could talk at ten months old and had scarcely completed his first year when he already knew and recited the principal facts in the five books of Moses and at fourteen months knew the history both of the Old and New Testament. In his thirteenth month he acquired an outline of ancient history geography anatomy the use of maps, and eight thousand Latin words. In his fourth year he had learned the doctrines of divinity with their proofs from the Bible modern history, ecclesiastical history, the institutes two hundred hymns, with their tunes and one thousand five hundred verses and sentences from the ancient Latin classics. His stupendous memory retained every word repeated to him and at the court of Denmark he delivered twelve speeches without once faltering and underwent public examinations on a variety of subjects. He spoke German Latin French and Low Dutch. He was exceedingly goodnatured and well behaved but of a most tender and delicate constitution. He never ate solid food but chiefly subsisted on his nurses milk not being weaned until within a few months of his death which took place at the age of four years and four months on the 27th June 1727. A dissertation on this extraordinary child was published by M Martin at Lubeck in 1730 and addressed to M Schenck the child's tutor who had published an account of him in the fifth volume of the *Republique of Letters* which statement was republished in the German language in 1778 or 1779.—*Schenck's account. Moreri.*

HEINECKEN (CHARLES HENRY baron) an eminent writer on the history of typography and the fine arts. He was brother to the extraordinary subject of the preceding article and became privy counsellor to the elector of Saxony. His most important production is entitled *Idée générale d'une Collection complète d Estampes Lips. 1771 8vo.* This work comprises much curious and interesting information relating to the first typographical attempts with fac simile engravings of the pictures in the early block books. Heinecken

H E I

also published "Galera Royal de Dresde" 8 vols. folio, and "Dictionnaire des Artistes, dont nous avons des Estampes" 4 vols 8vo, left imperfect. He died in 1791.—*Nous Dart Hes*

HEINSIUS (DATINI) a celebrated classical scholar, critic, and poet, born at Ghent in 1580. His father being a protestant, removed to Holland and afterwards to Zealand where young Heinsius pursued the study of the learned languages and philosophy. He made Latin verses at a very early age and when but ten years old composed an allegy of considerable merit. At fourteen he was sent to the university of Franeker to study the civil law, but he applied himself chiefly to Greek literature in which he made a rapid progress. Removing to Leyden he continued his studies under Joseph Scaliger who showed extraordinary attention to so promising a pupil. He read public lectures on Greek and Latin authors at twenty, and he was afterwards chosen professor of history and secretary and librarian to the university of Leyden. This learned man was not without his frailties. He was so much attached to his bottle as occasionally to incapacitate himself for his professional duties, and his disappointed pupils, finding the door of the lecture-room closed one day and suspecting the reason, wrote on it "Heinsius non legit hodie propter histerium crapulam" — "Heinsius gives no lecture to-day because of yester day's debauch." He seems to have been sensible of his own error though like many other persons, unable to correct it. One night, returning at a late hour from a convivial party at a tavern or elsewhere towards his own house as he was measuring the street involuntarily in a zigzag direction, he had it is said sufficient command over his intellectual faculties to compose the following Latin verses —

Sta pes, sta bone pes

Aut hi lapides

Mixta lectus erat.

Steady! my feet—good feet, be staid,
Or else these stones will be my bed.

In 1619 Heinsius was secretary to the states of Holland at the synod of Dort. His reputation for learning extended to foreign countries, and he received the title of counsellor to the king of Sweden and that of knight of St. Mark from the republic of Venice. Pope Urban VIII by liberal offers, attempted to draw him to Rome but he could not be induced to leave Leyden where he died January 15 1655. As a critic Heinsius distinguished himself by publishing Notes on Silius Italicus and on the New Testament, editions of Horace, Seneca's Tragedies, Haesiod, Mazzinus Tytius, Theocritus Theophrastus &c. His Latin poems consist of elegies, satires, and two tragedies besides other pieces. He also wrote Greek poems, which were much esteemed, and verses in the Dutch language. Of his Greek and Latin poems there are numerous editions. He delivered Latin orations on the death of Scaliger and other occasions, which were published together at Leyden. Heinsius, in his treatment of his

H E I

literary antagonists seems to have imitated not closely the contumelious behaviour of the haughty critic Scoger. Having a dispute with Balist who showed him all the respect due to his talents and erudition, he treated him so roughly that the lively Frenchman, in a letter to a friend, says when I requested instruction from Heinsius he threw stones at me — Baillot. *Sofia Intro. in Hist. Let D Argens Lettres Juries Moreti*

HEINSIUS (NICHOLAS) son of the preceding who cultivated the same branches of learning with his father and with so much success as to do honour to the literary reputation of his family. He was born at Leyden in 1620 and carefully educated under the paternal roof. In 1643 he made a voyage to England at that period the theatre of civil dissension and where he consequently stayed but a short time. In 1644 he went to Spa on account of his health, and on his return travelled through the Low Countries forming useful connexions with literary men and adding to his stores of knowledge. He afterwards travelled in France and Italy and having visited Rome and several other cities, he published at Padua, in 1648 under the title of *Italiae* two books of Elegies which were much admired. His father wishing for his return he went home to Leyden, but remained there only a few months as Christina of Sweden invited him to add to the lustre of her literary court. He established himself at Stockholm in 1650, when he was employed by her majesty to procure her books and manuscripts. He went to Italy for that purpose and on his return not being altogether satisfied with the conduct of his capricious mistress he demanded his discharge from her service. This he obtained with difficulty, but was prevented from leaving Sweden by being appointed resident from the States of Holland in October 1654. The death of his father in the following year determined him to return to his native country. The States to show their satisfaction with his conduct offered him an embassy to Prussia or Denmark, but the state of his health prevented him from accepting either situation. He continued at Amsterdam, and in 1656 was made secretary to that city. The repose of his latter days was disturbed by law proceedings instituted against him by Margaret Wullen a courtesan with whom he had been connected at Stockholm and who professed to have some claims on him which he would never admit. In 1658 he resigned his office and retired to the Hague. He gave up all his leisure to literature and it was against his inclination that he went on a public mission to Muscovy in 1667. He returned home with his health much debilitated in 1671, and in the following year he was obliged to remove to Germany. In 1674 he settled in the province of Utrecht, and afterwards at the small town of Viane where he was frequently visited by his friend Grotius. Family affairs having occasioned him to go to the Hague he died there, October 7, 1681, and was buried in the church of St

HEL

PESS, at Leyden. Much of his time was devoted to literature notwithstanding his public employments, and he gave to the world editions of Claudian, Ovid, Virgil, and Valerius Flaccus, Notes on Silius Italicus Petrus Phaedrus Quintus Curtius and Tibullus, Letitia, Adversaria and Latin Poems. Of the latter the best edition is that of D Elsevir Amsterdam 1666 8vo.—*Bog Univ.*

HEISTER (LAURENCE) an eminent physician surgeon and anatomist of the last century. He was born at Frankfort on the Main in 1683 and after studying four years in the universities of Germany he went in 1706 to Amsterdam where Ruyach and Rau then taught anatomy and surgery. The next year he served as a surgeon in the Dutch army and in the winter betook himself to Leyden to attend the lectures of Boerhaave after which he graduated as MD. He then returned to the army and in 1709 he was appointed physician general to the Dutch military hospital. He thus obtained much professional experience the result of which appears in his numerous writings. In 1710 he was chosen professor of anatomy and surgery at Altona where he acquired great reputation as a public teacher. In 1720 he removed to the university of Helmstadt and continued there till his death which took place in 1758. His Compendium Anatomicum and his Institutiones Chirurgiae were once extremely popular and have been translated into English and other European languages. Besides many works strictly professional he wrote some pamphlets against the Linnaean system of botany.—*Hutchinson's Bog Med Akin's G. Bog. Bog Univ.*

HELE (THOMAS) a writer who by birth an Englishman obtained the singular distinction of being admired in France as an author in the French language. He was born in Gloucester shire in 1740 and began his career in the army in which he served until the peace of 1763. He afterwards visited Italy where he remained some years and then settled in France. Being led by taste to pay much attention to the theatre, he at length began to write for the Italian comedy and with considerable success the pieces for that theatre being chiefly written in French with only one or two Italian characters. His pieces are entitled *Le Jugement de Midas* on the contest between French and Italian music which was much applauded 'L'Amans Jaloux' and 'Les Evenemens Imperius'. These pieces are much esteemed by the French as lively and interesting. Mr Hele died in December 1780. The French authoresses from whom this account is taken call him D Hele, possibly his right name was Dale.—*Nouv Dict. Hist.*

HELENNA (SAINT) a female peasant, born about the year 248 at an obscure village in Bathynia, which after her decease was endowed with the rank and privileges of an imperial city under the name of Helenopolis. Her beauty having caught the attention of Constantius Chlorus she became his wife and

HEL

in the year 272 gave birth to a son, afterwards Constantine the Great. Motives of ambition induced her husband to divorce her on his becoming a partner in the imperial throne, in order to marry the daughter of Maximian from which period she lived in retirement till the accession of her son to the empire in 306 when his filial affection restored her to her rank with the title of Augusta. Her subsequent conduct secured her the respect and esteem of a court in which Christianity had newly become the prevailing religion. She employed a great portion of her wealth in the foundation of churches, and in her eightieth year made a pilgrimage to the Holy Land, where she is affirmed to have been the main instrument in what in ecclesiastical history is called the Invention of the true cross in a cavern under a temple of Venus. She lived to return to the capital of her son but died in his arms soon after in the year 328. Her remains were conveyed by the emperor's orders to Rome where they were interred with great pomp. The Romish church has since conferred on her the honors of Canonization.—*Gibbon Cremer.*

HELIODORUS a Christian bishop of the fourth century who was the author of a Greek romance still extant. He was a native of Emesa in Phenicia and it was in his youth that he wrote his "Ethiopics" or Amours of Theagenes and Chandala an interesting and ingenious work which appears to have served as a model for succeeding writers. A MS. of this romance being found by a soldier at the taking of Buda in 1526 it was published at Basal by Opsopœus in 1534 but the best edition is that of Bourdelot Paris 1619 8vo. An English translation of this work appeared in 1792. Heliodorus became bishop of Tricca in Thessaly, and Nicephorus says that he resigned this dignity rather than destroy his romance, but the story appears to be apocryphal.—HAILODORIS of Larissa was a mathematician of the first century who wrote a treatise on optics of which some fragments are extant.—*Bayle. Moreri Fabre Bibl. Grec.*

HELL (MAXIMILIUS) a learned astronomer was born in 1720 at Chemnitz in Hungary and first educated at Neusohl. Having in 1738 entered the society of the Jesuits, he was sent by them to the college at Vienna where he exhibited a great genius for mechanics. He then applied to the mathematics with great diligence and became assistant at the observatory belonging to his order. In 1750 he published 'Adsummum Memorie manuale Chronologico genealogico historicum' which has been translated into various languages. In 1752 he obtained the priesthood and became professor of mathematics at Claustenburg where he published his 'Mémoires Astronomiques'. He was soon after recalled to Vienna, to be astronomer and director at the new observatory. In 1769 at the desire of the king of Denmark he went to observe the transit of Venus in an island in the Frozen Ocean after which he became a

HEL

member of the Academy of Sciences at Copenhagen and of various other academies. He was next employed to superintend the building of a new observatory at Erisan in Hungary, and soon after died of an inflammation of the lungs, in the month of March, 1792. Hell is to be ranked among those who have rendered essential services to astronomy —*Nova Diet. Hist.*

HELLADIUS (ALEXANDER) a learned Greek a native of Thessaly who lived in 1722. He made himself known by a curious Latin work on the state of the Greek church and the reasons why the Greeks of our times reject the translations of the Scriptures into their common language. He published his book at Altorf in the territory of Nuremberg where he resided and dedicated it to the czar Peter the Great. The title of this very singular work is *Status praesens Ecclesiae Graecae in quo etiam causa expounderetur cur Graeci moderni Novi Testamenti editiones in Graeco-barbara lingua factas acceptant recent 1714 12mo*. The book comprises much literary and bibliographical information relative to Greece, and displays a good deal of freedom and liberality of opinion. Helladius was also the author of a Greek grammar 1712 8vo —*Statu ist in His Lat. Bug. Utrh.*

HELIANICUS, an ancient Greek author born at Myzylene BC 490 twelve years before the birth of Herodotus. He wrote a history of the Earliest Kings of various Nations and the Founders of Cities which is mentioned by several ancient authors but is no longer extant.—*Mores.*

HÉLIOTI (JOUV.) a French chemist was born in 1686. From 1716 to 1732 he was employed as the compiler of the *Gazette de France*. He translated Schütter's work on the "Fusions of Ores" which he published with his own notes and remarks. He is like wise the author of a work entitled *L'Art de la Teinture des Laines et l'ofice des Laines* 1750 12mo which is reckoned a valuable treatise and the first in which the practice of the art is taught upon chemical principles. He was elected a member of the Royal Society of London in 1740 to which he furnished some articles as well as a still greater number in the French Academy of Sciences. He died in 1760.—*Biogr. Vni Dict. Hist.*

HESHAM (RICHARD) M.D. and professor of medicine and of natural philosophy in the university of Dublin. He was intimate with Swift with whom he used to correspond in the singular manner of that great humorist. Dr Hesham was author of a celebrated course of twenty three lectures on natural philosophy published after his death in an octavo volume by Dr Bryan Robinson. He died August 1 1738.—*Cent Mag vol xiiii*

HESMOND (JOHN BARTIER VAN) a famous alchymist born of a noble family at Brussels, in 1577. Being a younger brother he was intended for a scholar and being sent to the university of Louvain he finished his course of study in philosophy in his seven

HEL

teenth year According to his own account he entertained a low opinion of academic instruction and acquired by reading the works of Euclid and Copernicus, a knowledge of mathematics and astronomy. Natural philosophy in general was the object of his researches, and at length he commenced seriously the study of medicine in the works of the Greek and Arabian physicians as well as the moderns. He says that he perused six hundred authors and after all his labour threw aside his common place book having conceived a notion that all science and especially that of medicine could be derived only from inspiration. He however took his degree as M.D. at Louvain in 1599 and then quitted his country and travelled about for ten years making his own observations on the animal vegetable and mineral kingdoms of nature. In 1609 he settled at Vilvoorde and applied himself to chemistry studying the works of Paracelsus. He now became a religious and philosophical visionary practising medicine gratuitously, and if his own statement might be believed performing a multitude of wonderful cures. His first literary production was a treatise on the Spa waters printed at Liege in 1624. This piece is remarkable on account of the author having used the German term *geist* answering to the English ghost, or spirit to denote the air on which the properties of the Spa water depend. From this term is derived the modern gas, now so extensively employed. Helmont went on to publish other works, and attained great celebrity among his contemporaries. He was much esteemed by the elector of Cologne, and the emperor Rodolph invited him to Vienna, but he declined the journey. He died in 1644. His works were collected and published by his son in 1648 Amsterdam 4to Amudat a great deal of unintelligible mysticism they contain some absurd and important observations. Lobkowitz in eulogizing Van Helmont says The sick never languished long under his hands being always killed or cured in two or three days. He was sent for chiefly to those who were given up by other physicians and to the great grief and indignation of such physicians often restored the patient unexpectedly to health.—*Boerhaave's Chem Hutchinson's Bug. Med. Aiken's G. Beg.*

HELMONT (FRANCIS MERCURY baron van) son of the foregoing born probably at Vilvoorde in the Netherlands in 1618. He inherited from his father a taste for the occult sciences and also studied medicine but in a superficial manner. He applied himself more particularly to chemistry and boasted of possessing an intimate acquaintance with it, though he was in fact little better than a mercenary quack. He was fond of mechanical occupations, and he had learned to paint, to engrave the art of turnery and even weaving cloth and making slippers. He joined a caravan of Bohemians and travelled with them through several parts of Europe, to study their language and manners. In Italy the freedom

H E L

His opinions conducted him into the prisons of the inquisition. Restored to his liberty he went to Germany where he pretended to have discovered the language natural to the human race, and he had the impudence to affirm that a person born deaf and dumb would articulate the characters at first sight. He professed to believe the doctrine of transmigration of souls the universal panacea, and the philosopher's stone, and his profusion led some to believe that he could actually make gold. He died in 1699 not at Cologne as Moreau asserts but at Cölln on the Spree one of the suburbs of Berlin though some say his decease occurred in Switzerland. He published

Alphabetum naturalium Hebraicorum brevia summa denumeratio &c. 1667 12mo *Seder Olam, sive Ordo seculorum historiae etenato doctrinae* 1693 12mo said to be one of the most strange absurd and impious books which has appeared since the invention of printing.—*Elog. Univ. Stellae Introit in His Let.*

HELST (BARTHOLOMEW VANDER) a celebrated Dutch artist was born at Haerlem in 1613. He became one of the best portrait painters of his time and was not without merit in history and landscape. His finest performance is in the town hall of Amsterdam it represents a company of trained bands of about thirty figures at whole length and in the opinion of sir Joshua Reynolds is one of the first pictures of portraits in the world. This artist died in 1670.—*Sir J. Reynolds's Works vol II. Argentilla Vista del Pante*

HELVETIUS (JOHN FREDERICK) a physician of a noble family in the principality of Anhalt. He was born about 1655 and having obtained at an early age a reputation for medicine and surgery settled in Holland about 1649 and was appointed first physician to the states-general and to the prince of Orange. His works merit very little attention exhibiting a greater devotion to the absurdities of alchymists, physiognomists, and similar visionaries than to the advancement of science. He died in 1707.—His son ADRIAN born in 1656 also a physician visited Paris while a dysentery prevailed and practised so successfully that Louis XIV ordered him to publish the remedy which produced such salutary effects when he declared it to be *pecucanaria* and received 1000 Louis-d'ors for the discovery. He settled in Paris where he was appointed physician to the duke of Orleans. He died in 1721 leaving behind him some medical treatises in no great esteem.—JOHN CLAUDE son of the above was born in 1680 and rose to be a practitioner of great eminence. He cured Louis XV of a dangerous disorder in his infancy and became first physician to the queen and counsellor of state. He was also a member of the Academy of Sciences of the Royal Society of London and of various continental academies. He was generally esteemed and very attentive to the poor. He died 17th July 1755. His works are—*Lidée générale de l'économie Animale* 1722 8vo, *Principia Physico Medica* 2 vols.

H E L

8vo. He also published several valuable papers in the Memoirs of the Academy of Sciences.—*Mores, Haller Bibl. Med*

HEI VETIUS (CLAUDE ADRIAN) the son of the preceding and the most remarkable of this family was born at Paris in 1715. He received the early part of his education in his father's house and when he was of a proper age was sent to the college of Louis le Grand where he attracted the attention of the famous father Porée who paid a particular attention to his education. By the progress which he made in science and literature added to a ready wit and amiable manners he became a favourite with the most distinguished literary characters of the period and among others with Voltaire and Montesquieu. The celebrated work of the latter *L'Esprit des Lois* led Helvetius into the train of reasoning which produced his own at one time scarcely less famous *De L'Esprit* in order to be at leisure to compose which production he gave up his lucrative post of master general. It appeared in 1758 and was condemned by the parliament of Paris as derogatory to the nature of man by confining his faculties to animal sensibility, and destroying the distinctions between vice and virtue. This injudicious proscription as usual tended to give the condemned work additional celebrity both in and out of France and so obnoxious did it render the author that he was removed from his post of maître d'hôtel to the queen and narrowly escaped prosecution. In order to withdraw himself for a time from the resentment of his enemies he visited England in 1764, and the next year went to Prussia, where he was honourably received by Frederick the Great. When he returned to France he led a retired and domestic life on his estate at Voré and being much attached to his wife and family and fond of exercising the duties of a benevolent landlord he cared but little for the quietes of Paris. Both on his estate and in the capital indeed his purse was always open to indigent merit and among other instances of generosity he allowed pensions to Marivaux and Saurin. With every appearance of a robust constitution and long life he was carried off to the great regret of his friends, at the age of fifty-six in December 1771. The only work published by M Helvetius during his life time was his treatise *De L'Esprit* already alluded to in one volume 4to and three 18mo. It is divided into four essays and its chief general design is to prove that all men well organised have the natural power of acquiring the most exalted ideas and that the different genius observable in them depends on the various circumstances which surround them and the different educations which they receive. The principles maintained in this work are farther extended in a Treatise on Man his Intellectual Faculties, and his Education in 2 vols. 4to which by the direction of the author was not published until after his death for which he assigns as a reason the persecution that it would draw on him. In both these produc-

HE L

Since, he has displayed considerable sagacity and taste, and paradoxical as is his main position he shows an extensive knowledge of human nature, and an exquisit power of exposing the foibles of mankind. The style is often pompous and affected, and it is to be regretted that he has introduced notions in relation to the foundations of morality which are of a nature to mask superficial thinkers. In 1772 appeared his poem 'On Happiness,' written early in life and which although shown to and praised by Voltaire had not been before published. It contains some fine verses but in style is often stiff and affected.—*New Hist. Monthly Review* 1759.
Le Harpe's Lyceum

HELVICUS (CHRISTOPHER) a German divine, distinguished as a chronologer. He was a native of the county of Hesse and after having studied at Marburg he was employed to teach Greek and Hebrew at the college of Giessen. In 1610 he was made professor of theology in the same seminary where he continued to teach with great reputation till his death in 1617. Helvicus was eminent for his skill in Rabbinical literature, and was profoundly acquainted with the science of grammar on which he published several works. His System of Chronology in Latin has been repeatedly printed, and is still useful though the author has in the earlier ages been misled by the forgeries of Annus of Viterbo.—*Moreri Biog.*

HELWIG (GEORG ANDREW) a Prussian botanist and mineralogist. He was born in 1666 and studied theology at Königsberg and Jena applying his leisure to researches into natural history. After having travelled in Germany and Italy he commenced giving public lectures at Jena which were extremely well received. This undertaking however he was obliged to relinquish in order to assist his father as minister of Angerburg in Prussia, on whose death in 1705 he succeeded to the office. He became afterwards provost and arch priest, and finished his long life the 3rd of January 1743. Helwig formed several curious herbals, one of which is preserved in the royal library at Dresden. Among his published works are—Lithographia Angerburgica, Königsb. 1717—1720 2 vols. 4to containing observations on fossils, naturally marked with alphabetical characters. He was also the author of several other productions on lithology and botany.—*Gronovii Bibl. Regn. Annae et Legend. Biog. Univ.*

HELWIG (JOAN OTTO) a native of Thuringia, who studied medicine at Jena, Basel &c. and took the degree of doctor at Erfurt in 1675. He resided some time at Amsterdam and then embarked for Batavia where he practised medicine, and employed himself in the collection of natural curiosities. Returning to Europe he visited Italy, Portugal, France, Holland, England and Denmark, with the languages of almost all which countries he was acquainted. The elector palatine made him his counsellor first physician and professor at Heidelberg, and Charles II, of

HE M

England, conferred on him a baronetcy. Helwig at length fixed his residence at Haywards in France, where he died in 1698, aged forty four. He was a professor of the Hermetic art, and the author of a curious book entitled *Introtus in veram artus inandam Physicam* and another on the philosopher's stone.—*Bio. Univ.*

HELYOT (PETER) a French recollect friar of the third order of St Francis eminent as an ecclesiastical historian. He was of English descent but was born at Paris in 1660. He entered the convent of Picpus in 1683 when, according to custom he changed his name taking that of father Hippolytus. The great literary labour of his life was the collection of materials for a History of the Monastic Orders Religious and Military and of the Secular Congregations of both Sexes. He began publishing this work in 4to in 1714, and died in 1716 when the fifth volume was in the press it was completed in 8 volumes and is valuable for the extent and accuracy of the information it affords.—*Athen. G. Biog. Nov. Diet. Hist.*

HEMMINGFORD (WALTER DE) a regular canon of Gisborough abbey near Cleveland Yorkshire. He flourished in the fourteenth century during the reign of Edward III. He compiled a history commencing from the Norman conquest and continued to the reign of Edward II which is written with much care and exactness and in a very tolerable style for the time. He died at Gisborough in 1347. Hearne published an edition of the chronicle of Hemmingford in 2 vols. 8vo Oxford 1731 which is now esteemed one of the most valuable of his labours.—*Gale Veteris Script. Nicholson's Hist. Library*

HEMSKIRK or **HEEMSKIRK** (MARTIN) an eminent Dutch painter was the son of a peasant, and born at a village of that name in Holland in 1498. He was a disciple and imitator of Schorel, and visited Rome where he remained for three years, and then returned to his native country and lived at Haerlem for the remainder of his days. Most of his works are engraved and Vasari relates that Michael Angelo was so pleased with one of his prints that he had a mind to colour it. Fesch thinks that he invented with more fertility than taste or propriety that he rather groped than composed, and was unacquainted with the chiaroscuro. He died in 1572. *Pilkington. Strutt.*

HEMSKIRK (ROBERT) another painter probably of the same family as the preceding was born at Haerlem in 1645. In his own time his compositions were much esteemed for whimsical imagination and coarse humour. His delight was in painting fanciful wild and uncommon scenes such as the nocturnal intercourse of witches, devils spectres, enchantments temptations of St Anthony &c., all of which he wrought with great freedom of touch and intelligence of drawing. His colouring was also in general rich and agreeable. He quitted his own country to settle in London where he died in 1704. It was his custom to paint his

HEM

own portrait in his berouques, which was by no means one of the most engaging kind.—There was another HEMSTERHUIS called by way of distinction, the old, who painted subjects of the same kind with a more orderly imagination.—*Walpole's Anecd.* Fulkington.

HEMSTERHUIS (Tiessens) in Latin Hemsterhusius, a German critic and philosopher the son of a physician of Groningen where he was born in February 1685. About the close of the century he removed from his native place where he had received the rudiments of his education to Leyden for the purpose of completing it and made so rapid a progress there in classical and mathematical learning that before he had attained his twentieth year he was elected to fill the professor's chair in philosophy and mathematics at Amsterdam. The death of Lambert Bos in January 1717 making a vacancy in the Greek professorship at Franeker Hemsterhuis was induced to resign his situation in order to succeed him and there he remained during a period of twenty three years enjoying a great reputation both for talent and erudition. In 1740 he again removed to Leyden upon an invitation from the university having been elected to the joint professorships of history and Greek. The students of ancient literature are indebted to him for much valuable information and acute illustration especially in the editions which he published of the three last books of the *Oeconomica* of Juhus Pollux printed in 1706, the *Tumon* and *Dialogues* of Lucan 1708 as well as part of an edition of the same author in four vols. 4to. He also published annotations on the *Plutus* of Aristophanes 1744, and on the works of Xenophon of Ephesus together with two volumes of philosophical treatises and some miscellaneous essays and orations. There are likewise letters from him to J. Matt. Gessner and others, and he gave considerable aid to J. St. Bernard in publishing the *Elogia Thome Magistrorum* at Leyden in 1757. His death took place at Leyden in April 1766.—*Ellegaard Rhuskenius*

HEMSTERHUIS (FRANCIS) a Dutch philosopher who passed a great part of his life at the Hague where he enjoyed a post in the state, which afforded him a moderate income and left him leisure for meditation and study. He employed himself in the cultivation of the fine arts ancient literature, and philosophy and passed through life undisturbed by passion or intrigue and much esteemed by the friends with whom he associated for the simplicity of his manners and the charms of his conversation. He died unmarried at the Hague in June 1790 having long filled the station of first clerk in the secretary's office of the council of state. The following are the titles of his works—*Lettre sur la Sculpture* 1769 4to., *Lettre sur les Deux* 1770 *Lettre sur l'Homme et ses Rapports*, 1773, "Sophyle, ou la Philosophie" 1778, *Anastase ou de la Davantée* 1779, "Alexa ou de l'Age d'Or" 1787, "Simon, ou des Facultés

HEN

de l'Âme published after the death of the author. These pieces were collected and printed at Paris in 1792 3 vols. 8vo, and again in 1809. Hemsterhuis was well acquainted with astronomy optics and mathematics, he was a good designer and he possessed a valuable collection of engraved gems, pieces of sculpture &c.—*Bug Unio.*

HENAULT (CHARLES JOHN FRANCIS) usually termed the president Henault, an eminent French historian and writer on polite literature. He was the son of a farmer-general, and was born at Paris in 1685. He first adopted the ecclesiastical profession and entered among the fathers of the Oratory but he quitted that society for the long robe and obtained the posts of president of the chamber of inquests and superintendent of the finances of the queen's household. He produced a poem which in 1707 obtained a prize from the French academy. In 1713 his tragedy of

Corneille was brought on the stage where however it was not well received. In 1723 he was admitted into the French academy and he also became a member of the academy of Inscriptions and Belles Lettres and of other literary associations. He was intimately connected with madame de Deffand, and from his rank as well as his talents he held a distinguished station among the Parisian literati. His *Abrégé Chronologique de l'Histoire de France* exhibiting a tabular view of French history has been translated into several languages and been repeatedly imitated. He was also the author of comedies poems, academic discourses, &c. He died in 1770 in the following year was published posthumously his *Histoire Critique de l'Etablissement des Français dans les Canaries* 2 vols. 8vo and in 1806 appeared *Les Oeuvres inédites de Pres Henault* 8vo.—*Bug Unio. Nouv Dict. Hist.*

HENAULT or HENAUT (JOHN D.) a French poet of the seventeenth century. He was the son of a baker at Paris and having travelled when young in the Netherlands and in England he obtained on his return to France the patronage of the minister Fouquet. On his disgrace he wrote a satirical sonnet on the naval statesman Colbert which he afterwards endeavoured in vain to suppress. He was a kind of speculative libertine and from congeniality of sentiment he had translated a part of the philosophical poem of Lucretius, but alarmed at the approach of death, he was persuaded by his confessor to commit the manuscript to the flames, a circumstance which is characteristically lamented by Voltaire. He died in 1682. His works consist of miscellaneous poems, published together in 1670.—*Sécié de Louis XIV. Actes 1 G. Bug*

HENDERSON (JORN) a celebrated actor was born in London in 1747. He was apprenticed to a silversmith but on the death of his master he had recourse to the stage and after acquiring considerable celebrity at Bath came out in the character of Shylock at the theatre in the Haymarket. He was next engaged at

H E N

Derry-lane theatre, where he acquired great celebrity in Shakespeare's characters, especially those of Hamlet and Falstaff; in the latter of which he is said to have never been equalled. He was suddenly carried off by a brain fever in 1785 in the prime of life.—*Life by Ireland.* There was also another JOHN HENNESSY, a young man remarkable for the precocity of his genius, a native of Balgarvan, Ireland, where he was born in 1757. He was educated by his father, a Methodist preacher, in a Methodist seminary at Kingswood, and obtaining the notice of Dr. Tucker, dean of Gloucester, was sent by that divine to Pembroke college, Oxford, where he was visited by Dr. Johnson and other eminent men. His learning was universal but he applied chiefly to alchymy and metaphysics. His manners were highly eccentric, and he fell an early victim to intemperance in 1788. Some of his poems and essays have been printed.—*Europ. Mag.*

HENKEL (JOACHIM FREDERICK), a Dutch surgeon, who studied at Berlin and entered into the Prussian army. He was noticed by Frederick William I, who gave him a pension and sent him to Paris for improvement. On his return, after two years absence, he was made principal surgeon of a regiment of guards. He gave public lectures on surgery at Berlin but, never having graduated at a German university, he experienced much opposition. In 1744 he received the degree of M.D. at Frankfurt on the Oder, after sustaining a thesis *De Cataracta crystallina vera.* After having served two campaigns in Silesia, he devoted himself wholly to giving lectures and professional practice at Berlin, and many skilful surgeons studied under him. He died July 1st, 1779. His works which relate to surgery and midwifery contributed much to the improvement of those branches of the profession in Prussia.—*Bioog. Univ.*

HENKEL or HENCKEL (JONAS FAZ) a skilful Saxon chemist and mine raiser, born at Freiberg in 1679. He studied medicine and practised it for some time, but at length relinquished the pursuit to devote himself wholly to his more favourite studies. Augustus II of Poland appointed him collector of mines, in which office he made himself useful to his country in various respects. To his improvements in chemical processes, the manufacture of porcelain at Meissen owes much of the excellence which has distinguished it for more than half a century. This laborious chemist died January 26th 1744, leaving a rich collection of fossils and minerals which was removed to Petersburg. He was the author of several works valuable at the time they were published, of which the best known is his "Pyniologus, or Natural History of Pyrites," of which there are French and English translations.—*Id.*

HENLEY (JONAS) an English elegyman possessed of considerable talents, but principally distinguished for the irregularity of his conduct, and commonly known towards the middle of the last century by the title of *Orator Henley.* He was the son of a clergyman, and

was born at Merton Mowbray, in Leicestershire in 1693. He was regularly educated at St. John's college, Cambridge, where he took the degree of M.A. and afterwards entered into holy orders. While at the university he sent a letter to the Spectator signed *Peter de Quir* [see No. 396] which displays much of that quaint humour for which he was subsequently noted. After having for some time conducted a free school at the place of his birth and held a curacy he grew tired of his secluded situation and went to London in search of an ample field for his abilities. He was first engaged as a preacher at an episcopal chapel but being disappointed in an attempt to obtain the lectureship, and dissatisfied with his prospects of church preferment, he resigned his appointments and commenced public orator. Having opened a chapel in the neighbourhood of Newport-market, he gave lectures on theological topics on Sundays and other subjects on Wednesdays every week. He struck medals for admission tickets with a rising star for the device and the motto *Ad Summum et below Inveniam Viam aut faciam.* Novelty procured him a multitude of hearers, but he was too imprudent to gain any permanent advantage from his project. After having served as a butt for the satirical wits poets and painters, of his time, he removed his oratory to Clare-market, and sunk into comparative obscurity and contempt, previously to his death in 1756. He published a periodical paper called *The Hyp Doctor*, besides some poems and translations of Pliny's epistles and works by Montauncou Vertot &c.—*Nichols's Anec. of Hogarth. Atlan's Gen. Biog.*

HENLEY (SAMUEL) a divine of the church of England, who held the professorship of moral philosophy in the college of Williamsburgh in Virginia, before the separation of the United States from Great Britain. Leaving America, he became curate of Northwold Middlesex and usher of Harrow school, and he afterwards obtained the rectory of Rendlesham in Suffolk. In 1805 he was placed at the head of the East India college at Hartford, when he procured the diploma of DD. His death occurred at Rendlesham in 1813. He published a Dissertation on the controverted Passages in St Peter and St Jude, concerning the Angels that sinned and kept not their first estate 1778 Observations on the subject of the Fourth Eclogue, the Allegory in the Third Georgic and the primary design of the *Aeneid* of Virgil with Remarks on some Comms of the Jews 1782 8vo, and an Essay towards a new Edition of the Elegies of Tibullus with a translation and notes 8vo. He was also a FAS and published some papers in the Archaeologia.—*Genl. Mag.*

HENLEY (ANTHONY) an ingenious writer, contemporary with Steele and Addison. He was born at the Grange in Hampshire the seat of his father Mr. Robert Henley, and received his education at the university of Oxford, where he distinguished himself by his classical acquirements. In 1698 he was chosen MP for Andover, and he afterwards had

H E N

sent for Weymouth. He belonged to the whig party, but obtained more eminence for his literary talents than as a politician. He died in 1711. Besides some poetical pieces he wrote papers in the "Tatler" and in the "Medley".—ROBERT HENLEY his second son, was educated as a lawyer, and arrived at the rank of Lord Chancellor. He was created Earl of Northampton and died in 1772.—*Biog. Peacock Chalmers's Biog. D*

HENNAO (GABRIEL DE) a voluminous Spanish author was born in 1611. He entered at the age of fifteen into the order of jesuits at Salamanca, and spent the greater part of his life in that university. He died in 1704 at the great age of ninety three. His works consist of eleven folio volumes in Latin nine of which are controversial, theological and philosophical the remaining two, entitled *Biscaya Illustrata* contain much interesting matter relating to the history and antiquities of Biscay.—*Moresi.*

HENNEPIN (Lewis) a French recollect friar famous as a missionary and a traveller in North America. He was born in Flanders about 1640. His inclination for travelling led him to Italy, and he was afterwards preacher at Hall in Haauait. He then went into a convent and being sent by his superiors to Calais and Dunkirk the stories he heard from the sailors inspired him with a desire to visit distant countries. At length he embarked for Canada and arrived at Quebec in 1675. Between that period and 1688 he explored the regions now called Louisiana and returning to Europe published an account of his researches entitled *Description de la Louisiane nouvellement découverte au sud-ouest de la Nouvelle France avec la Carte du pays les mœurs et la manière de vivre des Sauvages* Paris 1688 12mo. He afterwards produced other works containing fuller descriptions of the result of his observations. He was appointed guardian of the convent of Renty in Artois, and refusing to return to America, after some disputes, he was permitted by his superiors to retire into Holland in 1697 where he found protectors at the court of William III. Though he adopted the secular habit among the Dutch it does not appear that he relinquished his religion or his profession, as he always added to his signature the title of missionary recollect and apostolic notary.—*Biog. Univ.*

HENNIGES (HENRY DE) a celebrated German lawyer and politician of the seveneenth and eighteenth centuries. He was a native of Weissenburg in Franconia and studied jurisprudence in the universities of Jena and Altona. Not being of a noble family he was unable to obtain any diplomatic appointment though distinguished for his knowledge. He published a work on the power of the emperor in ecclesiastical affairs in the hope of getting an office in the imperial cabinet at Vienna but he was disappointed. His observations on Grotius which appeared in 1675 attracted the notice at length, of the minister of the elector of Brandenburg through

H E N

whose patronage he was in 1678 appointed private secretary to the elector. The following year he replaced the Prussian secretary of legation at Ratisbon. The elector becoming king of Prussia conferred on Henninges letters of nobility and in 1711 he was sent as second ambassador of Prussia to the congress of Frankfort, where Charles VI was elected emperor of Germany. He was however present at only one sitting as he died August 26th, 1711. He published several tracts, and left in MS in 17 vols. a history of the Diet of the Empire with an index and documents preserved in the royal archives at Berlin.—*Biog. Univ.*

HENNIKER (or FREDERICK) an English baronet, descended of the noble family of that name. He was the eldest son of the hon. lieutenant-general sir Brydges Trecothea Henriker of Newton hall Essex and was born Nov 1 1793. He received his education at Eton, whence he removed to St John's college Cambridge and succeeded his father in his title and estates in 1816. A strong disposition towards literary and antiquarian research induced him on quitting the university to commence his travels through France Italy Egypt Nubia, and Palestine from which latter country after narrowly escaping with his nose in the hands of a wandering banditti who wounded and left him for dead between Jerusalem and Jencho he returned through Greece Turkey and Germany. Of this journey he published in 1822 a very amusing journal entitled "Notes during a Visit to Egypt Jerusalem &c." Sir Frederick died at his chambers in the Albany after a short but excruciating illness of fourteen days, August 6 1822.—*Gent Mag.*

HEN VINGES (JEROME) a learned Saxon genealogist, who was a native of Lunenburg. He studied under Melanthon and after finishing his education returned home expecting to obtain a situation as a minister. He applied with much zeal to historical and antiquarian researches and produced as the result of his studies *Genealogia Familiarum Saxoniarum*, Hamburg, 1596 folio. He died in 1597. After his decease appeared an immense compilation entitled *Theatrum Genealogicum communis Etatuum et Monarchiarum Familias complectens* Magdeb. 4 vols folio. The first work is the more accurate and valuable.—*Moresi Biog. Univ.*

HENNUYER (JOAN) bishop of Lassay, was born at St Quintin in Picardy in 1597. In the reign of Charles IX, when the royal lieutenant of the province communicated to him the order to massacre all the protestants in the diocese of Lassay he nobly signed a formal and official opposition to it for which humane and courageous act the court vented neither to censure nor persecute him. He died in 1597 universally respected, having effected more in favour of the church of Rome by his mildness than any of the bigots by their fury.—*Nous. Diet Hist.*

HENRY I king of England, surnamed Beauclerc, youngest son of William the

Conqueror, was born 1066. His father at his death, left him no dominions, and on consequence of disputes with his brothers he was for sometime in a state of great depression. He appears, however, to have been reconciled to William Rufus, as he was hunting with that prince in the New Forest, when he received his mortal wound, in 1100. Henry instantly rode to London and by securing the royal treasure and gaining over a party of the nobles and prelates, caused himself to be proclaimed king to the prejudice of his brother Robert, then absent on the Crusades, who was thus a second time defrauded of his right of succession. To reconcile the people to his usurpation Henry issued a charter containing great concessions to public liberty, but which seems to have operated little in modification of his own government. He also performed another purpose not by recalling Anselm, archbishop of Canterbury, the authority of which prelate was necessary to his projects of conciliating his English subjects by marrying Matilda daughter of Malcolm III, king of Scotland, by his queen, a sister to Edgar Atheling. This union accordingly took place, and much strengthened his party when his brother landed an army in 1101, with a view of asserting his claim to the crown. Actual hostilities were however prevented by the intercession of Anselm, who induced Robert to accept a pension, and it was agreed that the brothers should mutually succeed to each other's dominions, in the event of death without issue. This treaty did not prevent Henry from invading Normandy a short time after, and in 1106 he took Robert prisoner and reduced the whole of the duchy. He also became master of the persons of William son of Robert, whom he kept in custody in Normandy and of Edgar Atheling's wife, protected by the magnificence of his character was allowed to reside in privacy in England on a pension. With a rigour most unnatural and unfraternal, he confined Robert for the remainder of his life (twenty-eight years) in Cardiff castle where he ended his days. Henry like most of the other sovereigns of Europe had a contest with the papal court on the subject of investitures, that ended in a compromise by which he merely retained the right of temporal homage. His usurpation of Normandy involved him in continual war which was very oppressive to his English subjects, but although William son of Robert escaped out of custody and was assisted by the king of France, Henry maintained possession of the duchy. His public prosperity was, however counterbalanced by several domestic misfortunes. One of these was the loss at sea of his only son William then rising to manhood who was drowned in 1120 in returning from Normandy together with his natural sister, whose crew recalled him to the sailing ship after he had got clear from it in the long boat. Henry was never seen to smile afterwards. He had betrothed his only daughter Matilda to the emperor Henry V and when she became a widow, married her a second time to Geoffrey Plantagenet, son of

the count of Anjou. He himself also married a second wife, Adelais, daughter of the duke of Lorraine, by whom he had no issue. Henry reigned with great vigour and prudence, and although he firmly maintained his authority, would often redress grievances, of which he gave an instance by punishing with great severity an abuse of the chancery of parveyance. He died in Normandy of a sur' le mal il ne connu caused by the eating of lampreys, in the forty-seventh year of his age and thirty sixth of his reign. Henry was a prince of great accomplishments, both of mind and person, and his ready eloquence and proficiency in the literature of the period obtained him his surname. He was much attached to women and possessed all the Norman passion for the chase which produced so many rigorous game laws. In other respects the severity with which he punished delinquency was probably serviceable to a country in the then rude state of England.—*Hume's Hist. of Eng.*

HENRY II King of England, the first of the line of the PLANTAGENETS, was born in Normandy in 1133 being the son of Geoffrey, count of Anjou and the empress Matilda, daughter of Henry I. He early displayed an elevated character and was invested with the duchy of Normandy by the consent of his mother at the age of sixteen. The year following he succeeded his father in the possessions of Anjou and Maine and by a politic but not very scrupulous marriage with Eleanor of Aquitaine just divorced from Louis VII king of France on a suspicion of infidelity annexed that province with Poitou to his other dominions. Rendered thus potent, he determined to pursue his claim to the crown of England against the usurpation of Stephen. It is the province of history to narrate the events of his expedition for that purpose which ended in a compromise that Stephen should retain the crown during his life, and Henry succeed at his death an event which soon after took place in 1154. The commencement of his reign was marked by the dismissal of the foreign mercenaries, and although involved with his brother Geoffrey who attempted to seize Anjou and Maine and in a temporary dispute with France he resigned prosperously until he became involved in his memorable contest with Thomas à Becket. Landably anxious to repress the usurpation of the clergy which, although at the period in question unusual to civil authority every where was in no country more intolerable than in England, Henry in 1164 summoned a general council of nobility and prelates at Clarendon, which assembly passed the famous constitutions named from that place. The object of these articles, sixteen in number was to control the assumed authority of the clergy and to render them amenable in all civil matters to the ordinary courts of justice. By framing such laws, in a national council the supremacy of the legislature over papal and ecclesiastical synods was also fully established. The consequences of the reluctant subscription of Becket to these articles in the first instance and subsequent retraction on the disapprobation of the Pope,

have been already related in the life of the archbishop (see Becket). A prince of less power and policy than Henry might have yielded to the storm which followed the untoward death of that haughty prelate; but although sufficiently submissive in the way of penance and expiation, he only gave up the article in the constitutions of Clarendon which forbade appeals to the court of Rome in ecclesiastical cases, and even in that case reserved to himself the right of extracting sufficient security from all clergy who should leave the country in prosecution of such appeals. Before this matter was terminated Henry in 1172 armed with a bull of Pope Adrian, whose authority to give away kingdoms in this instance he did not dispute undertook an expedition into Ireland a great part of which country owing to the internal disputes of its native chieftains, had been reduced by some private adventures, conducted by Richard Strongbow earl of Strigil. The king found little more to do than make a progress through the island to receive the submission of the Irish princes, and having left earl Richard in the post of seneschal of Ireland he returned to England proceedings so important to the future destinies of both countries having occupied only a few months. A numerous progeny of sons seldom failed in these unsettled times to produce domestic strife in royal families and attempts against the authority of the common parent an unnatural species of affliction which Henry was doomed to undergo with unusual bitterness. Being an indulgent father he had assigned to each of his four sons a provision out of his extensive territories. The eldest son Henry was notably declared heir to England Normandy Anjou Maine and Tournais but actually crowned in his father's life time. On paying a visit to the court of his father in law Louis the prince was induced by the French monarch to demand of his father the immediate resignation either of the kingdom of England or of the dukedom of Normandy. This extraordinary request being refused he withdrew from his father's court and was openly supported in his claim by Louis. Henry's various gallantries exemplified in the popular and not altogether unfounded legend of fair Rosamond or Rosamond Clifford also embroiled him with his queen Eleanor, who spurned her other sons Richard and Geoffrey to make similar claims, and imitate the example of their elder brother. Many potent barons and nobles in the respective provinces were thus withdrawn from their allegiance and Louis king of France William king of Scotland and other powers lent spirit to the confederacy. A general invasion of Henry's dominions was in this way concerted and it began in 1173 by an attack on the frontiers of Normandy where he opposed the storm with vigour. In the mean time the flame had broken out in England which was overrun with malcontents, while the king of Scots made an incursion into the North. Henry in consequence hastened home and to conciliate the clergy having passed a day and night of penance at the tomb of Becket, his absolution was followed by the

news of a complete victory gained by his general, the justiciary Glanvills over the Scopines, which their king was made prisoner. The spirit of the English malcontents being thus broken they rapidly submitted and Henry, returning to Normandy entered into an accommodation with his sons on less favourable terms than they had previously rejected nor did the king of Scotland gain his liberty but by stipulating to do homage, and yield up some fortresses. The pause obtained by these exertions of vigour and ability Henry employed in regulations and improvements which equally manifested his capacity and love of justice. He checked the prevailing licentiousness by severe laws partitioned England into four judiciary districts and appointed itinerant justices to make regular excommunications through them. He revived trial by juryes discouraged that by combat and demolished all the newly-erected castles as shelters of violence and anarchy. The turbulence of his sons still disquieted him, but Henry the eldest who had engaged in a new conspiracy was cut off by a fever in 1183 after expressing great contrition for his disobedience, and two years after the death of the equally restless Geoffrey also released the king from newly meditated hostilities. Philip Augustus then became king of France however continued to foment the differences between Henry and his sons and Richard was again prompted to rebel. A war between the two crowns followed the event of which was so unfavourable to Henry that he was at length obliged to agree that Richard should receive an oath of fealty from all his subjects, and marry Alice sister of the French king for whom Henry himself under whose care she had long resided is charged and not without ground of having indulged an unbecoming if not a criminal passion. He also stipulated to pay a sum of money to the French king and to grant a pardon to all Richard's adherents. The mortification of Henry at these humiliating terms was aggravated to despair when he saw the name of his favourite son John head the list of delinquents whom he was required to pardon and cursing the day of his birth he pronounced a malediction upon his undutiful sons, which he could never be persuaded to retract. The anguish of his mind threw him into a low fever which put an end to his life at the castle of Chinon near Saumur in the fifty eighth year of his age and thirty fifth of his reign. Henry II ranks among the greatest kings of England, not only in extent of dominion but in all the qualities which give lustre to authority, being equally fitted for the active scenes of public life and for cultivated leisure. He was manly in person, gifted with ready elocution and possessed warm affections which seemed little to deserve the ingratitude he encountered. His wisdom and love of justice were acknowledged by foreign potentates who made him arbiter of their differences, and regarded him as the first prince of the age. Ambition was his ruling passion and he was enabled by circumstances to indulge it with less violence to equity than is usual among

ambition, or rather, hot the extent of his constitutional development, under a system so artificial and despotic as the feudal, one was the obvious cause of his principal discontent and misfortunes.—*Hume's Hist. of Eng. Lyttleton's Hist. of Henry II.*

HENRY III, king of England, surnamed of Winchester, son of John, was born in 1207 and succeeded his father 1216. At the time of his accession the country was in a state of lamentable distraction. The dauphin of France Louis, at the head of a foreign army supported by a faction of English nobles disgusted with the conduct and tyranny of John had assumed the reins of government, but being justly suspected of arbitrary misdeeds was become odious to the body of the people. The cause of the young king then only nine years of age was espoused by the earl of Pembroke whose prudent government as regent in a short time compelled Louis to sue for peace and quit the country. The death of Pembroke involved the country in new disorders, owing to the renewed turbulence of the barons, but in the mean time Magna Charta was again confirmed and parliament began to consider it as the fundamental law of the nation and its observance as the condition of their grants. As Henry approached to manhood, he displayed a character wholly unfit for his station and although his reign affords many important domestic events, in a biographical point of view it is extremely uninteresting. One of his first false steps was to discard his most faithful and able minister Hubert de Burgh, and give his entire confidence to rapacious and unprincipled foreigners an evil which was further augmented by his marriage in 1236 with Eleanor of Provence. Many oppressive grievances were the consequence and his foolish acceptance of the crown of Sicily offered him by the Pope involved him in vast debts which parliament very properly refused to discharge in his necessity he had recourse to exactions which increased the national discontent, and finally gave it to his brother in law the ambitious Simon de Montfort, earl of Leicester to make a total change in the constitution and deprive him of royal authority. In 1258 conspiring with the principal barons that earl appeared with them in arms at a parliament held at Oxford and obliged the king to sign a body of resolutions, which threw all the legislative and executive power into the hands of an aristocracy of twenty four barons assisted by a lower house consisting of four knights chosen from each county. The aristocracy as usual soon displayed a spirit which united both king and people against them, and the former was absolved by the Pope from his oath to observe the provisions of Oxford. By the aid of his able and spirited son Edward, Henry was gradually restored to authority on which Leicester calling in Llewellyn, prince of Wales involved the kingdom in a civil war. The power of the barons was by this means partially restored but great divisions prevailing in the parties agreed to abide by the award of Louis IX, king of France. The award of this

monarchy, given in 1264, being favourable to the king, Leicester and the confederate barons refused to submit to it, and a battle was fought near Lewes, in which Henry with his brother Richard, king of the Romans, were taken prisoners, and the person of prince Edward also ultimately secured. A convention ensued, called 'The Mise of Lewes' which provided for the future settlement of the kingdom, but in the mean time Leicester ruled without control. To him, however was owing the first example of a genuine house of Commons in England, for in a parliament summoned by him in 1265 deputies from boroughs were sent as well as knights of shires. Prince Edward at length escaped and assembling an army, defeated Leicester's son. The decisive battle of Evesham quickly followed in which Leicester himself was slain, and the poor king then in the hands of the rebels, being placed in the front of the battle narrowly escaped with his life. Replaced upon the throne he remained as insignificant as ever and the departure of his son for the Holy Land was the signal for new commotions which were however terminated by his death in 1272 in the sixty fourth year of his age and fifty sixth of his reign.—*Hume's Hist. of Eng.*

HENRY IV, king of England surnamed of Bolingbroke the first king of the house of Lancaster was born in 1367 being the eldest son of John of Gaunt, duke of Lancaster, third son of Edward III by the heiress of Edmund earl of Lancaster second son of Henry III. In the reign of Richard II he was made earl of Derby and duke of Hereford and while bearing the latter title appeared in the parliament of 1398 and preferred an accusation of treason against Mowbray duke of Norfolk. The latter denied the charge and offered to prove his innocence by single combat which challenge being accepted the king appointed the lists at Coventry but on the appearance of the two champions at the appointed time and place Richard would not suffer them to proceed. Both were banished the kingdom Norfolk for life and Hereford for ten years shortened by favour to four with the further privilege of immediately entering upon any inheritance which might accrue to him. On this sentence Hereford went and served with distinction against the infidels in Lithuania, and by his conduct acquired general esteem. On the death of John of Gaunt in 1399 he succeeded to the dukedom of Lancaster and laid claim, according to agreement, to the great estates attached to it, on which the fickle and imprudent Richard was induced to recall his letters patent, and retain possession of the estates soon after which imprudent step he departed for Ireland. The duke disregarding the unfinished term of his exile, embarked in July 1399 at Nantes and landing with a small retinue at Rye-snapur, in Yorkshire made oath on his landing, that he only came for the recovery of his duchy. He was quickly joined by the earls of Northumberland and Westmoreland the most potent barons of the North, and as he proceeded

York acting as guardian in the king's absence was unable to oppose him, and marching to Bristol, he took upon himself to execute some of the most odious of Richard's ministers, without trial. The latter on the report of these transactions landed at Milford Haven with an army which soon melted away by desertion, and falling into the hands of his enemies, he was brought to London by the duke who now began to openly aim at the crown. A resignation was first obtained from the ill-fated Richard who was then solemnly deposed in parliament (see RICHARD II.) On this abdication the right of succession was clearly in the house of Mortimer descended from Lionel, duke of Clarence the second son of Edward III but the duke of Lancaster stepping forward in parliament, claimed the crown for himself as being lawfully descended from Henry III which title alluded to an idle report that his maternal grandfather Edmund, earl of Lancaster, was really that king's eldest son, although set aside for his brother Edward I. A sort of right of conquest was also set up together with a plea of having delivered the nation from tyranny and though it was obvious that none of these claims would bear discussion Henry was unanimously declared lawful king under the title of Henry IV. The death of Richard soon removed a dangerous rival, yet a short time only elapsed before the turbulent and selfish nobles rebelled against the king of their own creation. The first plot, in 1400 was discovered time enough to prevent its success, and many executions of men of rank followed. In order to ingratiate himself with the clergy Henry promoted a law for committing to the flames persons convicted of the heresy of the Lollards. The Gascons who for a time refused submission to Henry were soon awed by an army, but an insurrection in Wales, under Owen Glendower (see article GLENDOOWER) proved a more lasting source of disturbance. That cheftain having captured Mortimer, earl of March, the legal heir to the crown Henry would not suffer his relation the earl of Northumberland, to treat for his ransom. He thus first offended the powerful nobleman, who, however with his son the famous Hotspur subsequently served the king effectually against the Scots whom they defeated at Homildon and captured their famous leader the earl of Douglas. An order from Henry not to ransom that nobleman and the other Scottish prisoners, whom he wished to reserve as hostages, completed the disgust of the Percys and the fiery temper of the younger Percy being especially roused by these indignities, he immediately set free his prisoner Douglas, after making an alliance with him and marched with all the partisans of his house towards Wales, to join Glendower. The king met the insurgents at Shrewsbury and a furious battle ensued, July 21 1403, which ended in the death of Percy and the extinction of his party. The king, who fought in

self. Henry was merciful in this instance; the earl of Northumberland whom sickness had prevented from joining his son was pardoned, and but few victims were executed. A new insurrection, headed by the earl of Nottingham and the archbishop of York, broke out in 1405 which was not very honourably suppressed by the king's third son prince John who by a pretended agreement induced the leaders to disband their forces and then apprehended them. The archbishop afforded the first example in the kingdom of a capital punishment inflicted upon a prelate and the chief justice sir William Gascoigne, deeming it unlawful a less scrupulous judge supplied his place Northumberland who had once more conspired with the rebels, fled into Scotland with lord Bardolf and in an attempt to raise a new rebellion in 1407 both these leaders were slain at Bramham, and the death of Glendower following soon after Henry at length felt his crown at firmly on his head. The casual capture by sea of James' son and heir to Robert, king of Scotland added to his safety on the side of Scotland and although he had not the generosity to release the young prince he had him admirably educated, and thereby laid the foundation of the distinction which he afterwards obtained as a reformer of the laws and manners of his country. The remainder of the reign of Henry requires little observation. For the purpose of inducing the nation to disregard the right by female descent, which superseded his own he procured a settlement of the crown on himself and his heirs male, but a salic law was so disagreeable to the nation he was obliged to admit the succession of females in a new act. The continual disgust of his life brought him, while yet in his prime into a declining condition and repeated fits which rendered nugatory a fond resolution of taking the cross, and visiting the Holy Land brought on his dissolution, March 20 1413 in the forty-sixth year of his age and thirteenth of his reign. His name amounted to four sons and two daughters. Had Henry IV obtained the crown under more favourable circumstances he showed himself capable of reigning possessing courage vigilance prudence and great command of temper. As it was, the necessity under which he lay of courting popularity rendered his reign upon the whole beneficial to the nation and particularly favourable to the rights of the commons.—*Ibid.*

HENRY V king of England, called after his birth place of Monmouth was born in 1388 and succeeded his father Henry IV in 1413. His dissipated youth and fondness for jousting and low company gave his father much uneasiness but circumstances occurred even in the midst of his wildness, which showed that better principles were latent in his mind. Having appeared at the bar of the King's Bench in order to support one of his notorious companions, being unable to shake the sum-

one of the chief justificatory proofs he produced on his trial to vindicate him upon the bench and as soon as he was sworn, even to strike him. The courageous Gascoigne nobly mindful of the law violated in his person ordered the prince into custody and by a ready submission to the constituted, the latter made atonement for the violence unto which Gascoigne had betrayed him. His conduct when he ascended the throne justified the best expectations he assumed the obsequies of the unhappy Richard to be performed with great solemnity and was studious to obliterate every party distinction. He had the magnanimity to treat with confidence and to address his superior in hereditary title the earl of March, who repaid his advances with undividing fidelity. It is to be regretted, that his other good qualities were sullied by a rigid execution of the laws against the Lollards, the severity of which procedure might produce a real or alleged conspiracy against his person and government. This was suppressed with the execution of the leader, but the parliament, although willing to support the church showed such a disposition to make free with the revenues of the clergy in order to answer the demands of the king that a great alarm was raised among that body and archbishop Chichester could think of no better expedient than that of turning the king's attention towards a war with France the circumstances of that kingdom torn asunder by the opposing factions of the dukes of Orleans and Burgundy afforded a tempting opportunity to an ambitious neighbour. Henry was easily induced to revive the claims of his predecessors upon that country and his first step was to send over ambassadors, offering peace and alliance with a demand of the hand of the princess Catherine with a great dowry and the restitution of Normandy and all other provinces wrested from the kings of England by Philip Augustus. Scarcely of its weak man, the French court made considerable offers, but none which Henry would accept. He accordingly assembled a great fleet and army at Southampton and was on the point of embarkation, when discovery was made of a dangerous conspiracy against his person headed by the earl of Cambridge, who had married a sister of the earl of March, and sought to assert the rights of that family. The conspirators were capitally punished after an singular trial and the king delaying no longer, landed near Harfleur on the 14th of August, 1415. He took that town after a siege, which so much reduced his army that he despatched to march to Calais and return to England; and finding a great force assembled to oppose him, he offered to resign his conquests for an unopposed retreat. The French in their confidence rejected the proposal and pursued him in battle array in the plain of Agincourt. It is unnecessary to detail the particulars of a conflict so well known being one of those which are inseparably connected with national recollection. After this great display of skill and valour which took place on the 25th of October, 1415, Henry did not

after his destination to return home and the dread of his name was the chief advantage which he reaped from it. A peace taking place for two years France was left to her own dissensions, until at length in August 1417 the unusually liberal grants of the Commons enabled Henry once more to invade Normandy with 25 000 men, and having made himself master of all the lower part of the province he laid siege to Rouen. To an application for peace he made a reply which showed that he sought nothing less than the crown of France, but nevertheless, in a negotiation with queen Isabella he offered to accept the provinces ceded to Edward III by the treaty of Bretigny. The negotiation was broken off by the assassination of the duke of Burgundy which murder induced his successor to join Henry. This alliance was rapidly followed by the famous treaty of Troyes made with the French king in a state of incapacity or rather with his queen and the Burgundian faction who held him in custody. By this treaty Henry engaged to marry the princess Catherine and to leave Charles in possession of the crown on condition that it should go to Henry and his heirs at his decease and be inseparably united to the crown of England. By this treaty the dauphin Charles was entirely cut off from his inheritance and could it have been brought to lasting effect it would have been pernicious to both kingdoms, but to England in particular which it would have gradually reduced to the condition of a province. Henry after espousing Catherine took possession of Paris and then went over to England to raise recruits for his army. He obtained some supplies from parliament, which however began to be sensible that these French conquests would be of little benefit to England. He returned to France in 1421 and pursued the dauphin with so much vigour as to drive him beyond the Loire. He carried with him his prisoner James I now become king of Scotland in order to place the Scots who were fighting as allies of the dauphin in the condition of being in arms against their own sovereign, and if it be true, that some who were taken prisoners were punished as traitors on that miserable pretence the character of Henry is deeply stained by the cruelty. As if to consummate his prosperity a son was at this time born to him and all his great projects seemed in full progress to success when he was attacked by a fistula, which carried him off in August 1422 at the early age of thirty four and in the tenth year of his reign. Henry V, as the gallant, youthful and successful conqueror of France, is a favourite name in English history; but he cannot be compared in wisdom and solid policy with more than one of his ancestors. Besides valour and military skill, he appears to have possessed several estimable qualities, to have been affable and generous in disposition, and to have at once maintained discipline in his army and justice in his civil administration. His reign was however consumed in spite ambitious pursuits, which, while they inflicted

protection of France applied in the same year in such a state, that the sword only could decide between them and that course of civil contention commenced the first bloodshed in which occurred at St Albans in May 1455, and as far as the reign of Henry was concerned, the last in the battle of Tewkesbury in 1471. When the latter took place, the king was a prisoner in the tower where he soon after died but whether by a natural or violent death is uncertain, although popular opinion assigned it to the violence of Richard duke of Gloucester. Henry was gentle peace, and well intentioned, but too weak in understanding and temper at all times to act for himself. He seems however to have had some attachment to letters but whether it originated only in his fondness for books of devotion is doubtful. At all events Eton college the most splendid establishment in England for classical learning reverses Henry as its founder as does likewise King's college Cambridge. It is said that he was near being canonized but it was thought that his piety was too closely allied with mental weakness to support the credit of sainthood.—*Ibid.*

HENRY VII king of England first sovereign of the vigorous race of Tudor was born in 1457. He was the son of Edmund earl of Richmond, son of Owen Tudor and Catherine of France widow of Henry V. His mother Margaret was the only child of John duke of Somerset, grandson of John of Gaunt. After the battle of Tewkesbury he was carried by his uncle, the earl of Pembroke to Brittany to seek refuge in that court from the jealousy of the victorious house of York. On the unjust usurpation of Richard the young earl of Richmond was naturally diverted to as the representative of the house of Lancaster and the enemies of that able but sanguinary sovereign projected a match between him and Elizabeth eldest daughter of Edward IV as a means of closing the feud by a union between the two houses. Richard who discovered the design, met the danger with so much vigour and ability that the plan was entirely disconcerted. Meantime Richmond assembled a body of troops in Brittany and set sail from St Malo's but having encountered a storm was obliged to return. It now became the policy of Richard to marry Elizabeth himself and he made application to the court of Rome for a dispensation accordingly. Finding by this step that no time was to be lost, Richmond made a second attempt in 1485 and landed at Milford Haven on the 7th of August, with no more than 2000 hired foreign adventurers. He was immediately joined by some leaders of rank but had only 6000 men when Richard met him at Bosworth with an army twice as numerous in appearance, but the defection of Lord Stanley with his forces who joined Richmond during the battle obtained for the latter a complete victory. Henry was proclaimed king on the field of battle although it is not clear upon what ground, for had the title of the house of Lancaster been superior to that of York, the Somerset branch of it was originally illegitimate, yet to mention that the claim

HEN

of his mother on this principle was superior to his own. Henry resolved however to stand upon this ground, and the recognition of his right by Parliament, and his coronation was made to precede his marriage with Elizabeth of York. That marriage however to the great joy of the nation took place in 1486 but Henry, jealous of his authority and strongly imbued with party prejudice was a stern and ungracious husband, and regarded the Yorkists in general with great aversion. He gave his confidence, indeed, chiefly to Morton and Fox both of the priesthood and men of business and capacity from whom he expected more obsequiousness than from the nobility. Discontent on this and other accounts soon arose and an insurrection took place headed by lord Lovel and the Staffords which was however, soon suppressed. The imposture of Lambert Simnel who by the countenance of Simon a priest was made to personate the earl of Warwick son to the duke of Clarence whom Henry kept confined in the Tower followed. Simnel was sent to act his part in Ireland where remote from detection he interested the whole island in his favour and was proclaimed king in Dublin. He then came to England, but Henry having publicly shown the true earl of Warwick in the streets of London little credit was given to him and the king collecting an army met the rebels at Stoke in Nottinghamshire and totally defeated them. The leaders fell in the field, and but few were executed although many were severely fined and with politic magnanimity Henry spared the impostor Simnel, and displayed his insignificance by making him a scullion in his kitchen. The project of France for annexing the province of Brittany by marriage with the heiress induced Henry to declare war but his measures were so tardy and parsimonious, that the annexation was not affected. He then raised large sums as a plea of the necessity for besieging and lending a numerous army at Calais in 1492 almost immediately accepted a large compensation for peace. The enmity of the duchess dowager of Burgundy governess of the low countries never ceased to pursue him. She had encouraged the imposture of Simnel and now brought a new adventurer on the stage in the person of the celebrated Perkin Warbeck said to be the son of a converted Jew at Tournay and a youth of parts and prepossessing figure. This young man gave himself out to be Richard Plantagenet the younger of the two sons of Edward IV supposed to have been murdered in the tower of London, but one of whom he alleged had escaped from that fortress. After visiting Ireland he accepted the invitation of Charles VIII, king of France then at war with Henry who received him with all the honour due to his supposed birth but disengaged him on concluding a peace. He then repaired to the duchess of Burgundy who pretending to be satisfied with the proofs of his identity acknowledged him as her nephew. The well-known circumstances of his landing and progress in England, need not be detailed.

HEN

hers, any more than his confessor of heresy and execution by the halter. Soon after, the king fixed an inflexible stamp on his policy, by the execution of the simple and innocent earl of Warwick for merely attempting to regain that liberty of which he ought never to have been deprived. Firmly seated upon the throne Henry now gained a high character among his brother monarchs many of whom sought his friendship and alliance and among these was Ferdinand king of Arragon a prince, in crafty and cautious policy very much like himself. After a long negotiation he brought about a match between the infant Catherine daughter of the sovereign and of Isabella of Castile and his eldest son Arthur, and on the death of the latter in order to retain the dowry of this princess he caused his remaining son Henry to marry the widow by papal dispensation an event which in the sequel led to a separation from the see of Rome. He also married his eldest daughter to James IV king of Scotland foreseeing the unity of sovereignty that would probably arise from it. In the midst of these cares, he never omitted his favourite pursuit of filling his coffers employing two lawyers Empson and Dudley who by penal statutes and all sorts of extortion and chicanery levied upon the subject in all directions, in order that Henry, with insatiable avarice and meanness might profit by their rapacity. He however made some good use of this treasure by the advance of sums of money to merchants without interest in order to enable them to carry on lucrative enterprises and promote an extension of commerce. It was owing merely to accident that Columbus did not engage in his service instead of that of Ferdinand and Isabella for he had sent him an invitation to his court which the capture of his brother by pirates prevented from arriving in time. He then employed Sebastian Cabot who under his auspices discovered Newfoundland and part of the American continent. In the midst of these and farther projects of national and family aggrandizement, a decline of health began to inspire him with uneasy thoughts of another world which he endeavoured to appease by the usual method of alms and religious foundations, and as his end approached even directed restitution to some of the parties oppressed by the exactions of Empson and Dudley. He at length sank under a consumptive disorder at his palace of Richmond in April 1509 in the twenty-fourth year of his reign and fifty-second of his age. Though extremely unamiable as a man and rapacious and opreative as a sovereign the reign of Henry VII was, upon the whole beneficial to his country. Being conducted upon pacific principles it put a period to many disorders, and gave an opportunity to the nation to flourish by its internal resources. His policy of depressing the feudal nobility, which proportionably exalted the middle ranks was also highly salutary; and it was especially advanced by the statute which allowed the breaking of entails, and the alienation of landed estates. Many other beneficial pro-

vising other states from this reign which however was very arbitrary, and the power lost in the aristocracy for a time gave an undue preponderance to that of the crown. In the reign of Henry VII, indeed chiefly originated that almost idolatrous notion of prerogative which was more or less entertained by English sovereigns until finally adjusted by the Revolution of 1688.—*Ibid.*

HENRY VIII, king of England son of the preceding was born in 1491 and succeeded his father in 1509. His education had been rather that of a scholar than of a prince but a handsome person and a frank and spirited manner rendered him the object of popular attachment, especially as successor to a sovereign so little beloved as Henry VII. No prince could succeed to a throne under happier circumstances possessing an undisputed title, a full treasury and a kingdom flourishing in the bosom of peace. He began by establishing a council consisting of his father's ablest ministers, and he also sacrificed Empson and Dudley to the popular odium, whose extortions were made a matter of prosecution and punished by a bill of attainder. His disposition for show and magnificence soon squandered away the hoards of his predecessor and his vanity and unsuspecting openness of character made him an early object of foreign artifice. He was in the first instance prevailed upon by the sister of Pope Julius II and the craft of his father in law Ferdinand to join in a league formed against Louis XII of France. Some campaigns in France followed but the success of the English at

Battle of the Spurs so called from the flight of the French under a panic being followed by no adequate result the taking of Tournay was the only part of this expensive expedition. Meantime more splendid success attended the English arms and honour. James IV king of Scotland having as ally of France made an incursion with a numerous body of troops into England was completely defeated and slain by the English under the earl of Surrey at the battle of Flodden field. Henry however granted peace to the queen of Scotland his sister and established an influence which rendered his kingdom long secure on that side. Finding himself annoyed by his allies, he soon after made peace with France returning Tournay and receiving a large perquisite in money. He also gave his younger sister Mary in marriage to Louis XII notwithstanding the great inequality of their ages a union which was terminated by the death of that king three months after, whose widow by subsequently marrying his brother's favourite Charles Brandon, duke of Suffolk founded the subsequent pretensions of that family and the Greys. The aggrandisement of Wolsey now began to give a leading feature to the conduct and policy of Henry. The neglect of this haughty and unscrupulous minister by Francis I produced hostilities from the emperor Maximilian, assisted by English gold, and when Charles V succeeded to the Spanish Throne, Francis found it highly expedient to

second his suit, and gain Wolsey, who in consequence induced his master to resign Tournay and enter into an amicable correspondence with Francis. In order to cement this new friendship the two monarchs had an interview within the bounds of the district of Calais the profuse magnificence of which gave the place of meeting the denomination of the field of the cloth of gold. Notwithstanding these indications a distant prospect of the papacy was artfully held out to the cardinal by the young emperor Charles his interest at length gained a preponderancy in the English councils and still more exhibited the ascendancy of Wolsey rendered highly unpopular at this time by his unprincipled prosecution and sacrifice of the duke of Buckingham. The principles of the reformation propagated by Luther were now making rapid strides, and among the most sincere and zealous of the votaries of papal authority was Henry himself. Carefully nurtured in controversial divinity a study so unbefitting a prince he was induced to write a Latin book against the tenets of Luther which he presented to pope Leo X who favoured him in return with the title of Defender of the Faith. Whether Henry received assistance in this literary labour is doubtful. Erasmus deemed him capable of it and Luther taking it for granted published a reply in which he treats his crowned opponent with very little ceremony. Charles V now emperor paid a visit to England in 1522 and induced Wolsey and Henry to declare war against France, which was again invaded by an English and Flemish army under the earl of Surrey. The defeat and capture of Francis at the battle of Pavia, gave such a preponderancy to the power of the emperor that the alarm produced thereby added to a discovery on the part of Wolsey that Charles was only amusing him on the subject of the papacy produced not only a peace with France but a declaration of war against the emperor which new alienation prepared the way for the most important event in Henry's reign his divorce from Catherine of Arragon. Addicted to the study of casuistical theology it is not unlikely that some real scruples in regard to the lawfulness of his union with his brother's widow were entertained by Henry, but it is equally probable that her disproportionate age indifferent health and want of male progeny operated most to effect a determination which was additionally strengthened by the charms of Anne Boleyn. This course of proceedings, which terminated in the divorce from Catherine and the marriage with Anne, the fall of Wolsey which they involved with the various acts subservient of the papal claims, produced by the impatience and resentment of Henry belong rather to history than biography. It was in 1532 that the king ventured privately to marry Anne Boleyn, and her subsequent pregnancy produced in the next year an open avowal of the marriage, followed by a sentence of divorce from Catherine pronounced by archbishop Cranmer. The papal court, highly incensed

as high statement of its authority, declared the marriage of Catherine null, and threatened excommunication. The interpretation of Francis I regarded the fulfilment of this marriage and annulment seemed to be in a train of agreement; when the casual delay of the emperor who kept the king's promise to submit his cause to the Roman curia (having first been assured of a decision in his favour) threw the pope and cardinals into a hasty fit of anger, and they launched the long withheld censure. Henry on his part also kept no further measures but proceeded to break off entirely all allegiance to the Roman see and to declare himself supreme head on earth of the English church, a title which he adhered to all his successors. Thus was effected the great revolution by which in ecclesiastical annals, this reign is so much distinguished. The birth of a daughter by the new queen, produced a bill for regulating the succession which settled it on the issue of this marriage and declared the king's daughter by Catherine illegitimate. But although Henry descended the authority of the Romish church he adhered to its theological tenets. While on the one hand, he executed such eminent characters as the learned bishop Fisher and the able and upright sir Thomas More for refusing the oath of supremacy he displayed a roared aversion to the principles of the reformation, and brought a great many of them to the stake. His temper also grew more stern and arbitrary as he advanced in years, and his reign from this period was that of a severe despot, who sacrificed without scruple every obstacle to his capricious will. Finding that the monks and friars in England were the most direct advocates of the papal authority and that they operated most influentially to create dissatisfaction among the people he was provoked to the grand measure of suppressing the monasteries, which he rapidly effected by act of parliament, and thereby inflicted an incurable blow upon the catholic religion in England. The revenues of these opulent establishments, were granted to the crown, which however was not proportionably enriched as Henry lavished many grants of land upon his courtiers, and besides settling pensions upon the resisted abbots, friars, and monks erected six new bishoprics. Another step which also highly promoted the reformation was the translation of the Scriptures into the vernacular tongue. The fall of Anne Boleyn (see article Holroyd) was however unfavourable for a time to the reformers. On the execution of that unfortunate queen, Henry married Jane Seymer the next day, and the birth of prince Edward in 1537 fulfilled his supreme wish for a male heir, although his joy was abated by the death of the queen soon after her delivery. In the mean time the nation becoming gradually divided between the Romish and the protestant faiths, and the dissolution of the monasteries affecting many interests, reassured the king; some of which in the northern country remained unbroken in the field. It was in 1539 that the dissolution of all

the religious houses took place, and as the opponent of royal authority the peculiar indignation of Henry fell upon Thomas à Becket. He not only pillaged his rich shrine but cast the saint himself into court had him condemned as a traitor his name expunged from the calendar and his bones burnt to ashes. The fate of Lambert, a poor schoolmaster who being condemned for heresy appealed to the king was more deserving of compassion. On an appointed day Henry sat on his throne in Westminster hall attended by the lords spiritual and temporal, entered the lists against the poor unsupported culprit and after sternly interrogating him concerning the real presence undertook to refute his errors from the Scriptures and the schoolmen. Six bishops followed and in conclusion Lambert was asked whether he would recant or die. He chose death and was executed with circumstances of unusual cruelty. Soon after a committee of parliament was employed in drawing up six articles of uniformity which were formed into an act called the bloody bill in consequence of its severity against protestants. Henry now resolved to marry again, and on faculty for himself Cromwell a favourite of the reformation recommended Anne of Cleves, sister to the duke of that title a prince of great influence with the German protestants. The marriage took place in 1540 and Henry even created Cromwell earl of Essex, but his dislike to his new wife hastened the fall of that minister who was condemned upon an ill founded charge of treason, and executed, after a vain attempt to soften the obdurate heart of his tyrannical master. At the same time Henry procured from the convocation and parliament a divorce from Anne of Cleves, who made no opposition, but with much phlegm continued to live in England. He then married Catherine Howard niece to the duke of Norfolk an union which brought him more under the influence of the catholic party, and a rigorous persecution of the protestants followed although with an impartiality of intolerance papists who denied his supremacy were treated with equal severity and the opponents victims were sometimes dragged to execution coupled together. The aged countess of Salisbury mother of cardinal Pole and the only relic of the Plantagenets, was the most eminent of the catholic sufferers. Henry now found that his new queen of whom he was very fond had proved false to his bed, and on further inquiry her conduct before marriage was discovered to have been loose and criminal. The king burst into tears when informed of these facts, but his grief quickly turned into fury and she was accused and brought to the block in 1542. His obsequious parliament further gratified him, by an act making it high treason for any woman whom the king might thereafter marry to pass herself for a virgin, if otherwise. The most important foreign transactions of the latter part of the reign of Henry were those relative to Scotland. The preference shown by the king's nephew, James V to the French alliance, brought in

H. E. N.

a war in 1544, the principal event of which was the fight of the Scottish army at Solway Firth, the disgrace of which broke the heart of Henry, who died soon after leaving his only daughter the still more unfortunate Mary. A failure on the part of Henry of a negotiation to affiliate his son Edward to these heures, produced a new war, and the king was so exasperated at the successful intrigues of France to prevent it, that he joined the emperor in a new war against Francis I. The events of both the Scottish and French wars belong to history. The former consisted chiefly of mutual invasions and devastation with no conclusive result, and in the latter, the king passed over to Calais, in July 1544 at the head of 30,000 troops, and being joined by 14,000 men from the Low Countries took Boulogne, but in the winter returned to England. The war lasted until 1546 when, on condition of a large payment from France a peace followed, in which Scotland was comprehended. In the mean time, Henry in 1543 had married his sixth wife Catherine Parr, widow of lord Latimer, a lady of merit secretly inclined to the reformation. This queen fell into great danger through the intrigues of the catholic party but being timely warned, she found means to avert the consequences (see article CATHERINE PARR). Disease now so much aggravated the natural violence of Henry that his oldest friends fell victims to his tyranny. The duke of Norfolk, his most trusted and successful general and the accomplished earl of Surrey his son were committed to the Tower. The latter was tried for an alleged correspondence with cardinal Pole and on an absurd accusation of treasonably quartering a portion of the royal arms for which pretended crimes he was convicted and executed. The duke of Norfolk was proceeded against by attainder without trial or evidence and so little was Henry's ferocity mitigated by his own apportioning end that nothing seemed so much to concern him as the fear that Norfolk might escape which he did, by the decease of the king the day before that appointed for his execution. It was long before any one would venture to tell Henry of his approaching dissolution but the communication was at length made by sir Anthony Denny and the king heard him with resignation. He desired that archbishop Cranmer might be sent for but was speechless before he came and could only by a pressure of his hand give a token of his dying faith. He expired January 28, 1547 in the thirty-eighth year of his reign and the fiftysixth of his age. The character of Henry VIII is so amply denoted by his actions that nothing in the way of portrait is necessary. As impressively depicted by the dying words of Wolsey the leading feature of it was love of sway. This passion, which was at first compatible with generosity and feeling, at length produced an excess of pride, impatience and intolerance which extinguished the sentiments of humanity, and rendered him violent and sanguinary to the extreme. He made himself so much feared, that no English king had fewer checks

H. E. N.

to their power and liberty and constitutional equipsme were cut of the quidnunc spirit of the whole of his reign, or what is worse, the terms of them were rendered purely subservient to his passions. His vigorous rule was however of some service to internal polis and it has been remarked, that he was after all beloved by the great mass of his subjects who setting aside the opposing partisans of religion cared little for passions which affected only couriers and great men. In another point of view it must be admitted that no hand less strong than that of Henry could have so suddenly snapped the chain which bound the nation to the papacy and have thereby opened the road to general freedom of opinion. The headstrong self-will of this imperious king also cleared him of the opposite vices of hypocrisy, craft, and dissimulation, none of which he ever condescended to display. The complete union of Wales with England, and the conversion of Ireland into a kingdom, date from the eventful reign of Henry.—*Ibid.*

HENRY IV King of France and Navarre called the Great, was born in 1553 at Pau in Bearn. His father Anthony of Bourbon, chief of that branch of the royal family was descended from a son of Louis IX. His mother Jane d'Albret, was the daughter an heiress of Henry king of Navarre. He was brought up by his grandfather in the simple and hardy manner of the peasantry of Bearn, and thus laid the foundation of a vigorous constitution and temperate habits. He was brought to the court of France by his father in the beginning of the reign of Charles IX but was recalled by his mother to Pau in 1566 and placed under the tuition of Laurent Chrestien a learned man and zealous protestant. In 1599 he accompanied his mother to Rochelle and learned the art of war under Admiral Coligny. When the perfidious design of destroying the Huguenot chiefs, by a massacre was formed by Charles and his mother Catherine one of the means employed to lull their suspicions was to bestow the king's sister Margaret, upon Henry whose mother dying before the ceremony he entitled himself king of Navarre. The marriage was followed by the massacre of St Bartholomew on which fatal day he was brought before Charles IX who with a furious countenance gave him the choice of mass, death or the Bastille nor is it surprising that in a moment of such horror he chose the former. He was subsequently kept at court, as a kind of state prisoner and was led to practise those arts of dissimulation and licentious intrigue the latter of which formed the greatest stain of his after character. In 1576 he escaped from Paris and retired to Alençon, where he renewed his professions of the reformed religion, and put himself at the head of the Huguenot party. The cheerful frankness of his manner rendered him the delight of the soldiery and he supported his cause with invincible spirit. When Henry III received his death wound in 1589 he called for the king of Navarre and with much affection acknowledged him his successor. Henry was then in his thirty-sixth year.

HEN

told, either of mind and body, admired and beloved by his own party, but detested by the catholic majority of his subjects, who were excited by the priesthood into an infatuated and oppositional spirit. The course of the interesting struggle, which ensued, until Henry by sacrificing his religion at St Denis, in July 1599 obtained quiet possession of his due authority in minister of history rather than of biography, although set off by much detail illustrative of the generous, gallant, and magnanimous character of that ultimately favourite monarch of France. The abjuration of a prince of Henry's levity of religious principles and freedom of private life was a cheap sacrifice to the peace of his country. Religion in his own case being little beyond a badge of party, even his protestant advisers recommended the measure in the sequel. The return of the kingdom to allegiance was however very gradual, and fanaticism, generally inappassable produced an attempt upon his life, from the knife of Clauzel a weak and famous bigot, who had been prepared by the regicide doctrine of the jesuits in consequence of which atrocious the latter were banished the kingdom. At length Pope Clement VIII granted Henry absolution, upon terms favourable to the claims of Rome and with a ceremony sufficiently humiliating to the king in the person of his ambassadors. The voices of the loungers, however still continued the war and, aided by the Spaniards brought Henry more than once into great trouble and perplexity from which he was principally relieved by the prudent financial management of the celebrated Sully. From the time, however, of his recovery of Amiens in 1596, his affairs assumed a new aspect, and he became respectable at home and abroad. By the edict of Nantz formed on the basis of toleration, he secured to his protestant subjects the exercise of their religion and the peace of Vervins in 1598, in which the Spaniards restored all which they had taken in Picardy was equally honourable and advantageous to France. No other foreign or civil war except an expedition against the dukes of Savoy took place during this reign, the remainder of which was embellished by an attention to those internal improvements and that amelioration of the condition of his subjects, which his good sense and benevolent dispositions suggested. In these salutary objects he was mainly assisted by Sully whose wise plans, however were much obstructed by the King's partiality to his various mistresses and especially to Gabrielle d'Estrees whom he created duchess of Beaufort and to whom he gave a promise of marriage which afterwards created him much uneasiness. In the mean time he was soliciting a divorce from Margaret of Valois, to which she who was equally addicted to irregular indulgences readily consented. When it was obtained Henry married Mary de Medici, more to the grand Duke of Tuscany, an alliance which by no means added to his fidelity. Disscontent, occasioned by royal pride, and impudent favouritism, soon after produced a conspiracy, headed by

HEN

the marshal de Biron, which, notwithstanding his own and his father's great services, cost him his head. Domestic discontent, occasioned by the new queen's foreign manners, and by the insolence of the marchioness de Verneuil, Henry's principal mistress who disturbed his repose, and formed the discreditable cause of incessant disquieting intrigues. The kingdom, however, increased in wealth and prosperity, and abroad he successfully mediated between the Pope and the Venetians, and promoted the treaty by which the Dutch were declared independent. Altogether in character at the age of fifty four he fell deeply in love with Charlotte de Montmorency, married to the prince of Condé and acted with so little self government, that the prince and princess quitted the kingdom and took up their residence at Brussels. Henry had indulged a desire to diminish the overgrown power of the house of Austria, and to this design joined the grand but chimerical plan of forming a kind of European federative republic, consisting of powers so well balanced as to be able to prevent future wars and encroachments altogether. Some of these ideas were communicated by Sully to queen Elizabeth. Whatever was the extent of his plans, he certainly intended to carry the war into Germany and immense preparations were made both in money and ammunition for that purpose. Nothing impeded his march but the ceremonial of the queen's coronation, which solemnity was performed with extraordinary magnificence on the 13th May 1610 and the very next day he received his death by a stab from the hand of a fanatical assassin, named Ravallac which instantly deprived him of life in the fifty-second year of his age and twenty second of his reign. Henry left no children by his first queen, but by his second he had three sons and three daughters. He had also a numerous illegitimate offspring of whom Cesare duke of Vendome was the nearest heir of his military character. Herald says of Henry IV he suited to extreme frankness the most dexterous policy, to the most elevated sentiments a charming simplicity of manners, to a soldier's courage an inexhaustible fund of humanity. This rendered him the good Henry in spite of foibles and defects, but he had too many weaknesses to be truly called the great. It was perhaps chiefly owing to Sully that his attachment to gaming, women and profusion of all kinds, did not defeat all his wise plans for the good government of his people. As a soldier no one exceeded him in gallantry and enterprise, but he is scarcely entitled to the name of a great general, not to mention that, like the most recent of his race his principal successes were over his own subjects.—Mod. Univ. Hist. Millet. Nouv. Diet. Hist.

HENBY OF ANDELY, or HENRY D'ANDELLI, a Norman troubadour of the thirteenth century, so called from the place of his birth. He was the author of a poem, entitled 'La Banlieue des sept Armes,' of which Le Grand & Aunay has given an analysis, in the

HEN

the 'Manuscript of the manuscript in the king's library at Paris, where the work is preserved. There is also extant, by this author the "La d'Artois," and a curious metrical romance, called "La Bataille des Vins," both which have been published in the collections of MM. Barbiana and Méon.—*Mus. de la Soc. des Ant. de la Normandie*.

HENRY OF KALCAR, a German divine of the fourteenth century who entered into the Carthusian order and became prior of the convent of St Barbara, at Cologne. He was eminent for his acquaintance with profane literature as well as with the scriptures, and was the author of elementary works for the use of his brethren, relating to rhetoric music and the duties of monachism besides which he wrote a treatise on the origin of his order.

De Ordine Ordinis sui" His. max. He flourished in the reign of the emperor Wenceslaus about 1390.—*Truthemus.*

HENRY THE MINSTREL, or **BLIND HARRY** names given to a Scottish poet who lived in the fifteenth century of whom very little is known. It is conjectured that he wrote his celebrated *Actes and Deeds of Shyr William Wallace*, about 1446. He discovered some knowledge in astronomy in classical history in the Latin and French languages, and in divinity and probably belonged to one of the religious orders. He was a kind of travelling bard and visited the middle and south parts of Scotland, and most likely the court and noble families. He was blind from his birth and in consequence fails in the descriptive parts of his work, but his invention in other respects was only the more active and he deals largely in romance. As a poet however he has considerable merit, and his *Wallace* passed through numerous editions during the period that its language could be duly understood. The first printed edition was that of Edinburgh 1570 and the latest that of Morrison's Perth 1790 3 vols. 12mo.—*Mackenzie's Scot. Writers.*

HENRY THE WISE, or **HENRICUS PRUDENS**, a Carthusian friar of the fifteenth century prior of a monastic establishment near Bruges, and afterwards of the new house of St Sophia of Constantinople in the neighbourhood of Bois-le-Duc. He was a very learned divine and was highly esteemed for his talents among those of his own persuasion. His claims to notice at present arise from the absurdity of a work which he wrote and which was much admired by his contemporaries whence may be inferred the degraded taste which prevailed in the religious world previously to the Reformation. The treatise alluded to is entitled 'Tetralogum Devotionis lib. tres' and consists of dialogues between an angel a monk Jesus the heavenly father and Mary the loving mother-in-law of all souls. He died in 1484.—*Truthemus.*

HENRY (DAVID) a native of Aberdeen in Scotland born in the December of 1710. He was brought up a minister and worked for some time under Cave the original projector of the gentleman's magazine. In 1736 he married

HEN

the sister of his employer and removed to Reading in Berkshire, where he conducted a public journal nearly eighteen years, till being received into partnership by his brother-in-law he thenceforth took a prominent part in the management of the miscellany above-mentioned. In 1772 he published a system of husbandry, under the title of "The Complete Farmer," and two years afterwards, a compilation of the voyages of various circum-navigators, in 6 vols. 8vo. He also printed an abridgment of some of Tillotson's sermons, in one vol. 8vo. His death took place at Lewisham June 5 1792.—*Nichols's Lit. Amer.*

HENRY (PHILIP) an eminent nonconformist, was born at Whitehall in 1631 his father being page of the back stairs to the king's second son prince Charles. He was educated at Westminster school, whence he was elected to Christchurch, Oxford. He was ordained to the ministry in 1657 according to the directions of the assembly of divines, and soon after married a lady by whom he became possessed of a competent estate near Whitechapel. When the king and episcopacy were restored, he refused to conform, and retired to Broad Oak where he spent the remaining years of his life in the most exemplary inculcation of religion and general benevolence. He died 24th June 1696 and his life was written by his son MATTHEW HENRY and is deemed so interesting a piece of biography that Dr Wordsworth was induced to re-print the whole in his *Ecclesiastical Biography*—*Life as above by his son.*

HENRY (MATTHEW) SON of the above and also a learned nonconformist divine, was born at Broad Oak in Flintshire, in 1663. He was early instructed by his father in the Latin Greek and Hebrew languages and was at first entered at Gray's inn to study the law but his strong predilection for divinity induced him to ultimately decide for the ministry. In 1686 he was invited to settle as pastor with a congregation of dissenters at Chester where he remained for twenty five years in a most sedulous attention to his studies and pastoral functions. During this period he received various invitations from congregations in the metropolis, all which he refused, until at length in 1702 he was induced with great reluctance to remove to Hackney where he took so large a share in occasional services at the various dissenting places of worship, as well as at his own that he secretly undermined his constitution. He died of a stroke of apoplexy at Nantwich, Cheshire in 1714 on his return from a visit to his old congregation at Chester in the fifty-second year of his age. The learning and extensive knowledge of Mr Henry rendered him extremely popular both as a writer and a preacher and he died greatly lamented. His writings, besides several single sermons, are—"A Discourse concerning the Nature of Schism, 1689, 'The Life of Mr Philip Henry' 1696 'A Scripture Catalogue,' 1702, 'Family Hymns' 1705, 'The Communicants Companion,' 1706, 'Method of Prayer,' 1710, 'Directions for

Henry, *Christianity with God*, 1742, "History of the Bible," 3 vols. folio, of which volume will complete his accomplished. Mr Henry had not completed his work at the time of his death, and the last volume, from *Genesis* to *Revelation*, was written with some assistance from the MSS., by a body of dissenting divines. All the works of Mr Henry had a great share of popularity among the class of dissenters to which he belonged.—
See, *Rev.*

HENRY DD (ROBERT) a clergyman of the Scottish church the son of a farmer settled at Muir Town St Ninians. He was born February 19, 1718 and having gone through the grammar-school of Stirling and the university of Edinburgh accepted the mastership of the grammar-school at Annan but relinquished the situation in 1746 in order to become minister to a presbyterian congregation at Carlisle. In 1760 he settled in a similar capacity at Berwick, where he married but after a residence of eight years returned to Scotland, and became minister of the New Quakerish church in the capital of that kingdom. Two years afterwards he obtained the degree of doctor of divinity from his university and was chosen moderator of the General Assembly in 1774. In 1776 he succeeded as joint minister to the old church which appointment he held for the remainder of his life. Dr Henry is principally known in England as the author of a valuable history of this country published originally in six quarto volumes, at various intervals, the first appearing in 1771 the fifth in 1781 and the last, which is posthumous in 1793. This work brings down the history arranged under the several heads, civil and military, religious, legal and constitutional, history commercial, &c to the reign of Henry VIII. It has since gone through several editions and is said to have produced its author no less a sum than £3000. for his copyright besides a pension of £100. per annum from the crown, through the recommendation of the earl of Mansfield. Dr Henry also printed a translation of Gogast's "Origin of Laws," &c in three vols. octavo. In his private character he is said to have been extremely amiable and exemplary in his clerical duties. His death took place in 1790.—*Nichol's Lit. Anecd.*

HENRYSON (ROBERT) an early Scottish poet, who was a monk of the order of St Benedict, and a schoolmaster at Dunfermline in the sixteenth century. He was the author of the "Testament of Fair Cressende," which is printed in some editions of the works of Chaucer; and he also wrote fables, published at Edinburgh, 1662. See.—*Irvine's Lives of Scottish Poets*.

HERCULIUS (SAXONICUS) an ingenious scholar, distinguished for his researches concerning ancient literature. He was educated at Oxford where he became a fellow of Brasenose College, and entered into holy orders. In 1600 he published a thin quarto volume, on *Latin Adages and Prose of a Tropographical Character*, Civil, and Natural His-

tory of South Britain." This publication, which related only to the county of Hereford, not continued for want of encouragement. He was also the author of "The Saxon and English Languages Illustrative of each other, the impracticability of acquiring an accurate knowledge of Saxon literature through the medium of Latin phraseology exemplified in the errors of Huetos, Wilkins, Gibson, and other scholars and a new mode suggested of radically studying the Saxon and English languages," 4to, "Actual Survey of South Britain by the Commissioners of William the Conqueror completed in 1086, faithfully translated with an introduction, Notes and Illustrations of S. Hemshall and John Wilkin son" 4to, 1789. "The Etymological Organic Reasoner," with one Sheet of the Gothic Gospel of St Matthew and another of the Saxon Durham Book in Roman Characters, and a literal English Version" 1807. Both the latter works were left imperfect, the author who was rector of St Mary Stratford-in-Bow Essex, having died soon after the publication of the first number of his *Organic Reasoner* in 1807.—*Gent Mag. Watt's Bibl. Brit.*

HEPBURN There were two of this name the elder **JAMES BUONAVENTURA** was descended of a Scottish family the son of a presbyterian minister settled at Hamstocks in Huntingdonshire where he was born in 1573. He studied at the university of St Andrews, and distinguished himself by his proficiency in Oriental literature till becoming a convert to the Romish church went to Rome assumed the surname and a considerable period spent in travel became at length keeper of the Vatican library. He published a grammar of the Arabic and a dictionary of the Chaldaic and Hebrew languages in 1591 and died in 1620 at Venice.—**MICHAEL HERBURN** a miscellaneous writer was born in 1690 and bred to the Scottish bar having gone through a regular course of study at a Dutch university. He was the author of a series of periodical papers, published in 1711 under the title of "The Lister" by Hector Maclellan of the North, and died the year following at Edinburgh in his twenty second year.—*Macfarlane's Scotch Writers. Taylor's Life of Lord Kames*

HERACLITUS a celebrated philosopher of antiquity was a native of Ephesus, and flourished about the fifty-ninth Olympiad, or the year 564 BC. He discovered an early attention to intellectual studies, and was initiated into the mysteries of the Pythagorean doctrine by Xanthippus and Hippomenes, which he afterwards incorporated into his own system. His fellow-citizens requested him to undertake the supreme magistracy but on account of their dissolute manners, he declined it in favour of his brother. His natural temper being sanguine and melancholy he despised the ignorance and follies of mankind, shunned all public intercourse, and devoted himself to retirement and contemplation. He made choice of a mountainous region for his residence, and lived upon the natural products

of the earth; the result of whose diet and manner of life was a dropsey, that terminated suddenly about the sixtieth year of his age. It has been a tale commonly received, that Heraclitus was perpetually shedding tears on account of the vices of mankind; a fable that probably took its rise from the gloomy severity of his temper, and which may par off with the perpetual laughing of Democritus for the same reason. He was the author of a treatise "On Nature" of which a few fragments, preserved by Sextus Empiricus alone remain. With a desire of concealing his opinion at least from the vulgar, he made use of figurative and intricate induction which obtained for him the title of the obscure philosopher.

They were deposited by him in the temple of Diana for the use of the learned where they remained until they were made public by Crates, or according to Titian, by the post Europides. To these writings both Zeno and Plato were partially indebted, and as good an account of the system, as its obscurity will allow may be obtained from Brucker. The sect of Heraclitus was probably soon extinct as no traces of its existence remain after the death of Socrates. In 1573 Henry Stephens published at Paris a collection of the fragments of Heraclitus with those of Democritus, Timon and other ancient philosophers in octavo.—*Degens. Leurtius. Falcula Boli Grec Enfield's Hut Philes*

HERAULT (DINIS) better known by his latinned name Denarius Heraldus was a French lawyer and philological writer in the seventeenth century. He held the office of counsellor of the parliament of Paris, but distinguished himself chiefly by the cultivation of ancient literature, and wrote notes on the works of Tertullian, Minutius Felix, and Arnobius, in defence of Christianity, and on the epigrams of Martial. He was also the author of a learned miscellany entitled *Adversaria*, 1599. *Quotidianarum tractatus*, "Observationes ad Ius Atticum et Romanum", and other publications. He died in 1649. His son, who was a protestant minister in London wrote sermons a tract against the recidives &c.—*Moreri Bayle*

HERAULT DE SECHELLES (MARIE JEAN) advocate-general in the parliament of Paris and after the revolution, royal counsillor member of the tribunal of cassation deputy from the department of Paris to the Legislative Assembly and at length a member of the National Convention. He possessed a considerable fortune and being a handsome man and fond of dress, he often attracted the attentions of some of his colleagues during the triumph of malediction. At the sessions of the Legislative Assembly he presented several reports, particularly relative to the responsibility of ministers, in July 1792 he joined in the declaration that the country was in danger and he subsequently advocated vindictive measures against the royalists. He presided in the National Assembly in September and becoming a member of the Convention, he was deeply engaged in the schemes of the revolution. About this time he was charged

with the management of some negotiations with foreign powers, but they proved unsuccessful. He was then sent on a mission to Alais and at Colmar he ran great risk of being assassinated in a popular insurrection. In November 1792 he was again employed as commissioner from the Convention to the army in the department of Mont Blanc; and he was thus absent from Paris during the trial of the king. He however in conjunction with his colleagues Gregoire Jagot, and Surcouf, wrote a letter to the Convention, charging Louis XVI with an unparried series of treasons, and recommending his condemnation without appeal to the people. But he chiefly distinguished himself in the contest between the Mountain and the Girondines and he powerfully co-operated in the destruction of the latter. Mercier accuses him of being the author of the constitution of 1793, or as he terms it, that ridiculous code of anarchy and in fact Herault presided in the Convention at the period when it was established. He was also a member of the committee of Public Safety. But all his services to the terrorists did not save him from the scaffold. He was denounced March 17 1794, for having concealed an emigrant, and as belonging to the faction of Danton, with whom he was executed on the 5th of April following. He displayed great courage, or rather levity of conduct in his last moments bidding adieu to his companions with as much sang froid as if he had been going to a party of pleasure.—*Duct des H M du 18me. S.—Biog. Nouve des Costemp*

HERBELLON (BARTHOLOMEW) a celebrated Orientalist, born of a good family at Paris, in 1625. After having gone through a course of study in the university of his native city he applied himself particularly to the eastern languages, with a view to the elucidation of the Hebrew Scriptures. He visited Italy for improvement and formed an acquaintance at Rome with Lucas Holstenius and Lee Allianus two of the most learned men of the age. He was patronised by cardinal Grimaldi, who in 1656 sent him to Marseilles to meet Christina queen of Sweden then on her way to Rome, and that princess was much pleased with his society. On his return to France, the minister of state Fouquet received him into his family and gave him a pension of 1000 livres. On the disgrace of his patron, D Herbelot was fortunate enough to escape the general ruin which involved the dependants of the fallen statesman, and his master procured him the office of Oriental interpreter to the king of France. After some years he again travelled into Italy. At Leghorn he was introduced to the grand duke of Tuscany Ferdinand II who invited him to Florence where he arrived in July 1666. He was not only magnificently entertained by the duke but was also gratified with a present of a valuable collection of eastern MSS. While in Italy he commenced his great work the "Oriental Library," and being recalled to Paris by Colbert, a pension was given him, that he

H E R

might be at liberty to proceed with his undertaking. It was his first design to have published his collections in the Arabic language and types were cast for the purpose of printing it. But the death of Colbert having interrupted this plan he recomposed his work in the French language as likely to prove more generally useful. On the recommendation of the chancellor M. de Fontchartrain he was afterwards appointed to the royal professorship of Syria, vacant by the death of M. d'Avergne. He died at Paris, December 8th 1695. His book was published in 1697 under the title of *La Bibliothèque Orientale*, folio. Besides which he left a collection on the same subject entitled "Anthologia, and a dictionary in the Turkish, Persian, Arabic and Latin languages, neither of which has been printed." The best edition of the Oriental Library is that of the Hague 1777 4 vols. 4to with the Supplements of Galland and Videlou.—*Perrault Homme Illustre Mortuus.*

HERBERT (EDWARD) lord Herbert of Cherbury in Shropshire eminent for his character and writings, was the eldest son of Richard Herbert esq; of a very ancient family and was born at Montgomery castle in Wales in 1581. He so early attained the rudiments of learning, that at the age of twelve he was entered as a gentleman commoner at University college Oxford. In 1600 he came to London and shortly after the accession of James I became a knight of the bath having previously and before he had completed his education married the heiress of Sir William Herbert of St Gillian's another branch of the family. He served the office of high sheriff of Montgomery and divided his time between the country and the court, where he was much esteemed for his gallant bearing. At length wearied with the uniformity of a domestic life he visited the continent carrying with him those chivalrous ideas with which the whimsical oath and ceremonies attendant on the investiture of the order of the bath seem to have seriously impressed him. His advantageous person and manners gained him many friends among whom was the constable of Montmorency. He returned to England in 1607 and in 1609 quitted it again, in order to join the English forces serving in aid of the prince of Orange at the siege of Jülich where he distinguished himself with his usual rash and romantic bravery. On the conclusion of the siege he visited Antwerp and Brussels and then returned to London where his reputation having preceded him, he was deemed one of the most conspicuous characters of the period. His gallantry towards a court lady which however he asserts to have been without criminality produced an attempt by her husband to assassinate him in the streets of London which attempt he foiled by an extraordinary effort of courage and dexterity. In 1614 he served again in the Low Countries, under the prince of Orange, and in 1616 was sent ambassador to the court of France, where he acted with great spirit, and received some high language on the part of the constable

H E R

Leynes the favourite of Louis XIII "with as much spirit, that a complaint was sent to the English court, which produced his recall." He cleared himself however so well to King James, that on the death of Leynes he was sent back to France as resident ambassador. It was at Paris that in 1624, he printed his famous book *De Veritate prout distinguuntur Religiones* which he had planned and begun in England. The purport of this singular work was to assert the sufficiency universality and absolute perfection of natural religion, with a view of proving the uselessness of Revelation. An incident which he has mentioned as occurring previously to its publication affords a remarkable proof of the power of imagination over an enthusiastic mind. Being in his chamber doubtful as to the propriety of publishing his book on one fair day in summer his casement opened to the south the sun shining clear and no wind stirring.

I took says he my book *De Veritate* in my hand and kneeling devoutly on my knees said these words O thou eternal God author of the light which now shines upon me and gives of all inward illuminations I do beseech thee of thy infinite goodness to pardon a greater request than a sinner ought to make I am not satisfied enough whether I shall publish this book *De Veritate* if it be for thy glory I beseech thee give me some sign from heaven if not I shall suppress it. I had no sooner spake these words, but a loud though yet gentle noise came from the heavens (for it was like nothing on earth) which did so comfort and cheer me that I took my petition as granted and that I had the sign demanded. He makes the most solemn assertions of the truth of this narrative and there is no reason to doubt that he fully believed it an extraordinary instance of vanity and self-delusion in one whose chief argument against revealed religion is founded on the improbability that heaven would communicate its will to a part of the world only. In 1625 he returned from France and was created an Irish peer and afterwards an English baron, by the title of lord Herbert of Cherbury. Little more is heard of him in public life except that he joined the parliamentary party in the first instance but subsequently quitted it, and was a great sufferer in his fortune in consequence. He died in London 1648 and was buried in the church of St Giles in the Fields, where his epitaph particularly recorded him as the author of *De Veritate*. The character of lord Herbert is strongly marked in his memoirs, which shew him to be vain punctilious, and fanciful but open generous, brave, and disinterested. Of his writings, the work *De Veritate* is the first for learning and argument, and was answered by Gassendi. He followed this piece by another, entitled *De Religione Gentium*, errorumque apud eos causis or an inquiry into those causes which misled the priests and sages of antiquity. Soon after his death was published his *Life and Reign of Henry VIII.* which is rather an apology of or a panegyric on that turbulent prince, than a fair representation. The English style

H E R

of lord Herbert is strong, manly and free from the spirit of pedantry of the age. A collection of his poems published by his son in 1665, display little poetical merit. His entertaining narrative, written by himself, remained in MS. in the family until first printed by lord Orford at Strawberry hill in 1764.—*Biog. Brit.*
Life by Himself

HERBERT (GROSES) younger brother of the subject of the last article and distinguished as a poet and divine. He was born at Montgomery castle, April 1st 1593 and received his education at Westminster school and Trinity college Cambridge. He pursued his studies with great assiduity and in 1619 he was chosen public orator to the university having previously taken the degree of MA and been elected a fellow of his college. At this period he was in anticipation of preferment at court and with that view he paid particular attention to the modern languages. His talents attracted the notice of James I and in his endeavours to conciliate and secure the favour of that monarch he had recourse to a system of flattery which however it might be countenanced by the example of his learned contemporaries was by no means creditable to his character. A letter of thanks which he wrote to James officially on account of his present to the university of his *Basilicon Doron* is said by Isaac Walton to have been composed in such elegant Latin so full of conceits and all expressions so suited to the king that he enquired the orator's name. Herbert's assiduities were rewarded with the gift of a sinecure office worth £20. a year but the death of his majesty in 1625 put an end to his prospects of promotion and in conjunction with other motives induced him to relinquish his former plans and take orders in the church of England. Like his brother he had a strong constitutional tendency to orthodoxy and he entered with ardour on the duties of his new profession. The first benefice he obtained was a prebend in the diocese of Lincoln, which his zeal induced him to rebuild partly at his own expense the parish church with which it was connected. He was subsequently advanced with a fit of illness on his recovery from which he married a lady of feelings and sentiments congenial with his own, who was nearly related to lord Danby. In 1630 he took priest's orders and was presented to the rectory of Bemerton near Salisbury in Wiltshire. There he drew up a manual of pastoral duty entitled

The Priest to the Temple or the Country Parson," the rules and maxims of which were strikingly exemplified in his own conduct as a clergyman. He died in February 1632. His friend Nicholas Ferrar (who rendered himself remarkable by establishing a kind of protestant monastery at Little Gidding in Huntingdonshire) published from Herbert's MS. *The Temple Sacred Poems and Private ejaculations*, Cambridge 1663. He was also the author of a Latin oration on the return of prince Charles from Spain printed in 1659, and he is said to have translated Cesario's treatise on temperance and long

H E R

life. The poetry of Herbert, in common with that of Donne and Cowley, is deformed by point and antithesis, and obscured by metaphysical allusion but some of his minor pieces, in spite of their defects, are extremely beautiful and may be said to bear the stamp of genius. It should also be remembered by the censors of our author that he neither cultivated poetry as an art in which he wished to excel nor as an amusement but simply employed poetical phraseology as the vehicle of moral and devotional sentiments. His life by Isaac Walton has been often published.—*Atlas's G. Biog. Edit.*

HERBERT (MARY) see Sidney

HERBERT (WILLIAM earl of Pembroke) a noble poet and a munificent patron of learned men. He was born in 1580 at the family seat Wilton house Wiltshire and was educated at New college Oxford. At the expiration of his minority he succeeded his father in the titles and estates of his house and three years after became a knight companion of the order of the garter. In 1626 he was elected chancellor of Oxford to which university he was a liberal benefactor in his life and at his death bequeathed a valuable collection of manuscripts. In the same year he was appointed lord steward of the household to Charles the First but held his post little more than three years, dying suddenly of an apoplectic attack in April 1630. An octavo volume of his miscellaneous poems appeared in 1660.—*Biog. Brit.*

HERBERT (Sir THOMAS) descended of a junior branch of the Pembroke family was the son of an alderman of York. In 1626 his relation William, earl of Pembroke then lord steward, who had previously supported him, first at Jesus college Oxford and afterwards at Trinity college Cambridge furnished him with the means of indulging his wishes in travelling over a considerable portion of the east an account of which journey he published in 1634, under the title of "A Relation of some years Travel into Africa and the Great Asia, especially the territories of the Persian monarchy and some part of the Oriental Indies and the Isles adjacent." Of this work, first printed in one folio volume there have been four subsequent editions. The death of his patron in 1630 by stopping his resources caused his return to Europe. On the breaking out of the civil war he leaned at first to the parliament, but subsequently he reconciled himself to the king whom he attended with uncorruptible fidelity and affection during his captivity and up to the very moment of his execution. On the restoration of monarchy his attachment to the deceased sovereign was compensated by his successor with a baronetcy. He survived that event more than twenty years occupying himself principally in literary pursuits, during which period he assisted Dugdale in the compilation of the third volume of his *Monasticon Angliaeum* and published in 1678 his *Threnosus Carolinae*, an account of the two last years of the life of king Charles I. This work was reprinted in 1813. An

account of the said or the research from his papers, now to be found in Wood's *Athenaeum* March 23, 1823.—*Eng. Hist.*

HERBERT (Matthew) an antiquarian and bibliographical writer of the last century. He appears to have been a native of Fleetwoodshire, and was educated at Huddersfield. For some years he carried on trade as a hosiery, in London, and subsequently went out to the East Indies, in the situation of master's clerk, on board one of the company's ships. He remained a good while in that country employing his time in making charts and plans of the coasts and harbours for which he obtained a handsome gratuity from the India directors on his return to England. He then commenced map and print seller in which business he was so successful as to be enabled to purchase an estate at Cheshunt, whether he retired in the latter part of his life. He reprinted sir Robert Atkins's *History of Gloucestershire*, but has only literary labour of importance was an edition of Ames's *Topographical Antiquities* or Account of the Origin and Progress of Printing in Great Britain and Ireland, considerably augmented. 1785-1790 3 vols. 4to. He died at Cheshunt in 1790 aged seventy-six.—*Eng. Hist. of the Typog. Antiq.*

HERBIN (Augustus FRANCIS JULIAN) an able oriental scholar was born March 16 1753. At the age of sixteen he began to compose an Arabic grammar, the first part of which was published at Paris 1803, 4to and folio, under the title of *Developpement des principes de la langue Arabe Moderne*—no second part of which has yet appeared. In his twenty-first year he was admitted into the academy of sciences, belles lettres and arts. Besides the above he published a *Treatise on Ancient Music*, and *An Account of Hadji the Persian poet*. He died December 20, 1806 in his twenty third year leaving many MSS. which prove his early death to be a great loss to the learned world.—*See. Diet. Hist.*

HERBINIUS (John), a native of Salzburg in 1632. He was deputed by the Polish protestant churches to visit those of Germany Holland, &c. in 1664. This employment leading him to travel he took the opportunity of examining such matters as excited his curiosity, particularly cataracts and waterfalls, which produced the following publications: "De Admiranda Mundi Cataracta" etc. Amsterdam, 1678 4to, "Klava Subterranea," *Terre motus et quietis ex terra*—He also wrote *De Statu Ecclesiastico Argentino Confessionis in Polonia* 1670, etc; "Tragico-comedia et Lachrymorum de Jelisco Imperatoris Apostate" &c. He died in 1676.—*Niceron. Morri.*

HERBET (Joh. Andreas) a German writer of the seventeenth century. He was a native of Nuremberg, and in 1628 he was chosen master at Frankfurt on the Main, and professor at Nuremberg. In 1650 he removed to Frankfurt, where he died in 1660 having now the author of a treatise, entitled "Spirituall Pidion;" and of works on vocal

music, at Frankfurt, and on architecture; besides which, he translated from the Italian a Treatise on music and poetry, by Giovanni Giordano—*See's Encyclopedia*.

HERBERT (Joh. Paulus WILHELM) a German naturalist, distinguished particularly for his entomological researches. He was born November 1st, 1743, at Petershagen, in the principality of Minden, and after having for some years been a teacher at Berlin, he obtained the situation of chaplain to a Prussian regiment of infantry. His talents becoming known, he was appointed preacher in several churches of Berlin where he gave great satisfaction. He was, however, principally known as a naturalist. He was a director of the society of friends of natural history at Berlin, of the royal academy of Bavaria at Berghausen, and of the economical society of Potsdam. He kept up a correspondence with men of science in various parts of the world, and made journeys into Germany France Switzerland, and Denmark, in search of knowledge. His death took place November 6th, 1807. He was the author of treatises on the natural history of crustaceous animals insects worms scorpion butterflies, and apterous insects all which works were published collectively at Berlin, 1785-1804, under the title of a *Natural System of all the known Insects, indigenous and exotic* with plates. As a preacher he is placed by his countrymen in the same rank with Spalding. Different collections of his sermons have been published.—*Eng. Univ.*

HERDER (JOHN GODFREY) a German Lutheran divine and moral philosopher of the new school. He was a Prussian by birth and having received a clerical education he at length obtained the office of ecclesiastical superintendent-general of the Duchy of Saxe Weimar. He was also first preacher to the court, vice president of the consistory and had the title of counsellor of state. He distinguished himself by his writings on the belles lettres in general, but his works relating to ethics and intellectual philosophy attracted most notice and procured him the greatest reputation in his own country. The following are the titles of some of his publications:

"Lays of Love the oldest and most beautiful specimens of Oriental Poetry with twenty-four ancient lays of the Minnewangen," Leipzig, 1778 8vo, "Scattered Leaves," Gotha, 1791 1796 6 vols. 12mo, "Letters on the Improvement of Human Nature" Regn. 1793-1796 8 vols. 8vo, "Intellect and Imagination, a Meta-criticism on the Criticism of Paley Reason &c. a. the Philosophy of Kant," 1799 2 vols. 8vo "Popular Songs; Poems," "Terpsichore" 3 vols. 8vo; a treatise on the "Origin of Language." But the work by which Herder is principally known in England is, the "Outlines of a Philosophy of the History of Man," of which a translation was published in London in 1800. He died in 1803; and a collection of his writings has since appeared in 96 vols. 8vo.—*See. Diet. Hist. Eng. Univ.*

HERISSARD (Léon d'Avranches Poissot). a French physician and naturalist of the last century. He was a native of Paris, where he died at the age of twenty four in 1762. His literary works are a Latin poem on the Art of Painting; a biographical eulogy on John Winter or Gunther of Andersach; an early German naturalist, another on the antiquary Da Cange; and a work entitled *Physico-théorie physique de la France, ou L'art de tous les Ouvrages qui traitent de l'histoire Naturelle de ce Royaume*. He was also the author of *Mémoirs* published by the Royal Academy of Sciences.—*Nous Diet Hist.*

HERITIER DE BRUTELLE (CHARLES Lewis L.) an eminent French botanist distinguished as one of the first propagators of the Linnean system in France. He was born at Paris in 1746 of an opulent mercantile family. In 1772 he was appointed superintendent of the waters and forests in the généralité of Paris, when he turned his attention particularly to the study of botany. The first fruit of his researches was the publication of a splendid work entitled *Stirpes Novae aut minus cognite quas Descriptionibus et iconibus illustravit L. Heritier 2 vols. folio* which he commenced in 1784 but did not finish till several years after. He then published the Flora of Peru from the collections of Dombey. In a visit to England he collected the materials of a work entitled *Hortum Anglicum*, and during his stay in this country he greatly augmented his library. L. Heritier was a lawyer by profession and in 1775 he became counsellor of the court of Aids and he was for a long time dean of that court. After the Revolution he accepted the office of a judge of the civil tribunal of the department of the Seine and he is said to have fulfilled the duties of his station with rectitude and fidelity. He was also member of the Constituent Assembly. On the establishment of the National Institute he became a zealous and efficient associate of that learned body. He was returning from one of its sittings on the 15th of August 1801 when he was murdered in the street near his own residence. The deed occasioned a peculiar sensation of horror throughout Paris, the more especially as suspicion rested on one of the sons of the unfortunate man who had made himself previously notorious for filial disobedience and general depravity. Neither the family of L. Heritier nor the public authorities appear to have taken any active measures for the discovery of the assassin. Besides the works already noticed, he was the author of several monographies of plants and other botanical essays.—Ree's Cycloped. *Bug Uss.*

HERITIER DE VILLANDON (NICHOLAS L.) a French poet of the seventeenth century. He adopted the military profession and served in the French guards, but being disabled, he retired from the army to devote himself to literature. He held the office of royal historiographer; but his works consists of two tragedies and a few poems. He died in 1690.—His daughter MARIE JEANNE L'Heritier de Villandon obtained some reputa-

tion as a poetess in the beginning of the last century. She published a translation of the Metamorphoses of Ovid; of which *voir* in vers, "Le Tombeau de M. le Duc de Bourgogne" a poem, "L'Aurore printanière" a novel in verse, and "La Tour Montaigne." She died in 1734, aged seventy.—*Nous Diet Hist.*

HEIMMANN There were four of this name JAMES HERMANN an excellent mathematical scholar was born at Basle in 1678 and became professor of his favourite science in the university of Padua. Peter the Great, then occupied in the formation of his academy induced him to take a journey into Russia in order to assist in the organisation of his infant establishment. On his return he repaired to his native city where he obtained the professorship of ethics and jurisprudence. He was the author of a treatise in two books on the motions and forces of solids and liquids entitled *De Phoronoma &c. &c. 1716. De Nova Accelerationis Lega* *De Vibratimbus Chordarum tensionum, Responso ad Considerationes de Principi Calculi Differentiæ* &c. and other mathematical tracts to be found in the transactions of various scientific associations. His decease took place in 1733.—JOHN HERMANN was a physician of Strasburgh in the neighbourhood of which city he was born in 1738. Having graduated as MD in that university he obtained in succession the professorships of medicine in 1768 philosophy 1778 pathology 1782 botany chemistry &c. 1784. Strasburg is indebted to him for the foundation of its cabinet of natural history in order to create which, he bequeathed the whole of his own collection as well as the remains of his property at his death. Herman greatly extended the boundaries of science both by his lectures and by the great number of dissertations and theses which he published. In 1787 and 1789 he printed some pieces on the medical virtues of certain reptiles. These tracts are inserted in the memoirs of the academy of Strasburg and other scientific collections. Except a journey to Paris, and two tours in Switzerland in 1772 and 1791, he rarely absented himself from Strasburg where he died about 1802. His son in law M. Hammer published from his MSS. in 1804, *Observations Zoologiques posthume*, pars 1. 4to, Strasburg and Paris.—HERMANN (JOHN FRANCIS) son of the preceding, and eminent also as a naturalist. He was born in 1768 and died of a contagious fever in 1793. He left among other works a thesis on Comparative Osteology, and a memoir on Insects, without wings, crowned by the Society of Natural History at Paris in 1790, and published with plates in 1804. He also wrote the History of the Spiders of Alsace not hitherto published.—PAUL HERMANN a native of Halle in Saxony and professor of botany at Leyden, flourished in the latter part of the seventeenth century. In the early part of his life he had acted as physician to the Dutch settlement at Ceylon whence he re-

other, of a catalogue of the plants in the Leyden garden. "Lugdina Batava Flores," "Musaeum Zeylanicum," 1717, "Paradiesus Batavus," "Cynocephalus Materies Medicis &c," 2 vols. &c. His death took place in 1695.—*Hutton's Math. Dict.* —*New Dict. Hist. Eng. Revue des Contemp.*

HERMAS an ancient father of the Christian church, sometimes Pastor or the Shepherd from a book written by him under that title. This treatise was originally composed in the Greek language, and sufficient fragments are yet extant in quotations to prove the fact of its existence, as a whole however it is now only to be found in a Latin version printed by Cotelanus, and translated into English by archbishop Wake. It consists of a series of allegories visions, &c. in the manner of the Book of Ezechias but any practical good which might result from its perusal is likely to be much weakened by the tediousness and prolixity of the similitudes. Thus Hermas is generally considered to have been the same alluded to in the Epistle to the Romans cap. 26 v. xiv., but the particulars of his life and the manner of his death are unknown, farther than that the latter is supposed to have taken place at Rome in the year 81 when Clemens was bishop there. In the Romish Martyrology by a mistake not unfrequent in that communion his names original and acquired, are celebrated as those of two distinct persons the festival of Hermas being kept on the 9th of May and that of Pastor on the 26th of July

—*Cate. Duges.*

HERMELIN (SAMUEL GUSTAVUS, baron) a Swedish nobleman eminent for his literary and scientific attainments, a native of Stockholm in which metropolis he was born in 1744. Having early in life travelled for improvement over a great part of the European continent, he was afterwards entrusted with the conduct of a diplomatic mission from his own government to that of the United States of America. On his return in 1764 he visited England, of which he made the tour directing his attention here as well as in the other countries through which he passed, principally to the study of geology and statistics. In the pursuit of his favourite sciences, no small portion of his property and more than fifteen years of his life were devoted to a most laborious geographical undertaking which comprising with the survey of Westro-Bothnia and Lapland, finally ripened through the assistance of a company which he formed on the failure of his own pecuniary resources into the completion of an entire Swedish atlas. Through his exertions also and principally at his own expense, great improvements were introduced among the mining establishments of the country especially in Bothnia, where three new furnaces were erected by him and the two mines, of which he was now appointed superintendent, were worked under his direction. As more honourable than lucrative testimony to his valuable services on these occa-

sions were given in 1771, when he retired from public life in 1815, retaining his salary with an additional pension of 1000 dollars. Besides a great variety of papers printed among the transactions of the Royal Society of Stockholm, of which society he had been a member since the year 1771, the following treatises were published by him in a scientific form:—A Mineralogical Description of Lapland and Westro-Bothnia, with tables of population and industry of the latter province.

Mineralogical Charts of the Southern Provinces of Sweden, On the Melting and Casting of Copper Minerals, On the uses of Stones found in the Swedish Quarries, and an Essay on the Resources of the Swedish Provinces. M. Hermelin closed a long and useful life at the age of seventy four on the 4th of May 1820.—*N. Month. Mag.*

HERMES or MERCURY called by the Egyptians Thoth a highly celebrated legislator, priest and philosopher who on account of his science and learning acquired the surname of Trismegistus, or thrice great. Various opinions are entertained of the time in which he flourished but the most general opinion assigns about BC 1930 Clemens Alexandrinus has given an account of his writings which he makes extend to thirty two volumes of theology and philosophy and six upon medicine, but they are no longer in existence. The two dialogues assigned to him named

'Poemandre' and 'Asclepius' are now universally held to be apocryphous. According to Manetho the Thoth or Hermes who wrote the works described by Clemens Alexandrinus, lived at a later period than BC 1930 and was the reviver of the institutions of the more ancient philosopher of the same name whom Diodorus Siculus makes the counsellor and friend of Osiris and the inventor of letters or hieroglyphica. According to both this writer and Cicero he framed laws and instituted religious rites among the Egyptians and taught astronomy music and other sciences. Christian writers have identified him with Enoch Joseph, Moses and others, each upon some fancied similarity or other, resting upon no foundation and utterly unworthy of notice.—*Cave Merri. Brucker.*

HERMILLY (VAGUETTE) a French historian of the last century who was a native of Amiens. His most important production is a French translation of the General History of Spain by John de Ferreyras, 10 vols. &c., besides which he published Histoire du Royame de Majorque et de Minorque 4to, Bibliographie Parisienne, and Théâtre Critique 12 vols. 12mo. He died in 1778.—*New Dict. Hist.*

HERMOXNES. There were two of this name, the first, a rhetorician of Tarsus, lived about the middle of the second century the precocity of whose talents was equalled only by the shortness of their duration. He gave lectures on eloquence in his fifteenth year, and two treatises of his on the same art were

written one at the age of seventeen, the other at that of twenty-two. Three years afterwards memory and even the power of speech forsook him. Of the precise time of his decease nothing certain is known but a copy of the above-mentioned works is yet extant, printed in one volume 8vo, at Geneva, 1614.—The other was an African painter and philosopher, a few years posterior in point of time to the former. Though embracing many of the Christian doctrines, he denied that of the resurrection, the necessity of baptism, &c and in his opinions respecting the person of Christ, made an odd mixture of Christianity and the religion of Mithras.—*Cate. Dapini.*

HERNANDES (FRANCESCO) a Spanish physician employed by Philip II to arrange and describe the plants, animals and minerals of the New World a task which he executed with considerable ability. This treatise written in the Latin language was printed at Rome in 1651 folio. Of the birth place of this author or of the time and manner of his decease nothing is accurately known.—*Halleri Bibl. Bot.*

HFRIO a philosopher and mathematician of Alexandria, the scholar of Ctesias who distinguished himself by his skill in the construction of warlike machines. Two treatises of his on this subject are yet extant entitled

De Telis confundendi jaculandisque and *De Constructione et Mensura Manubialistarum* as also another *De Automotorum fabria*. There was another of the same name under the emperor Heracius, who wrote on similar subjects. Of his works there are yet remaining a work on fortification entitled *De Obsidione repellenda et toleranda*, as also *De Machinis Bellicis*, *De Vocabulis Geometrictis et Stereometrictis* and a tract called *Geo deca*. —*Fabrius. Bibl. Grec.*

HEROD the Great so called from his power and talents king of the Jews. He was a native of Ascalon in Judea where he was born BC 71 being the second son of Antipater the Idumean, who appointed him to the government of Galilee. He at first embraced the party of Brutus and Cassius but after their death reconciled himself to Antony by whose interest he was first named tetrarch and afterwards king of Judea. After the battle of Actium, he so successfully paid his court to the victor, that Augustus confirmed him in his kingdom and on all occasions his abilities as a politician and commander were conspicuous. In other respects his passions were fierce and un governable. Although married to the celebrated Mariamne a princess of the Asconian family her brother Aristobulus and venerable grandfather Hyrcanus, fell victims to his jealousy of the ancient pretensions of their race. His very love of Mariamne herself mingled as it was with the most fearful jealousy terminated in her execution, and his remorse and keen remorse at her death, only exasperated him to further outrages against her surviving relations her mother, Alexandra, and many more falling victims to his savage cruelty. His own son by Mariamne

Shee. Dict. — Vol. II.

Alexander and Aristobulus, whose indignities at the treatment of their mother seems to have led into some intrigues against his authority were also sacrificed in hunger and their death crowned the domestic barbarity of Herod. It was the latter event which induced Augustus to observe that it was better to be Herod's hog than his son. He rebuilt the temple at Jerusalem with great magnificence and erected a stately theatre and an amphitheatre in that city, in which he celebrated games in honour of Augustus to the great displeasure of the more zealous of the Jews. He also rebuilt Samaria, which he called Sebaste and adorned it with very sumptuous edifices. He likewise for his security constructed many strong fortresses throughout Judea, the principal of which he termed Caesarea after the emperor. On his palace near the temple of Jerusalem he lavished the most costly materials and his residence of Herodium at some distance from the capital by the beauty of its situation drew around it the population of a great city. Such indeed was his magnificence that Augustus said his soul was too great for his kingdom. The birth of Jesus Christ took place in the thirty third year of the reign of Herod which important event was followed in a year or two by his death of a languishing and loathsome disease at the age of sixty eight. According to Josephus he planned a scene of posthumous cruelty which could have been conceived only by the hardest and most depraved heart. Having summoned the chief persons among the Jews to Jericho he caused them to be shut up in the circus and gave strict orders to his sister Salome to have them massacred at his death that every great family should weep for him which savage order was not executed. Herod was the first who struck the foundation of the Jewish government by dissolving the national council and appointing the high priests and removing them at pleasure without regard to the laws of succession. His policy ability and influence with Augustus however gave a great temporary splendour to the Jewish nation.—*HEROD ANTIPAS* son of Herod the Great by his fifth wife Cleopatra was appointed tetrarch of Galilee on his death. This was the Herod who put to death St John the Baptist in compliment to his wife Herodias in revenge for his repudiation of their incestuous union. Herodias having been united to and forcibly taken away from her brother Aretas. The ambition of Herodias stimulated her husband to a measure which proved his ruin. His nephew Agrippa having obtained royal honours from Caligula she induced Herod to visit Rome to request the same favour where he was met by an accusation on the part of Agrippa, of having been concerned in the conspiracy of Sejanus and of being in secret league with the king of Parthia. This accusation being credited he was stripped of his dominions, and sent with his wife into exile at Lyons, or as some say to Spain where he died after possessing his tetrarchy for forty three years.—*HEROD AGrippa*, see

H E R

H E R

of Aristobulus, by Berenice, daughter of Herod the Great, and nephew to the preceding was partly brought up at Rome with Drusus the son of Tiberius, on whose death he left Rome with a disipated fortune but returned some years after and being suspected of an attachment to Caligula was imprisoned by Tiberius. This apparent misfortune proved the source of his future prosperity for on the accession of Caligula, he was not only rewarded with a golden chain as heavy as the iron one which had bound him, but was honoured with the title of king and received the tetrarchy of his disgraced uncle and all the dominions of Herod the Great. It was thus Herod who to please the Jews, caused St James to be put to death and St Peter to be imprisoned. His power and opulence acquired him a great reputation and in a grand audience at Cesarea having made an oration to some deputies from Tyre and Sidon he was hailed by his obsequious train as one who spoke like a god. His satisfaction at this flattery was soon after re proved by a violent disorder in his bowels which carried him off in the forty fourth year of his age and seventh of his reign.—*Herod Agrippa II* son of the preceding being too young to govern Judea was again reduced to a Roman province. He subsequently however received the kingdom of Chalcis and obtained the superintendency of the temple and sacred utensils at Jerusalem together with the nomination of the high priests. He resided much at Jerusalem and here together with his sister Berenice heard the defence of Paul addressed to the Roman governor Festus. Being driven from Jerusalem in the revolt which proved so fatal to the Jews he joined Cestius, the Roman commander and when Vespasian was sent into the province met him with a considerable reinforcement. During the siege of Jerusalem he was very serviceable to Titus, and after its reduction he and Berenice (with whom he was suspected to have an incestuous intercourse) returned to Rome. He is supposed to have died there AD 94, and in him terminated the Herodian line and family.—*Josephus. Now His*

HERODIAN the son of Apollonius the Alexandria a Greek historian who died about the middle of the third century. He was the author of a history of his own times, commencing the reigns of Antoninus Philosophus, Balbinus, and Pupienus. This work, which was written in eight books contains among other curious matter, an account of the ceremonies used at the apotheosis of the emperors. Like many historians who have related the events of their own times, Herodian sometimes forgets that he is writing for posterity and omits the necessary dates, nor is he very correct as to matters of fact and points of geography. His impartiality has also been called in question as respects his histories of Alexander Severus and Maximinus, but, according to some able critics, with suspicion. Herodian was translated into Latin by Pothinus, which version is to be found in *Historia Augusta* 1790. 1805 French

Leipsic, 5 vols. 8vo, by far the most creditable and elaborate of the whole; as also in the editions of Paris, Strasburg, Oxford, and Edinburgh.—*Fabrich Bibl. Grec.*

HERODOTUS, the most eminent of the Greek historians whose works are extant, and called by Cicero the "Father of History." He was born at Hahcaranassus, in Curna, in the first year of the seventy fourth Olympiad, answering to BC 484 and left his native place in order to travel for the acquisition of knowledge, through Greece Thrace Scythia, Mesopotamia Syria, and Egypt. After collecting in this way all the information that he could obtain concerning the history and origin of nations he is supposed to have returned to the Isle of Samos for the composition of his History and afterwards to have revisited Hahcaranassus in order to assist in the overthrow of the tyranny to which it had been subjected. He was in his thirty ninth year when a generous desire of fame led him to publicly recite his History at the olympic games probably that part of it which relates to the Persian invasion. It was heard with great applause, and caused him to be known and admired throughout Greece. He appears in the latter part of his life to have been a resident of Thurium an Athenian colony in Magna Graecia. He survived the Peloponnesian war and his death is placed BC 413. The History of Herodotus is contained in nine books distinguished by the names of the nine muses. They comprehend a period of about 240 years from Cyrus the great to Xerxes, and besides the transactions between Persia and Greece contain a sketch of the affairs of several other nations. The style of this author is admired for its ease and sweetness, and he chiefly excels in narration. The value of his History has been the subject of much discussion and controversy but the most considerate opinion deems him deserving of credit in relation to the affairs of Greece which took place after his own birth, and in other respects he is believed to relate the traditional accounts respecting remote times and countries just as he heard them without feeling much solicitude to distinguish fact from fable. This carelessness has laid him open to the satire of Juvenal and in modern times to that of Voltaire. Plutarch also accuses him of partiality and composed a treatise 'On the Malignity of Herodotus,' taxing him with injustice to the Thebans, Corinthians and Greeks in general. His work however will always be deemed one of the most precious remains of antiquity. A life of Homer is ascribed to Herodotus which is evidently spurious. The best editions of the valuable classic are that of Aldus, 1502, folio, that of Wesseling Amsterdam, 1763, and that of Edinburgh 1806 7 vols. 8vo. A very good translation of Herodotus into French was published by M Langer, in 9 vols. 8vo, and there are two English versions one by Littlebury in 2 vols., and the other by Beloe in 4 vols. 8vo.—*Voss. Hen. Graec. Fabrich Bibl. Grec. Meyer*

HERON (*Boscar*) a miscellaneous writer,

H E R

who was a native of Scotland, and received a classical education in that country. He was patronised by Dr Hugh Blair to whom he for some time acted as assistant preacher at the high church at Edinburgh. While in that situation he translated Niebuhr's travels in Arabia and other works, and executed some literary compilations. Being disappointed in his views of preferment in the Scottish Kirk he removed to London and devoted himself entirely to writing for the press. He translated Fourcroy's chemistry, published a system of geography in 4 vols. 8vo and displayed at least a great deal of industry in the profession which he had adopted. For a short time he was editor of the British Press and the Globe daily papers, and in 1806 he commenced a newspaper entitled The Fane but the undertaking proving unsuccessful he became involved in pecuniary difficulties and distress which probably injured his health and ultimately occasioned his death which took place in the fever institution St Pancras near London in the summer of 1807.—*Genl Mag. Watt's Biblio. Brit.*

HEROPHILUS, an eminent Greek physician of Chalcedon who lived nearly three hundred years BC. He is mentioned by Cicero Pliny and Plutarch and according to Fallopius understood the human body better and made more discoveries than his contemporary Erasistratus. He is also said to have discovered the lacteal vessels, and to have given the names to various parts of the body which they still retain. Galen calls him a consummate physician and says that these two great anatomists dissected many human bodies at Alexandria in Egypt. Herophilus has also the reputation of having discovered the nerves and their use making three sorts of them; the first to convey sensation the second to move the bones and the third the muscles. He was also the first who paid accurate attention to the movements of the pulse. Of the many writings of this physician, scarcely anything remains to us but a few fragments inserted in the works of Galen.—*Halleri Bibl. Med. et Ant.*

HERRERA TORDESILLAS (Antonio de) a Spanish historical writer of the last century. He was born in 1565 and obtained the situation of secretary to the viceroy of Naples Vespasian Gonzaga. From this post he rose successively to be grand historiographer of the Indies, and secretary of state. His principal work is his history of India embracing a period of sixty two years from 1492 to 1554 inclusively. This work, published originally in four folio volumes, is in general accurate and valuable though written in too inflated a style, and with an occasional tendency towards the marvellous. It has been translated into English, 8vo. 6 vols. Another production, which he commenced at a later period having for its subject the history of his native country and printed in three folio volumes, is far inferior to the first, both in point of execution and design. His death took place in 1625. There was another writer of the same

H E R

family Ferdinand de Herrera his contemporary. This latter was a native of Seville, and is known as the author of a history of the war of Cyprus, an account of the battle of Lepanto, and a life of Sir Thomas More; besides a volume of lyrics, printed in 1588.—*Anton. Bibl. Hispan.*

HERRGOTT (John James Marquard) a German historian who was a native of Prienburg in Brandenburg and became a Benedictine monk. He was historiographer to the imperial house of Austria and he published "Genealogia Diplomatica Gentis Habenburgicæ," 3 vols. folio, and "Monumenta Domus Austriae," 5 vols. folio. He died in 1769.—*Nova Diet. Hist.*

HERRICK (ROBERT) an English poet of the seventeenth century. He was a native of London and was educated at St John's college and Trinity hall Cambridge. He took orders in the church of England, and in 1659 was presented to the living of Dean Prior, in Devonshire. In common with many others of the episcopal clergy he suffered deprivation under the government of Cromwell, but he recovered his benefice after the Restoration of Charles II in 1660 which period he did not long survive. The compositions of this bard were published in 1648 under the title of "Hesperides or the Works both Humane and Divine of Robert Herrick" 8vo. A selection from these poems with an account of the author by Dr Nott was printed at Bristol in 1810 and a complete edition at Edinburgh in 1823 2 vols. 8vo. Dr Drake in his "Literary Hours" has taken some pains to illustrate the poetical character of Herrick, and has given specimens of his productions which shew that he does not deserve the comparative oblivion in which he has been involved.—*Campbell's Spec. of Brit. Poets.*

HERRING (THOMAS) archbishop of Canterbury a distinguished English prelate was born in the year 1691 at Walsoken in Norfolk, of which parish his father was rector. He was educated in the first instance at the free grammar-school at Wisbech whence he was in due time removed to Jesus college and afterwards to Corpus Christi college Cambridge. Here he obtained a fellowship in 1716, and in the same year was made deacon, and graduating as AM took the charge of pupils. In 1719 he was ordained priest, and became successively master of Great Shelford, Stow cum Quy, and Trinity in Cambridge. In these stations his talents as a preacher became highly celebrated and were not long unwarded bishop Fleetwood appointing him his chaplain in 1728 and presenting him with the rectories of Butenden in Essex and Barley in Hertfordshire. Two years afterwards, he was chosen preacher to the hon society of Lincoln's Inn and about the same time was made a chaplain in ordinary to the king whom he attended on his visit to the university of Cambridge in 1733 and was made doctor of divinity. In 1731 he was appointed dean of Rochester, and in 1737 obtained the see of Bangor, whence he was

HER

translated, in 1743, to the archbishopric of York: and it was fortunate for the country that a portion of his spirit and principles held their influence during the rebellion of 1745. On learning the defeat of the king's troops at Preston Pans, he convened a meeting of the nobility, gentry and clergy at York to which he addressed a spirited speech and excited so much enthusiasm that no less than 50,000 were immediately subscribed to raise troops for their defence. These services added to his general reputation naturally advanced him to the primacy on the death of archbishop Potter whom he succeeded in 1747 to the general satisfaction of all parties. In 1753 he was seized with a violent fever which brought him to the brink of the grave, and although he in some measure recovered, he found it necessary to retire to his seat at Croydon and decline all public business. After languishing in this manner nearly four years, he expired 13th March 1757. Archbishop Herring was a prelate of great liberality both in mind and conduct, and much dis inclined to controversy and persecution. Although so celebrated for his pulpit oratory seven of his sermons only have been printed which were collected and published after his death, by his friend Mr Duncome in 1767. In the year 1777 his Letters to the same gentleman written from 1722 to 1757 were also published with notes and an appendix octavo which correspondence has been much admired.—*Bog Brit Monthly Review* vol. xxvii. and lvi.

HERSCHELL (MR WILLIAM) a distinguished astronomer son of a musician of Hanover born November 15 1738. He was the second of four sons, and being destined by his father for his own profession was placed by him at the age of fourteen in the band of the Hanoverian foot guards. In this situation however he did not long remain but quitting the regiment abruptly arrived in England towards the close of the year 1757 and having the good fortune to attract the notice of the earl of Darlington he was employed by that nobleman in the formation of a military band, and also in conducting several concerts oratorios, &c. in the palatinates of Durham and the neighbouring counties. In 1766 he obtained the situation of organist at Halifax, but shortly after relinquished it for a more advantageous appointment of a similar nature at the Octagon chapel Bath which together with his pupils produced him a hand some income. Although enthusiastically fond of music he had for some time devoted his leisure hours to the study of mathematics and astronomy, and being dissatisfied with the only telescopes within his reach he set about constructing one for himself in which arduous undertaking he succeeded, having in 1774 finished an excellent reflecting instrument of five feet, with his own hands. Encouraged by his success he proceeded to complete larger telescopes, and soon constructed a seven feet, and a twenty feet reflector, having in the latter case finished nearly two hundred object

HER

mirrors before he could satisfy himself. From this period he gradually withdrew from his professional engagements. Late in 1779 he began a regular survey of the heavens star by star with a seven feet reflector and after eighteen months labour discovered, on the 13th of March, 1781 a new primary planet, which he named the *Georgium Sidus*. This discovery drew upon him the attention of the scientific world and the patronage of George the third who by the settlement of a handsome salary enabled him to devote the rest of his life exclusively to astronomy. He now quitted Bath for Datchet in the neighbourhood of Windsor but afterwards removed to Slough where he commenced the erection of a telescope of the enormous dimensions of forty feet and completed it in 1787. With this powerful instrument he continued to prosecute his discoveries assisted by his sister Caroline regularly communicating the results to the Royal Society till the year 1813. In 1783 he had discovered a volcanic mountain in the moon and from farther observations made with the assistance of his large instrument, in 1787 two others were plainly distinguished in the same planet emitting fire from their summits, he also ascertained that the *Georgium Sidus* was surrounded with rings and had six satellites and established a far more intimate acquaintance with the appearance satellites, &c. of Saturn than had been before obtained. In 1802 Herschell laid before the Royal Society a catalogue of 5000 new nebulae nebulous stars planetary nebulae and clusters of stars which he had discovered and in consequence of the important additions made by him to the stock of astronomical knowledge received from the university of Oxford the honorary degree of doctor of laws, an honour which was followed up in 1816 by the Guelphic order of knighthood from the king. He continued his astronomical observations till within a few years of his death which took place at Slough and he was buried at Upton Berk in Aug 1822.—*Ann Bog*

HERSENT or HERSEN (CHARLES) a French divine principally distinguished as the writer of a satire against cardinal Richelieu. He was a member of the congregation of the fathers of the oratory, and after having preached with great reputation at Lyon Angers, Paris, and other places he quitted the society in 1625 in consequence of a dispute with the bishop of Angers, about the profits of a priory to which he thought himself entitled. He showed his pugnacious disposition by attacking in different publications, the proceedings of his late associates. In 1627 he became chancellor of Metz and was admitted a doctor of the Sorbonne. While in this situation he published an octavo pamphlet entitled *Optati Galli de cavendo Schismate, Liber parneticus ad illustres Gallos pri mates, archiepiscopos episcopos, &c.* 1646. This is a bitter libel against cardinal Richelieu, who at that period, wishing to intimidate the papal court, had threatened to create a patriarch to preside over the Gallican church

H E R.

Stewart, under the name of Optatus, (borrowed from a writer against the schism of the Donatists in the fourth century,) endeavoured to show that the measures of the French minister would lead to a separation from the church of Rome. The cardinal exasperated by the style as well as the subject of the book procured a decree of the parliament, ordering that it should be burnt by the common hang man, and took great pains to suppress the work so that it is extremely rare and highly valued by bibliomaniacs. A strict persecution was made after the author who however took refuge at Rome. After reading there a few years he involved himself in new difficulties by a sermon which he preached in 1650 on the festival of St Louis king of France. The doctrines he delivered savoured of Jansenism and to avoid being tried before the Inquisition he returned to his native country where he died in 1660. A list of his works may be found in Muret, but they require no particular notice.—*Nous Dict Hist. Pagnet. Dict. des Lév condamn. en Fr.*

HERTZBERG (EWALD FREDERICK count von) a Prussian minister of state and political writer of eminence in the last century. He was born at Lotzin in Pomerania in 1725. He manifested his talents at an early age by the publication of a Dissertation on History, and on the completion of his academic studies he became so advantageously known to the king Frederick II as to obtain from that monarch employment as a diplomatic agent. It was in 1745 that he was appointed secretary of legation whence he gradually rose to the highest offices in the state, and having been ennobled he was made prime minister in which post his history is closely connected with that of his ambitious but highly-talented master. He died in 1795. Besides an Essay on the Population of Brandenburg which in 1792 obtained the prize proposed by the Academy of Sciences of Berlin for the best treatise on the subject he was the author of many important memoirs and discourses on the history and political relations of Prussia.—*Nous Dict Hist. Biog. Univ.*

HERVEY (JAMES) a pious and popular divine of the church of England. He was born at Hardwicksome near Northampton in 1713 & was sent by his father who held the living of Collingtree in that neighbourhood to the free grammar school of Northampton whence he was removed at the age of seventeen to Lincoln college Oxford. He remained at the university five or six years without proceeding further than his bachelor's degree and having taken orders retired in 1736 to the curacy of Dummer in Hampshire. In 1738 he quitted Dummer to reside at Stoke abbey in Devonshire the seat of his friend Paul Orchard esq and in 1738 undertook the curacy of Bideford, in the same county where he was greatly beloved by his congregation who increased his small stipend by a voluntary collection. It was during his residence in Devonshire that he planned, and probably

H E R.

wrote part of his "Meditations; and as his curson to Kilhampton, in Cornwall occasioned him to lay the scenes of his Meditations among the tombs in the church of that place. After serving the cure of Bideford nearly three years his rector died and the new incumbent dismissed him although the parishioners offered to maintain him at their own expense. In 1743 he became curate to his father then possessing the living of Weston Favell and on the death of the latter he succeeded him in his livings both of Weston and Collingtree. He attended the duty in each of these parishes alternately with a curate with the most exemplary assiduity holding a weekly lecture in addition to the regular service until his great exertions both in the study and pulpit brought on a decline which terminated his existence on Christmas day 1758 in the forty fifth year of his age. The moral character of this conscientious divine was most exemplary his temper was disinterested placid and humble and in benevolence and charity he was surpassed by none with equally bounded means. His religious notions were Calvinistic and in respect to the imputed righteousness of Christ he is accused of carrying them to the verge of Antinomianism. The style of his writings is more flowery than classic or manly, and hence his great popularity among general readers who possess little refinement of taste. Besides his celebrated Meditations the price of the copyright of the first part of which (700) he wholly distributed in charity he is the author of Theron and Aspasio or a series of Letters and Dialogues on the most important subjects. Remarks on Lord Bolingbroke's Letters on the Use and Study of History. Eleven Letters to the Rev John Wesley in answer to his Remarks on Theron and Aspasio. A Collection of Letters, published after the author's death. Letters to Lady Frances Shirley not published until 1782 and various sermons printed from his MSS. All which are included in the genuine edition of his works, 6 vols 8vo.—*Life prefixed to Letters. Biog. Brit.*

HERVEY (JOHN lord) a literary nobleman of the last century chiefly known at present as one of the individuals satirized by Pope. He was born October 15th 1696 and was the eldest son of Mr Hervey afterwards created earl of Bristol. He received his education at Clare hall Cambridge where he took the degree of MA. Soon after the accession of George I he was appointed a gentleman of the bed chamber to the prince of Wales. His master becoming king Hervey in 1730 was promoted to the office of vice chamberlain and made a privy counsellor. In 1731 in consequence of a political quarrel he fought a duel with Pulteney afterwards earl of Bath which exposed both parties to some ridicule and excited towards the latter the displeasure of the king. In 1733 the subject of this article was raised to the peerage by the title of baron Hervey of Ickworth and in 1740 he was made lord privy seal in which post he remained only till the following year, when a

HER

change of ministry occurred on the retirement of Sir Robert Walpole from the administration of public affairs. He died August 5th, 1743. Lord Hervey appears to have owed the obloquy cast on his character by Pope, to his acquaintances with lady Mary Wortley Montagu whose talents as a wit and portress excited the sensitive jealousy of the celebrated bard. Under the appellations of *Spoils* and *Lord Fanny* Pope has drawn very degrading portraits of a man whose personal political or literary character was by no means contemptible and who showed that he was not to be induced with impunity by his retaliation on his antagonist, in a poetical Epistle from a Noblemen to a Doctor of Divinity. He was also the author of several short poems, and of some clever political tracts in defence of Walpole. He married Miss Lepel, a lady celebrated for her beauty and wit. Dying before his father the earlom of Bristol descended successively to his two sons.—The elder AUGUSTUS JOHN HERVEY who entered into the naval service and rose to the rank of admiral was unfortunately distinguished as the husband of the abandoned duchess of Kingston. He died in 1780 and was succeeded by the hon and rev FREDERICK HERVEY bishop of Derry in Ireland, whose death took place in 1803.—*Biog Portra. Chalmers's Biog Dict.*

HERVEY (hon THOMAS) brother of the preceding more distinguished in the annals of honour and gallantry than in those of literature but noticed here as the author of a very peculiar publication. About 1741 was printed without date a pamphlet entitled *Letters from the Hon T Hervey to Sir Thomas Hanmer* 8vo which called forth a Proper Reply to a very extraordinary Letter from the Hon T H— 1742. The subject of these tracts is the reverend right to an estate in Wales, of which the wife of Sir G Hamner the editor of Shakespeare was heiress. This lady had been seduced by Mr Hervey whose Letters to the injured husband were designed as an apology for himself and his mistress.—*Ong*

HERY (THIERRY DE) an eminent French surgeon in the sixteenth century. He practised his profession at Paris where he acquired great reputation as a surgeon and an anatomist. Francis I sent him into Italy as medical superintendent of the French army in which post he continued till after the battle of Pavia in 1525 when the disorganization of the troops released him from his engagement. He then went to Rome and entered into the hospital of St James the Elder in which he found many patients languishing under the syphilitic disease to whose cases he particularly directed his attention. He is said to have employed in their care the external application of mercury and he was probably one of the first surgeons who adopted that practice. Returning to Paris he devoted himself principally to the treatment of the terrible scrofula in question, in which he was so successful that he gained more than fifty thousand crowns, in fees from patients infected

HES

with that disorder. He died in 1599, at an extremely advanced age. There is extant by this author a treatise on Syphilis, which was formerly held in much estimation.—*Hutchinson's Biog Med. Biog Univ.*

HERZ (Marcus) a celebrated German physician of the Jewish persuasion who was professor of medicine at Berlin where he died in 1803. He published in the German language several works on professional subjects which procured him much reputation on the continent. But in England Dr Herz is disadvantageously known as one of the most illiberal and decided opponents of the practice of vaccination which he denominates basal immunization but which in spite of his distastes, and those of Birch and Moseley in our own country has extended its benefits to a large portion of the habitable world.—*New Diet Hist. Edit.*

HESELRIGE (Sir ARTHUR) a distinguished actor in the political revolutions of the age of Charles I. He was the eldest son of sir Thomas Heselrige of Noseley in Leices towshire a gentleman of an ancient Norman family who was created a baronet in 1622. The subject of this article succeeded to the title on the death of his father in 1629. He was one of the representatives in parliament for the county of Leicester in 1640 when he distinguished himself by his opposition to the arbitrary measures of the court party, and he was particularly active in procuring the bill of attainder against lord Strafford. His conduct excited the hostility of the king's counsellors, and his name appears in English history among the members of parliament whose arrest was the object of his majesty's imprudent visit to the house of Commons. In the civil war which followed sir Arthur Heselrige was governor of Newcastle-upon-Tyne, and commanded a regiment of cuirassiers which he had raised for the service of the common wealth. He also acted at the head of a committee at Leicester for the confiscation of the property of the royalists and the raising of forces zealously assisting the lord lieutenant and the sheriff appointed by parliament in all affairs in which his influence or authority in the county could be advantageous to the cause he had embraced. He attached himself to Cromwell whose friendship and confidence he enjoyed and after the termination of hostilities and the death of the king he was appointed one of the council of state. The protector likewise nominated him a member of his house of Peers but Heselrige preferred a seat among the Commons. In the confusion which prevailed previously to the restoration, he endeavoured to counteract the designs of general Monk but in vain and he did not live to witness the triumph of the royal cause and the prescription of his party his death having taken place January 7th 1660. Two letters which he wrote while on military service have been published—one "Concerning the revolt and recovery of Thremonth Castle" London 1648 4to and another intituled "A Letter to William Laudall concerning a great victory

H E S

garrisoned by the Parliament Forces in Newhamberland" London, 1648, folio.—*Lord Clarendon. Hist. Reformation. Remonstrance. War's Bill. Brit.*

HESIOD an ancient Greek poet by some supposed to be contemporary with Homer but by others, who support themselves by the authority of the Arundelian marbles he lived about thirty years earlier. His father was a native of Cumae, a town of Etolia who being driven thence by misfortunes, settled at Ascrea in Boeotia, but whether before or after the birth of Hesiod is not known although usually called the Ascraean. Little is recorded regarding him which can be depended upon, yet it appears that he at one time kept sheep on Mount Helicon and that on the death of his father he was deprived of his share of his patrimony by a brother named Perses, whom however he lets us know he not only forgave but relieved when he afterwards stood in need of assistance. He raised himself to consequence by his talents and obtained the prize of poetry at the funeral games of Archimadas king of Eubaea. He is also said to have viciously contended with Homer but the account of this pretended contention is deemed fabulous. Several pieces attributed to Hesiod are held to be spurious but the works most certainly of his composition are that entitled "Works and Days" a sort of calendar of rural occupations, and his Theogony or Generation of the Gods which is valuable for the information it affords of the Pagan mythology. His death as related by Solon in Plutarch's banquet took place at Locri where he was falsely accused of being an accomplice in a rape and suffered death from the hands of the brothers of the abused female who were in their turn drowned by the inhabitants and who also burnt their houses. The best editions of Hesiod are those of Amsterdam 1667 and 1701 8vo, of Oxford 1737 4to, and of Leipzig 1778 8vo. There are English translations by Cooke and Elton.—*Mores. Scen. Omen. Diction. Classici.*

HESS MD (JONAS LEWIN VON) a physician of Hamburg, born at Stralsund in 1766. He was the friend and pupil of the celebrated Kant, whose philosophical principles he adopted. He is principally known by his elaborate History of Hamburg of which city his fellow citizens appointed him governor in the insurrection which took place there towards the termination of the career of Napoleon. He died February 20 1823.—*Ann. Beg.*

HESSE (WILLIAM landgrave of) a German prince who distinguished himself as a cultivator of mathematical science and especially astronomy in the sixteenth century. He erected at Cassel an observatory which he stored with the best instruments he could procure for making observations on the heavenly bodies. Christopher Rothmann a mathematician and Justus Byrgius, an ingenious artist, were employed by this prince, and the result of their joint researches appeared in the *Observations Hassiae*,

H E S

published at Leyden in 1618, by Willem van Snell. Many letters of the Landgrave and of Rothmann to Tycho Brahe were printed in his collection of *Astronomical Epistles* Utrecht 1596 4to. The prince of Hesse died in 1592.
Martin's Biog. Philos.

HESSELING or **HESSELINK** (GERARD) an anabaptist minister eminent as a theologian, who was born at Groningen in 1725 and died at Amsterdam in 1811. He studied at his native place at Langen and at Amsterdam and in 1778 he took his degrees in philosophy at Langen where he produced a remarkable dissertation, *De Montibus ignavissim acturus motibus sororibus cognatione*. On being nominated professor of theology in the seminary of the anabaptists at Amsterdam in 1786 he delivered a Latin discourse on the causes of the rejection of Christianity by the Jews and Gentiles on the first preaching of the gospel. He was promoted to the professorship of philosophy in the same institution in 1800, and sustained that office with great reputation till his death. His principal works are a memoir *On the Priesthood of Jesus Christ*, as described in the Epistle to the Hebrews; a *Hermeneutical Dictionary of the New Testament* 2 vols 8vo and a Memoir on the Rhythm and Prosody of the Dutch Language, to which may be added three theological dissertations which obtained prizes from the Teylerian Society of Haerlem. He also published in periodical works many papers on physics natural history and general literature, and when the Royal Institute of Holland was formed he was nominated one of the members but he declined the honour as inconsistent with his academical avocations.—*Bug. Una. Biog. Nouv. des Cont.*

HESYCHIUS of Alexandria a Greek lexicographer of whose personal history nothing certain can be ascertained. His dictionary which is still extant contains a number of scripture words whence it has been inferred that he was a Christian though some critics think it probable such words are additions to the original work by another author. The lexicon of Hesychius which is reckoned one of the most valuable collections of grammatical and philological information relative to the Greek language still existing was published by Schrevelius Lugd. Bat. 1668, 4to but the most important edition is that of Alberti Lug. Bat. 1746-1756 2 vols folio, to which should be added *Hesychii Lexicon Graecum ex cod. MS. restitutum ave Supplimenta ad edit. Hesychii Albertinam, auctore N. Schow Lips. 1792 8vo —Baillot Fabrin. B G*

HESYCHIUS of Miletus a Greek historian who lived in the sixth century. His "Universal History" from the reign of Belus, king of Assyria to the death of the Greek emperor Anastasius is no longer extant, but he wrote a treatise *De Viris Doctrina clara;* and another *De Rebus patrum Constantino-politicis* which still remain. They were published together by Mourauus, Leyden 1613, 12mo.—*Vetus Test. Greec. Mors.*

H E U

H E V

HUMMANN (*Cassanopha Ayousus*) a learned and ingenuous ecclesiast of the last century. He was born at Alstadt, in the dutchy of Weimar in 1691, and after having completed his studies in philosophy and theology at Jena he was in 1709 appointed professor of the latter science in the seminary of Eisenach and also a teacher in the gymnasium. In 1714 he published a work in German entitled 'The Political Philosopher' or rational advice relative to the affairs of common life having previously produced a considerable number of essays and dissertations chiefly in Latin relating to divinity and ecclesiastical history. He was appointed professor at the gymnasium of Göttingen in 1717 and he subsequently obtained the degree of doctor of theology at Helmstadt. Between the years 1713 and 1737 he published in periodical portions his 'Acta Philosoporum' forming three volumes octavo and in 1718 appeared the first edition of a popular manual of the history of literature under the title of 'Compendius Republicae Literariae' 12mo of which an enlarged impression was published in 1736 and another in 1763. On the institution of the university of Göttingen in 1733 Hummann was made professor of history and extraordinary professor of theology. In 1743 he was raised to the station of ordinary professor, which he filled with great credit to himself and advantage to the establishment, where he preached till 1758 when he resigned the professorship partly on account of some scruples which he entertained relative to the Lutheran doctrine of transubstantiation. He was allowed to retain his salary till his death which took place in May 1764. His name was one of the most erudite scholars of his time and during the greater part of his long literary career he kept up an extensive epistolary correspondence with his literary contemporaries and as he carefully preserved all his letters they were after his death placed in the Electoral Library at Hanover. His writings which are very numerous include the following works besides those already mentioned 'De Anonymis et Pseudonymis' lib. n. 1711 8vo, 'Anthologia Latina hoc est Epigrammata selecta cum Prefatione de Natura et Virtutibus Epigrammatum' 1721 8vo, 'Poecile' 3 vols. 8vo 'Augusta Cencin Nicam censura; hoc est Caroli M de ampio Imaginem Cultu' lib. iv '1731 8vo 'Sylloge Dissertationum' 1741 8vo, 'Nova Sylloge Dissertationum' 1752 and 'De Presidentia Christiana' lib. 1761 8vo.—*Stolli Intr in Hist Lat Actas G Berg*

HEUMANN (John) an eminent civilian who was a native of Franconia, and became professor of law at Alton. He was the author of a learned work, entitled 'Commentarii de Re Diplomatica Imperatorum Regum Imperiasticorum et Regnorum Germanie' 3 vols. 4to. He died in 1760.—*Nomv Dict. Hist.*

HEURNIUS (John) an eminent Dutch physician of the sixteenth century. He was a native of Utrecht, where his father was a weaver. He however received a liberal edu-

cation and after studying at Louvain and Paris, he went to Tourn, where he took the degree of MD. Setting in his native city he was made physician to the count of Egmont, and had a place in the council of Utrecht, but in 1581 he removed to Leyden where he was offered the professorship of medicine. He also gave lectures on anatomy and is said to have been the first professor in that university who used dead bodies for public demonstrations. He died of the stone in 1601 aged fifty seven. His works are a treatise on Disorders of the Head and other original pieces in the Latin language and he published the writings of Hippocrates in Greek and Latin, with Commentaries of which there are several editions.—*Utrecht. Huiusq[ue] s[ic] Big. Med. Actas G Berg*.—**HEURNIUS** (Otto) son of the preceding was also a physician. He published a work entitled 'Anatomia Philo sophica Barbarica' lib. n. Antw 1600 12mo, which is said to be a superficial performance.—*Wort f. Philist. Studi Int. in Hist Lat*

HEYDING R (JOHN MICHAEL) a German divine an eminent classical scholar. He was born at Duderhausen in Thuringia in 1690 and was educated at the universities of Halle and Gotha. He at length became director of the gymnasium of Eisenach and died in 1751. His editions of classic authors are much esteemed including the works of Caesar, Phaedrus Cornelius Nepos &c.—*Hi. SINGER* (JANES FREDERIK) nephew of the preceding distinguished himself in the same department of literature. He was born at Usingen near Eisenach in 1719 and was rector of the school of Wolfenbuttel where he died in 1778. Among his literary labours are Observations on the Ajax and Electra of Sophocles, and editions of Malibius Theologorum de Metris and of Plutarch de Educatione.—*Nomv Dict. Hist.*

HEVELIUS or **HEVELIUS** (JOHN) a highly celebrated astronomer of the seven teenth century. He was born of respectable and opulent parentage in the city of Danzig in 1611. Destined for the mercantile profession he received liberal education but mathematics chiefly attracted his attention which he studied under Peter Crugerus with great diligence and success. In 1630 he set out on his travels and passed four years in Holland England France and Germany where he became acquainted with the most eminent mathematicians and philosophers then living. Returning to Danzig he married in 1635; and he was chosen by his fellow citizens to the office of burgomaster in 1641. Having erected an observatory on the top of his house, he furnished it with the instruments requisite for making astronomical observations among which were some excellent telescopes constructed by himself. From constant practice, he attained great accuracy in his researches, and made several important astronomical discoveries. He was the first who noticed that remarkable phenomenon termed the libration of the moon, on which satellite he made a variety of observations, the substance of which appeared in his 'Selenographia, sive Lenes

Descriptio Atque Accurata Dehincus 1647
folio, with numerous copper plates, engraved by himself. They exhibit the spots on the moon's disk and the various phases of that planetary body as seen through the telescope. In 1654 he published a Latin Epistle to Father Riccioli, on the libration of the moon, and another to Bellaldus, on eclipses of the sun and moon. Between 1656 and 1666 he printed treatises on the aspect of Saturn and his phases, on Mercury as discovered in the sun at Danzig May 3 N.S. 1661, and other astronomical tracts. In 1666 appeared his *Cometographia* folio, explaining the nature of comets with the history of all which had been observed previously to his own time and representing the extraordinary motions and other phenomena of these wandering stars. Having sent copies of this work to several members of the Royal Society of London among whom was Dr Robert Hooke the present gave rise to a controversy with that gentleman as to the question whether distances and altitudes could be most accurately ascertained by means of plain or telescopic sights. Hevelius recommending the former and Hooke the latter. In 1673 Hevelius published the first part of his

'*Machina Coelestis continens Organographium sive Instrumentorum Astronomicorum omnium accuratum Dehincussem &c.*' folio as a specimen of the accuracy of his instruments and observations. The next year Dr Hooke published *Animadversions on the first part of the Machina Coelestis* in which he treated the author with great illiberality. Such was the interest taken in the controversy that Dr Halley was sent by the Royal Society to Danzig to investigate the subject of dispute when he decided against our countryman though astronomers have since preferred the mode of observation which he recommended. In 1679 appeared the second part of the '*Machina Coelestis*' which is peculiarly valuable from its scarcity owing to a number of the copies being destroyed by a fire which consumed the author's house at Danzig (during his absence at his county seat) and ruined his observatory and astronomical apparatus. In 1685 he printed a work entitled

'*Annuus Chmactericus*' which appears to have been the latest of his productions. His death took place January 28th 1687 the very day on which he completed his seventy-sixth year. Besides his labours already noticed in the cause of science he discovered several fixed stars of which he wrote an account published in 1690 under the title of *Fir-mamentum Sobiescianum* an application he had given to those stars, in honour of his sovereign John Sobieski. Another posthumous publication was his '*Prodromus Astronomicus*' containing a general catalogue of the fixed stars with descriptions of the methods of making observations on them.—*Martin's Eng. Philos. Aikin's Gen. Eng.*

HEWSON (WILLIAM) an English surgeon celebrated for his discoveries in anatomy and physiology. He was the son of a surgeon and apothecary at Hexham, in Northumberland,

where he was born November 11 O. 1739. After being educated at a grammar school in his native place, he commenced the study of his profession under his father and was next an apprentice or pupil of Mr Lambert, an eminent surgeon at Newcastle-upon-Tyne. He subsequently resided for some time at London, Edinburgh and Paris, and then became assistant and joint lecturer on anatomy with Dr William Hunter. This connection commenced about 1764 and continued till 1770 when some disputes occurred which led to a separation and Mr Hewson afterwards gave lectures on his own account. In 1771 he was chosen a fellow of the Royal Society having obtained the Copleyan prize medal for his researches relative to the absorbent system in birds and fishes. In 1772 he published *Experimental Inquiries into the Properties of the Blood* 8vo and thus was followed by another volume of *Experimental Inquiries* relative to the Lymphatic or Absorbents. He died May 1st 1774 in consequence of fever arising from an accidental wound received in the dissection of a putrid subject. A third volume of *Experimental Inquiries* was published after his death by Mr Magnus Falconer who succeeded him as a public lecturer. A Latin translation of the anatomical and physiological works of Hewson was published by Dr Hahn professor of medicine in the university of Leyden.—*Hutchinson's Eng. Med. Edit.*

HEY (JOHN) a learned divine of the establishment was born in 1734 and educated at the university of Cambridge where he was elected fellow of Sidney college in 1758. He proceeded through all his degrees until in 1780 he graduated as DD and became first Norrisian professor of divinity. He was for many years rector of Passeham in North Hampshire and of Calverton in Buckinghamshire but latterly resigned both livings to reside in London where he died in 1815. He wrote 'Lectures on Divinity' 4 vols. 8vo, 'Redemption, a Seatonian prize poem', Sermons on several occasions 8vo Discourses on the malevolent Sentiments 8vo Observations on the Writings of St Paul — *Gent. Mag.*

HEY (WILLIAM) see Appendix

HEY LIN (PETER DD.) an English divine of the seventeenth century born in November 1600 at Burford near Oxford in which university he was educated. From Hart Hall where he had entered he removed on a fellowship to Magdalen college and in 1621 published a cosmographical work entitled *Microcosmos*. This treatise gained him considerable reputation both as a scholar and a man of genius and procured him the patronage of archbishop Laud, whose life he afterwards wrote and whose principles both in church and state he warmly supported. The recommendation of the prelate obtained for him a king's chaplaincy in 1629 on which occasion he resigned his fellowship. Two years after he was promoted to a stall at Westminster with the livings of Houghton, county Durham, and Hemmingford, Huntingdonshire. For this venerable

HEY

professor he is said to have been indebted to his "History of St George," a work with which Charles I was extremely taken. Heyne graduated as Doctor of Divinity in 1658; he was presented four years afterwards to the rectory of Latip, Oxfordshire but soon gave up that benefice for the living of South Wermborough, Hants. During the civil wars Dr Heyne became obnoxious to the parliamentarian party on account of his tenets both civil and religious, and ejection from the whole of his property was the consequence, his private property was at the same time sequestered and he himself found it advisable to fly from the storm and to seek an asylum at Wimchester, Abingdon, and other places. With the restored fortune of the house of Stuart his own prospects once more brightened. He was reinstated in all his former appointments and further promotion promised him. The realization of his hopes was however prevented by death on the 8th of May 1662. He was an acute and indefatigable writer but the scrupulous party spirit of his numerous productions renders them of little positive value although they may be often consulted with considerable advantage. Besides the works already alluded to, he was the author of the *Mercurius Aulicus*, a weekly paper published at Oxford previously to the utter ruin of the king's party which it was set up to advocate. His other productions are *Theologia veterum folio*, "A Help to English History" reprinted by Dr Wright in 1773. "A History of the Reformation" folio. "Short View of the Life of Charles I." "A History of the Presbyterians" folio, and a folio volume of miscellanies, printed in 1682. He lies buried in Westmonaster abbey.—*Bios Bruc.*

HEYNE (CHRISTIAN GOTTLÖB) a learned German critic was born at Glogau, in Silesia in 1729. His father was a weaver in very humble circumstances and at a very early age Heyne taught other children to provide funds for the extension of his own education. After studying at Chemnitz he proceeded to Leipzig where he succeeded in obtaining considerable reputation for his classical acquirements in the midst of much annoyance from the extreme ingrowness of his circumstances. At length he obtained some pupils and was farther assisted by the post of librarian to count Brühl. He also increased his income by translations of French and English works of merit. In 1755 appeared his edition of *Tibullus* and soon after that of *Epicetus*. He was involved in great distress by the seven years war the entry of the Prussians into Dresden leading to the dispersion of his patron's library. He was however relieved by being taken into the family of Von Schonberg as a tutor to one of the members of it in which situation he married. In 1763 he succeeded Gomper as professor of rhetoric at Göttingen where he also became secretary to the society of Sciences. In 1775 he undertook the compilation of a catalogue of the library at Döbeln, in which laborious work, extending to 130 folio volumes, he was liberally en-

HEY

couraged by George III whose three younger sons were placed under his tuition. He died suddenly, July 12 1814 leaving three children by a first wife and six by a second. His principal works, in addition to those already mentioned, are his editions of Homer and Virgil, with notes and elucidations, and *Oraacula Academica*, 6 vols. 8vo.—*Lyc's by Professor Heyne.*

HEYTHER Mrs. Doct (WILLIAM) a musician of no great skill or eminence in his profession who lived in the early part of the 17th century and was a member of the church of Westminster and the chapel royal. His principal claim to notoriety is the restoration, through his exertions, of the musical professorship originally founded at Oxford by King Alfred. The stupend attached being too insignificant for any man of distinguished musical talent to accept, Dr Heyther following the example of his friend Camden in respect to the historical lecture he endowed it by permission of convocation in 1626 with funds which have been since further increased by the liberality of lord Crew, bishop of Durham. He was the intimate friend of Orlando Gibbons, who is said to have written his probationary exercise for him. His death took place in 1627.—*Bug. Diet. of Mus.*

HEYWOOD (ELIZA) the maiden name of this lady was Fowler her father being a tradesman residing in London where she was born in 1693 or as others say in 1696. She contracted an imprudent marriage early in life and commenced authoress by profession. Her first productions *The Court of Araneus*, and *New Utopia* are loose novels or rather tales replete with personal scandal and written on the model of the *New Atlantis*. In after life her taste appears to have been much improved as is evinced by her *Female Spectator* 4 vols. *The History of Miss Betsy Thoughtless* 4 vols. *Jemmy and Jemmy Jessamy* 3 vols. *Epistles for the Ladies* 2 vols. *Husband and Wife* 2 vols., *'The Invisible Spy* 4 vols. *The Fortunate Foundling*, A present for a Servant Maid.

Adventures of Nature Amanda, &c. Pope whether from indignation at the boorish character of her first productions or as some assert from motives of personal pique introduced her in the Dunciad as one of the prizes given in honour of Dulness, but though a free writer her private reputation was always considered unexceptionable. She tried dramatic composition and even went herself upon the stage but failed in both her theatrical speculations. The year of her death as well as that of her birth has been variously stated some fixing it at 1756, others deferring it till 1759.—*Bug. Dram. Bowles's Edition of Pope*

HEYWOOD (JOHN) one of the earliest English dramatic poets in high estimation with his contemporaries for the brilliancy of his convivial talents. He was a native of North Mims Herts, and received a university education at Oxford but the liveliness of his disposition uniting ill with academical restraint he quitted college abruptly and returned to the

HEY

metropolis. With sir Thomas More he became a great favourite, and that minister introduced him to the notice of Henry VIII who entertained a strong degree of partiality for his wit and poetical effusions. His popularity at court in the reign of queen Mary was not inferior to that which he had enjoyed during the lifetime of her father; for this he was perhaps as much indebted to his unassuming adherence to the church of Rome as to the brilliancy of his wit or the superiority of his musical attainments. In this latter accomplishment his progress was so agreeable to his royal mistress that she is said to have expressed a wish to hear him on her death bed. After her decease on the full establishment of the protestant religion Heywood went into voluntary exile and died at Mechlin in Brabant in 1565. Besides several plays he was the author of *The Spider and Fly* 4to 1556 a parable, at the commencement of every chapter of which work (and they are 77 in number) is a wood cut of the author's portrait, surrounded with cobweb fies &c. This curious book is very scarce and on that account only very dear being according to Warton a dull tedious and trifling apologue without moral or meaning. His other works are—a dialogue of all the proverbs in the English language three quarto pamphlets containing six hundred enigmas of both of which works there were numerous editions before 1598 and six plays or rather interludes. The latter are entitled *A Play between Johan the husband Tyb the wife and Sir Johan the priest* 1553 4to *A merry Play between the Pardoners and the Ffar the Curate and neighbour Prat* 1553 4to, *The Play called the Four F* a new and very merry Interlude of a Palmer a Pardoners a Potyary and a Pedlar 4to *A Play of Gentleiness and Nobility* 4to, *A Play of Love* 1553 4to, and *A Play of the Weather* 1553 4to A poem of Heywood in honour of Mary occurs among the Harleian MSS. and some witty sayings in the Cotton MSS. He left two sons *Elliis* and *Jasper* both born in London the elder of whom was chosen a fellow of All Souls college Oxford in 1547. He like his father quitted England for the continent on the prevalence of the reformed doctrines in his native country entered into the society of Jesuits and became a great favourite with cardinal Pole under whose patronage he lived at Florence. He was a good Italian scholar and published a work written in that language under the title of *"Il Moro"*. His death took place at Louvain in 1572.—*JASPER* the younger born 1553 held a fellowship at Merton college Oxford but was obliged to resign it on account of the irregularity of his life in 1558 and although he afterwards succeeded in obtaining another at All Souls he too eventually quitted England and in 1562 entered the Jesuit's college at Rome. He was a man of lively talents and besides translating three of Seneca's tragedies into English was the author of a number of miscellaneous poems originally printed

HIA

under the title of *Various Poems and Devices* a selection from which appeared in *"The Paradise of Dandy Devices,"* 1574. 4to. His death took place about the close of the year 1597 at Naples.—*Oller's Lives, Warton's Hist. of Eng. Poet.* Cem. Lit. vols. iii. and ix.

HEYWOOD (THOMAS) an actor and writer of plays in the reigns of queen Elizabeth, James I and Charles I the time of whose birth and death is not recorded. According to Winstanley he was one of the most voluminous writers of his age and in a preface to one of his plays he tells us that it was preserved out of two hundred and twenty of which number twenty-four only now remain. His Actor's Vindication displays much learning but what rank he himself held on the stage none of his biographers have recorded. His translations from Lucian Erasmus and several Latin and Italian authors show him to have been a tolerable classic although he appears to have been held by the wits and poets of the day in no great esteem. Besides the works already mentioned he wrote a *Life of Merlin*, *The Hierarchy of the Angels* a very remarkable production *Life of Queen Elizabeth*, *Lives of the Nine Worthies*, *The Lives of nine Women Worthies*, *General History of Women* &c notices of which may be found in our authorities.—*Warton's Hist. of Eng. Poet Censura Lit. Restituta Biog. Dram.*

HJÆRNE (URAN) a Swedish physician and natural philosopher of the eighteenth century. He studied medicine at Upsal under the learned Rudbeck and having gained the friendship of the count de Tott, that nobleman furnished him with the means of travelling for improvement. He went to London where he was admitted a fellow of the Royal Society and he afterwards visited Paris. Returning to Sweden the knowledge he had acquired rendered him the oracle of learning in that country. Having examined the metallurgical processes in use in Germany he applied himself to the improvement of those of Sweden, where he was nominated vice-president of the council of mines. He was also at the head of the board of medicine and first physician to the king. He had the direction of a chemical laboratory and introduced into Sweden the discoveries of foreign chemists in various branches of their art. He died at an advanced age in 1724. Among his works are—*Acta Laborum Chymici,* Stockholm 1706 *Oryctographia Suecana* 1716, and a treatise in Swedish on the mineral waters of Medevi of which he was the discoverer.—*Biog. Univ.*

HIAM (—) the appellation of an incendiary writer of the seventeenth century whose proper name is said to have been *Abaser Coppo*. He was born at Warwick in 1619 and became post master of Merton college, Oxford. After having successively turned presbyterian and anabaptist he gave way to unbridled enthusiasm and was one of the wildest fanatics who appeared in England,

H I C

when the established church was overturned by the parliament after the civil war. He published several pamphlets with odd titles and corresponding contents, one of which is dated London, 1648, "two or three days before the eternal God thundered at Great St Helena. In 1650 he was committed to Newgate, for publishing a book entitled *The fiery flying Roll*, a copy of which is preserved in the British museum. This work which was ordered to be burnt by the common hangman abounds with extravagant flights and shocking blasphemies but the author appears to have been fitter subject for Bedlam than Newgate yet after having lain in prison more than a year he published a recantation called *The Wmgs of the fiery flying Roll* clipp'd or Coppe's Return to the Ways of Truth. In September 1650 he was brought before the house of Commons, but it was some time before he procured his liberty. When he did so he seems to have been so far reduced to reason by his punishment as to be willing to avoid giving offence to the ruling powers. He changed his name to that of Iliam and took up his residence at Barn-elms in Surrey where he practised as a physician and preached occasionally in some of the neighbouring conventicles. He died and was buried at Barnes August 23d 1672 — *Lysons: Envir of London*

HICELAS, a celebrated philosopher of Syracuse who flourished at an unknown period. According to Theophrastus as quoted by Cicero he believed that the heavens sun and stars were stationary and that it was the earth which moved and by turning on its axis produced the same appearance as if the reverse were the case. The name of this philosopher preserving as Copernicus acknowledges that it was this passage in Cicero which suggested to him the first idea of his system — *Cicero: Tusc. Quæst lib. iv: Diogenes Laertius*

HICKES (GEORGE) a very learned English divine and antiquary of the seventeenth century. He was born in 1642 at Newsham in Yorkshire and was the son of a farmer. After passing through his elementary studies at a grammar school at North Allerton he was in 1659 admitted a servitor at St John's college Oxford. Thence he removed to Magdalen college and took the degree of B.A. in 1662. He next became a member of Magdalen hall whence in 1664 he was chosen a fellow of Lincoln college. He proceeded M.A. in 1665 and the year following entered into holy orders. After reading at the university for some years discharging the duties of a college tutor he, in 1673, accepted an invitation to travel abroad with one of his pupils Mr George Wheeler. He accompanied that gentleman to Paris where he formed an acquaintance with Henry Justell, by whom he was entrusted with the care of the original Greek MS of the *Caeciliæ epicene universals* which had been published by his father to be presented to the university of Oxford. Returning to England after eighteen months absence Mr Hickes took the degree of D.D. in 1675 and obtained the rectory of St Ebbe's at Oxford

H I C

In 1677 he went to Scotland as chaplain to the high-commissioner the duke of Lauderdale; when the university of St Andrew's presented him a diploma of doctor of divinity. In 1679 he was created DD at Oxford also in consequence of the chancellor's letters. The same year he was collated to a prebend in the cathedral of Worcester and archbishop San croft presented him to the living of Althallows, Barking in London when he resigned his fellowship. In 1681 he was appointed chaplain in ordinary to the king who in 1683 raised him to the deanery of Worcester. The death of Charles II prevented him from obtaining the bishopric of Bristol and put a stop to his farther promotion for though he had displayed his zeal for high church principles he was an enemy to popery and therefore no favourite with James II. After the Revolution he nevertheless became one of the most prominent of the party of non jurors. His refusal to take the oaths to William III and the queen consort, occasioned his suspension in 1689, and in the beginning of the next year he was deprived of all his benefices. A protest which he posted up in the cathedral of Worcester against the appointment of his successor to the deanery occasioned a prosecution by the officers of the crown to avoid the consequences of which he was obliged to remain for some time in concealment. At length in 1699 the lord chancellor Somers, out of regard to the talents and learning of Dr Hickes procured an order of council to stop the proceedings against him. In the mean time he had been actively engaged in serious acts of disobedience to the established government, for he was the individual who in 1693 was sent by the non juring clergy to St Germain's to concert measures with the exiled king for the appointment of bishops in the English church from their party. He returned from this dangerous mission in the beginning of the following year and was himself shortly after consecrated bishop of Thetford. He survived this elevation more than twenty years as his death took place December 15th 1715. The learning of Dr Hickes was profound and extensive both in the branches of literature more immediately connected with his profession and as regarded the monuments and records of our Anglo-Saxon ancestors. He was particularly acquainted with the writings of the primitive fathers of the church whose testimony he adduced to prove the exact conformity of the church of England with the Catholic church in the earliest ages of its existence. His theological works consist of three volumes of sermons the last of which was a posthumous publication a multitude of tracts in defence of the non jurors and their tenets, a treatise on the eucharist controversial letters against popery, a work on the Christian priesthood and the dignity of the episcopal order to which might be added many others the titles of which may be found in the annexed authorities. His reputation as a writer on divinity has declined since the extinction of the sect to which he belonged.

H I C

The violence of his prejudices obscured his judgment and the party spirit of illiberality which appeared most offenly when he applied to archbishop Tillotson the appellation of atheist as but too conspicuous in his polemical writings in general. As a Saxon scholar Dr Hickes has attained permanent celebrity. In 1689 he published *Institutiones Grammaticae Anglo-Saxonicæ et Masso-Gothicæ* 4to, and this was followed by his *Thesaurus Grammatico-Criticus et Archæologicus Linnaeum veterum Septentrionalium Oxon 1703 2 vols. folio*. This treasury of Gothic literature may be truly styled *magnus opus* and it is as creditable to the talents and learning as to the persevering industry of the author. It is usually accompanied by Humphry Wanley's catalogues of Anglo-Saxon MSS forming a third volume.—*Bug Brit. Watt's Biblio Britan.*

H CKES (JOHN) brother of the preceding was remarkable for having joined an opposite party in the church and advocated its principles with extraordinary zeal. He was a non conformist minister, and having written a pamphlet called a sad narrative of the oppression of many honest people in Devonshire relating to the sufferings of the dissenters under the conventicle act in the reign of Charles II two messengers were sent from London to apprehend him as a state criminal. He happened to meet with them while travelling near the end of their journey, and he being an utter stranger they had the imprudence to disclose the nature of their errand with many invectives against the object of their pursuit. When they arrived at an inn Hickes who was a very athletic man told them who he was, and having horsewhipped them both to teach them more charity or caution in future he set off for London alone. By means of a friend in power he procured an introduction to the king with whom he pleaded so successfully that he not only obtained indemnity for himself but also the promise of protection for the Devonshire non-conformists. In the ensuing reign Hickes joined the duke of Monmouth, and probably fought at the battle of Sedgemoor. After that event he found refuge in the house of Miss Lisle usually termed lady Lisle, who suffered death for sheltering him and other proscribed adherents of Monmouth. Mr Hickes being taken was also executed as a traitor in 1685.—*Calamy's Non conformists Memorial*

HICKLING GILL (EDWARD) a native of Essex born 1630. He received a university education at Cambridge but on its completion obtained a subaltern commission in the army and went into garrison in the West Indies. On his return to Europe he quitted that service for the church and was successively vicar of Boxted and rector of All Saints, Colchester both in his native county. Although of loose and irregular habits he attained to the age of seventy-eight, dying in 1708. He was the author of a description of the island of Jamaica and of some miscellaneous tracts, which were published together

in one quarto volume the year before his decease and reprinted in 1710 in two vols. 8vo.—*Chalmers's G. Biog. Dict.*

HIDALGO (JOSEPH GARCIA) a noble Spaniard of some eminence as a painter on which art he published an elementary treatise entitled *Principios para estudiar el nobilissimo arte de la Pintura* printed 1691. He was born about the middle of the seventeenth century, and was held in considerable estimation at court, being honoured with the order of St Michael. His death took place in 1720.—*Pilkington*

HIDALGO Y COSTILLA (DON MIGUEL) a Spanish priest who acted a distinguished part in Mexico, at the commencement of the late war of independence in that country. He was resident clergymen or curate in the town of Dolores in the intendencia of Goanaxoato, holding a valuable benefice and regarded as a man of considerable talents and better informed than the clergy in general in New Spain. He possessed much influence among the Indians to whom he had endeavoured to extend the benefits of education. His intercourse with them had afforded him opportunities of perceiving their rooted dislike to the Spaniards and this led him in concert with others to form the plan of a general insurrection throughout the provinces of New Spain which it was said was to have taken place on the 1st of November 1810. Circumstances induced the conspirators to hasten the execution of their scheme captain Allende one of them, having collected a few soldiers who were attached to him, marched to Dolores and arriving there on the 10th of September joined Hidalgo whose exhortations produced a general revolt of the people against the Spanish government. Allende and the priest at the head of the insurgents, pillaged the houses of the Spaniards in the neighbouring town of San Miguel el grande, and on the 29th of September they gained possession of Goanaxoato in the treasury of which town they found a large quantity of coin and bar silver. Don J Villegas, who had been appointed viceroy by the regency of Cadiz arrived at Mexico immediately after the insurrection took place and he sent a body of troops against Hidalgo and also published a proclamation calculated to repress the general spirit of discontent. His measures at first were ineffectual, Hidalgo attached the Indians to his cause by repealing the tax called *tributo*, which they had paid ever since their conquest by the Spaniards. From Goanaxoato he marched to Valladolid which he entered October the 20th and there he was joyfully received and was joined by two regiments of militia. Soon after he was proclaimed generalissimo of the Mexican armies various commands were distributed among his principal associates, and the armed mob which he had collected was formed into eighty regiments of one thousand men each. At the head of this force he proceeded towards Mexico and all began, having but a handful of troops for its defence, resorted to the powerful aid of super-

sition, against so dangerous a foe. He applied to the archbishop of Mexico, and to the Inquisition, for a sentence of excommunication against Hidalgo and all his adherents which was forthwith passed. This awed the Mexicans, and prevented them from joining the insurgents, which many of them would otherwise probably have done. Thus disappointed in his expectations of assistance the priest became irresolute and after having waited in the neighbourhood of the capital till the viceroy had recalled his troops to his support he began his retreat. At Aculco he was attacked and completely defeated on the 7th of November by general Calleja. He then retired to Guanajuato whither he was followed by the same officer, who took the place with great slaughter of the insurgents. Hidalgo fled to Guadalajara and on the 17th of January 1811 he suffered a disastrous defeat at the bridge of Calderon eleven leagues from that place. Became a fugitive before the Spanish forces, one of his own officers took him prisoner on the 21st of March 1811, and he was put to death on the 27th of July that year having previously been degraded from the order of priesthood. Thus fell a man who appears to have possessed considerable talents, though deficient in that promptitude of spirit which will almost always insure the success of schemes like that in which he was engaged—*Outline of the Revolution in Spanish America, 1817* 8vo. *Bog M des Contemp*

HIEROCLES There were two of this name the first, a rhetorician of Bathyma was afterwards governor of Alexandria, and distinguished himself in the persecution of the Christians which took place AD 302 under Diocletian both by his actions and his writings; which latter consisting of two separate treatises, are referred to by Iambus and Lactantius. Their main object is to contrast the miracles of Christ with those ascribed to Apollonius Tyaneus, and to draw an inference in favour of the latter. The second was a platonick philosopher who flourished at Alexandria about the middle of the fifth century and was much admired for his eloquence. He is said to have encountered considerable opposition from the Christians of that period in consequence of his doctrines. Of his writings, an essay on the golden versus of Pythagoras is yet extant, in several editions, the best of which is that of London 1742 8vo. His other works, being treatises on fate and on providence, the latter composed in seven books, are only known by the extracts which remain of them in Photius. They were written with a dedication to Olympiodorus an eminent philosopher much esteemed and employed by the emperor Honorus and the younger Theodosius.—*Cave, London*

HIFFERNAN (PAUL) a native of Dublin born 1719. He was of a Catholic family and intended for the priesthood in that communion, but abandoned the church for the study of physick which he practised for a short time with sufficient success in the city where he was born. In 1738 Dr. Hiffernan as he was

styled, came to London, where he commenced author by profession, and effected a cordial acquaintance with Garrick, Foote Goldsmith and other wits, through whose assistance he managed with difficulty to keep up a decent exterior, but never could be prevailed upon to disclose the secret of his abode which was found at his decease to have been in an obscure court in the neighbourhood of St Martin's-lane. His eccentricities were numerous, and in pecuniary matters not always of the most respectable description. His writings are now but little known, they consist for the most part of a series of political essays entitled 'The Ticklers Dublin, 1750', 'The Tuner London 1753' a volume of miscellaneous pieces in prose and verse and an adaptation which did not succeed of La Harpe's tragedy 'The Earl of Warwick'. He died June 1777 in great indigence.—*Bog Dram*

HIGDEN (RANDAL or RANULPH) an English chronicler who was a Benedictine monk of the abbey of St Werburgh at Chester in the fourteenth century. He compiled a work in Latin entitled *Polychronicon* in seven books containing an account of events from the creation to the year 1357 and comprising many valuable documents relating to the affairs of the Britons and Saxons from older chronicles. An English translation of Higden's History by John de Trevisa was printed by Caxton in 1482 and the original work was published in 1642, folio. Higden also translated or rather travestied several parts of the Bible into dramatic dialogues. A copy of these plays is among the Harleian MSS in the British Museum; to which is prefixed a note stating that the author went thence to Rome before he could obtain permission from the pope for these biblical mysteries to be represented in the English language.—*Nelson's Hist Lab Lyons's Magn. Britan. vol II.*

HIGGINS (JOHN) whose name is sometimes spelt Higgins. An English author of the sixteenth century born in Somersetshire, in which county he after graduating at Oxford, and taking holy orders, kept a school at Ilminster till his death in 1604. He is known as the author of a translation of the *Nomenclator* of Adrian Junius 8vo 1585 a controversial treatise written against Perkins on the subject of the descent into Hell part of the *Mirror for Magistrates* 1587, *Holinch's Dictionary*, and *Flosculi Terentiani*.—*Warton's Hist of Eng Poet.*

HIGGONS (MR THOMAS) the son a clergyman who held the benefice of Westbury, Seaford where he was born in 1624. He became a member of Alban-hall, Oxford but quitted the university without graduating, and married, first the dowager countess of Essex, whose character he defended against the aspersions of her censurers in a funeral oration, which he pronounced over her in elegant Latin, on her decease in 1656. This composition was afterwards printed. Mr Higgons subsequently entered into the marriage sense a second time with the daughter of sir Bevil Grenville, sister to sir John afterwards en-

HIG

sied first Earl of Bath. In 1658 he entered parliament, on the decease of Cromwell, and sat as member for the borough of Malmesbury, in which capacity he exerted himself for the restoration of monarchy and on the return of the king obtained a pension of 500*l.* with the honour of knighthood in reward for his good service. He was afterwards in succession envoy to the courts of Dresden and Vienna. On the 26th of November 1691 having been called upon to give his testimony on a trial in the court of king's bench he was suddenly attacked by apoplexy and expired before he could be removed to his own house. Besides the panegyric on his wife he was the author of another addressed to the king on his restoration printed in 1660. *The History of Yusup Bassa,* 1684 and an English translation of

The Venetian Triumph? Sir Thomas left a family by his second lady of which the younger son named BEVIL after his maternal grandfather was born in 1670. He entered himself of St John's college, Oxford in 1686 but removed afterwards to Cambridge. On quitting the university he became a member of the society of the Middle Temple and wrote a variety of political and other works. Among these are—*Remarks on Bishop Burnet's History of his own Times* 8vo. *A Short View of English History with political reflections &c.* 8vo. *An Heroic Poem on the Peace of Utrecht* and a tragedy acted at Drury lane theatre in 1702 under the title of *'The Generous Conqueror or Timely Discovery. On the abdication of James II.* Mr Higgins was one of the few faithful adherents who accompanied that monarch in his flight to the continent where he died in 1735.—*Wood*

HIGHMORF (Josern) an eminent portrait and historical painter of the last century born in London June 13 1692. He only displayed a strong partiality for the fine arts which was discouraged by his family who placed him in a solicitor's office. The whole of his spare time was however devoted by him to the study of his favourite pursuit and although his own genius and application were at first his only instructors his progress even at this period was such that immediately on the expiration of his clerkship when only seventeen years of age he fearlessly abandoned the law resolved to trust in future to his talents as a painter alone for his chance of fame and fortune. The year following he married and continued rising in reputation till on the revival of the order of the bath he was selected as the artist to be employed in painting the knights in full costume. The years 1732 and 1734 were spent by him in professional tours through the Netherlands and France, and on his return he applied himself with renewed exertions to the cultivation of an art which he exercised nearly half a century. His death took place in the spring of 1780, in the house of his son in law Mr Duncome at Canterbury, to which city he had retired from the fatigues of his profession for the last eighteen years of his life. Among his

best paintings are the "Hagar and Ishmael" in the Foundling Hospital, the "Finding of Moses" &c. The illustrations to the original editions of the novels of Richardson with whom he was personally acquainted were also from his easel. As an author he is known by his "Critical Examination of Rubens," two paintings in the Banqueting House White hall 4to. *Observations on Dodwell's pamphlet against Christianity. The Practice of Perspective* 1763, and two vols of Moral and Religious Essays with a translation of Brown on the Immortality of the Soul.—*Chatmers's Gen. Biog. Dict.*

HIGHMORE (NATHANIEL) an eminent English physician and anatomist who was the son of a clergyman and was born at Fordingbridge in Hampshire in 1614. He studied at Trinity college Oxford and took the degree of MD in 1642. He settled as a practitioner at Sherborne in Dorsetshire and became eminent for his professional skill and his scientific researches. He died March 21st, 1684 at the age of seventy. His principal work is entitled *Corporis Humanus Descriptio Anatomica*, 1657 folio. He also wrote *The History of Generation* 1651 8vo, besides treatises on Hysteric and Hypochondriac Affections. Some of his opinions having been controverted by Dr Willis, he published in 1670

Epiatola Responsoria ad T. Willis. His name is commemorated in the appellation

Antrum Highmonianum applied to a cavity in the upper jaw.—*Adams's G. Biog.*

HIJAR (DUKE DE) a Spanish grandee of the first class member of the Junta of Bayonne and grand master of the ceremonies to king Joseph Napoleon. He was born of an ancient Castilian family in 1775, and during the life of his father was known by the title of the Duke d'Allaga. He was engaged in the study of literature and the fine arts when the events which occurred at Aranjuez occasioned the forced abdication of Charles IV. In 1808 he was summoned to Bayonne as one of the junta, convoked by order of Napoleon and after the second abdication of king Charles the duke d'Hijar was appointed to the office of master of the ceremonies to the new sovereign Joseph. He however abandoned the cause of the usurper as soon as the partisans of Ferdinand VII took active measures to support his rival authority. Hence the duke was included in the list of Castilian nobles proscribed by the decree of Burgos on which he prudently retired to London and remained there till the progress of events had brought about the restoration of Ferdinand. He was then recalled to Madrid and in 1814 appointed Spanish ambassador at the court of France. Little aquitance of honours he devoted all his leisure to literary pursuits and died in 1817 a short time after having received the order of the golden fleece.—*Bog. Now. des Contemp.*

HILARION a Christian anchorite of the fourth century born at Gaza in 271. On his conversion from idolatry he became the original founder of monachism in Syria, after

the example of St Anthony, whom he had seen in the deserts of Egypt. To this purpose he dedicated the whole of his possessions, and by the fame of his sanctity induced many to join him. His death took place in the year 371 in the island of Cyprus.—*Morer*

HILARY (St.) a Christian prelate of the fourth century one of the early fathers of the church, born at Poictiers of which city after his conversion from heathenism, he eventually became the bishop in 355. His zeal in favour of the Athanasian doctrine respecting the trinity which he defended with much energy at Bensares, drew on him the persecution of the Arian party with Saturinus at its head who prevailed on the emperor Constantius to exile him into Phrygia. After four years spent in banishment, he was permitted to return to his see where he occupied himself in committing the arguments for his side of the question to writing, and continued to distinguish himself as an active diocesan till his death in 367. His works were printed in folio at Paris in 1693. There was another of the same name bishop of Arles, a semi-pelagian in his opinions who was the author of a life of St Honoratus and some devotional tracta. He died in 449 and also enjoyed the honours of canonisation.—*Cree. Dupin.*

HILDEBERT a divine of the twelfth century, who was a native of Lavardin in the province of Vendome in France. He was a disciple of the famous Berenger and afterwards of Hugo abbot of Clugny and became so distinguished for his learning, that in 1098 he was appointed master of the school of Mans, over which he presided thirteen years. After having been archdeacon and then bishop of Mans, he was raised in 1125 to the archiepiscopal see of Tours, where he died in 1134. His zeal for the interest of the church involved him in some disputes with the Norman princes William Rufus and Henry I of England, and also with Louis the Fat, king of France, but he is more advantageously known on account of his literary productions, which entitle him to be considered as the best writer of his age. His works consist of sermons, theological tracta, Latin poems and letters the latter of which afford some interesting details of contemporary history.—*New Dict Hist Eng Univ.*

HILDESLEY (Mark) bishop of Sodor and Man a prelate of exemplary piety and learning. His father was rector of Marston Kent, where he was born in 1698. From the Charterhouse he removed to Trinity college Cambridge and obtained a fellowship there in 1713. Two years afterwards the living of Hitchin, Herts, the presentation to which is in the college, becoming vacant, he succeeded to the prebend, and to that of Holwell Bedfordshire in 1735. On the death of Bishop Wilcox the duke of Athol conferred on him the vacant see and his conduct as a dissenter did not degenerate from that of his predecessor. Besides his bishopric the value of which has never exceeded a thousand a year, he held the mastership of Sherburne

hospital and a stall at Lincoln. Under his auspices the translation of the Scriptures into Manx, commenced by Wilson, was completed in 1755. His death took place in 1772.—*Life by Butler*

HILDUIN a French ecclesiastic of the ninth century. He was abbot of St Denys, and is known only as the author of a curious history of the life and miracles of his patron saint in which he ludicrously enough confounds him with the Areopagite of the same name a gross fraud or mistake which led to the persecution of Abelard for detecting it and to much absurd controversy in after times.—*Dupin.*

HILL (Aaron) an English poet and miscellaneous writer was born in London in 1685. His father originally a gentleman of good estate in Wiltshire left him almost wholly unprovided for which circumstance obliged him to quit Westminster school at the age of fourteen. His relation lord Paget, being ambassador at Constantinople he ventured uninvited to join him and was received with kindness although with some surprise, and a tutor was provided for him under whose care he travelled through Palestine, Egypt and various parts of the east. In 1703 he returned to England and the death of lord Paget frustrating his expectations in that quarter, he travelled for three years with sir William Wentworth. In 1709 he published a History of the Ottoman Empire partly from materials collected in Turkey which publication although it obtained much notice the author himself subsequently regarded as a crude and juvenile performance. A poem which he addressed in the same year to the earl of Peterborough procured him the patronage of that nobleman and an introduction to the tory leaders. In 1710 he married a lady of beauty and fortune and became manager of Drury lane theatre which post however he soon gave up in consequence of a difference with the lord chamberlain the then duke of Kent. While in the management of Drury lane he wrote his first tragedy of Alfred and Rinaldo an opera. Much under the influence of a projecting spirit in 1713 he obtained a patent for extracting sweet oil from beech mast and a company was formed under his auspices but after a trial of three years the scheme entirely failed as did a subsequent plan for establishing a plantation in Georgia. He still continued to write for the theatres, and several of his pieces were brought on the stage. He also composed poems and for one entitled the Northern Star in compliment to Peter the Great, received a complimentary reward from his widow Catherine L. In 1724 he commenced a periodical paper in conjunction with a Mr Bond called The Plain Dealer which publication seems to be that which introduced Mr Hill into the Dunciad, in a tone of half satire and half compliment on the part of its celebrated author to which Hill replied in a piece entitled The Progress of Wit, in lines that Pope himself used not have disclaimed. The breach was afterwards

banded, and as far as appearances at least, the poets became good friends. A new project of supplying timber from the Highland estates of the York Buddings company next engaged his attention and in 1731 he wrote his *Eldrid* which he brought forward under the title of *Athelwold*. He afterwards translated in succession the *Zaire* Alzire and *Merope* of Voltaire, all of which show him in the light of a superior dramatic translator. He still however continued to interest himself with schemes of commercial improvement until his health began to decline and he died in February 1750 in his sixty fifth year and was interred in Westminster abbey. Aaron Hill was a man of active and extensive benevolence and so kind and affectionate in the relations of society that few men were more beloved. As a poet he was turgid and affected although occasionally nervous and harmonious. He is however little read at present, although his versions of Zaire and Merope have kept the stage until within these few years.

—*Biog. Brit. Anderson's Lives of Brit Poets*

HILL (GEORGE) a divine of the church of Scotland was born at St Andrews in 1748. He was educated in his native place where he obtained the Greek professorship of St Salvador's college and that of Divinity in succession. He subsequently became principal of St Mary's chaplain to the king for Scotland, and fellow of the Royal Society of Edinburgh. He is the author of sermons theological institutes, and lectures on the Old Testament. He died in 1800 — *Gent. Mag.*

HILL (sir JOHN) a writer of the last century distinguished for the versatility of his talents and the multitude of his publications. He was the son of a clergyman of Peterborough and was born about 1716. After having served an apprenticeship to an apothecary in Westminster he established himself in that business in St Martin's Lane, but having married a wife without a fortune he was obliged to seek farther resources for the increase of his income. Having some knowledge of botany he was employed by the duke of Richmond and lord Petre to manage their botanic gardens. By their liberal assistance also he was enabled to travel through various parts of the kingdom and collect scarce plants of which he published an account by subscription. This scheme was not very profitable and he therefore turned his attention to the stage, but after two or three exhibitions at the Haymarket and Covent-garden he discovered that he was not qualified to shine as an actor and returned again to his shop. His activity attracted the notice of men of science and learning; and a translation of a Greek tract on gems, by Theophrastus which he published in 1746 procured him both money and reputation as an author. He was introduced to Martin Folkes and Henry Baker two distinguished members of the Royal Society and a paper which he wrote was published in the Philosophical Transactions; but on his being disappointed in an attempt to obtain admission into the society he revenged the affront

by publishing "A Review of the *Philosophical Transactions*, &c." 1751 etc in which he reviewed all of the contributions to the Philosophical Transactions in a ludicrous point of view. Henceforth he depended chiefly on his pen for his support. He undertook *A General Natural History* 3 vols folio, and in conjunction with George Lewis Scott he compiled a *Supplement to Chambers's Cyclopaedia*. In 1753 he published *Essays on Natural History and Philosophy* containing curious microscopical observations. At the same period he started the *British Magazine* and also carried on a diurnal publication called the *Inspector*. Notwithstanding his literary engagements he was a constant attendant on every place of public amusement where he collected by wholesale a great variety of private intrigues and personal scandal which he freely retailed to the public in his *Inspectors* and magazines. This discreditable occupation was not without its inconveniences for it involved him in various quarrels and on one occasion he was severely caned at Ranelagh, by a gentleman who had been the object of his slander. He had procured the diploma of MD and practised as a physician, but not content with the regular emoluments of his profession he invented several quack medicines which by means of the puffing advertisements he wrote to recommend them, had for some time a considerable sale to his great pecuniary advantage. His talents as a botanist however were by no means despicable though his conduct was in so many respects unworthy of the character of a man of literature and science. He produced many useful works but his greatest undertaking was a work entitled *The Vegetable System* 17 vols folio published successively with plates, under the patronage of the earl of Bute. His introduction to this nobleman was probably through his marriage with the sister of lord Ranelagh though that lady after the death of her husband published a pamphlet complaining of the conduct of lord Bute towards sir John Hill. The title of knighthood he owed to the king of Sweden who bestowed on him the order of the Polar star in return for the present of a copy of his botanical works. He died of the gout a disease for which he professed to have a specific in November 1775. Besides the works already mentioned, he wrote novels and plays now deservedly forgotten; and he was so industrious and prolific an author that he is said to have received 1500*l* in the course of a year for works of his own composition, a circumstance not very creditable to the taste of his contemporaries, as, except his tracts on natural history he published nothing of any value. Having had a quarrel with Garrick on account of the rejection of one of his dramas, that celebrated actor characterized Hill not unjustly, in the following caustic epigram —

For physic and forces his rival there scarce is;
His forces are physic his physic is force.
—*Biog. Dram. Hutchinson's Biog. Med. Authors*
C. Biog.

HIL.

HILL (Sir RICHARD) (first son of our present Hill, of Hawkstone, Salop, the first member of the family, was born there in 1733. He received his education at Westminster school whence he removed to Magdalen college, Oxford, where he graduated as M.A. He made the tour of Europe, and on his return much distinguished himself by his attachment to the Calvinistic methodists, which he strikingly displayed in 1766, on the expulsion of six young men from the university of Oxford whose conduct and principles were then deemed fanatical. On that occasion Mr Hill attacked the authoritarians there in a severe pamphlet which he entitled 'Pietas Oxoniensis,' which was answered by the public orator of the university Dr Nowell, upon whom his antagonist retorted with much asperity. He next engaged in strenuous controversy with Wesley Fletcher and others of the Arminian methodist leaders, in defense of Calvinism. On the death of his father he succeeded him in the representation of the county of Salop, and was a frequent speaker. His observations were almost always more or less connected with the subject of religion, and by his frequent quaint if not humorous application of facts and language from the Bible he obtained from the writer of the *Rohad* the title of the scriptural Killebrew. In 1796 he published a vindication of Calvinism, against Daubeney's

Guide to the Church, and in 1804, remarks of a similar tendency against one of the bishops of Lincoln's charges. He would sometimes even preach in dissenting chapels and built one of his own at Hawkstone. He died unmarried in 1808 when his title passed to his brother Mr John Hill, father of lord Hill. The celebrated rev Rowland Hill is another brother.—*Gent. Mag.*

HILL (ROBERT) an industrious scholar remarkable for his application to study notwithstanding the obstacles arising from domestic poverty and a mercial occupation. He was born in 1699 at Mawell, near Tiverton in Devonshire, and was apprenticed to a tailor and staymaker. To those employments he occasionally joined that of a schoolmaster by means of which he with difficulty supported himself and his family. In spite of those disengagements he contrived to make himself acquainted with the Latin, Greek, and Hebrew languages; and he exhibited so much literary talent as to attract the favourable notice of the now Joseph Spence, who, with a view to benefit the pauper-taking student, published a tract, entitled "A Parallel between a most celebrated man of Florence [Machiavelli] and one never ever heard of in England" [R. Hill,] printed at Bury-street Hill, 1758 8vo. By the assistance of his friendly biographer Hill was relieved from his embarrassments, and enabled to remove to Buckingham, where he died in 1777. He was the author of an answer to Clayton's *Essay on Spont.*, *Criticismes* on the book of Job; and a tract entitled *The Anatomy of a Jew*.—*Gent. Mag.*

HILL (WILLIAM) a critical and philological writer of the eighteenth century. He was a principal doctor to whom is ascribed the gen-

HIL.

erative of *Ovidius* in Warwickshire, and was educated at Merton college, Oxford, where he obtained a fellowship. He then became master of a free-school at Sutton Coldfield, in his native country, but after a time relinquished that office, and engaged in the practice of physic in the metropolis. Thence he removed to Ireland, procured the degree of DD at Dublin, and obtained the office of master of St Patrick's school in that city. Being deprived of this appointment on the restoration of Charles II he returned to Eng land and died in 1667, aged about forty eight. He was the editor of the *Peregrinus*, or poetical geography of *Dionysius*, in Greek with the commentary of Ennius, and notes, 1658 8vo and he also wrote a tract entitled *Woman's Looking Glass* London, 1660 12mo — *Wood's Athene Oxon.*

HILLEL the elder a celebrated Jewish doctor or rabbin who lived in the century preceding the Christian era. He is probably the same individual who is termed *Pollie*, by Josephus, and is mentioned by St Jerome as having flourished not long before the birth of Christ. He was a native of Babylon and, on the mother's side descended from the family of David. At the age of forty he went to Jerusalem where he studied with great application so as to gain the credit of a profound acquaintance with the records and traditions of his nation. Being chosen a member of the Sanhedrim together with his disciple Shammai these two doctors opposed the measures brought forward in that great council against Herod, and thus escaped the slaughter to which the other members were consigned when Herod became master of Jerusalem. Hillel was made president and Shammai vice-president, of the new Sanhedrim, and the former is said to have discharged the duties of his office with more wisdom and justice than any of his predecessors since the time of Simon the Just. It is, however, no proof of the wisdom of Hillel that he had a controversy with Shammai which led to bloody quarrels among their respective adherents though the dispute was at length decided in favour of the former. The origin of the *Talmud* or at least the *Mishnah*, or earliest part of it, is attributed to the elder Hillel, and Jonathan, the author of the *Targum*, was one of his disciples.—*Prudentius's Connect of the Hist. of O & N Test.* *Adorn's G. King.*

HILLEL II or the younger, another famous rabbi who presided over the Jewish church in the third and fourth centuries, with the title of *Nan* or prince of the captivity. He was kindly descended from the subject of the last article, and was a man of great learning and merit. He is principally distinguished as the reformer of the Jewish calendar, into which he introduced the cycle of nineteen years, to reconcile the course of the sun with that of the moon; and regulated the period of the equinoxes, on the same principles which Julius Caesar, pope Gregory XIII, and others, adopted for that purpose. He was one of the principal doctors to whom is ascribed the gen-

HIN

one of the ~~thousand~~ called "Gomara." Epiphanius says he became a convert to Christianity in his last illness; but the Jews treat this report as a calumny. He flourished A.D. 390, according to Dr. Priestley.—*Actius & Blag.*

HILLIARD (Nicholas) an English portrait painter of the age of Elizabeth, who honoured him with her patronage and protection. He was a native of Exeter born 1547. His pictures were held in high estimation both for their execution and the fidelity of the resemblance although he seldom at tempted more than the head. Of his performances the best known are a full length of the queen, and another in water-colours of her rival the queen of Scots taken in her eighteenth year. His style which he formed on the model of Holbein is highly applauded by Donne. His death took place in 1619.—*Walpole's Ante.*

HILL TON (WALTER) a celebrated English ascetic divine of the fifteenth century. He was a Carthusian monk of the monastery of Sheen in Surrey now Richmond founded by Henry V. He was the author of a treatise entitled "The Scale or Ladder of Perfection" published by A Woodhead London, 1639 but his chief claim to notice arises from his having been supposed to have written the famous book *De Imitatione Christi* usually attributed to Thomas à Kempis but this notion appears to be erroneous, the work of Hilton still in MS called *De Musica Ecclesiastica liber unus* having been confounded with the composition in question. See KEMPIS.—*Bog Univ.*

HILTZ (JOHN) a German architect of the fifteenth century. He succeeded Erwin de Steinbach builder of the famous cathedral of Strasburg, and erected the tower of that edifice which was finished in 1449. It is raised to the vast height of five hundred and seventy feet being one of the loftiest buildings in the world. It is considered as a master piece of architecture being erected with hewn stone carved with tracery and exhibiting great elegance of design and skill in the execution.—*Festien des Archit. N D H.*

HIMERIUS a Greek grammarian who flourished under the emperor Constantine and Julian and was living after the death of the latter in 363. He was a native of Prusias in Bithynia, and taught rhetoric at Athens. Eusebius commends the style of his orations a copy of which having been discovered an edition was published by Wernsdorff in 1790 under the title of *Himerii sophistarum eclogae et declamationes*. Gr. Lat. Göttingen 1800. *Carr. Ovina.*

HINCHLIFFE, DD (John) bishop of Peterborough was born in the parish of St. James's, Westminster where his father kept an ivory stable in 1731. He was educated at Westminster school, and after graduating at Trinity college Cambridge returned to that seminary in the capacity of under-master and finally obtained the headship. In 1768 the Grenville interest obtained him the mastership

HIP

of his college; and, on the loss of that office, ceasing his power he was further presented to the deanery of Durham and the see of Peterborough both which valuable preferments he held together. He was the author of several discourses these were collected and published together in one volume two years after his decease, which took place in 1794.—*Gant. Mag.*

HINGMAR There were two French prelates of this name in the ninth century equally distinguished for the intemperate violence of their zeal in the cause of the church. The elder was archbishop of Rheims in which capacity he became notorious for his severity towards Godo-calculus or Guttchalculus a monk of his own order, as well as towards the second of the name his own nephew bishop of Laon whom he not only deposed in consequence of his opinions, but punished farther with the loss of sight. The latter was however restored to his see in 878 a short time before his death which preceded that of his tyrannical uncle who survived till the year 882 when he died at Epernay. His works of the elder Hincmar written in a nervous style though deformed by the monkish barbarisms of the Latinity were printed in two folio volumes by Simond in 1645.—*Cave Dugm.*

HINGHAM or HFNIGHAM (s. Ralph de) an English magistrate and juridical writer who was proprietor of an estate at Hingham in Norfolk in the latter part of the thirteenth century. He appears to have been of the clerical order as he held a canonry in St Paul's cathedral London. He was one of the justices of the king's bench in which post he continued during sixteen years. When Edward I instituted justices itinerant Hingham was among the number of those first appointed, and he was chief commissioner for the government of the kingdom, while Edward visited Palestine, but after the king's return this great lawyer was among the judges dismissed from office for bribery and corruption. He was also fined 7000 marks which sum not being immediately paid he was imprisoned, and afterwards banished with nine of his brethren two only of the whole bench escaping via. Sir John de Mettingham and Elisa de Bekingham. Hingham continued in disgrace till the accession of Edward II in 1308 when he was raised to the office of chief justice of the common pleas which he did not long enjoy for dying the same year he was interred in St Paul's cathedral. Soledi published in the original Latin with English notes, a treatise of justice Hingham entitled 'Summa Magna et Parva,' relating to the ancient forms of pleadings, and he is said to have composed a register of writs, mentioned by Dugdale, and two law tracts still in manuscript.—*Bloomfield's Hist. of Norfolk.* *Bradman's Legal Bibliog.*

HIPPARCHUS a very celebrated ancient astronomer who made the earliest catalogues existing of the fixed stars. He was a native of Nice in Bithynia, and flourished between the 154th and 163d olympiads or between 160 and 125 BC as appears from his having

made astronomical observations during that interval. He resided some time in the island of Rhodes, where he pursued his researches whence he has derived the appellation of Rhodes; but he afterwards went to Alexandria, then famous as a school of science and there he continued his studies, in the reign of the Egyptian prince Ptolemy Philometer. The period of his death is not known. He was the author of a commentary on the *Phaenomena* of Aratus, published by Peter Vitorius at Florence in 1567, and also by Petavius, with a Latin version and notes in his *Uranologia*. He also wrote treatises on the nature of the fixed stars, on the motion of the moon and others no longer extant. Hipparchus has been highly praised both by the ancients and the moderns. Pliny the elder styles him the *genius* of nature on account of the importance of his discoveries, and M. Bailly has bestowed on him the title of the patriarch of astronomy. He treated that science with a philosophical spirit, of which there are no traces before his time. He considered the subject in a general point of view examined the received opinions, passed in review the truths previously ascertained, and exhibited the method of reducing them so far to a system as to connect them with each other. He was the first who noticed the precession of the equinoxes or that very slow motion of the fixed stars from west to east, by which they perform an apparent revolution in a great number of years. He observed and calculated eclipses discovered the equation of time the parallax and the geometrical measurement of distances, and thus laid the solid foundations of geographical and trigonometrical science. The result of his labours in the observation of the fixed stars has been preserved by Ptolemy who has inserted the catalogue of Hipparchus in his almagest.—*Bosio. Martin's Biog. Philos. Bauli Hist de l' Astron. Med. vol. i.*

HIPPOCRATES the most famous physician among the ancient Greeks, and deservedly esteemed the father of medical science. He was born in the island of Cos one of the Cyclades, about 460 BC, and was the son of Heraclides descended through a line of professional ancestors according to tradition, from Esculapius. Many incidents concerning him are reported but some of them are manifestly fabulous, and others destitute of satisfactory evidence. He is said to have studied medicine under Herodotus and philosophy under Gorgias of Leontum and Heraclitus. Some of his professional science was probably derived from the medical maxims and receipts which had been preserved in his family, but it may readily be believed that he did not content himself with this empirical knowledge, adding, as we are told, to his stock of information, by perusing the tablets in the temples of the gods, on which those who had recovered from dangerous diseases were accustomed to record the methods by which they had obtained relief. Pliny on the authority of Vergil, relates that he was keeper

of a library at Cnidus, from which he fled after having burnt the books entrusted to his care whence he had extracted all the precepts they contained relative to medicine, intending to publish them as his own and Soranus says he emigrated from Asia Minor, in consequence of being divinely admonished in a dream to go and settle in Thessaly but both these stories may be considered as specimens of the most romantic part of his history. It is certain that he left Cos when young travelled much and practised physic in various parts of Greece. He was for some time at the court of Perdiccas king of Macedon, and he is said to have received an invitation from Artaxerxes Longimanus king of Persia, which he rejected on the ground of its being unlawful or unpatriotic to employ his talents for the benefit of an enemy of his country. The well-known account of his being sent for by the people of Abdera, to cure their celebrated townsmen Democritus, whom they fancied to be a lunatic but who was pronounced by Hippocrates after conversing with him to be the wisest man in Abdera, has much the air of a fable. His reported services to the Athenians, when they were suffering from the plague during the Peloponnesian war and the magnificent rewards which they decreed him are inconsistent with the narrative of Thucydides. Neither the time nor the place of his death are precisely known, but it is commonly asserted that he died in the ninety ninth year of his age at Larissa in Thessaly. The highest honours were paid to his memory. Statues were erected to him, and his professional opinions were quoted not only in the schools of medicine but in the courts of law. He practised as a surgeon as well as a physician and his writings relate to both departments of the profession. Of the works ascribed to him the last is exceedingly numerous but by far the greater part may safely be considered as spurious. Among his genuine compositions are treatises On Epidemics "three books," Prognostics Aphorisms On Air Water &c., On Joints and Fractures, On wounds of the Head. Collective editions of the works of Hippocrates have been published by Antinus Foenius Francof. 1595 folio, by Vander Linden Lugd. Bat 1665 2 vols 8vo by Chartier together with the works of Galen Paris 1679 13 vols 4to by Mack, Vienna, 1743 2 vols folio, and by Pierer Leipzig 1806 3 vols. 8vo An English translation of his treatise on air water epidemics &c. was published with notes by Francis Chilton MD in 1752 8vo, and in 1788 Dr John Moffat published the Prognostics and Prophetic of Hippocrates, in English, with an account of his life.—*Le Clerc Hist de la Med. Holleri Bibl. Pract. Acad. Med. et Chirurg. Hutchinson's Biog. Med.*

HIPPISLEY bart. DCL FR and AS. (or John Cox) an English barrister, descended of an ancient Somersetshire family. He was the only surviving son of William Hippisley esq. of Yatton, and was born in 1763. Having

H I R.

graduated at DCL, at Hertford college, Oxford in 1776, he became a member, and eventually a bencher of the Inner Temple. On his return from Italy which country he visited in 1780 he was appointed through the interest of lord North to an office of trust and importance in India, which he held during the wars with Hyder Ali and Tipoo Saib. Returning to England he was elected in 1790 MP for Sudbury of which borough he became the recorder and representative in five parliaments. In 1796 Mr Hippisley was raised to the baronetage as a reward for his services in the negotiations then concluded for a marriage between the duke of Wurtemberg and the princess royal of England Sir John besides being an active magistrate and a warm supporter of many agricultural literary and other useful institutions distinguished himself on several occasions in the house by his speeches especially upon Irish affairs as a strenuous supporter of catholic emancipation In favour of this measure he published an octavo volume of Observations in 1806 and his speech on Mr Grattan's motion in 1812 and a series of letters to the earl of Fingal in 1813 He was also the author of a treatise on prison discipline printed in 1823 in which he strongly advocated the substitution of the hand crank mill for the tread mill as a punishment for convicts His death took place May 3 1825.—*Genl Mag*.

HIPPOLYTUS (SAINT) a Christian martyr of the third century who suffered under Severus in the fifth persecution about the year 230 The best edition of his writings is that by Fabricius Gr Lat 2 vols folio 1716—*Cave Lardner Sacra Omnia*

HIPPOVAX a Greek poet contemporary with Anacreon who flourished about the middle of the sixth century before the Christian era. He was the son of an Ephesian named Prostes and so ugly that his deformity was selected by two brothers named Atheneus and Bupelus sculptors as well calculated for the exhibition of their art. The poet in revenge wrote so severe a lampoon upon his caricaturists that according to the popular story they sank under his ridicule and perished by their own hands. The invention of that description of iambic verse called scacme is attributed to him.—*Aous Diet Hist Morer*

HIRE (PHILIP DE LA) an eminent French mathematician and astronomer in the beginning of the last century He was the son of Laurence de la Hire painter in ordinary to the king and professor in the academy of Painting at Paris who died in 1656 The son born at Paris in 1640 was intended for his father's profession and was instructed in those branches of mathematics which are connected with it as well as in the principles of design After the death of his father he travelled into Italy and examined the curious remains of ancient art in that country, but prompted by inclination he made geometry the chief object of his studies and on his return to Paris, after about four years absence, he devoted himself to the cultivation of that

H I R.

science The first work by which he made himself known was the second part of "A Treatise on Stone-cutting" published in 1673, in continuation of the work of Godefroid D'Argues on the same subject. This was followed by a treatise on the Cycloid, and another geometrical publication, and in 1678 he was chosen a member of the Academy of Sciences Colbert having determined to procure a more correct map of France than any before made M.M. de la Hire and Picard were deputed to execute the surveys and observations necessary for that purpose. The former consequently went to Brittany in 1679 to Guyenne in 1680 to Calais and Dunkirk in 1681 and to Provence in 1682 Besides prosecuting the peculiar object of these journeys, he made observations on the measurement of heights by the barometer on the variation of the compass, and on atmospheric refraction In 1683 he was employed to continue the meridian line commenced by Picard in 1669 He conducted the necessary operations to the north of Paris while Cassini carried them on to the south but the death of the minister Colbert, prevented the completion of the undertaking He was then engaged with other members of the academy in taking levels for the grand aqueduct projected by Louis XIV to convey the water of the river Eure to Versailles. In 1683 he published a Latin work on the theory of conic sections, which gained him great reputation throughout Europe About 1690 he was appointed a professor of the royal college and of the academy of architecture His death took place April 21st, 1718 Besides the productions already noticed he published astronomical tables an edition of the works of the ancient Greek mathematicians, and many tracts on geometrical science.—*Martin's Biog Philos Aiken's G Biog*

HIRSCHING (FREDERIC CHARLES GOTTLIEB) a learned and industrious German professor born at Uffenheim December 21st, 1769 and died at Erlangen March 11th, 1800 He had been nominated supernumerary professor of philosophy in that city but had not entered on the functions of his office. He was well acquainted with botany and rural economy but is chiefly known for his researches on history and geography His most important works are— A Description of the principal Libraries of Germany Erlang 1786 6 vols 8vo An account of the most curious Pictures and collections of Engravings 6 vols 8vo and a Dictionary of celebrated Persons of the Eighteenth century contracted after his death by J H M Ernesti and others at Cobourg Hirsching's portion of the work consists of the first five volumes extending through about half the alphabet.—*Biog Univ.*

HIRTIUS or HIRCIUS (Aulus) a noble Roman who filled the consulship in conjunction with Vibius Pansa in the year 43 before the Christian era. He had been a distinguished officer under the first Caesar the eighth book of whose Commentaries, concerning the war in Gaul was written by him. The account of the Africans and Alani—*Biog Univ.*

H O A

H O A

agents both have also been attributed to him through historical doubts whether Oppius had not a better claim to be considered their author. On the fall of the dictator Brutus besieged the camp of Brutus and marching to relieve that general when besieged by Marc Anthony at Mutina, fell in the action.—*Vigil Hist. Lat.* Mowat.

HIREL (*Joh Caspar*) an eminent physician and writer on rural economy. He was born at Zurich in 1725 and adopting the medical profession he distinguished himself by his learning and intelligence. After having for some time given gratuitous instruction to female accoucheurs he lectured on the theory and practice of medicine. He was one of the principal founders of the Helvetic society in 1762. He translated the works of Tissot into German, and subsequently published a *Treatise on Rural Economy*. Forming an acquaintance with a Swiss farmer distinguished for his industry and skill Hirsel conceived the idea of publishing the result of this man's experience in his agricultural occupation combined with a series of facts and observations from other sources. This useful undertaking he executed and produced a work entitled 'The Rustic Socrates' which has been translated into English by Arthur Young and also into most other languages of Europe. Hirsel died of apoplexy February 19 1803. Besides the preceding publications he was the author of some historical eulogies, and dialogues on religion and toleration addressed to his friend Meister — *Bibl Univ Bag Novae Contemp.*

HOADLY (*Benjamin*) an eminent Eng. Episc prelate was born at Westerham in Kent in 1676. He was the son of the rev Samuel Hoadly who for many years kept a private school, and who was afterwards master of the grammar-school at Norwich. He was educated in the first instance by his father and at the age of fifteen was sent to Catharine hall Cambridge where he was chosen fellow in 1696, and having graduated as MA became a tutor. He took orders in 1700 and marrying was appointed to the lectureship of St Mildred's in the Poultry London. This situation he held for ten years when he thought it time to resign having preached it down as he facetiously observed, to 30/- per annum. He subsequently officiated some time as rector of St Swithin's, and was at length presented to the rectory of St Peter le Poor, in Broad street. He had by this time become distinguished for his controversial talents and his first contest was with Mr Calamy the biographer of the non-conformists. In 1705 he preached a sermon on civic government before the lord mayor which gave great offence to the times; but the principles of which he strenuously defended, in a tract entitled 'The Pillars of Obedience' and in other publications. He also entered the lists with the celebrated bishop Atterbury, some of whose pretensions in a funeral sermon, he deemed of very可疑可疑. He still more seriously contended with the same prelate in 1708, on

the subject of passive obedience and non-resistance, and in this controversy he evidently distinguished himself, that the bishops of cumbria recommended him for promotion to queen Anne who never fulfilled the promise that she made to bestow it. He was however presented by Mrs Howland, grandmother to the duke of Bedford with the living of Streatham in Surrey, and on the accession of George I was immediately nominated one of the king's chaplains having been previously created DD by archbishop Wake. This pre-ferment soon formed a step to higher dignities, and in 1715 he was raised to the episcopal bench being appointed to the vacant see of Bangor. In 1717 he preached before the king his famous sermon on 'The Nature of the Kingdom or Church of Christ' which discourse excited so much anger among the clergy of the high church party that it was determined to proceed against the author in convocation, which step was however defeated by the prorogation of that assembly. The celebrated Bangorian controversy then commenced in which bishop Hoadly ably defended his views of civil and religious liberty against Snape, Sherlock, Hare, Potter, Law and many more who charged him with an intention to undermine all establishments and that of the church of England in particular. In 1720 he was translated from the see of Bangor to that of Hereford and in 1725 again to that of Salisbury. He still continued an active controversialist and in 1732 drew up an account of the life character and writings of Dr Samuel Clarke, which was prefixed to the posthumous works of that celebrated divine. In 1734 he succeeded bishop Willes in the see of Winchester and in the following year published his treatise entitled 'A plain account of the Nature and End of the Sacrament of the Lord's Supper'. In 1734 and the following year he published two octavo volumes of sermons which are much esteemed and maintained in his now advanced age his usual spirit and ability which he eminently displayed in 1758 in 'A Letter from the bishop of Winchester to Clement Chevalier esq.' This was a spirited account of the attempt of one Bernard Fournier a convert from popery and curate of Jersey to defraud him by a pretended note of hand of £ 8000. He was at this time in his eighty first year and survived until his eighty fifth dying at his palace in Chelsea in 1761. Bishop Hoadly was as distinguished for his moderation and candour as for his skill in controversy and his character in private life was in the highest degree respectable and amiable. In 1773 his son, Dr John Hoadly published a complete edition of his father's works in 3 vols. folio, a list of the numerous contents of which may be seen in the *Biographia Britannica*. An appendix contains the correspondence of the bishop with lady Sandon, lady of the bed-chamber to queen Caroline.—*Bibl Brit. Ann Reg. 1762.*

HOADLY (*Benjamin*) MD eldest son of the bishop of Winchester, was born in

1736. He was educated as was also his brother, at the school of Dr Newcome, Hackney; and in 1738 he was admitted a student in Jesus college, Cambridge. Here he particularly applied himself to philosophical and mathematical studies, under the celebrated professor Standerwick. He was early received into the royal society and in 1738 the degree of MD was conferred on him by mandamus and he settled in London as a physician. In 1742 he was appointed physician to the king's household and in 1746 to that also of the prince of Wales. Dr Hoadly was a man of elegant, as well as of solid accomplishments, and his *Suspicious Husband*, which still keeps the stage is deemed one of the most sprightly comedies in the English language. He also assisted Hogarth in the composition of his *Analysis of Beauty*. His other works are *Three Lectures on the Organs of Respiration* which are deemed an ingenious defence of a defective theory, an *Harridan Oration* pronounced in 1742 which is regarded as a piece of elegant Latinity; and *Observations on a Series of Electrical Experiments*, by Dr Hoadly and Mr Wilson. — JOHN HOADLY LL.D. younger son of the bishop born 8th October 1711 received his academical education at Corpus Christi college Cambridge. He took orders in 1735. He enjoyed the livings of Wrington in Somersetshire of Alresford Hants of St Mary near Southampton and was also master of St Cross and Chancellor of Winchester. He wrote five pieces for the stage besides a tragedy on the subject of lord Cromwell which was never performed. These pieces which never attracted much attention are *The Contrast*, a comedy; *Love a Revenge* a pastoral; *Phæbe*, a pastoral; *Jephtha*, an oratorio; and *The Force of Truth*. He was author of several poems in Dodaleys collection. He died in 1776.—*Bug Bug Bug Drama*.

HOARE (WILLIAM) an English historical painter of the last century a native of Eye in Suffolk born 1707. He was the pupil first of Grison, and afterwards of Francesco Lampi to obtain the advantage of whose instructions he went to Italy and remained there several years. Several altar-pieces, &c. were painted by him on his return which have been much admired. He also occasionally took likenesses in crayons. His death took place at Bath in 1792.—*Chalmers's G. Bug Diet*

HOBES (THOMAS) a celebrated moral and political writer and metaphysical philosopher of the seventeenth century. He was born April 5th, 1588 within the borough of Malmesbury in Wiltshire, his father being vicar of one of the parishes in that town. At the age of eight, he was sent to a grammar school at Malmesbury where he made such proficiency as to have translated the Medea of Euripides into Latin verse before his removal to the university. In 1603 he became a scholar of Magdalen hall Oxford, where he took the degree of BA. in 1607, and the following year he accepted the office of tutor

to the son of lord Hardwick, afterwards Earl of Devonshire. In 1610 he set out on a tour with his pupil, through France and Italy and after his return to England, he resided several years in the Devonshire family as secretary to lord Hardwick who succeeded his father in the earldom in 1626. During this period Hobbes became acquainted with the lord chanceller Bacon some of whose works he translated into Latin, and he also obtained the friendly notice of lord Herbert, of Cherbury and Ben Jonson. The first performance which he published, was a translation of the history of Thucydides, which he was preparing for the press when he was deprived by death of his patron lord Devonshire. Subsequently to the publication of his book, he went abroad as tutor to the son of sir Gervase Clifton, but the countess dowager of Devonshire wishing to place the young earl her son, under his care, he accepted the charge and took his pupil to Paris where he became acquainted with Mersenne and Gassendi and afterwards going to Italy he was introduced to the celebrated Galileo at Pisa. In 1637 he returned to England, and resided much at Chatsworth till 1641 when alarmed at the probability of political commotions, he went to Paris. He stayed abroad some years, and during that time published most of the works which have rendered his name conspicuous in the annals of learning. In 1642 first appeared his treatise *De Cive*, afterwards published in England, with the title of *Philosophical Rudiments concerning Government and Society*, or a Dissertation concerning Man, in his several habitudes and respects as a member of society first secular and then sacred. In 1645 he engaged in a mathematical controversy relative to the quadrature of the circle, but his writings on that subject, and other branches of the mathematics are not calculated to increase his reputation. Yet he was employed to teach prince Charles, afterwards Charles II the elements of mathematical philosophy and he acquitted himself to the satisfaction of his royal scholar. In 1650 was published in London a small treatise by Hobbes, entitled *Human Nature* which Addison has characterised as his best work and another *De Corpore Politico* or *Elements of the Law*, which was highly esteemed by father Gassendi. But the most remarkable of all his works is his *Leviathan*, or the Matter Form and Power of a Commonwealth ecclesiastical and civil printed in London 1651 folio. This bold attack on opinions and prejudices sanctioned by antiquity greatly alarmed the ecclesiastics of those days, and drew on the author much literary hostility. Indeed it is said, he would have been called to account before the civil magistrate if he had not secretly left Paris, and returned to England. Here he was well received by the Devonshire family in which he passed the remainder of his life. He continued to employ his pen on philosophical topics, and in 1654 he published a *Lecter upon Liberty and Necessity* which occasioned a protracted dispute with Bishop

HOB

Hobbes. In 1651 appeared his "De Cive," which completed his philosophical system, a work containing some singular speculations relative to the moral and intellectual faculties of the human species. After the restoration Hobbes was favourably received by the king who promised him his protection, and settled to him a pension of £1000 yearly out of his privy purse. He was visited by Cosimo de' Medici then prince and afterwards duke of Tuscany and by other foreigners of distinction and the general deference and respect with which he was treated must have been highly gratifying to his feelings. These honours might have served to console him for the illiberality of some of his clerical opponents, as well as the dangers he apprehended of prosecution as an infidel or heretic. The latter were not wholly imaginary for in 1656 his "Leviathan" was censured in Parliament, and a bill was introduced into the house of commons to provide for the punishment of atheism and profaneness about the same time which gave him great uneasiness. On this occasion he composed a learned and ingenious work entitled an "Historical Narration concerning Heresy and the Punishment thereof" to shew that he was not legally chargeable with heresy for writing and publishing his "Leviathan." Among the principal literary labours of his later years were translations of Homer's Iliad and Odyssey in verse which passed through three editions within ten years though utterly destitute of poetical merit His "Decameron Physiologum, or Ten Dialogues of Natural Philosophy" was published in 1678 as was also "A Dialogue between a Philosopher and a Student of the Common Law of England" and in 1679 he consigned to the care of a book seller his "Behemoth or a History of the Civil Wars from 1640 to 1660" which did not appear till after his death. That event took place December 4th 1679 at Hardwicke a seat of the earl of Devonshire in Derbyshire and he was interred in the church of Hawk Hucknall in the same county where a monument was erected to his memory. Few authors have encountered more virulent opposition than the philosopher of Malmesbury. A vague imputation of irreligion was brought against him by his literary antagonists and the charge has been renewed even in our own times. A baronet, who has distinguished himself by his labours as an author and a patron of literature has characterised the subject of our notice as the infamous Hobbes and a few years since an evangelical clergyman preaching in the abbey-church of Malmesbury vituperated the supposed infidel in unmeasured terms, stating that his birth had fired a lasting stigma at the town and its inhabitants. Yet the writings of this calumniated individual, contain repeated testimonies in favour of Christianity, and that he practised the rites of religion as a member of the church of Scotland, is a fact of which there is positive evidence. The great merit of Hobbes consists in having successfully applied the in-

HOB

ductive method of reasoning, recommended by Bacon to the investigation of natural philosophy. In his search after truth he is swayed by no consequences to which the inquiry may lead his grand object being to ascertain the boundaries of knowledge and to show where the imperfection of human intellect renders our creed a matter of conventional authority. Hence he has excited the hostility of those who would have all points of faith taken for granted as equally evident and who have branded him with the epithets of infidel and atheist, because they fancied his speculations might weaken the confidence of mankind in the general principles of morals and theology; though his obvious design is accurately to indicate their respective origin and importance. He expressly admits the existence of a God, but from his assertion that incorporeal substances are no better than non entities it has been inferred that he represented God as a corporeal being and hence he has been styled an atheist. Religion he says, originated from the fear of power invisible imagined by the mind of man. The doctrine of the necessary operation of motives on the will he states positively and distinctly and he also asserts the materiality and natural mortality of the human soul or rather considers it as a mere term to denote the intellectual powers of the body since he treats the distinction between soul and body as an error contracted by the contagion of the demonology of the Greeks. The belief of a future state, he says is grounded upon other men's saying that they knew it supernaturally or that they knew those that knew them that knew others that knew it supernaturally. In his observations on the authenticity and authority of the Books of the Old and New Testaments, he gave great offence to his contemporaries though opinions similar to his have since been advocated by writers who did not wish to be considered as enemies of Revelation. He states the Pentateuch and other sacred histories of the Jews, to be no older than the time of Ezra and that the Christian Scriptures were not received by the church as of divine authority till the settlement of the canon by the council of Laodicea, AD 364. Both with respect to religion and government he ascribes great weight to the will of the civil magistrate. And his sentiments on this point, together with his doctrine that a state of nature must be a state of perpetual hostility in which brute force must supersede law and every other principle of action have perhaps been most generally objected to. Yet his claim of obedience to existing authorities is qualified by the assertion that it is no longer due than while they can afford protection to the subject. He says, expressly "Obligatio civium erga sumum qui summam habet potestates tandem nec duotus permanere intelligitur, quoniam manet protinus civis protegendi." He therefore at least, considered the duties of princes and their subjects as reciprocal. His notion of the state of nature at worst, is more consistent with the present degree of our knowl-

H O C

sidered, than that of those who have looked for Hobbes among savages. The philosophy of Hobbes, so deprecated among his contemporaries has been more or less adopted by Locke, Hartley, Hume, and Priestley. The extensive obliquities of the first mentioned metaphysician to Hobbes have been distinctly indicated by Mr. Hirsch. [See Nos. 31 and 34 of the *Round Table*.] The philosopher of Malmesbury shrewdly remarked Warburton writing in the middle of the last century "was the terror of the last age as Tindal and Collins are of this. The press swarms with the controversy and every young churchman militant would try his arms in thundering on Hobbes's steel cap. He might have added the veteran's armour was too well tempered to readily yield to such inexperienced assailants.—*Ackroyd's G. Bigg, Dissertations pref. to the Suppl. to the Encyclop. Brit.*

HOBIBIMA (MINCKENHOUT) a Dutch landscape painter born in 1611 at Antwerp. His pieces are remarkable for the grace and beauty of their execution. Being like Claude and Gaspar Poussin defective in the delineation of the human figure, he was often aided in that department by Ostade Teniers, and others. His works are now very rare and valuable.—Pilkington

HOBOKEN or **HOBOKENIUS** (NIcolas) an anatomist and physician of the seventeenth century who was a native of Utrecht in Holland and held a medical professorship in the university of Harderwick. He was the author of a treatise entitled *Ductus Salivaris Blasianus in lucem protractus* 1662. *Anatomia Serundina Humanae* 1669 republished with considerable emendations in 1675, *Anatomus Secundinus Virtus*, 1670. *Medicina Physiologica*, 1685. Prefixed to the last mentioned work is an *Oratio de Nobilitate Medicorum*. Hoboken was born in 1633. He also wrote a tract on the seat of the soul or human mind probably with reference to the Cartesian hypothesis which fixed its domicile in the pineal gland.—*Hutton's Abbr. of the Phases* *Tunn.*

HOCCLEVE or **OCCLEVE** (THOMAS) an English poet of the fifteenth century who as well as Gower and Chaucer was bred to the study of law at Chester-man in the Strand. Warton expresses a mean opinion of this bard and remarks that the feebleness of his genius may be inferred from the mapud titles of his compositions as *Fable of a certain Empress* *Consolation offered by an olde Man*, *Merry as defined by St Austin* 'Letter of Cupid &c Coij however as in the general style and manner of Hoccleve some of his pieces show that he possessed taste and feeling if not genius. His greatest work is a poetical translation of *Aegidius de Regimine Principum*.—*Warton's Hist. of Eng. Poetry*.

HOCHSTETTER (ANDREW ADAM) a clergyman of the Reformed church born in 1626, at Tulangen of which university he was elected rector, after having successively

H O C

filled the professor's chair in rhetoric, philosophy and divinity. He was the author of several treatises which evince much historical and antiquarian research. Among them are *De Robe Eliogianibus*, *De Festis Expansione et Incio Aenei*; *Collegium Pufendorfianum*, and *De Courtauldum e Scavis Duce*. His death took place in the spring of 1717 at Tubingen.—*Nous Diet. Hist.*

HOCHE (LÉAUX) one of the numerous individuals distinguished for their military talents among the French soldiery towards the end of the last century. He was born in the lowest rank of society at Montréal near Versailles, in 1768. Employed as a stable-boy at Versailles he was so fond of reading that all the money he could spare was laid out in the purchase of books. At the age of seventeen he enlisted in the French guards in which situation he continued to indulge his literary taste. When the Revolution took place he was a non-commissioned officer and entering into the national guard he was promoted to a hussitancy in 1792. He served under Dumouriez, and obtained credit by his conduct at Thionville at Nivelles, and on other occasions. In 1793 he was made adjutant general and he showed himself to be a brave and active officer, but he owed his rank more to his connection with the Jacobins, and especially Robespierre than to his merit. After having assisted in the defeat of the duke of York at Dunkirk Hoche was in November 1793 entrusted with the command of the army of the Moselle, destined to act against the duke of Brunswick by whom he was repeatedly beaten. He had better success when opposed to general Wurmser, and at length in conjunction with Pichegru, he drove the Austrians out of the province of Alsace. He intrigued with the Jacobins to ruin Pichegru, whose superior talents excited his jealousy but his machinations were terminated for awhile by his being arrested and imprisoned by order of the commissioners of the national convention. Confinement did not blunt the energy of his disposition for instead of giving way to despondency at his misfortune he employed the leisure which it procured him in the acquisition of knowledge, and the improvement of his talents by study. On the fall of Robespierre and the cessation of the reign of terror in 1794 Hoche obtained his liberty and he was soon after appointed commander of the republican army in La Vendée. In this station he first displayed the extent of his abilities. Aware that though force might exterminate the royalists, lenient measures alone could reclaim them he with admirable address, by means of moderate and well timed proclamations weakened the bond of union among their soldiers, he calmed the apprehensions, and removed the prejudices of the inhabitants, by restoring discipline in his own army and by favour and fatuity he gained many of the priests to his side after which he found it a comparatively easy task to direct his columns through the province, and reduce

HOD

to subjugate a people who had so long withstood the efforts made to subdue them. The advice of the intelligent, under the guidance of Puisaye and Bonaparte, to re-awake the spirit of loyalty among the Bretons, only of foisted Hocine an opportunity of gaining new laurels, in the utter defeat of the royalists at Quiberon, in July 1795. He continued in the command of the army of the west, till the middle of December 1796, when he sailed from Brest on an expedition against Ireland. But his ships were dispersed, some of them lost, and he was forced to return to France unsuccessful. He then had the command of the army of the Sambre and Meuse and gained some advantages in the campaign of 1797, on the Lower Rhine, but the armistice concluded between the archduke Charles and Bonaparte, put a stop to his operations. He was afterwards offered the post of war minister, under the Directory, but he preferred a military command. Subsequently he undertook to support Barras in his contest for power and marched his troops to Paris for that purpose, but alarmed at the spirit of opposition manifested in the metropolis, he relinquished the enterprise which was confided to Augereau. His death, not without suspicion of poison took place within a short time after September 15th 1797.—*Dictionnaire H M du 18me S* *Bug Nowz, des Contemp.*

HODGES (NATHANIEL) an eminent English physician of the seventeenth century. He was the son of Dr Thomas Hodges, dean of Hereford, who published three sermons and other tracts. The son received his education at Westminster school and Christchurch college Oxford, and after having taken in due course his degrees in arts, he in 1659 accu-
stimated those of bachelor and doctor of medicine. He settled as a practitioner in the metropolis and he is principally distinguished for having remained there during the great plague in 1665. It appears to have been one of the two dispensary physicians appointed by the city of London to attend the infected, and he fulfilled the duty of his office in an exemplary manner. He wrote a Latin work on titled "Lothologia," containing an historical account of the dreadful contagion in which he states that he treated to the burning of persons before him when he visited the sick, and used Spanish wine as a prophylactic. In the present state of medical knowledge the safety of Dr Hodges will hardly be attributed to such precautions as these, since the re-
mark of the most and most malignant ob-
servers, in the Levant and elsewhere, lead to a conclusion now however disputed that the plague can only be communicated by contact with infected persons, clothes, merchandise &c. Indeed, it seems the doctor was twice taken ill, while the plague lasted, however he recovered, and, according to Wood, obtained numerous praises among the citizens, and was chosen fellow of the college of physicians in 1666. With a regard to his contemporaries

HOE

ment in the position of Lodgate, in London, for debt, in 1664, though under what circum-
stances is not precisely known. He wrote a tract entitled "Vindicia Medicorum et Medicorum," 1660 8vo; and a translation of his book on the plague was published in 1790.—*Wood's Athene Oxon. Hutchinson's Biog. Med.*

HODGSON (JAMES) a mathematician of the last century who was for some time master of the royal mathematical school, in Christ's hospital London. He published a "Treatise on Navigation" 1706 4to, a "System of the Mathematics" 1723, 2 vols. 4to "The theory of Jupiter's Satellites," 1750 4to, "The Doctrine of Fluxions" (founded on Mr Isaac Newton's method,) 1758 4to, "The Valuation of Annuities upon Lives," 1767, and "An Introduction to Chronology." He was a fellow of the Royal Society and the author of many papers in the Philosophical Transactions relating to astronomy.—*Hutton's Abr. of the Philos. Trans.*

HODY (HUXRAY) a learned divine was born at Oddcome in Somersetshire of which place his father was rector in 1659. He was educated at Wadham college Oxford, where he took his degree of MA in 1682, and in 1684 was chosen fellow of his college, and discharged the office of tutor. Previously to this at the age of twenty two, he wrote his learned Dissertation on Anstaeus's History of the Seventy two interpreters. This treatise is intended to show that it was the invention of a Hellenist Jew to give greater authority to the Septuagint. In 1692 he took his degree of DD and became chaplain successively to the archbishops Tillotson and Lancelot. In 1698 he was appointed regius professor of Greek in the university of Oxford and was presented to the living of Monk's Risborough in Buckinghamshire. In 1701 he engaged in a controversy on the powers of the convocation in a work entitled, "A History of the English Councils and Convocations &c 8vo." In 1704 he was made archdeacon of Oxford and in the same year published his pieces announced nearly twenty years before on the original text and Greek and Latin vulgate versions of the Bible under the title "De Bibliorum Textibus Originalibus, Versionibus Graecis et Latina Vulgatis," &c 1704 8vo. He died in 1706 and by his will founded ten scholarships in Wadham college. His works not yet mentioned are—
"Prologomena to Malela's Chronicle and
The Unreasonableness of a Separation from the New Bishops," A Dissertation on the Resurrection of the same Body," and a posthumous work entitled "De Graeciis Illustrissimis huius Graecis literarumque humaniorum restauratoribus serum vita, scriptis et eligitis." —*Biog. Brit.*

HOESCHLILIUS (DAVID) an eminent Greek scholar, was born at Augsburg in 1556, and obtaining great reputation for ancient learning was in 1589 made librarian of the college of that city. He published a catalogue of the Greek MSS. in the library under his care, and edited a great many Greek writers,

HOF

city belonging to Christian antiquity and
historical history. He died in 1617.—
Moresi.

HOET (GUILLAUME) a French painter, was born at Sommeil in 1645. He was the son of a glass painter, and with inconsiderable instruction became celebrated for cabinet pictures and historical and fabulous pieces, which continue to be held in great esteem. He finally settled at Utrecht, where he exerted his influence to establish a school of design an academy of which he became the director. His compositions are ingenious and appropriate and in the design of his small figures he is more than usually correct. His pictures are very valuable. He died in 1733, aged eighty five.—*Bryan's Dict. of Paint. and Eng.*

HOFLER (ANNAUER) chief of the Tyrolese, during their insurrection against the Bavarian government in 1809. He was born at Passau in 1763 and kept an inn in that town at the same time carrying on a considerable trade in corn wine and cattle. The country of Tyrol was transferred to the king of Bavaria by the treaty of Preßburg, but the war being rekindled in 1809 the inhabitants rose in a mass to drive out the Bavarians and again place themselves under the dominion of Austria. The riches and influence of Hofer has decided character and athletic form all combined to induce the insurgents to elect him for their chief. He accepted the command and obtained some advantages over the enemy, but the peace of Vienna having confirmed the cession of Tyrol to Bavaria he laid down his arms. Hofer had in all circumstances distinguished himself by his moderation and humanity and as Bonaparte had solemnly promised indemnity to the Tyrolese revolted, he thought himself safe from danger. He was however accused of having endeavoured to excite new troubles and orders were given for his apprehension a price at the same time being set on his head. He sought an asylum in the mountains and after a long search he was found hidden in a cabin on the summit of a lofty and almost inaccessible peak surrounded by snow and glaciars. On the 27th of January 1810 he was surrounded by a body of grenadiers to whom he immediately surrendered. He was conducted to Bolzen and afterwards to Mantua, where he was condemned by a council of war to be shot, and the sentence was almost immediately executed. After his death he was revered by his countrymen as a martyr his cabin has since been converted into an hospital, and the Emperor of Austria has ennobled his son, and bestowed many benefits on his family.—*Bug. Univ. Bug. Nouv. des Consens.*

HOFFMAN (DAVID) a German divine of the Lutheran persuasion, noted as a controversial writer towards the conclusion of the sixteenth century. He became professor of theology in the university of Helmstadt in 1588, soon after which he engaged in disputes relating to the ubiquity of Jesus Christ and the doctrine of predestination. But he rendered himself most famous as the head of

HOF

a party whose object it was to depose the philosophy as inconsistent with theology. He minimized the extravagant opinion that theological and philosophical truths were entirely different, so that what was true in philosophy was false in theology. Hoffman, like other paradoxical theorists, made proselytes to his doctrine, and a violent controversy was the result, which was at length terminated by the authority of the duke of Brunswick, who ordered our author to retract his invectives against philosophy and he accordingly made a public confession of his error in 1601. His death took place in 1611. He left no works of any permanent importance.—*Moresi. Bayle. Monast. i Eccl. Hist.*

HOFFMAN (JOHN JAMES) a native of Basel eminent as a critic and general scholar. He held the office of Greek professor in the university of Basel where he died in 1706 at the age of seventy. He wrote the History of the Popes, 3 vols. 13mo; and a Universal History in Latin verse, but he is principally known as the author of a work entitled Lexicon Universale comprising the subjects of history geography poetry, philosophy politics and philology. The first edition appeared in two volumes folio at Basel in 1677, in 1683 he published two supplementary volumes, and the dictionary was reprinted in four volumes at Leyden, in 1698. Still on the authority of a German review, charges Hoffman with having overreached his booksellers in the publication of this work, and also with being so avançous that he was fond of counting his money and when reproached for his meanness, he replied Even the sound is delightful.—*Moresi. Stoll. Int. in Hist. Lit.*

HOFFMAN (CASPAR) a German physician of the seventeenth century. He was a native of Gotha, and after having studied at Altorf and other German universities, went to Padua in Italy and in 1605 took the degree of MD at Basel. He became professor of the theory of medicine at Altorf and died there in 1648. He was a learned Hellenist, but he showed too great a predilection for the opinions of Aristotle and other ancient philosophers. Among his numerous works are—*Apologiae pro Germanis contra Galenum, Ambrogi 1686 4to* and *De Thorace ejusque partibus, Frankfurt 1627, folio.*—*Bug. Univ.*

HOFFMANN (CHRISTOPHER LEWIS) a German physician and medical writer of the last century. He was born at Rheyd, in Westphalia, in 1731, and after having been physician to the bishop of Munster and the elector of Cologne, he in 1767 accepted the same situation with the elector of Mayence. That prince gave him the direction of the college of medicine in that city. On the suppression of the electorates he removed to the small town of Elvez on the Rhine where he died in 1807. He distinguished himself as a professional writer by forming a new system of medicine, by combining the nervous and humoral pathology. He admitted the

H O F

sensibility and insensibility of the solids as the basis of his system, and the corruption of the humours as a principle of irritation. His ideas are developed in the following works — “On the Sensibility and Irritability of Disease Parts,” “On the Scurvy and Syphilis,” “On the medicinal virtues of Mercury.” A Treatise on the Small Pox 2 vols. 8vo; “The Magnetist,” Frankfort 1787 4to. He also published a number of Latin dissertations in the manners of the college of medicine at Munster — *Bog Univ.*

HOFFMANN (FABRICIUS) the most celebrated individual of a name and family distinguished in the annals of medicine. He was born February 19th, 1660, at Halle in Saxony where his father was an eminent physician and he received his early education in a public school in that place. At the age of fifteen he had the misfortune to lose both his parents but that circumstance did not alter his devotion to the medical profession and in his nineteenth year he went to the university of Jena, where he studied under professor Wedelius. In 1680 he attended the chemical lectures of Caspar Cramer at Erfurt and returning to Jena took the degree of MD in 1684. He then gave lectures at Jena and afterwards practised as physician at Minden. In 1684 he visited Holland and England and formed an acquaintance with Robert Boyle and other men of science. Returning to Minden he was appointed physician to the garrison there and subsequently to the whole principality. He removed to Halberstadt in 1688 to settle there as public physician at which period he published a treatise *De Insufficiencia Acreti et Vacuac.* On the establishment of the university of Halle Hoffmann in 1693 was appointed primary professor of medicine and natural philosophy, on which occasion he published an inaugural address, *De Acte ex artificiosissima Corporis humani Fabrica convocando.* He improved the spirit of medical education promoting among the students of the university a disposition for inquiry highly favourable to the progress of knowledge. He once held the office of rector of the university; and his fame procured him admission into the scientific associations of London Berlin and Petersburg. In 1708 he was called in to attend the king of Prussia who gave him the title of archdrake and chief counsellor with a liberal salary. He however retained his professorship at Halle and returned thither in 1712. In 1718 he commenced the publication of a work entitled “Systema Medicinae rationalis,” which was received with great approbation by the faculty in different parts of Europe. In this system of medicine he exhibits his peculiar theoretical opinions, the chief feature of which is the doctrine of atom and space, afterwards made the foundation of a medical hypothesis by the famous Dr John Brown. Much of the humoral pathology was retained by Hoffmann, whose speculations are chiefly important as having given an impulse to future inquiries. He made a special collection of the most important

H O G

cases which occurred to him in his practice as a physician, and published them under the title of “Medicina Consultatoria.” After a long life devoted to the cultivation of medicine, he died at Halle in 1743. His works, which are very numerous and multifarious, were collected after his death, and published at Geneva, 1748-1754, in nine volumes, folio. Many of his productions relate to chemistry, and it deserves to be noticed that he made some improvements in chemical pharmacy — *Halleri Bibl. Med. Pract. Atkins's G Bog Rev's Cycloped.*

HOFFMANN AB HOFFMANSWALDAU (JOHN CHRISTIAN) a German poet of the seventeenth century. He was imperial counsellor and president of the senate of Breslau where he died in 1679 at the age of sixty-one. His principal production is a German translation of the Pastor Fido of Guarini, which has been much commended, and he likewise translated from the French the dying Socrates of Théophile. — *Steink. Int. in Hist. Lit. Nov. Diet. Hist.*

HOFFMANN (MAURICE) a physician of the seventeenth century who was a native of Furstenwald in the electorate of Brandenburg. He studied first at Cologne but his father's death in 1638 obliged him to leave that place, and go to reside with an uncle who was professor of medicine at Altona where he commenced a course of medical study. In 1641 he removed to Padua where while pursuing his researches in anatomy according to Thomas Bartholinus he discovered the pancreatic duct in dissecting a turkey. He is said to have shown it to Virsungius who afterwards demonstrated it in the human body. Returning to Altona he took the degree of MD and commenced medical practice. In 1648 he was made professor extraordinary of anatomy and surgery in 1649 professor of medicine, soon after a member of the college of physicians and in 1653 professor of botany and director of the botanic garden. In all his employments he acquitted himself with zeal and ability; and such was his reputation that he was appointed physician to several of the princes of Germany. He died of apoplexy in 1698. His anatomical and physiological works are numerous, and he also published a catalogue of the plants in the botanic garden of Altona, and another of those growing wild in the neighbourhood of that place. — HOFFMANN (John Maurice) son of the preceding was born in 1653 and died at Anspach in 1727. He studied medicine at Altona, Frankfurt on the Oder and Padua and took his doctor's degree in 1674. He occupied the medical chair at Altona and was for some time rector of that university. Besides works on anatomy chemistry and medicine he continued his father's catalogues of the wild plants about Altona. — *Elog. Doct. H. de la Med. Hutchinson's Bog Med. Atkins's G Bog*

HOGARTH (WILLIAM) an eminent and original painter, was the son of a native of Westmoreland, who settled in London, where he kept a school, and was employed as a copy-

H O G

master of the press. The subject of this article was born in 1697, or 1698, in the parish of St Martin, Ludgate, and was apprenticed to an engraving silversmith. This occupation necessarily gave him some skill in drawing and before his apprenticeship expired he had exhibited several specimens of ludicrous caricature. Yielding to the impulse of genius, as soon as he became his own master he entered at the academy for design in St Martin's-lane and studied drawing from the life. His proficiency however was not considerable and he might never have exhibited much talent as a painter had he not penetrated through external force to character and manner. He was at first obliged to support himself by engraving arms and shop-bills, from which he ascended to designs for books, an edition of Hudibras affording him the first subject particularly suited to his genius. In the mean time having practised painting with much industry and being very successful in catching likenesses he acquired considerable celebrity as a portrait painter. His decided talents for original comic design now gradually unfolded themselves, and various public occasions produced displays of his ludicrous powers. In 1730 he contracted a clandestine marriage with the only daughter of sir James Thornhill the painter and soon after commenced his first great series of moral paintings.

The Harlot's Progress The merit of these pictures gradually reconciled him to his father in law and the young couple took up their abode at his house. Nothing could exceed the popularity of this series for the plates of which the names of one thousand two hundred subscribers were entered. In 1745 he acquired additional reputation by his much-admired series of *The Rake's Progress*, and *Mariage à-la-Mode*. His other works in series are *Industry and Idleness*, *The Stages of Cruelty*, and *Election Prints*. The single comic pieces from his pencil are very numerous, among the most distinguished of these are *The March to Finchley*, *Modern Midnight Conversation*, *Sleeping Congregation*, *Parts of the Day*, *Gates of Calais*, *Guineas and Beer Street*, *Strollers in a Bar*, &c. These are rather studies for the scaramuza life and manners than for the professional artist but to those of every class who possess a genuine relish for ridicule and humour they will ever prove attractive. Hogarth who was not destitute of vanity also wished to shine in the higher branch of historical painting and attempted a *Segismunda* in the Italian style which lord Orford calls a complete failure. Although he affected to disregard literature, he sought to appear in the character of an author and by the aid chiefly of Dr B. Hoadly produced in 1753, his *Analysis of Beauty*, the leading principle of which is that beauty fundamentally consists in that union of uniformity and variety which is found in the curve or waving line. By the resignation of his brother-in-law, Thornhill, in 1757 he became secretary-painter to the king an appointment

H O H

which possibly induced him to depart from the party neutrality he had previously maintained, by attacking Mr Wilkes, and his friends. A print, published in September 1762 entitled "The Times." It was answered by Wilkes in a severe *North Briton* which in its turn produced a caricature of Wilkes. An angry epistle to the painter followed from the pen of Churchill which was retaliated by a caricature of the poetical divine and never says lord Orford did two men of abilities throw mud with less dexterity? The powers of Hogarth were not, however impaired as he had shortly before published one of his capital works a satirical print against the methodists. From this a decline in health took place which terminated in death in October 1764 owing to the rupture of an aneurism in his chest. He lies interred at Chiswick under an elegant mausoleum decorated with an inscription by his friend Garrick. Hogarth was a man of rough and vulgar manners, who like most uneducated persons affected a contempt for all knowledge which he did not himself possess but he was at the same time generous and hospitable. He was often absent in company and seemed entertaining himself with his own ideas or searching after some new objects of ridicule which he attentively caught up when they occurred. Lord Orford is mistaken when he asserts that he seldom indulged in personal satire many of his delineations being individual portraits. He lived to enjoy the fame which in his own peculiar line he so richly merited and complete collections of his works are deemed highly valuable and curious. A catalogue of all his prints will be found in the fourth volume of Walpole's *Anecdotes*. A multiplicity of local and temporary circumstances introduced into his pictures, has rendered notes necessary to a due comprehension of them a task which has been well performed in the *Hogarth Illustrated* of Ireland.—*Laws by Nichols. Walpole's Anecdotes*.

HOHENLOHE KIRCHBERG (Prince of) a general of artillery in the service of the emperor of Austria. He fought with success against the Turks in Transylvania in 1789, having completely defeated an army under the command of Kara Mustapha, on the 8th of October that year. On the opening of the campaign against France in 1792 he was opposed to Béurnonville before Treves when he greatly distinguished himself. He also signalized his courage at Fumars and Mormal, and he covered the siege of Querrey and contributed to the success of prince Cobourg and general Mollendorff. He died in August 1796 when he was commander of the army on the Rhine. His loss was sensibly felt and even the French regarded him as one of the ablest generals opposed to them during the revolutionary war.—*New Dict. Hist. Diet des H. M. de 18me. S.*

HOHENLOHE INGELFINGEN (prince Frederick Louis) general of infantry in the Prussian service. He was born in 1746, and adopted the military profession. He accom-

HOL

pened the king of Prussia to Silesia, and was entrusted with the command of a division of the army in the campaign of 1752. He distinguished himself on different occasions in 1753, and particularly at the taking of the town of Weissenburg which he attacked under the orders of general Wurmser. In 1755 the king gave him the command of the line of neutrality on the Elbe, and the general inspection of the troops in Silesia. Being required by the death of his father to the government of his little territories he was rewarded with the present of a splendid sword and made governor of Breslau. In 1806 he was commander of the Prussian and Saxon army destined to penetrate into Franconia but the battle of Jena frustrated all his efforts. After having retreated to Saxe he was obliged to capitulate at Friedland. This misfortune induced him to leave the service and ceding his principality to his son, he retired to a castle in upper Silesia where he died in February 1817.—*Bug Note, des Contemp. Duet des H M du 18me S*

HOHLFIELD (—) an ingenious mechanician of Berlin. In 1757 a monk named Engrambil invented a machine by means of which pieces of music performed on the harpsichord would be legibly traced on paper as the music was executed. Similar inventions had taken place in England and Germany but they do not appear to have been perfected. In 1752 Hohlfield presented to the academy of Berlin a machine which he had completed and which seems to give him the priority of actual invention. He derived the idea of his instrument from Euler. The description of this machine shews that Engrambil's invention was exactly the same. The academy gave the ingenious artist a reward for his discovery but considered the process as too troublesome for general use. The machine was buried by accident in 1757. Hohlfield also invented a new kind of piano-forte in which the strings were struck by a bow which instrument has since been greatly improved by other artists.—*Bug Univ.*

HOLBACH (PAUL THIERRY BARON DE) a German writer eminent for his knowledge of mineralogy, a native of the Palatinate born 1723. He was an honorary member of several philosophical societies among others of the academies of Berlin, Mannheim St Petersburg and Paris, in which latter city his house was the rendezvous of the most celebrated wits and philosophers of France. He died in 1789. He translated the mineralogy of Wallerius, and Akenardi's Pleasures of Imagination into the French language, and published a new edition of *Nom on the art of making glass* under the title of "l'Art de la Verterie." His original works are "Eлементs de la Morale Universelle, ou Catechisme de la Nature," "Introduction à la Minéralogie," 2 vols., and "Chimie Métallurgique," 3 vols. 12me.—*Note. Dict. Hist.*

HOLBEIN (Hans) the son of a painter at Augsburg, Germany, who, being instructed by his father in the rudiments of the art, soon got

HOL

only excelled his teacher, but rose to first-rate eminence in his profession. The year of his birth has been variously fixed; by Polin it is 1493, but by others at 1496 which latter is the era more generally received. His talents procured him the acquaintance and even the friendship of Erasmus, in spite of his rough and dissolute habits which that philosopher exerted himself much to soften and ameliorate. His advice and the wish to escape from the consequences of an unfortunate marriage induced the young artist to set out for England whether he had been invited most pressingly by one of the nobility. His finances were so low at the time that he found the greatest difficulty in reaching that country; where when he had arrived his having forgotten the name of his promised patron seemed about to throw still further impediments in the way of his success. Fortunately however although the title had escaped him the features of the peer were yet fresh in his recollection and a striking resemblance of him which he produced from his easel supplied a deficiency which through his lapses of memory might have proved a most inconvenient not to say a fatal one. Letters from his friend Erasmus whose

Panegyric on Folly he had illustrated by a series of drawings procured him subsequently the powerful patronage of the chancellor sir Thomas More who not only took him into his own house and employed him to delineate the portraits of most of his own personal friends about the court, but eventually introduced him to the notice of Henry VIII who, with all his faults was a liberal encourager of the fine arts. At the command of this monarch Holbein drew the portrait of the dowager duchess of Milan whom Henry entertained thoughts of espousing. He likewise at the same royal instigation took that of Anne of Cleves, the original of which was afterwards considered by his fastidious patron so far inferior in point of beauty to her picture that his daguerre was expressed in terms less courtly than sincere. While in this country Holbein painted most of the principal nobility who showed themselves eager to encourage an artist ranking so high in the favour of such a sovereign as Henry. These portraits are still considered master-pieces of art not shrinking from comparison even with Raphael or Titian, although according to Dr Freinet there is a degree of Gothic gusto betrayed in them, which would have been altogether reformed, had the painter been more conversant with the works of the Italian masters. Some of his earlier productions especially his *Dance of Death* are also very celebrated and have perhaps contributed as much to the establishment of his reputation as his later productions. One of the finest specimens of his genius, so far as regards historical composition, was displayed in the picture which he painted for the hall of the stall yard company. The capacious prince whom he served, however yields towards others was constant in the protection which he afforded to him, and was ever as sensible of his value, that a memorandum saying

H O L

of his recorded on the occasion of some complaints made against this artist by a court leet: "I can, if I please, make seven folds of seven ploughmen; but I cannot make one Holbein over of seven lords." Holbein died at Whitehall of the plague in 1554.—*Walpole's Anecd.* See *J. Reynolds's Works.*

HOLBERG (Ludvico) a Danish writer who obtained distinction in various walks of literature. He was of low origin and was born at Bergen in Norway in 1683. His father who had risen from the situation of a common soldier to the rank of lieutenant-colonel left him an orphan in his infancy and accident depriving him of his property he was fortunate enough to obtain the assistance of a relative to enable him to indulge his strong passion for study. In 1702 he was sent to Copenhagen for improvement, but was unable to remain there long for want of funds for his support. After various changes of situation at home he travelled through several parts of Holland, Germany and England and returning to his own country he published an "Introduction to the Modern History of Denmark" which procured him the office of extraordinary professor at Copenhagen and he afterwards obtained a salary of 100 dollars. He then visited the Netherlands France and Italy and on his return he was made professor of metaphysics at Copenhagen and assessor in the consistory court. He now applied himself to satirical composition and with considerable success, an heroic comic poem which he produced entitled "Peter Paars," being still popular in Sweden and Denmark. His literary reputation became established and he published a variety of works many of which have been translated into English and other languages. In 1735 he was made rector of the university of Copenhagen and in 1737 treasurer of that institution. He was raised to the title of baron in 1747 and he died in 1754. He was never married being prevented from taking a wife by the want of fortune in his younger years, which circumstance induced him to leave the large property he had acquired for the support of students in the academy of Sorøe and for dowries for portly young women. Besides Danish comedies he wrote, the "Subterraneous Travels of Klausen," an "Introduction to Universal History" &c.—Akin's Gen. Biog. Biog. Univ.

HOLBOURNE (Sir ROBERT) an English lawyer in the time of the civil wars appointed Lent reader to the society of Lincoln's-inn in 1641 at which period he was representative in parliament of the borough of St. Michael's. He espoused the royal cause and was made a knight and a privy counsellor. His name is to be found among those of the commissioners chosen to act between the king and the commons, both at Uxbridge and the Isle of Wight. In his professional capacity he is principally known as the author of a treatise on the Law of Freeman, 4to., 1640, the Freeman's Great Survey, which goes under the name of Mr. Weston is also said to have been his

H O L

composition. His death took place in 1657.—*Biog. Brit.*

HOLCROFT (THOMAS) a dramatic, gay, robust and successful writer, said to have been born in the neighbourhood of Leadenhall-square in 1744. His father was a shoemaker, and the son followed the same occupation which he relinquished when young, to try his fortune on the stage. His scheme did not succeed and he then turned his attention to dramatic composition. His first piece of that kind appears to have been a musical entertainment called "The Crisis or Love and Fear" acted at Drury lane in 1778. This was followed by "Duplicity" a comedy 1782 "The Noble Peasant" an opera 1784 "The Folies of a Day or the Marriage of Figaro" 1785 and several others of which the most popular is "The Road to Ruin" 1792 still frequently performed. On the occurrence of the French Revolution, Holcroft displayed much zeal in the cause of liberty and his conduct with that of other individuals having excited the alarm of government, he was included in the famous prosecution for treason instituted against Hardy, Horne Tooke and Hetherell as well as several others in 1794. The persons just mentioned having been acquitted Holcroft and the rest were discharged without being brought to trial. He contrived to write for the stage with great assiduity, and published a multitude of works original and translated among the former of which were some clever novels. His last publication was a "Tour in Germany and France" 2 vols. 4to. He died in 1809. Holcroft is stated to have been the first who introduced on the English stage those since popular entertainments termed melo-dramas. He possessed strong natural abilities and considering that he was self taught his attainments were very considerable. His translations are from the French and German languages.—*Biog. Dram.*

HOLDFR (WILLIAM) a divine of the church of England principally noted as the inventor or improver of a mode of instructing the deaf and dumb. He was a native of Nottinghamshire and studied at Pembroke-hall, Cambridge. In 1648 he obtained the rectory of Bischington Oxfordshire and in 1660 he proceeded DD. He afterwards was promoted to canonries in the cathedrals of Ely and St Paul's London and to the offices of sub-dean of the Chapel royal and sub-shanoner to the king. His death took place in January 1696/7. He was acquainted with music on which subject he wrote and also composed some anthems. But his most important work is a treatise on

The Elements of Speech relating to the means of instructing persons born without the faculty of hearing. This book involved him in a dispute with Dr. Wallis, who also claimed the invention, and the controversy was carried on in the Transactions of the Royal Society of which both Holden and Wallis were members. The discovery which they contested was however made at least a century before their time. [See article *Ponce (Peter)*.]—*Ross's Cyclopaedia.*

HOLDSWORTH. There were two of this

H O L

HOLLES, RICHARD, the elder, whose name is sometimes spelt Charnworth, was the son of a tinsmith at Newcastle-upon-Tyne, where he was born in 1580, and educated until old enough to be placed at St John's college Cambridge. Of this society he became a fellow and obtained, in 1603, the living of St Peter le-Poor, London. Four years after he was chosen divinity professor of Gresham college, and was preferred to the archdeaconry of Huntingdon, with a stall in Lincoln cathedral. On the complete success of the parliamentarian party he was imprisoned, expelled from all his benefices, and puritan divines substituted in his room. An account of his life was published in 1661 in one volume folio prefixed to a devotional treatise of his composition entitled *Praelectiones Theologicae*. A quarto volume containing a selection of discourses under the fanciful name of the Valley of Vision proceeded also from his pen. His death took place in 1649.—EDWARD HOLLES WORTH was an elegant scholar and an acute critic who flourished towards the close of the same century and during the first half of the one succeeding. He was son to the rector of North Stoneham Hants, and was placed by his father at Winchester grammar school whence he removed to Magdalen college Oxford and graduated there in 1711 as A.M. His opinions religious and political preventing his complying with the provisions of the test act, the loss of a fellowship which under other circumstances, he might have obtained was the necessary consequence. He therefore quitted the university and devoted his time and talents during the remainder of his life to the purposes of private tuition. A clever commentary on part of the Georgics of Virgil entitled *Pharsala et Philippi* written by him gives proof of equal taste and erudition. Some posthumous criticisms on the works of the same author published under the title of "Remarks and Dissertations on Virgil" 4to 1768 also exhibit considerable acumen. The only other production of his pen is an elegant little poem remarkable for the classical purity of its Latinity called *Muscipula*. Of this a translation by Dr Hoadly is to be found in Dodoley's collection of miscellaneous poetry. His death was occasioned by a fever which seized him at Coleahill in Warwickshire the seat of lord Digby and carried him off Dec 30 1747. Joseph Spence who edited his posthumous writings speaks enthusiastically of his classical attainments.—*Ward's Gresham Professors*. *Nichols's Lit. Ans.*

HOLE (RICHARD) an English author rector of Faringdon and vicar of Inwardleigh in Devonshire of which county he was a native having been born at Exeter and educated at the grammar school belonging to that city. He was afterwards member of Exeter college, Oxford, where he took the degree of bachelor in civil law in 1771. Soon after he entered the church, and in 1792 obtained from the bishop of Exeter the preferment abovementioned. His works consist of a translation into heroic verse of Ossian's "Fingal," and another of

H O L

the "Hymn to Ceres," attributed to Horace; a variety of poetical pieces on miscellaneous subjects to be found in the Devonshire collection, "Prince Arthur" a poetical romance with notes, an "Ode to Imagination" and a fine volume of curious remarks on the drama of Nights Entertainments written with a view to illustrate some portions of the *Odysey* 1797. His death took place in 1803
Gent. Mag.

HOLNSHED or HOLINGSHED (RAFAEL) an English chronicler of the age of queen Elizabeth. He has been represented as a clergyman and bishop Tanner farther states that he was educated at Cambridge and took the degree of M.A. there in 1544. But Dr Farmer in his essay on the learning of Shakespeare has corrected this mistake having ascertained that the graduate was one Ottewall Holingshed, who was subsequently nominated by the founder one of the first fellows of Trinity college. From the will of the historian preserved by Hearne it appears that at the close of his life he was only a steward or servant to Thomas Burdet esq of Bromcote in Warwickshire. His death took place about 1582. The *Chronicles of Holingshed* were first published in 2 vols. folio 1577, and a second edition in 3 vols. in 1587. Several individuals were concerned in the compilation of this work. In 1807 a new edition of it appeared, in 6 vols. 4to, in which the castrations chiefly from the preceding impression of the third volume were restored. They principally relate to the history of lord Cobham and the earl of Leicester during the reign of Elizabeth to whom the passages in question appeared offensive. Prefixed to the *Chronicles* is one of the most curious and interesting memorials existing of the manners and domestic history of our countrymen in the sixteenth century.—*Bug Ent. Nicholson's Hist. Lab. Monthly Mag.* vol. XXII.

HOKAR (JESWANT RAO) a Mahratta chief who distinguished himself by his courage and talents in his wars with the English. The Mahrattas are a people of Hindostan who live under a kind of confederative monarchy being governed by a number of kings the chief of whom is called the Peshwa. Animated by national antipathy to the English Holkar let slip no opportunity of giving proofs of his sentiments. He first earned arms under Meodjiha Scindia and he succeeded Mahabir Holkar, soubah of Malwa in the command of the Deccan. He was then one of the most powerful of the Mahratta princes, and able to bring into the field one hundred thousand men of whom one half were cavalry. But engaging in several wars with his Indian neighbours, and with the English his power was very much reduced; and his territories diminished. His contests with his ancient comrade Scindia proved unfortunate, but in 1803 he carried on a successful war against the Peshwa, who was obliged to take refuge among the English at Bombay. Holkar commenced hostilities against the English in 1804, the result of which was a treaty concluded December 1804.

HOL

1800 by which he gave up all his maritime pretensions. The insurrection of the Pindarrees in 1817 induced Holkar again to make war on the English. The defection of the Peshwa, who had joined in his confederacy against us deranged his operations, and he was ultimately deprived of two-thirds of his remaining dominions. He died in 1825.—*Bug Nouv des Contemp.*

HOLLAND (HENRY)—See Appendix.

HOLLAND (Sir NATHANIEL) an English painter of some ability, but more known for his wealth and eccentricity than for his skill as an artist. He was the son of George Dance sen architect and surveyor to the city of London, but having married a wealthy Yorkshire heiress he obtained an act of parliament to alter his name and relinquishing the profession in which he had been instructed he assumed the arms of a man of rank and consequence. Having been made a baronet and chosen a member of the house of Commons, he was desirous of obliterating the remembrance of his former employment and endeavoured to buy up all the pictures he had painted, in order to destroy them. He possessed a very large income in right of his wife, but it does not appear that he employed his riches in any undertakings or pursuits worthy of record. He died at Winchester in 1811 aged eighty two.—*Gent Mag*

HOLLAND (FLETCHER) an industrious writer of the sixteenth and seventeenth centuries. He was a native of Chelmsford in Essex, and studied at Trinity college Cambridge where he proceeded M.A. and obtained a fellowship. He subsequently procured a diploma as a physician and engaged in medical practice at Coventry. He is also said to have been master of a free grammar school at that place where his death occurred in 1636 in the eighty seventh year of his age. He was a kind of translator general of his time whence he became the subject of the following punning epigram —

Holland with his translations doth so fill us

He will not let Suetonius be tranquillus.
He published versions of several of the classics besides Suetonius but his most important work is his translation of Camden's *Britannia*. *Fuller's Worthies of Eng.*—**HOLLAND (HENRY)** the son of Philemon followed the profession of a bookseller in London and published some works which are still esteemed His *Herologia Anglica hoc est Clerisarmorum et Doctorum aliquot Anglorum, qui floruerunt ab anno Christi 1500 ad presentem annum Vite Effigies &c* London 1620 foho is of considerable value on account of the portraits. He likewise published *Monuments Sepulchralia Ecclesie S. Pauli*, and a work entitled the "Book of Kings. —*Wood's Athen. Oren*

HOLLAR (WENCESLAUS or WINTZEL) a distinguished Bohemian engraver born at Prague in 1607. The storming of this capital in 1619 by destroying the pecuniary resources of his parents, compelled him to give up all thoughts of following the law to which he was bred and to turn his attention to the cultiva-

HOL

tion of the art of engraving, for which he had shown some talent, as a means of future support. In this his new profession he soon rose to distinguished excellence, and the delicacy with which he had even as early as his eighteenth year executed copies of portraits from the best masters and miniature views of several of the cities of Germany not only obtained him great reputation among his brethren artists but secured him the valuable patronage of Howard, earl of Arundel at that time ambassador from England to the court of Vienna. This munificent encourager of the arts took Hollar into his service in 1636 and on his recall brought him in his suite to England where he soon engaged in executing specimens of his art for the booksellers. A view of Greenwich and an equestrian portrait of his noble patron were among the first of these his productions, and appeared in 1637-8 Two years afterwards his now generally acknowledged talents procured him the notice of royalty and he was engaged to instruct the junior members of the royal family in the art of designing. This avocation did not however occupy so much of his time as to prevent his executing about the same period many beautiful copies of the Arundel and other paintings. On the breaking out of the civil wars and the ruin of the royal cause his talents which had hitherto brought him fame at least if not fortune proved most imminent to his welfare. His having perpetrated so many likenesses of persons obnoxious to the party then in power was gravely alleged as a charge against him and being at length taken in arms for the king at Baconsthorpe in 1645 he was thrown into prison. What might have been the event of his captivity can only be conjectured had he not fortunately contrived to make his escape to Antwerp where he again attached himself to his tried friend the earl of Arundel then dwelling there in exile. The restoration brought him once more to England but the same ill fortune which had so long pursued did not yet abandon him and although his exertions and perseverance in the use of his graver were unceasing, the national calamity which took place in 1666 when London was consumed together with an immense mass of property involved him in the common ruin which overwhelmed so many. The king's countenance was not however withdrawn from him, and he proceeded the year following at the instance of the court to Tangier in order to bring home a correct fac simile of the fortifications there. In 1672 he went into the north of England where he executed many views of the principal towns and buildings and soon after some of Windsor castle together with prints of the costume, and portraits of the knights of the garter &c but although he appears to have ever been kept in full employ either a want of prudence on his own part or the parsimony of those who benefited by his labours, or as is far from improbable, both these causes combined prevented his ever extricating himself from the load of debt in which he had suffered himself to become

HOL

involved. In the spring of 1677, when he had passed the usual age of man, his furniture was seized in execution, and a writ served upon his person, at his obscure lodgings in Gardner's-lane, Westminster. Feeling that the mortal blow was struck, and the hand of death already upon him, the unfortunate artist begged hard to be allowed to expire without the walls of the prison but whether his request was complied with is not exactly known. His death however is ascertained to have taken place on the 28th of March in that year and his body was buried at St Margaret's chapel in the neighbourhood. His *Orationis Multis Anglicanae* a series of engravings representing the female costume of the day is an interesting work and is held in high estimation by antiquaries, as portraying with great correctness the appearance of the fair sex in the various classes of the community during the seventeenth century.—*Life by Vertue. Eng Brut.*

HOLLES (DENZIL lord) an eminent political character of the seventeenth century was the second son of Holles, the first earl of Clare at whose seat at Hangton in Northamptonshire he was born in 1607. He was liberally educated and when his father had a place at court, was playfellow and companion to prince Charles. The earl of Clare's subsequent discontent was communicated to his son and in the last parliament of James I Denzil who represented St Michael's in Cornwall sided with the opposition. In the parliament of 1678 he was returned for Dorchester and took a leading part in favour of liberty with his characteristic ardour and courage. When the three resolutions of the Commons, against popery, arminianism, and tonnage and poundage by the king's prerogative were drawn up he was one of the two members who forcibly held the speaker in the chair until they were passed. For this conduct, refusing to give bail or sureties for his good behaviour he was condemned to fine and imprisonment the latter of which he endured in the Tower for upwards of twelve months. In 1640 he entered the long parliament determined to go to the court, and was placed at the head of the presbyterian party. The earl of Strafford having married his sister, he was prevented from taking part in the prosecution of that minister, but he carried up the impeachment against archbishop Laud. He was also one of the members in the imprudent attempt to seize whom, in the parliament house formed the immediate cause of taking up arms. In the ensuing war the parliament conferred on him the command of a regiment, and appointed him lieutenant of Bristol, but becoming aware of the designs of the leaders of the independents, he endeavoured to frustrate them by promoting a treaty with the king. In 1644 he was one of the commissioners appointed to carry propositions of peace to Charles at Oxford, and in 1647 he made a motion for disbanding the army but that party was now predominant, and the attack was returned upon himself by an impeachment for high treason

HOL

He consulted his safety by retiring to France, whence he was allowed to return in 1668, when he resumed his seat in parliament, and was one of the commissioners appointed to treat with the king in the Isle of Wight. He was soon after again obliged, by the violence of the times, to retreat to France where he remained until the Restoration which he zealously promoted. He was one of the members of the house of Commons who waited upon the king at the Hague, and Charles II, before his coronation, advanced him to the peerage by the title of lord Holles of Isfield in Sussex. In 1663 he was sent ambassador to France and in 1667 was one of the English plenipotentiaries at Breda. Notwithstanding these employments he remained a zealous friend to liberty, and when the politics of the reign tended to make the king absolute lord Holles was a conspicuous leader of opposition. He is mentioned by Barillon the French ambassador as one of the noblemen who entered into negotiations with France to thwart the suspected measures of Charles against liberty at home but it is at the same time intimated that he and lord William Russell, alone refused the money offered by Louis XIV. He died with a high character for honour integrity and patriotism in 1680 in the eighty-second year of his age. In 1699 were published *Memoirs of Denzil lord Holles, from 1641 to 1668 4to*, some of his letters and speeches have been published separately —*Eng. Brit. Hanes's Hist. of Eng.*

HOLLIS (THOMAS) an English gentleman memorable for his attachment to civil and religious liberty and his services to literature and the arts was born in London in 1720. He was descended from a Yorkshire family of dissenters, and being designed for commerce was sent after a common school education to Amsterdam in his thirteenth or fourteenth year to learn the Dutch language and merchant's accounts. Not long after his return in 1735 his father died and being now the heir of a handsome fortune it was resolved to complete his education upon a liberal plan and he was placed under the tuition of Dr Ward professor of rhetoric in Graham college with whom he studied the learned languages and other branches of literature. In 1740 he took chambers in Lincoln's Inn but never appears to have engaged in the law as a profession. His attention seems to have been chiefly occupied with the study of the English constitution and the cultivation of a serious attachment for civil and religious liberty and of the friendship of its most eminent supporters, especially among the dissenters. In 1748 he travelled over a part of the continent and in 1750 engaged in another tour through the remainder. While abroad he increased his love for virtue and the arts and finding on his return that he could not enter into parliament without compliances which he did not approve he made collections of books and medals especially such as preserved the memory of eminent assertors of liberty among whom he highly regarded Milton and Algernon Sidney. The

HOL

particulars of Mr. Hollis's life are little more than a list of generous and public spirited actions, and there were few useful and benevolent institutions of which he was not a member and liberal patron. He was a fellow of the royal, antislavery and other learned societies and made many valuable presents to the British Museum. In 1758 he presented anonymously, a handsome collection of English books to the library at Boston and also acted in a similar way to Harvard college in New England to which, in imitation of some deceased members of his family, he was a most liberal benefactor. In his own country also it was one of his leading objects to disseminate books favourable to popular principles of government, editions of many of which he caused to be reprinted. Fatigued with his various occupations, he retired in 1770 to his estate at Corcombe in Dorsetshire where he lived retired until 1774 when he dropped down in a fit and immediately expired while giving directions to some workmen. With many peculiarities and professing the austere principles of a republican he was very gentle and polite in his manners and seems to have united much of the ancient stow to the modern partisan of freedom and general philanthropist. He bequeathed his fortune to Mr Brand who took the name of Hollis and who died in 1804 leaving it in his turn to Dr Disney there being no relationship in either case.—*Mem by Brand Hollis.*

HOLMAN (JOSEPH GEORGE) a comic writer and performer was born in London and educated under Dr Barrow master of an eminent private academy in Soho square. From school he was sent to Queen's college Oxford with a view to the church but having imbibed a taste for the stage he soon quitted the university and in 1784 made his debut in Covent garden theatre. At the end of the season he repaired to Dublin and subsequently to Edinburgh and then returned to Covent garden where he remained until 1800. Upon a difference with the manager he once more quitted the theatre and repaired to America where he himself became manager of the theatre in Charlestown. His death was remarkable and melancholy taking place together with that of his second wife two days after their marriage by the yellow fever in 1817. His dramatic productions are *A broad and at Home* a comic opera, *Red Cross Knights*, a play, *Votary of Wealth* a comedy,

What a Blunder a comic opera, *Love gives the Alarm* a comedy, and *The Gazette Extraordinary* a comedy.—*Gent Mag*

HOLMES. There have been several English authors of this name, George Holmes, a native of Skipton, in the tract of land called Craven, Yorkshire was born in 1662. When about thirty years of age has reputation as an antiquary induced lord Halifax then at the head of the government to appoint him record keeper in the tower of London, at a salary of £100. In this situation he set about the arduous task of arranging the archives kept in that ancient fortress, where he was also barrack

HOL

master. He was a member of the antiquarian society who caused an engraving to be made of his portrait after his death. His long and useful life was brought to a close on the 16th February 1746 9 after a period of more than half a century spent in the active discharge of the duties of his post. At his decease ministers purchased all his papers of his widow for the sum of £200! They are preserved with great care in the office over which he presided. His only printed work was a new and valuable edit. of the first 17 vols of Rymer's *Fœderæ*—Dr NATHANIEL HOLMES a learned non conformist divine of the seventeenth century was especially eminent for his knowledge of the Hebrew language and antiquities. He was the author of a tract on the millennium, entitled *Resurrection Revealed*, 1654 folio. He survived nearly seventeen years has ejected from his living of St. Mary Stanning in the city of London which took place on account of his religious and political tenets in 1662.—Dr ROBERT HOLMES dean of Winchester was born in Hampshire 1749 and placed at an early age at the grammar school of Winchester his native county. Removing in due course on a fellowship to New college Oxford he proceeded through the usual degrees to that of doctor in divinity which he took in 1789. The year following he succeeded Mr Thomas Warton in the professorship of poetry. About the same period he went to Paris for the purpose of collating the different manuscripts of the scriptures preserved in the library there. Besides his biblical studies and the valuable works to which they gave rise Dr Holmes appeared as a lyric poet on more occasions than one especially at the duke of Portland's installation as chancellor of the university in 1793 the ode performed in the theatre on which occasion was of his composition. The other productions of his muse are an ode entitled *Alfred* and a small collection of sonnets. The names and dates of his graver writings are the *Bampton Lecture* 1782, and an octavo volume of *Divinity Tracts* 1788, besides several occasional sermons an essay on the prophecies of Daniel, and a letter addressed to the bishop of Durham respecting his own laborious collation of the Septuagint manuscripts in five folio volumes after the manner of Kennicott. It is much to be lamented that he did not live to complete this valuable and eruditè work, which has however since his decease, been carried on by Mr Parsons. This learned and industrious divine was successively rector of Stanton, Oxfordshire, canon of Salisbury and canon of Christchurch till the year 1804, when he was prefered to his deanery. He did not however enjoy his elevation long dying at Oxford, November 12 1805.—*Gent Mag* vol. lxxv

HOLMSKIOULD (THEODORE DE) a Danish physician and naturalist, celebrated for his botanical researches relative to plants of the fungus kind. He was originally a surgeon, and afterwards professor of medicine at the academy of Söoe. The favour of the queen

HOL

dowager Juliana Maria, opened to him the career of honour. He was ennobled made a counsellor of state knight of the order of Dannebrog grand master of the court of the queen dowager, &c. He published a work on mushrooms, entitled 'Beau rame des funis Danes' impensa à Th Holmkiold with plates, in which he exhibits some curious and interesting facts and observations. This treatise consists of 2 vols folio the first published by the author in 1790 and the second by M. Viborg in 1799 after the death of Holmkiold which occurred in 1793.—*Bog Ukr. Bog Nouv des Contemp.*

HOLROYD (JOHN BAKER) lord Sheffield, a political writer and statesman who was a native of Yorkshire and descended from a very ancient family settled in that county. When young he served in the army under the marquis of Granby in Germany and afterwards travelled on the continent. On his return to England in 1776 he retired to the country and employed himself in farming but during the American war he raised at his own expense a regiment of dragoons of which he had the command whence he was commonly called colonel Holroyd, till his elevation to the peerage. He was first created lord Sheffield of Dunamore in Ireland when he sat in the house of Commons as member of parliament for Bristol. He was next promoted to an Irish earldom, and in 1802 to an English barony. His death happened May 30 1801 at the age of eighty. Lord Sheffield wrote 'Observations on the Commerce of the American States,' which went through several editions and was translated into German, besides tracts on the slave trade and on Irish affairs. But he is most known as the friend of Gibbon the historian and the editor of his posthumous works and correspondence.—*Great Mag. Ann. Bog*

HOLSTEIN (LUXE) better known by his Latin denomination Lucas Holstenius a learned German ecclesiastic of the seventeenth century born in 1596 at Hamburg. His parents being Lutherans educated him in the same profession of faith from which he was converted by the arguments of Surmont the Jesuit, and made his public recantation. He afterwards went to Rome where he enjoyed the patronage of Francesco Barberini and his relative pope Urban VIII. This pontiff presented him to a canonry of St Peter's and his successor in the papal chair Innocent X, made him librarian to the Vatican. In 1655 Alexander VII with whom he was as great a favorite sent him on a special mission to Innspruck to receive the professor of catholicism from Christina queen of Sweden. Holstenius was remarkably well read both in profane and sacred antiquity and although with the exception of a treatise on the life and writings of Porphyry he published no original work, yet his annotations on those of others especially of Demophilus and Apollo nose, are valuable, and give ample evidence of the research and deep erudition of their author. His death took place in 1661.—*Mores*

HOL

HOLT (Sir JOHN) an English judge, equally celebrated for his constitutional knowledge, firmness, and integrity. He was born in 1648 at Thame Oxfordshire being the son of sir Thomas Holt, knight sergeant-at law and recorder of Abingdon in the grammar-school of which town he was educated, till sufficiently advanced to enter as gentleman commoner at Oriel college Oxford. Being from the first, designed for the profession of his father he became a member of the society of Gray's Inn in 1668 was called to the bar in due course and soon distinguished himself as a sound lawyer and an able advocate. His professional eminence having procured him the post of recorder to the city of London he filled that responsible office with much ability for about a year and a half when the court determining on the abolition of the Test Act his uncompromising opposition to that unpopular measure lost him his situation. He continued in disgrace with James till 1686 when he was made sergeant-at law and becoming a member of the lower house on the arrival of the prince of Orange he distinguished himself so much by his talents and exertions in what is called the Convention Parliament that William, soon after his own establishment on the throne elevated him to the dignity of lord chief justice of the King's Bench with a seat at the council board. In this honourable situation he continued during the remainder of his life declining the chancellorship which was offered him on the removal of lord Somers in 1700, and discharging the duties of his high office with a degree of resolute uprightness, which however distasteful on more occasions than one to both the houses of Lords and Commons gained him not only popularity with his contemporaries but has secured him the veneration of posterity. Of his determination and vigour whenever any measure trenching in the slightest degree upon the constitutional rights and privileges of the subject was in contemplation many instances are recorded. Among others is his memorable reply to a military officer who applied to him to support, with his authority a party of soldiers whom he was marching to suppress an inconsiderable riot in Holborn.— Go back to those who sent your sir said the judge and tell them that the laws of this realm are not to be executed by the sword their due enforcement is the province of the civil power and take especial notice moreover that if there be one man killed on the present occasion by military interference I will hang you and every soldier of your party. The officer retired and sir John repairing with his upstaves afterwards to the spot, succeeded in dispersing the mob without bloodshed. The only professional remains of this able and independent magistrate are his edition of an John Kelyng's Reports of Cases in Pleas of the Crown in the reign of Charles II with Notes printed in 1708, fols. Sir John Holt died after a long and severe illness in the spring of the following year.—*Life 1764 Svo Bog Brit.*

HOLT (John) born at Mottram, in Cheshire.

H O L

shes in 1742, was a schoolmaster of Walton a village in the neighbourhood of Liverpool in which parish he also officiated as clerk. Besides some agricultural tracts On the *Curt in Potatoes* Report for Lancashire, &c. " he was the author of three 12mo vols. on the " Characters of the Kings and Queens of England. A history of Liverpool which he had undertaken remained unfinished at his death in 1801.—*Gent Mag.* vol. lxxi.

HOLTE (JOHN) an English schoolmaster elected fellow of Magdalen college and master of the school belonging to that society in 1491. He is known only as the author of the first Latin grammar ever published in England. This work which is now extremely scarce was printed in 4to by Wynkyn de Worde in 1497 and is entitled *Lac puerorum M Holte Mylke for Chyldren*. Of his birth nothing farther is ascertained than that he was a native of the county of Sussex. His death is supposed to have taken place in 1511.—*Tanner Bayle Pits*

HOLTY (LEWIS HEVY CHRISTOPHER) an eminent German poet, born at Marienrode in the electorate of Hanover in 1743. He was sent to Gottingen to study theology but his disposition rather led him to devote himself to the belles-lettres, and he paid great attention to ancient literature in particular. There was a literary society at Gottingen the principal members of which were Holt Voss Sanger and the two counts Stollberg; and these young poets held weekly meetings at which they submitted to each other their compositions for the benefit of mutual criticism. Holt whose father could not support him in independence gave lessons to pupils in Greek and English and employed himself in translating from the latter language for the press. His constitution naturally feeble sank under the fatigues of these occupations and he died September 1 1776. The poems of Holt are distinguished by facility and purity of style and he has been considered as imitating in his odes the simplicity of Anacreon and the philosophy of Horace. The best edition of his works is that published by his friend Voss, at Hamburg in 1814 8vo. He translated from the English *The Connisseur Hurd's Dialogues* and Shaftesbury's *Characteristica*.—*Eleg. Unus*

HOLWELL (JOHN ZEPHANIAN) a gentleman distinguished by his writings relative to the East Indies was born at Dublin in 1711. He was brought to England in his eighth year and educated at Richmond Survey. He was first intended for trade but subsequently articled to a surgeon. In 1732 he went to India and in 1736 became a member of the court of Calcutta. He was appointed perpetual secretary to the council in 1751 when he introduced a long meditated plan of reform. In 1756 he was second in the council at Fort William which was in that year besieged by Surajah Dowlah, nabob of Bengal and the governors and senior in council having deserted the place Mr Holwell took the command but to no purpose the place being

unassizable. He at length surrendered on a promise of security of person in violation of which he with his companions, to the number of 146 persons, were shut up all night in the black hole of Calcutta a prison not 18 feet square, and such was the consequence of heat thrust, and bad air that at six in the morning twenty three only survived. Mr Holwell who was one of them has given a curious and affecting narrative of the transaction and when Calcutta was again brought under British dominion raised a monument to the unhappy victims at his own expense. He then returned to England but in 1758 he went out again, and the next year succeeded colonel Clive as governor. At the close of the following year he again returned to England where he died in 1798. Mr Holwell was author of many tracts on Indian affairs of a temporary interest from which however must be excepted his *Narrative of the Sufferings endured in the Black Hole of Calcutta*, and his *Interesting Historical Events relative to the Province of Bengal and the empire of Hindostan &c.* in three parts published in 1765 1767 and 1771. In these he gives a very particular and favourable account of the Gento Shaster which he represents as the oldest religious code in existence and the source of the cosmogony and mythology of the Egyptians, Greeks and Romans. He is inclined to infer that its doctrines are really of divine origin and seems at length to have indulged in a singular and fanciful system of which he gave a view in a work of his old age entitled *Dissertations on the Origin Nature and Pursuits of Intelligent Beings* 1788 8vo. The idea that men are fallen angels condemned to suffer in mortal bodies is the fundamental principle of this treatise which, like all the author's other works displays with much eccentricity a benevolent heart and a liberal way of thinking.—*Monthly Review. Enquiry Britan.*

HOLYDAY (BARTON) the son of a taylor at Oxford born 1593 in that university where he afterwards obtained a studentship at Christ church. Having entered the church he in 1618 went to Spain with sir F Stewart in the capacity of chaplain and was afterwards made archdeacon of Oxford and king's chaplain. On the breaking out of the troubles his arch deaconry was taken from him by the Parliament on account of his supposed anti-republican principles and he was obliged to conceal himself for a while but eventually found means so far to reconcile himself with the predominant party as to be allowed to hold the living of Chilton Berka. On the restoration of monarchy the court notwithstanding the temporizing nature of his late conduct, allowed him to resume his former benefices, but the further promotion which he is said to have expected and applied for was denied him. Besides about twenty sermons, Dr Holyday published a translation of the satires of Juvenal and Persius, 8vo and folio which if it be deficient in point of poetry is yet valuable from the fidelity with which it is rendered

H O M

and the information contained in the notes. His other works are, a poem in ten books, entitled "The Survey of the World" 8vo 1661, "Technogonia," a Latin comedy acted in 1617 before King James I at Oxford

"Philosophica Politica-harbara Specimen &c. 4to, and "Comus Jacundus in Vt. His death took place at Ilsey October 1661—Athen. Oxon. Malone's Dryden.

HOLYOAK There were two learned lexicographers of this name father and son. **FRANCIS** the elder was born about the year 1567 at Nether Whatecre a village of Warwickshire in which country after going through a regular course of university education at Oxford he obtained the rectory of Southam in 1604. Two years after his appointment to this piece of preferment he published an etymological dictionary of the Latin tongue in one volume 4to, which went through four editions. His reputation for integrity and abilities caused him to be chosen a member of the convocation called together in the first year of the reign of Charles I through his loyalty and attachment to which sovereign Mr. Holycak afterwards underwent much persecution. He died in 1653, and lies buried at Warwick.—**THOMAS HOLYOAK** born at the parsonage of Southam in 1616 was educated at Queen's college Oxford. During the civil wars he commanded a troop of horse in the king's service although already in holy orders and chaplain to his college. For this and other services the degree of DD was conferred on him by the university at the express direction of the king. On the failure of the royal cause he practised medicine for his subsistence but on the restoration of monarchy resumed his ecclesiastical character and obtained successively the livings of What nash in his native county and of Breamore Hants. He superintended an edition of his father's dictionary which he corrected and amended and published another of his own in both Latin and English, 1667. He died in 1675 leaving a son Henry afterwards master of Rugby grammar-school. *Athen. Oxon. Corp. Mag. vol. i.*

HOLYWOOD (John) a mathematician of the thirteenth century known also by his Latinized appellation of de Sacrobosco. The place and even the country which gave him birth, is uncertain being by some fixed at Halifax in Yorkshire, while Ireland and Scotland contend, according to others for the honour of having produced him. The claims of the latter country in this respect may, perhaps, have originated in the fact of his having been for many years a resident in the Augustinian convent of Holyrood, in Nithsdale of which he was a regular canon. His education was acquired at Oxford, and some years before his death he settled at Paris where he taught mathematics. The titles of his writings are, "De Algorismo," "De Sphaera Mundi," 4to; "De anni ratione seu de computo Hocholoden." His death took place in the capital above-mentioned in 1256.—Mackenzie.

HOMMANN (JOHN BAPTIST) a German

H O M

engraver, who published a vast number of geographical charts and maps, which contributed much to the improvement of geography in the eighteenth century. He settled at Nuremberg where he formed a commercial establishment on a large scale, and he died there in 1724.—*New Dict. Hist.*

HOMBERG (WILLIAM) an eminent chemist of the last century. He was born in 1652, at Batavia; his father being a Saxon gentleman in the service of the Dutch East India company. Coming to Europe he studied jurisprudence at Jena and Leipsic and in 1674 was admitted a counsellor at Magdeburg. Natural history and philosophy however occupied more of his attention than law and his taste for those sciences was heightened by his acquaintance with Otho Guericke the inventor of the air-pump. He then went to Italy, and after studying at Padua and Bologna, with a view to the practice of physic he returned to Germany and took the degree of MD at Wittemberg. Having subsequently visited Saxony, Hungary, Bohemia, and Sweden to observe the processes of metallurgy he in 1682 settled in France, under the patronage of the minister Colbert, when he embraced the catholic religion, and thus irreparably offended his father and other friends, who were protestants. The death of Colbert deprived him of support and in 1687 he went to Rome to practise as a physician. He returned to Paris in 1690 and became a member of the Academy of Sciences. In 1702 he obtained the protection of the duke of Orleans, who in 1704, made him his first physician. He married the daughter of M. Dodart, an attachment which prevented him from accepting an invitation to settle in the dominions of the elector Palatine. He died in September 1715. His works consist of papers in the Memoirs of the Academy of Sciences among which are the following: the method of making the phosphorus of Kunckel, various experiments on phosphorus the new phosphorus, relating to the Bologna stone; and observations on focal matter from which he procured another kind of phosphorus.—*Hutchinson's Big Med. Aiken's G Big*

HOME (DAVID) a protestant minister of Scottish birth who was educated and settled in France towards the close of the sixteenth and beginning of the seventeenth century. He was engaged by James I to attempt the impracticable task of uniting all the protestant divines in Europe in one system of religious belief. The most considerable of his productions is "Apologia Basilica, seu Machiavelli Ingenium Examinatum." He is also deemed the author of two satires on the Jesuits, entitled "Le Contre Assasme ou reponse à l'Apologie des Jésuites," 1612 8vo, "L'Assassinat du Roi ou maxime du Vieil de Montague Vaticame, et de ses assassinies pratiquées sur la personne de défunt Henri le Grand," 1617. Several of his poems are in the Delices Posturam Scotorum. The date of his death is unknown.—*New Dict. Hist.*

HOME (HENRY) lord Kames, a Scottish

HOM

Judge, eminent for his writings on various subjects, was the son of George Home of Kames in the county of Berwick, descended from a noble family. He was born in 1696, and received his education from a private tutor at home. In 1719 he was bound by indenture to a writer of the signet but inspired with the ambition of becoming an advocate he zealously repaired the defects of his education and fitted himself for the law to which he was called in 1724. Although inferior as an orator he soon acquired considerable reputation by a number of publications on the civil and Scotch law, the first of which, consisting of *Remarkable Decisions in the Court of Session* appeared in 1728. This work was followed in 1738 by *Essays on several Subjects in Law*. During the troubles in 1745 and 6 he sought shelter in country retirement, the fruits of which leisure appeared in 1747 in his *Essays upon several Subjects concerning British Antiquities*. In 1757 appeared his useful work *The Statute Law of Scotland abridged with historical notes*, which was followed in 1759 by his *Historical Law Tracts*. In 1760 he published *Principles of Equity* folio, and in 1766 and 1780 he gave additional *Decisions of the Court of Session*. Lastly in 1777 he crowned his legal labours with *Elucidations respecting the common and Statute Law in Scotland*. These instances of indefatigable industry could not but exalt him in his profession and so early as 1752 he became a judge of session and assumed according to the custom of Scotland the title of lord Kames. His inquisitive and speculative mind, however, was by no means confined to his profession. From his youth he had a great turn for metaphysical disputation and maintained a correspondence on that subject with bishops Berkeley and Butler, Dr Clarke and other eminent reasoners. He became an author on this branch of study in 1753 when he published *Essays on the Principles of Morality and Natural Religion* in which he endeavours to establish general principles of human action and to advocate the doctrine of philosophical necessity which having become obnoxious in consequence of its adoption by many writers who objected to revealed religion subjected him to various attacks. His *Introduction to the Art of Thinking* 12mo, 1761 is deemed useful to young persons. In 1762 he published his celebrated *Elements of Criticism*, 3 vols. 8vo in which original performance discarding all arbitrary rules of literary composition, he endeavours to establish a new theory on the principles of human nature. Its chief defect is over refinement, and an unnecessary multiplication of original tastes or principles. He followed this elaborate work in 1773, with two quarto volumes entitled *'Sketches of the History of Man'* which is ingenious and entertaining but not always founded on the best information. With a view to the improvement of Scotch agriculture, he published, in 1776, at the age of eighty, *"The Gentleman Farmer*, being an

HOM

Attempt to improve Agriculture by subjecting it to the test of natural Principles, 8vo. As this work every branch of the farming business is discussed, but not always with equal accuracy, although the book was useful in its day Advanced as was his age the habit of writing attended him to the very close of life his last work being published in 1781 under the title of *Loose Hints upon Education* chiefly concerning the culture of the Heart. He did not long survive the appearance of this the last of his labours, dying in December 1782, at the age of eighty-six. Lord Kames was much distinguished for vivacity in conversation which sometimes exceeded the bounds of judicial gravity even on the bench. He is accused of a little partiality to flattery and proclivity to literary jealousy which defects but slightly detract from the credit due to his many private merits and indefatigable public spirit. His speculations were free but he was a constant advocate of morality and a zealous assertor of the wisdom and goodness of the Creator.—*Life by Lord Wedderburn.*

HOME (John) a clergyman of the church of Scotland but known chiefly as a dramatic writer was born near Ancrum in Roxburghshire in 1724. He was educated at Edinburgh for the church but in 1745 took up arms on the royal side and was made prisoner at the battle of Falkirk but contrived to escape. On the suppression of the rebellion, he resumed his studies and was licensed to preach in 1747. After visiting London he was settled as minister at Athelstaneford in East Lothian where he composed his tragedy of *Agis* which was refused by the London managers a circumstance which did not prevent him from composing *Douglas*, also refused by Garrick on which the author had it performed at Edinburgh in 1756 Mr Home and several of his clerical brethren being present. For this alleged departure from the decorum enjoined by the church of Scotland the author was so threatened with ecclesiastical censures that he resigned his living and ever after acted and appeared as a layman. As a persecuted man he was complimented on this occasion by David Hume who in a strain of high panegyric addressed to him his "Four Dissertations." Thus lifted into notice "Douglas" was presented at Covent-garden in March 1757 and gradually became a stock piece. He followed with *Agis* "The Siege of Aquiles," "The Fatal Discovery," "Alonzo," and "Alfred," none of which had even temporary success. In 1763 by the patronage of lord Bute he was made commissioner of sick and wounded seamen and appointed conservator of the Scotch privileges at Campvere in Zealand. In 1778 he received a captain's commission in the Baccleugh fencibles, which he held until the peace. He subsequently published a "History of the Rebellion of 1745 &c" etc a work which disappointed public expectation. He died decayed in his stipend, at Merchiston-house, in 1816, at the advanced age of eighty five.—*Drury's Life of Garrick*

HOMER. The most ancient and celebrated of the Greek bards extant, usually honoured with the title of the father of poetry and prince of the poets. Where he was born who were his parents, and at what period he lived, are all facts involved in obscurity. The Attic marbles refer the time in which he lived to the tenth century BC while others have brought it down to the age of Romulus or Numa, two centuries later. His birth place was long the subject of ancient contest, no less than seven Grecian cities disputing for that honour. The probability seems to be that he was born in one of the Greek cities of Asia Minor or in some island near it. The most copious account of the life of Homer which goes under the name of Herodotus is evidently spurious, yet as it is ancient, and exhibits the traditional ideas of the Greeks and Romans concerning him, it merits a brief notice. According to this story Menalippus, a native of Magnesia, went to live at Cumae where he married, and had a daughter named Critheis who was left an orphan in the care of Cleonax. The latter seduced his ward, who going to a festival on the banks of the river Meles near Smyrna was delivered of a male infant, whom she named Meleagrus. Being left without support she engaged herself to spin wool for Phemus a schoolmaster who ultimately married her and adopted her son. After the death of Phemus and Critheis the young man conducted the school, until one Mentes, a ship-owner, persuaded him to accompany him to Egypt. He also visited Italy Spain and the island of Ithaca, where he collected the materials for his *Odyssey*. On arriving at Colophon he lost his sight, which made him resolve to return to Smyrna, and stopping on his way at Cumae he offered to settle if the people would allow him a salary which they refused saying it would be to no purpose to maintain *ephoros*, or blind men, whence the name of Homer. He then went to Phocaea, where a schoolmaster offered to maintain him on condition of being allowed to transcribe his poems which he had no sooner done than he basely deserted him, and withdrew to Chios, where he became rich by means of the stolen productions. Homer followed him and finding near Chios, was conducted by Glaucon, a shepherd, to his master Bohus who employed him in the education of his children. The schoolmaster hearing of his arrival fed and Homer setting up a school at Chios, married and had two daughters. Intending to visit Athens the ship put in at Samos, where he continued during the winter singing attended by a chorus of boys, at the houses of the great men. In the spring he embarked again but landing at Chios, he fell sick, died and was buried on the sea-shore. The foregoing tale evidently deserves little credit, and the origin and composition of the poems ascribed to Homer are involved in as much obscurity as his biography. Critics have long debated whether the "Iliad" and "Odyssey" were epic poems in the sense now attached to the word, or a fortuitous assembly of detached

passages or rhapsodies. It appears certain that portions of them wandered separately through the towns of Asia Minor, until brought from Asia to Greece by Lycurgus, and arranged in their present order under the patronage of Pausanias. However, or by whomsoever composed the poems of Homer not only obtained the highest degree of popularity in Greece, but as Grecian literature became the parent of everything bearing the same name in ancient Rome and modern Europe, the veneration for Homer is a point of classical orthodoxy to this day. In point of sublimity, comprehensiveness of genius, fertility of invention and true poetic talent he is still regarded as primary, and although how far he himself was original in his mythology diction and versification is uncertain it is evident that until very modern times all epic poets have copied him with even servile imitation. Of the other poems attributed to Homer the "Batrachomyomachia" or Battle of the Frogs and Mice is rejected by almost all refined critics, as a parody incompatible with the simplicity of the Homeric age. Of the Hymns some are acknowledged by Lucas and Pausanias but others are undoubtedly spurious. On the whole the *Iliad* and *Odyssey* alone are strictly identified with the fame of Homer and of these the editions are very numerous. It is sufficient to say that the best are those of Barnes, Clarke and Hayne. The two leading English translations of Pope and Cowper in rhyme and blank verse are too well known to require observation. Almost all the modern languages supply versions of Homer.—*Vestni Post. Russ. Harwood's Classics.*

HOMER (HENRY) the son of a clergyman rector of Burdignbury Warwickshire where he was born in 1752. He received the rudiments of a classical education at Rugby and afterwards took the degree of bachelor in divinity at Emanuel college Cambridge in 1783. Mr Homer in conjunction with Dr Coenbe and others assisted in bringing out a variorum edition of Horace. He also edited the works of Cesar, Livy, Tacitus, Sallust, and the epistles of Ovid. His death took place in 1791.—*Gent Mag. Brit Crit. vol. vi.*

HOMMEL (CHARLES FREDERICK) a German writer on jurisprudence born in 1722 at Leipzig. His works are "Corpus Juris Civilis cum notis variorum" 8vo, "Palm geneas librorum iuriis veterum" 8vo 3 vols, "De legum civilium et naturalium natura," "Obligamenta Juri Feudali aucte Grammaticae Observationses, Jus Rei Chenteianis et Antiquitates Germanicas varie illustratae, and Jurisprudentia nondimilibus illustrata." His death took place in 1781.—*Nouv Diet Hist.*

HOMPESCH (BARTHOLD) grand master of the order of Malta and said to have been the first German knight who ever held that office. In 1798 he surrendered the island to the French, and the letters which he addressed to Buonaparte on that occasion were remarkable for the

HOG

stifications they displayed, and the spirit of pusillanimity and meanness by which they were dictated. Hompesch afterwards endeavoured to aid the English government in its views with regard to the occupation of Malta. He was some time in this country where he seems to have been disappointed in his expectations from the ministry. After amusing the metropolis for a while by his peculiarities of costume and manners he was obliged to remove to the continent, and he died at Montpellier in France in the beginning of 1803.—*Dictionnaire des Hommes de Lettres S. Eng. town des Contemp.*

HONDEKOETER or **HONDEKOTTER**. There were three Flemish artists of this name, GILLES, born in 1583 a. Utrecht excelled in landscape painting.—HANS GESBERT born in 1613 was celebrated for his delineation of ducks and other fowl in the representation of which as well as of birds in general he excelled. MELCHIOR the grandson and b. for the most celebrated of the three was still more successful. This last was a native of the same city in which his family had been so long settled was born in 1636 and died there in 1695.—*Pilkington. D'Argenville Vies de Peint.*

HONDRIUS (ABRAHAM) a Dutch artist born in 1638 at Rotterdam. He did not confine his pencil to any particular branch of painting but more frequently employed it in the delineation of hunting pieces in which he was very successful. His best picture however is considered to be his destruction of Troy the figures introduced in which are singularly well designed and executed. Hondius came to England where he died in 1691.—There was also an eminent engraver descended from the same family named JOSEPH HONDRIUS who was born at Wackern in the Netherlands in 1563. He was a self taught artist and attained to great perfection in engraving both on copper and ivory. Amsterdam was the place of his residence where he set up a letter foundry. He applied himself with considerable success, to the study of geography and published several treatises on that science. Of these the principal are *Descriptio Geographica Orbis Terrarum*, fol 1607, "Italiae Hodieina Descriptio", and *Gerhardi Mercatoris Atlas*. He was also the author of a tract, entitled *Theatrum Artis Scenendi*. He died in 1611.—*Bryan's Dict of Paint and Eng.*

HONE (NATHANIEL) an eminent painter in enamel who was a native of Dublin. He removed to England while young, and settled at York, where he married a lady of property. He subsequently established himself in London as a painter in oil and miniature but he excelled in enamel and was reckoned inferior to no artist of his time, except Zincke. On the foundation of the Royal Academy he became one of the earliest members. He died in 1784.—*Edwards's Suppl. to Walpole.*

HONORIUS or **SANTA MARIA** the ecclesiastical name of Blaize Venselle, a Carmelite friar of Toulouse, born at Limoges, in 1631. He was the author of a tract 'On

Indulgences, and the Institution of the Jubilee'; a Dissertation Critical and Historical on the Military Orders in 4to, "Reflections on the Laws of Criticism," and a devotional treatise entitled *La Tradition des Pères et des Antiques Ecclésiastiques sur la Contemplation* '12mo. 3 vols. He died in 1729.—*Mower. New Dict. Hist.*

HONTAN (BARON DE LA) a native of the province of Gascony in France who served as a common soldier in Canada, and afterwards as an officer. He was sent to Newfoundland as king's lieutenant, but in consequence of disputes with the governor he was disgraced and retired first to Portugal and then to Denmark. His travels in North America, Amsterdam 1705 & vols. 12mo afford some curious details respecting the Indian tribes and the work is written in barbarous style and its authenticity is very questionable.—*New Dict. Hist. Aiken's G. Brog.*

HONTHORST (GERARD) a celebrated artist, called also GERARD DALLE NOTTE from his subjects, was born at Utrecht in 1592 and was disciple of Abraham Bloemaert. He completed his studies at Rome and imitated the style of Caravaggio. His subjects are generally night pieces as large as life and illuminated by torch or candle light. Among his numerous pictures, that of Jesus Christ before the tribunal of Pilate in the Justinian gallery is the most celebrated. He visited London and obtained the favor of Charles I by many able performances, and on his return to Holland was much employed by the prince of Orange. The pencil of Honthorst is free and firm and his colouring has a great deal of force although often unpleasing from a predominancy of brown and yellow tints yet with more grace and correctness in his figures, he would have been an excellent painter. He died in 1660 aged sixty eight.—WILLIAM Honthorst brother to the above painted portraits which are highly esteemed.—*Bryan's Dict. of Paint and Eng.*

HOOD (SIR NATHANIEL LORD VISCOUNT) an English admiral whose father was an episcopal clergyman in Devonshire where he was born in 1724. He entered as a midshipman in the navy in 1740 and six years after was promoted to a lieutenancy, in 1754 he was made master and commander and in 1759 post-captain. He had the office of commissioner of Portsmouth dock yard bestowed on him in 1778 but resigned it two years after on being made a rear admiral. He was then employed in the West Indies, where he preserved the Isle of St Christopher's from being taken by count de Grasse and was present at the famous defeat of that officer by admiral Rodney April 13th 1782. His services on this occasion were rewarded with an Irish peerage. In 1784 he was chosen MP for Westminster but vacated his seat in 1788 on obtaining the appointment of a lord of the admiralty. In 1793 he commanded against the French in the Mediterranean where he signified himself by the taking of Toulon, and afterwards Corsica, in reward of which achievements he was made

HOO

a vicarage, and governor of Greenwich hospital. He died at Ruth in 1616.—*Bug. Bug.*

HOOGFT (PETrus CARINHUS VAN) a Dutch historian and poet, born in 1581 at Amsterdam. He translated Tacitus into the Dutch language, with great fidelity and perspicuity, published a life of Henri IV of France in Latin, a "History of the Pays Bas from the Abdication of the emperor Charles V to the year 1598," 2 vols. folio, besides a variety of miscellaneous works consisting of epigrams, comedies, &c. Louis XIII made him a knight of the order of St. Michael. He was on his way to witness the obsequies of Frederick Henry prince of Orange, when he was suddenly taken ill, and died on the road in 1647.—*Mores. Bug. Unus.*

HOOGSTRATEN (DAVID VAN) a Dutch poet and critic born at Rotterdam in 1658. He became professor of the belles lettres at Amsterdam, and was the author of several poems composed in Latin of which language he also compiled a dictionary. His classical attainments are further attested by some ingenious annotations of the works of Terence and Cornelius Nepos. His death was occasioned by a fatal fall into a canal during a fog and though the accident did not prove instantaneously fatal yet he survived it only a week dying on the 13th of November 1724.—*Mores. Sacra Oratione.*

HOOK (JAMES) a musician of Norwich, born 1746. He studied the science which he afterwards professed under Garland, organist to the cathedral of his native city. Few composers have been more voluminous, the number of his musical productions amounting to more than one hundred and forty complete works. Of these the principal are—*The Ascension* an oratorio 1776 *Cupid's Revenge*, a pastoral 1772 *La y of the Manor* 1778, *"Jack of Newbury* 1795, *"Wilmote Castle*, 1800, *Soldier's Return* 1805, *Opera. Tekeli*, a melodrama *The Siege of St Quentin* *"Munc Mad"* and several other dramatic pieces besides upwards of two thousand songs. He was the father of the rev Dr Hook now a dignitary of the established church, and of Theodore Edward Hook editor of the John Bull newspaper author of *Sayings and Doings* *"Killing no Murder a Taxe &c."*—*Bug. Duct of Mus.*

HOODE (NATHANIEL) celebrated for an elaborate Roman history. So few particulars of him are recorded that the time of his birth and family origin are unknown. The first fact that is afforded of him is given in a letter from himself to lord Oxford in which he describes himself as made by the South Sea inflation just worth nothing. He was recommended to Sarah, duchess of Marlborough to aid her in drawing up her *Apology* for which service she presented him with 5000*l.* although she afterwards quarrelled with him for an endeavouring to make her a catholic. His zeal for his religion was very great, if not orthodox being greatly attached to the mysticism and system of the school of Fesoon. It was Hook who brought the priest to confess Pope on hissing bed. Hook's great work, his

HOO

"Roman History from the earliest period to the accession of Octavius, is comprised in 4 vols. 4to, published in 1733 1745, 1764, and 1771, it is a performance of great accuracy, precision and critical acumen the style of which is clear and perspicuous without being eloquent or masterly. Another work upon Roman affairs was *Observations on four pieces upon the Roman Senate* 1756 4to in which he discusses the opinion of Vertot, Middleton and Chapman with some severity in respect to the two latter. He also translated Ramsey's *Travels of Cyrus*. He died 19th July 1763.—*Nichols's Lit. Anec. Rust Head. Life of Pope.*

HOOKE (ROBERT) a celebrated English mathematician and natural philosopher of the seventeenth century. His father was rector of Freshwater in the Isle of Wight where he was born in 1635. When young he displayed a particular inclination for mechanics on which account he was first destined to be a watch maker, but that intention was relinquished and he became a pupil of sir Peter Lely the painter. He did not however pursue this profession, but after some previous study at Westminster school under Dr Busby he removed to Christchurch college Oxford in 1653, and took the degree of MA about 1660. Previously to this he had become acquainted with Robert Boyle and Dr Seth Ward the former of whom he assisted as a chemical operator and from the latter he received instructions in astronomy. His researches on this subject led him to make some improvements in the pendulum for the mensuration of time and in 1658 or 1659 he invented what is now called the pendulum watch at least the prior discovery of it is usually assigned to Hooke by the English while foreigners ascribe it to Christiaan Huygens. In 1660 this philosopher was appointed curator of experiments to the Royal Society which then met at Gresham college and on the establishment of that learned association by charter in 1663, was nominated one of the first fellows and was afterwards a member of the council. In 1664 he was made Cutlerian professor of mechanics to the Royal Society and he afterwards became professor of geometry at Gresham college, having previously lectured for Dr Pope the astronomical professor. The next year he published his *Micrographia* or some philosophical descriptions of some minute bodies made by magnifying glasses &c folio. After the desolating fire in the metropolis in 1666 he proposed a plan for rebuilding it, which was much approved but not adopted. He was however appointed one of the surveyors to the city which proved a very lucrative employment. In 1668 commenced his controversy with Hevelius already noticed [See HEVELIUS]. In 1671 he attacked Newton's theory of light and colours, and in 1673 he proposed a Theory of the Variation of the Manner's Compass. He had a dispute with Oldenburg secretary to the Royal Society whom he accused of malice presenting his side to the discovery of pendulums

watches. On the death of that gentleman in 1673 he succeeded him in his office, but it was soon after bestowed on Dr Nehemiah Grew. He was created M.D. in 1691, by mandate of the archbishop of Canterbury. His death took place at his apartments at Gresham college, in March, 1702-3. He published a great number of papers in the Philosophical Transactions, besides which he was the author of Cutlerian lectures, a volume of posthumous tracts printed in 1705 and Philosophical Experiments and Observations, published by Dr Derham in 1726. Dr Hooke was a man of undoubted talents but of a very unamiable disposition. His quarrels with other men of science were generally managed in a way by no means creditable to his character, and his personal conduct was degraded by the most sordid avarice. He is said however to have been strongly impressed with the truths of religion, and in the general acceptance of the phrase he appears to have been a just and honest man.—*Ward's Lives of the Gresham Professors Martin's Biog Philos. Aiken's G. Biog.*

HOOKE or VOWELL (John) an English historian was born at Exeter about the year 1524 his father being mayor of that city. He studied at Oxford but it is not known in what college. He travelled into Germany and resided some time in Cologne and Strasburg where he heard the divinity lectures of Peter Martyr. Returning to England he was elected chamberlain of his native city and in 1571 represented Exeter in parliament. He died in 1602. His works are 'Order and Usage of keeping Parliaments in Ireland'. The Events of Comets or Blazing Stars made upon the sight of the Comet Pagona which appeared in November and December 1577. London 1577 8vo. An Addition to the Chronicles of Ireland from 1546 to 1568 in the second volume of Holinshed's Catalogue of Bishops of Exeter and a Description of Exeter in the third volume of Holinshed. A translation of the History of the Conquest of Ireland from Geraldus Cambrensis. He was uncle to the celebrated Richard Hooker.—*Prince's Worthies of Devon. Wore's Ireland by Herries.*

HOOKER (Richard) a celebrated divine and theological writer of the sixteenth century distinguished for his defense of the form and discipline of the episcopal church of England. He was born about 1553 at the village of Heavitree near Exeter. Displaying early in life an avidity for learning his uncle, John Hooker procured him the patronage of bishop Jewel who in 1567 sent him to Oxford where he obtained the place of one of the clerks of Corpus Christi college. After the death of his first friend, he was patronised by Dr Edwin Sandys, bishop of London and afterwards archbishop of York, through whose interest, and that of the president, Dr Cole, he was elected a scholar of his college in 1573, and he became tutor to the son of that prelate and to the grand nephew of archbishop Cranmer. In 1577 he took his degree as M.A., and

the same year was chosen a fellow of Christ-church. In 1579 his skill in the oriental languages procured him the appointment of deputy professor of Hebrew, and in 1581 he took holy orders and was shortly after made preacher at St Paul's cross in London. This appointment was the occasion of his entering into the marriage state with a partner who had neither the recommendation of beauty nor of fortune but was according to Anthony Wood, a silly clownish woman and widow a mere Xantippe. He thus lost his fellowship and remained unbenedict till 1584, when he was presented to the rectory of Drayton Beauchamp in Buckinghamshire. The following year his pupil, Mr Sandys obtained for him the valuable situation of master of the Temple, but the annoyances he experienced from the opposition of the afternoon lecturer Walter Travers who was a calvinist induced him to exchange this lucrative preferment for a quiet retreat at Beocumble in Wiltshire to which rectory he was presented in 1591. He was likewise appointed a prebend and sub-dean in the cathedral church of Salisbury. At this period he completed the first four books of his celebrated treatise 'Of the Laws of Ecclesiastical Polity' which was entered at Stationers hall in 1592 but not printed till 1594. The ensuing year he was presented by queen Elizabeth to the living of Bishop's Boume, in Kent, where he passed the remainder of his life. The fifth book of his great work appeared in 1597, and he finished also the last three books but they were not published till after his death which occurred November 2d 1600, in consequence of a pulmonary disease, arising from an accidental cold. The literary reputation of Hooker is founded on his ecclesiastical polity written in defence of the church of England against the attacks of the puritans. The book is no less remarkable for learning and extent of research than for the richness and purity of its style which entitles its author to be regarded as one of the classics of the Elizabethan age. The most convenient edition is that of Oxford, 3 vols 8vo. He was also the author of some tracts against Walter Travers and sermons.—*Isaac Walton's Life of Hooker Biog Brit. Aiken's G. Biog.*

HOOLE (John) a dramatic poet and translator born in London in December 1727. He was the son of Samuel Hoole of London, watchmaker, and was educated at a private boarding-school where he acquired an accurate knowledge of the Latin and French languages and some small knowledge of Greek. At the age of seventeen he entered as a clerk at the East India-house and imbibing a taste for the Italian language from the perusal of sir John Harrington's version of the Orlando Furioso he closely studied it, with a view of translating that poem, but after proceeding some time he set it aside for the Jerusalem Delivered, of Tasso which he commenced in 1758 and published in 1763. He was permitted to dedicate and present this translation to the queen, the dedication being composed by Dr Johnson. This was his first

second production, but he had before written a tragedy on the death of Mrs Woffington, and some poems in French's collection. In 1777 he published a translation of six dramas of Metastasio, in 2 vols., and the next year brought out his own tragedy of Cyrus, which did not succeed, Timanthes in 1770, and Cleone in 1775 were equally unsuccessful being the whole of his dramatic efforts. In 1773 he published the first volume of his Orlando Furioso, the farther progress of which was impeded by his advancement to the auditorship of the Indian accounts, he however concluded it in 1783, when it appeared complete in 5 vols. 8vo. In 1785 he wrote the life of his friend Mr Scott of Answell. Having retired from the East India house after a service of forty two years he took up his abode in 1786 with his wife and son, at the parsonage-house of the latter at Abinger near Dorking. Here advertizing to the common place objections to the Orlando he connected the narrative in twenty four books, and disposed the stories in a regular series, which alteration by no means superseded his former edition. In 1792 he translated Tasso's Rinaldo and ended his literary labours with a more complete collection of dramas from Metastasio. Mr Hooles is smooth but prosaic and monotonous in his versification and his translations are now nearly superseded. He died much respected in 1803.—*Boswell's Life of Johnson.* Nichols's Lit. Ans.

HOOPER. There were two eminent prelates of that name in the English church. The first of them JOHN HOOPER whose name is also sometimes spelt Hooper was a learned Cistercian monk converted to protestantism in the reign of Henry VIII. The date of his birth which took place in the county of Somerset, has been fixed at 1493; and his education was conducted at Merton college Oxford where he assumed the cowl. On the passing of the act commonly known as the statute of the six articles Hooper whose newly-formed opinions placed him in some danger from its operation fled to France and afterwards to Zurich in Switzerland where he married and led a life of literary leisure till the death of Henry allowed him to return once more to his native country. Setting in the metropolis, he became soon distinguished by his eloquence as a preacher while the prominent part he now took in the proceedings against bishop Bonner still further increased his popularity among those of his own persuasion. Thus, backed by his friend the earl of Warwick's interest with the young king procured his advancement to the sees of Gloucester in 1500 and of Worcester in 1552 both which he held together in commendam. A difficulty ensued at his consecration which had nearly prevented his preferment, the new bishop scrupling to go through the ceremony in the usual canon and habit, as being too nearly connected with the practice of the Romish church. He was even for a short time in custody on this account, but Edgland at length waived the question

he took his seat on the episcopal bench. In this his new situation he distinguished himself as well by his hospitality as by his piety and the mildness of his manners but on the accession of Mary these qualities could not obviate from the minds of the now dominant party the part he had formerly taken against Bonner and the tendency of his opinions continuing firm in his profession of the form of religion he had from choice adopted he at length received sentence as an obstinate and irrevocable heretic and suffered at the stake in the city of Gloucester with much constancy on the 9th of February 1554. He published several sermons and polemical tracts an account of which is to be found in Fox's Martyrology.—The second bishop of this name was GEORGE HOOPER a native of Grimsley Worcestershire born 1640. He was at first placed at St Paul's school but was soon removed to that of Westminster whence he proceeded on the foundation to Christ church Oxford in 1656. In this university he acquired considerable reputation by his scholastic attainments especially in oriental literature as well as in mathematics. In 1672 Morley bishop of Winchester made him his domestic chaplain and presented him soon after to the living of Havant which he exchanged for that of East Woodhay Hants. Sheldon archbishop of Canterbury afterwards availed himself of his services in the same capacity and in 1673 gave him the valuable rectory of Lambeth and a stall in Exeter cathedral. At the expiration of two years he attended Mary princess of Orange daughter of James II to the Netherlands as her almoner and on his return was offered the divinity of professorship in the university where he was educated but declined it. After the Revolution he obtained through the interest of his royal patroness the deanery of Canterbury to which he was presented in 1691 and almost immediately subsequent to the accession of queen Anne to the throne he was raised first to the see of St Asaph and in little more than six months afterwards translated to the more lucrative one of Bath and Wells. He was the author of a great variety of devotional tracts an essay on divorces written in Latin, and a learned treatise on the Jewish, Greek and Roman measures with another on English coin measures &c affixed to it by way of appendix. This work was first printed in 1721 but is to be found also in an excellent edition of his works complete published at Oxford, in folio 1737. This learned prelate after presiding over his diocese for twenty-four years, died in 1727 at Barleby Somerset, and is buried in Wells cathedral.—Fox's Acts and Monuments. Burnet's own Times. Nichols's Lit. Ans.

HOORNBEECK (John) a Dutch Polemic of the seventeenth century born in 1617 at Haerlem. He received his education at Leyden and Utrecht, in which latter university he succeeded to the divinity chair in 1644 acting at the same time as pastor to the congregation there. After continuing to fill this

H O P

situation for ten years with great ability and reputation he accepted an invitation to a similar but more lucrative appointment at Leyden. Bayle speaks highly of him both as a professor and a practical divine. Among his writings are to be found a "System of Practical Divinity" 4to, A Refutation of Socinianism 4to 3 vols two treatises the objects of which are the conversion of the jews and of the gentiles the former in 8vo the latter in 4to and a work on Theological Institutions. Dr Hoornbeek died at Leyden in 1666.—*Fischer Thact Sacra Nom.*

HOORNE (JOHN VAN) a Dutch physician born in 1621 at Amsterdam. Having studied at Utrecht he went to Venice and entered into the service of that state as a medical attendant on the forces of the republic. He subsequently graduated in physic at the university of Basle and after having filled the professor's chair in surgery and anatomy in his native city died eventually in 1670 at Leyden where he had passed the last seven years of his life in the capacity of anatomical professor. He was the author of a great variety of tracts on professional subjects all of which are much esteemed especially those on the formation of the testes and on the thoracic duct.—*Morer: Raet's Cyclop.*

HOPE (JONV) an ingenious physician and naturalist of the last century. He was born at Edinburgh May 10th 1725, and after studying at the university of his native city he went to Paris to attend the botanical lectures of the celebrated Jussieu. Returning home he graduated as M.D. at Glasgow and became a fellow of the college of physicians of Edinburgh of which he was afterwards president. He obtained the professorship of botany and the materia medica in the university of Edinburgh and he was in 1761 appointed botanist to the king and superintendent of the botanic garden. His death took place November 10th 1786 Dr Hope did not distinguish himself by any distinct publications of importance but he was fellow of the Royal Society in whose Transactions are to be found several memoirs on the subject of his botanical researches —*Life of Hope by Dr Dunton.*

HOPKINS (EXKIN) bishop of Londonderry the son of an English clergyman who officiated at Sandford in Devonshire where the subject of this memoir was born in 1633 His father got him admitted into the choir of Magdalen college Oxford of which society he afterwards became chaplain. Being presented to the rectory of St Mary Woolnoth in the city of London the bishop of that diocese made a difficulty of instituting him on account of his opinions which leaned towards presbyterianism. This circumstance and the breaking out of the great plague induced him to remove to Exeter where forming an acquaintance with the family of lord Robertes afterwards earl of Truro he married Araminta a daughter of that nobleman and on the appointment of his father in law to the lord-lieutenancy of Ireland accompanied him to

H O P

his seat of government. Before his patron's recall he had already obtained the deanship of Raphoe and in 1671 the new lord Lieutenant, the earl of Berkley raised him on the strong personal recommendation of his predecessor to the bishopric of the same diocese. In this see he continued ten years when he was translated to that of Londonderry On the city's being besieged in 1688 he came to London and the following year was made minister of St Mary Aldermanbury and continued so till his death in June 1690 Three editions of his works among which are expositions of the Decalogue and the Lord's Prayer besides sermons have been printed in folio 4to and 8vo. Bishop Hopkins left two sons the elder of whom CHARLES was born in 1664 at Exeter before his parents went to Ireland. He was placed at Trinity college, Dublin whence he removed to Cambridge. During the war of the Revolution he distinguished himself much in favour of the Orange party and afterwards lived as a wit and man of fashion about town, associating with Dryden lord Dorset Congreve and other poets of the day the latter of whom wrote an epilogue to a tragedy which he produced 1695 under the title of *Fyrrhus*. He was the author also of two other tragedies *The Female Warrior* and *Boudicea* and published a translation of the *Art of Love* and other pieces from Ovid. His death which was much hastened by his intemperate mode of living took place in 1699.—JOHN his younger brother was born January 1 1675 He too inherited the talent of the family although little more is known of him than that he was the author of a collection of poems printed in 1700 in three volumes entitled *Amarus, or the Works of the Muse* a poetical tribute to king William called *The Triumphs of Peace* 1698, and a short poem *The Victory of Death* The time and manner of his decease is unknown.—*Prince's Worthies of Devon: Baye Drum.*

HOPKINS (JOHN) see STRANHOLD

HOPKINS (WILLIAM) There were two divines of this name the one a native of Evesham in Worcestershire was born in 1647 He was educated at Oxford being successively a member of Trinity college and St Mary hall in that university Having taken holy orders he in 1671 accompanied the English embassy to Stockholm in the capacity of chaplain and four years after on his return to England was presented to the living of Landridge with the mastership of St Oswald's hospital, and a stall in Worcester cathedral Dr Hopkins possessed a great fund of antiquarian knowledge, and is known to have assisted bishop Gibson in rendering the *Chronicon Saxonum* into Latin, as well as to have been the translator of the article headed Worcestershire in Gibson's *Camden's Britannia* His other works are some *Anecdotes* on Johnson's reply to Jovian and Bertram on the Eucharist 8vo. His death took place in 1700 at Worcester — The second WILLIAM HOPKINS though in orders and rector of Bchey Sussex openly professed Arian principles, and even

H G R

published a treatise in defence of them, entitled "An Appeal to Common Sense," 1795. He died in 1796. — *Athen. Oevr. Res' Cycles*

HOPFNER (1641) an able and ingenious artist, especially in portraits. He was in a great degree self-taught, but by his talents and exertions struggled through many difficulties to the attainment of considerable eminence, and the rank of royal academician. Mr Hopfer had also a taste for poetry, which he exhibited in 1805, by a metrical translation of Tales from the *Touti Nama* the *Histoire des Pasteurs*, and the *Fabliaux de Le Grand*. He died in 1810. — *Cant Mag.*

HOPTON (Astrea) a mathematician, son of Sir Arthur Hopton, was born in Somersetshire, and educated at Lincoln college, Oxford. After taking his degree of BA, he removed to the Temple where he became the intimate friend of Fielden. He died in 1614, in his twenty-sixth year. He wrote a treatise on the *Geometrical Staff*, "The Topographical Gunne, containing the uses of that instrument the quadrant, plane table and circumferentor." "A concordance of Years, containing a new and exact computation of Time according to the English account." "Prognostications for the Years 1607 and 1614." — *Athen. Oevr.*

HORAPOLLO or **HORUS APOLLO** an Egyptian grammarian who flourished under the emperor Theodosius towards the close of the fourth century. He was a native of Panoplos and according to Suidas, taught publicly at Alexandria before he settled in the metropolis of the empire. In 1503 Aldus Manutius printed at Venice two books on the Hieroglyphics of ancient Egypt written in the Greek language, in one volume folio. These have been since reprinted by De Pau 1727 in 4to, at Utrecht, accompanied with annotations, and a Latin translation, but although all join in ascribing them to some person of this name, it is yet as Faberius observes very doubtful whether they be not the production of another Horus Apollo of even earlier date than the grammarian to whom they are attributed — *Faberius Bibl. Oevr.*

HORATIUS FLACCUS (Quintus) one of the most celebrated, and beyond comparison the most popular of the Roman poets. He was born at Venusia a town in the confines of Apulia and Lucania, BC 65, being the son of a freedman, who followed the employment of a tax-gatherer. Notwithstanding his humble origin, his father was a man of elevated and liberal sentiments, who took extraordinary pains to give his son an excellent education, for the completion of which he sent him at the age of eighteen to study philosophy and Greek literature at Athens. Whilst in that city, Marcus Brutus passing through in his way to Macedonia, took Horace, with several other Roman students, to the army. He soon made him a military tribune, but the poet freely confesses to a lack of martial spirit, and it appears that he fled from the field at the battle of Philippi, after throwing away his shield in a state of unseemly fear and dis-

order. As he was on the losing side, he incurred a forfeiture of property, but in other respects obtained a pardon. His literary talents now formed his sole dependence, and applying himself to poetry he soon made himself known to all the leading men of genius at Rome. Virgil, he informs us, was the friend who introduced him to Mecenas to whom he quickly rendered himself so acceptable that he became his familiar companion. That distinguished patron of letters also procured the restoration of his estate, and made him personally known to Augustus, who became greatly attached to him and would have constituted him his private secretary but Horace who preferred literary leisure and personal independence declined the appointment. Although fully capable of participating in the pleasures of refined society he seems to have been extremely attached to rural retirement, which he has eulogised in his poetry with great feeling and energy. At the same time he accuses himself of levity and mutability in his predilections and seems not to have been untaught with the follies familiar to his youth and station. When Horace was about twenty six years of age, Augustus found it necessary to make peace with Anthony in order to unite their forces against the younger Pompey on which occasion Horace and Virgil accompanied Mecenas to Brundisium, that minister being deputed by Caesar to conclude the treaty. Of this journey Horace has given a very entertaining account, in the fifth satire of his first book. The incidents of the life of this favourite poet were few and he appears to have chiefly passed his time between Rome and his Tiburtine or Sabine villa. His writings prove that he was on terms of easy familiarity with many persons of rank, and he showed himself generally ready to do friendly offices, in the way of advice and recommendation. He acquired much fame by his writings during his life but never could be induced to undertake any single great work. He, however composed his "Carmen secundum," at the express request of Augustus who had kindly complained of his saying so little of him in his writings. He died BC 8 in his fifty-seventh year and was interred near the tomb of his patron Mecenas whose death a short time preceded his own, an event that much affected him. On the merits of an author so well known, and so masterly canvassed by classical critics as Horace it is an unnecessary to dwell in a work of this nature. His odes are models of that kind of composition in the Latin language, and his epistles and astrologie while scarcely pretending to be poetry, abound in moral maxims vigorously expressed, in acute observations on life and manners, and in much easy and vivacious illustration. His preceptive pieces on the art of writing, the principal of which is his "Epistle to the Friars," or "Art of Poetry" display much good sense and taste, but are desultory and immature; a species of graceful negligence being one of the great charms of Horace. He is peculiarly the poet for apt

and elegant quotations, even the variety of his humor and vivacity of his philosophy used to increase his attraction in this respect, by allowing him to occasionally moralise in the lofty manner of the stoics, and at other times to indulge in the lighter strain of the Epicurean school, to which his genius and practice were probably more naturally conformable. The editions of Horace are numerous beyond those of any other poet. Dr Douglass, an eminent physician in the reign of George II collected no fewer than four hundred of them to which may be added the more recent editions of Combe, Wakefield, Hunter, and Matherichius.—*Horatii Opera in nova Doli Crasius' Litteris et Rom. Post.*

HOBBERY (MATTHEW) an episcopal clergyman who attracted notice by discussing the doctrine of the eternity of hell torments. He was born in 1707 at Haxey in Lincolnshire where his father was vicar of the parish. After some previous education in the country he became a student at Lincoln college Oxford whence he was elected fellow of Magdalen college. He took his bachelor's degree in divinity in 1743 and in 1745 he obtained that of doctor. Dr Smallbroke, bishop of Lichfield and Coventry made him his chaplain and bestowed on him a canonry in his cathedral, as well as other ecclesiastical preferment. He was subsequently presented by his college to the rectory of Stanlake which he held till his death in 1773. He published in 1744 a treatise on the Duration of Future Punishment 8vo and a posthumous collection of his sermons appeared in 1774.—*Genl Mag.*

HORNE (ANDREW) an English lawyer and juridical writer of the fourteenth century He is said to have been a native of Gloucester and held the office of chamberlain of the city of London in the reign of Edward II. He is asserted to have written a book entitled *Chronicon Gloucestrum* which is not now extant and he was the compiler of a work in the town clerk's office called *Liber Horne* containing the charters customs ordinances and statutes relating to the metropolis in the time of Henry III and Edward I. But the chief work ascribed to Horne is *The Mirror of Justice*, of which a translation by William Hague was published in 1642 and several times reprinted. This is a system of the common law of England, most of which according to Sir E. Coke was written before the conquest but arranged and augmented by Horne. It is, however a curious and interesting tract, whatever may have been its origin.—*Bridgeman's Legal Bibliography*

HORNE (GEORGE) a learned and pious English prelate of the eighteenth century. He was born at Otham near Maidstone in Kent, November 1 1730. To his father who was rector of Otham he was indebted for his early education; and he was afterwards at a grammar school at Maidstone whence at the age of fifteen he removed to University college, Oxford, where he had obtained a scholarship. He applied himself closely to study especially

of the Hebrew language to which he added the person of the writings of the Christian fathers. At this period also he became a convert to the system of Hutchinson, through his acquaintance with the rev William Jones, who was afterwards his chaplain. Adopting the strange notion that the philosophy of Newton was inconsistent with the Bible, and was designed to subvert its authority he in 1751 published anonymously, *The Theology and Philosophy in Cicero's Somnium Scipionis explained, or a Brief Attempt to demonstrate that the Newmann System is agreeable to the Nations of the wisest Ancients*; and that Mathematical Principles are the only safe ones 8vo. This was an ironical attack on the doctrines of Newton, which he neither acknowledged nor defended against the animadversions it provoked. In 1752 he proceeded M.A. and the following year he published an other tract against the Newtonian philosophy in support of the principle of Hutchinson. He now entered into holy orders, and soon obtained considerable reputation as a preacher. In 1754 he wrote against Dr Shunkford's account of the creation and fall of man and in 1756 he became involved in a controversy with Dr Keencott, the supposed author of *A Word to the Hutchinsonians*. In 1758 he was chosen a proctor to the university and at the expiration of his office he was admitted to the degree of BD. In 1760 he produced a pamphlet, in which he censured the plan of Keencott for a new edition of the Hebrew Bible, but the literary hostilities of these gentlemen terminated in a lasting friendship. In 1764 he took the degree of DD, and in 1768 he was elected to the presidency of Magdalene college. Shortly after obtaining this preferment he married the daughter of Philip Burton esq. In 1771 Dr Horne was appointed chaplain in ordinary to the king and the next year he displayed his seal in defiance of the thirty nine articles by publishing his *Considerations on the projected Reformation of the Church of England* in a Letter to Lord North 4to. His principal and most popular work, the *Commentary on the Book of Psalms*, made its appearance in 1776 in two vols. 4to. It displays to advantage the erudition and piety of the author, but a want of judgment is observable, which must detract from his acknowledged merit as a Scripture critic in the opinion of readers not unacquainted with his peculiar sentiments. In the same year in which he published his commentary he was chosen vice-chancellor of the university of Oxford. In 1781 he was promoted, through the recommendation of his friend, lord Hawkesbury (afterwards earl of Liverpool) to the deanship of Canterbury. In 1784 appeared his *Letters on Infidelity* 12mo directed chiefly against the writings of Hume and in 1787 he published "A Letter to the rev Dr Priestley" by an Under-graduate, 8vo to which the doctor replied in his *Defences of Unitarianism for the year 1787*. In 1790 Dr Horne was advanced to the bishopric of Norwich, when he resigned the presidency of

Magdalen college. He held this dignity rather less than two years, dying January 17 1773, at Bath, whence he was removed for interment to the church of Eltham in Kent. Besides the works noticed, he was the author of " Considerations on the Life and Death of John the Baptist," 1769, " A Letter to Dr. Adam Smith, on the Life, Death, and Philosophy of David Hume, esq; by one of the People called Chatham," 1777 8vo, " Discourses on several Subjects and Occasions, 8 vols. 8vo., Observations on the Case of the Protestant Dissenters, with Reference to the Corporation and Test Acts," 1790 8vo, and " A Charge intended to have been delivered to the Clergy of the Diocese of Norwich" 1791 4to. He also wrote some papers in a manuscript, called the " Olla Podrida," published at Oxford in 1787.—*Acta: G. Biog.*

HORNECK (Astronomy) a native of Basle, in the lower Palatinate, born 1641, who came over to this country in 1663, and entered himself of Queen's college Oxford, being admitted *ad eiusdem* to the degree of master of arts from the university of Wittenberg. Two years afterwards he quitted Oxford, where he had already obtained the living of All Saints and entered the family of Montague of Albermarle as domestic chaplain and tutor to his eldest son. His services in this double capacity were rewarded by his patron with a stall in Exeter cathedral and the Rectory of Doulton, Devon. Having graduated as doctor in divinity at Cambridge in 1681 he became some years afterwards one of the chaplains to king William and queen Mary to whose favour he had been specially recommended by lord Oxford and in 1693 was allowed to exchange his Exeter prebend for a more valuable one in Westminster abbey. The following year he freed, Dr Kidder bishop of Bath and Wells who afterwards wrote an account of his life, presented him to a stall in his cathedral, which he held together with his other preferment. Dr. Horneck is commemorated by his biographer as an able scholar especially versed in the Hebrew language and also as an active and conscientious divine. He published several sermons, which were much admired, as well as " The Happy Ascent; The Fire of the Altar;" " The Great Law of Consideration;" " The Crucified Jesus;" " The Exercise of Prayer," and other devotional tracts besides an account of

The Confessions of Lieutenant Stirrup and George Borroky executed for the murder of Mr Thynne of Longleat, 1681 and another of Mr Storer the rector of Putney's abjuration of protestantism under James II. He died of the stone in January 1696 and is buried in Westminster abbey.—*Kidder's Life of Horneck.*

HORNBY (FRANCIS) barrister-at-law was born at Edinburgh in the year 1778. He was educated at the high school, and finished his studies at the university of his native city, where he formed an intimacy with lord Henry Petty, subsequently marquis of Lansdowne, under whose patronage after studying the law, and becoming an advocate, he repaired to

London, and entered parliament in the year 1806. In 1810 he became chairman to the Balloon Committee, and was author of the unanimous report on that intricate subject, which formed the result of its labours. His close application to business however so much impaired his naturally delicate constitution, that he was obliged to seek the climate of Italy and died, greatly lamented at Pisa, 26 February 1817. Mr Horner whose literary talents were considerable was one of the earliest and most able writers in the Edinburgh Review.—*Annual Eng.*

HORNIUS (Grazius) an eminent writer of history was born in the Palatinate about the commencement of the seventeenth century. He studied at the college of Kreuzen, and becoming preceptor to a young Englishman, visited this country and attaching himself to the presbyterian party paid great attention to public affairs. He finally became professor of history in the university of Leyden, and died in 1650. His principal works are—" A Commentary on the present state of the Churches of England 1647" " A History of the Transactions in England Scotland, and Ireland in 1645-6" 1648, " De Ongnibus Americanis" 1658, " Historia Philosophie" 1655, " Historia Ecclesiastica, Orbis Politicus Orbis Imperans Geographus Venetia et Nova Arca Noe a history of monachies, and an edition of Sulpicius Severus. He had a warm controversy with Isaac Vossius respecting the age of the world.—*Mores.*

HORNSBY (THOMAS) an eminent mathematician and astronomer, born 1734, and died April 11 1810. He was Savilian professor of astronomy professor of natural philosophy and lectures on experimental philosophy at Oxford as well as keeper of the Radcliffe library. He had taken the degrees of MA and DD and was a fellow of the Royal Society in whose Transactions he published the following papers — " On the Parallax of the Sun" 1763, " Observations on the Solar Eclipse April 1 1764 at Oxford," " Account of the Improvements to be made by Observations of the Transit of Venus, in 1769," " Observations on the Transit of Venus, and Eclipse of the Sun, June 3, 1769," " The Quantity of the Sun's Parallax as deduced from Observations of the Transit of Venus on June 3 1769," " Inquiry into the Quantity and Direction of the proper Motion of Arcturus with some Remarks on the Determination of the Obliquity of the Ecliptic But Dr Hornsby chiefly distinguished himself in the literary world as the editor of the astronomical observations made by Dr Bradley, at Greenwich which, after a long delay arising from various causes were published in two volumes, folio 1796. Dr Hornsby entitled himself to the lasting gratitude of the scientific members of the university, by his successful labours in completing the astronomical arrangements at the observatory as well as by his zealous attention to the duties of his station.—*Gent Mag. Watt's Hist. Brit.*

H O R

HØRREBOW (Peter) an eminent astronomer and professor at Copenhagen, was born at Laagedal in Jutland in 1679. He studied at Aalborg under very unfavourable circumstances, being obliged during that time to submit to various kinds of labour. In 1716 he was appointed professor of mathematics at Copenhagen, and in 1723 was elected a member of the Danish Academy of Sciences. He died in 1764. He was the author of many works connected with his favourite pursuits among which were *Copernicus Triumphantus sive de Parallaxi Orbis Anni* in which he warmly advocates the system of Copernicus the Elements of Astronomy, and The Elements of Mathematics, but he is best known in England by his "Natural History of Iceland," folio 1753. His mathematical works were published in four vols. 4to Copenhagen 1735.—*Nova Diet Hist.*

HORROX (JEREMIAH) a celebrated English astronomer of the seventeenth century. He was born at Toxteth near Liverpool about 1619 and received his education at Emmanuel college Cambridge. About 1633 he began to study astronomy, but living then at Toxteth with a slender income his progress was but slow, and he made little proficiency in the science till about three years after when he formed an acquaintance with Mr William Crabtree of Broughton near Manchester who was engaged in a correspondence with Samuel Foster then professor of geometry at Gresham college London. Animated by the assistance of these gentlemen Horrox pursued his studies with assiduity and success. He appears to have resided at the village of Hool near Liverpool where he accurately observed the transit of Venus over the sun's disk November 24th 1639. Science would probably have been greatly indebted to him but he was unfortunately cut off by death January 3 1640-1, only a few days after he had finished his treatise entitled "Venus in Sole visa" which shows him to have been more intimately acquainted with the extent of the solar system than his learned editor Hookeius. Other productions of his pen left in an imperfect state were collected and published by Dr Wallis in 1673 under the title of *Opera Postuma*. Horrox seems to have been the first who ever predicted or observed the passage of Venus over the sun's disk from which he deduced many useful observations, though not aware of the full advantages to be derived from an examination of that important phenomenon. His theory of lunar motions afforded assistance to Newton who always spoke of Horrox as a mathematical genius of the highest order.—*Martin's Biog Philos. Aikin's Gen Biog*

HORSLEY (John) an English clergyman eminent as an investigator of the Roman antiquities of Britain. He was a native of Northumberland and was educated at a grammar school at Newcastle-upon-Tyne and afterwards at one of the Scottish universities, where he obtained the degree of MA. He then settled at Morpeth, in his native county as minister to a dissenting congregation; and

he appears to have died there December 12th, 1731, at the age of forty six. He was distinguished for a profound acquaintance with the antiquities of his country and some of his letters on archaeological topics are extant, addressed to Roger Gale esq. That gentleman was a contributor to Horsley's great work

Britannia Romana the publication of which was posthumous 1733 folio. It contains a sketch of the Roman history of Britain lists of military forces a description of the Roman walls accounts of inscriptions and sculptures with the geography and topography of Britain from Ptolemy Antonine &c. Though from its nature and the period at which it was compiled, this work is both defective and inaccurate it is still valuable and is entitled to commendation as the earliest systematic production of the kind. Mr Horsley was acquainted with mathematical science and he gave lectures on natural philosophy at Newcastle and at Morpeth.—*Vickit's Lit. Aikin's Gen Biog*

HORSLEY (SAMUEL) a learned dignitary of the church of England, probably of the same family with the preceding as his grandfather was a dissenter. His father who was a clergyman held the curacy of St Martin's in the Fields London in which parish the son was born in October 1733. He was educated at Westminster school and Trinity hall Cambridge where he took the degree of LLB in 1758. The same year having been ordained he became curate to his father then rector of Newington Butts which benefice he resigned to his son in 1759 who retained it till his promotion to the see of Rochester. In 1767 he was chosen a fellow of the Royal Society and the same year he published an elaborate treatise entitled "The Power of God deduced from the computable instantaneous production of it in the Solar System" 8vo. In 1768 he went to Christchurch Oxford as private tutor to lord Gurnsey eldest son of the earl of Aylesford and at that university he took the degree of LLD. In 1770 was printed at the Clarendon press his earliest mathematical publication *Apolloni Pergei Inclusionis Libri II.* In November 1773 he was elected secretary to the Royal Society; and not long after the earl of Aylesford presented him to the rectory of Aldbury in Surrey which he held by dispensation, together with that of Newington. In 1774 he published "Remarks on the Observations made in the last Voyage towards the North Pole, for discovering the Acceleration of the Pendulum in latitude 79 deg 50 min in a Letter to the hon C J Phipps, &c. In December the same year he married the daughter of the rev John Botham his predecessor at Aldbury. In 1776 he published proposals for a new edition of the works of sir Isaac Newton, which was gradually completed in five volumes, quarto. His great diligence and proficiency in various sciences now procured him the patronage of bishop Lewth who made him his chaplain and collated him to a prebend in St Paul's cathedral. In 1779 he resigned Aldbury and

HOR

the next year obtained the living of Thorley. He was appointed archdeacon of St Albans in 1781 and early in 1782 vicar of South Weald in Essex, on which he resigned both Thorley and Newington. He engaged warmly in the contest carried on in 1783 and 1784 with sir Joseph Banks, respecting his conduct as president of the Royal Society and delivered several very eloquent speeches on the occasion, printed with others in An Authentic Narrative of the Disensions of the Royal Society, 1784. Dr Horsey withdrew from the society in consequence of a certain high appointment taking place of which he did not approve. His concluding words on returning were I quit that temple where philosophy once presided and where Newton was her officiating minister. About the same period he commenced a literary controversy with the great champion of unitarianism Dr Priestley. His labours in the cause of orthodoxy on this occasion procured him the friendly patronage of the lord chancellor Thurlow who characteristically remarked, that those who defended the church ought to be supported by the church, and accordingly presented him to a prebendal stall in the cathedral of Gloucester and in 1798 he was, through the same interest made bishop of St David's. In his episcopal character he supported the reputation for learning and ability which he had previously acquired. His first charge to his clergy delivered in 1790 attracted great approbation as did also his speech in the house of lords on the catholic bill May 31st, 1791. On these as well as on other occasions, he showed himself the strenuous advocate for the existing state of things in religion and politics, and the merit of his conduct will accordingly be differently appreciated with reference to the various opinions of different persons but none can deny the ability with which he advocated the cause he had adopted. His zeal did not go unwarded. He was promoted to the see of Rochester in 1793 and made dean of Westminster, and in 1802 he was translated to St Asaph. He died at Brighton October 4th, 1806 and was interred at Newington Butts. Bishop Horsey at one period became quite an atheist, and some incautious and perhaps impetuous speeches which he uttered in the house of peers during the discussion of lord Grenville's bill etc. exposed him to a good deal of censure, but he may at least claim the praise of consistency of conduct as an enemy of innovation, and he was probably honest and sincere, if not wholly disinterested in his despaciations against religious and political heresy, and heretics. Besides the works noticed, he was the author of Critical Discussions on the 18th Chapter of Isaiah 4to, "Hosea, a new translation, with notes, 4to, a Translation of the Psalms, 2 vols., Biblical Criticism," 4 vols. 8vo, Sermons, Charges, Elementary Treatises on the Mathematics; on the Pyramids of the Greek and Latin Languages, and Papers in the Philological Department.—Nichol's Lit. Ann.

THOMAS HORSEY (1658) a physician of stu-

HOR

nece in the sixteenth century. He was a native of Torgau, and studied at the university of Frankfort on the Oder, where he took the degree of MD in 1552. After having practised his profession in Silesia and Moravia, he was in 1580 made physician-in-ordinary to the archduke of Austria, and four years after he obtained the professorship of medicine in the university of Helmstadt. On this occasion he delivered an inaugural oration De Remediis discordium Medicina et eorum Remedii printed with his Epistola Philosophorum et Medicinalium Lupa 1596 8vo. He died about 1600. Heatus was the author of a tract De Amore Dentis maxillari Poeni Silesi; et de Natura, Differentia, et Causis eorum qui Doloribus ambulant, Lupa 1596, 15mo. The Silesian boy with the golden tooth noticed in that work was an impostor whom Horstius, unfortunately for his reputation took for a prodigy whose appearance portended the overthrow of the Turkish empire.—HORSTIUS (Grazz) nephew of the foregoing became so celebrated a physician that he was styled the Aesculapius of Germany. He was born at Torgau in 1578 and studied at Wittenberg and Basel at which last place he was admitted MD in 1606. After being professor of medicine at different universities, he became first physician to the city of Ulm in 1622 and resided there during the rest of his life dying of the gout in August 1636. He published treatises De tripla Sanitate 1648, 15mo, De tuenda Sanitate Studiorum et Literatorum, De Causis similitudinis et dissimilitudinis in Foetu, respectu Parentum, 1619 4to, Dissertatio de Natura Amoris Additio Resolutionibus de Cura Faroës Amatoriae de Phœnix atque de Pulu Amantum 1611 4to. His works were printed in 3 vols. folio Nuremberg 1660.—Morer Hutchinson's Biog Med.

HORTE (Josiah) an ingenious and liberal divine who was a native of Marshfield, in Gloucestershire. He received his education at Tewkesbury in the same county at a dissenting academy kept by Mr Samuel Jones, where Butler afterwards bishop of Durham, was at the same time a student. After having completed his studies, Horte became pastor to a congregation of dissenters at Newbury in Berkshire which situation he left, and took orders in the church of England. Obtaining the patronage of one of the viceroys, he went to Ireland, where he was made bishop of Kilmore, and subsequently archbishop of Tuam which see he held till his death, which happened in December 1751. His published works consist of a volume of sermons, and a Pastoral Charge to his Clergy.—Chidwicks Gen. Biog Diet.

HORTENSII (LAMMARI) the assumed name of a learned native of Montfort, near Utrecht, who in his various writings in history, poetry and philology took this designation, by which alone he has come down to posterity, in commemoration of his descent from a Dutch gardener. Although his real name is unknown, it is ascertained that he was born about the

commencement of the sixteenth century and received a liberal education at Louvain. He afterwards presided for a number of years over the grammar-school of Naarden and was the author of a history of the war in Germany under the emperor Charles V written in the Latin language, in seven books, a Common tract on the first six books of Virgil's *Aeneid*, another on Four of the Comedies of Aristophanes, and a third on Lucan's *Pharsalia*. He also published two accounts "De secessione Ultrayectana," and "De tumultu Anabaptistarum"; besides some satirical and other poems. His death took place at Naarden in 1577.

HORTENSIIUS (*Quintius*) a celebrated Roman orator, who flourished in the time of Marcus and Sylla, and survived to see his reputation eclipsed by the growing eloquence of his great rival Cicero. He was of senatorial dignity and having pleaded his first cause with great success about the year 92 before the christian era when only in his nineteenth year passed successively through the offices of military tribune A U C 664 and prætor 651 till he finally attained the consulship in 655. His works are unfortunately lost to posterity, but Cicero has spoken ably and affectingly upon his death which took place in the same year in which Caesar by causing himself to be proclaimed dictator put an end to the Roman republic, and about half a century BC. The intimacy of Hortensius with Cato was shown by the singular circumstance of his obtaining from the latter his wife Marcia, for the purpose of bringing him a family which had not been answered and she lived after wards with Cato until his death.—*S C Hon* TENESIA daughter of this orator inherited her father's eloquence which she exercised in pleading the cause of the Roman ladies before the triumvir, Antony Octavian and Lepidas, who had issued an edict compelling them to declare their property preparatory to a heavy taxation. Quintilian speaks of this harangue with applause.—*Ciceron Brutus. Boyle.*

HOSPINIAN (*Rosolinus*) an eminent Swiss divine born at Altdorf in the canton of Zurich in 1547. Having received a liberal education at Zurich, Marburg, and Heidelberg he entered the church in 1568 and three years afterwards obtained the freedom of the city of Zurich and the superintendence of the abbey school there. While in this situation he devoted his leisure hours to the compilation of a voluminous and elaborate work, which he printed occasion ally in different portions, under the title of a

History of the Errors of Popery but did not live to complete it. This and another treatise written against the Jesuits, and entitled *Historia Jesuicola*, procured him, in 1568 the archdeaconry of the Caroline church. At the expiration of six years he was further preferred to be pastor of the abbey church, where he continued to officiate till within three years of his death, although a cataract deprived him of sight for more than a twelvemonth during the interval. In 1613 the operation of couching restored his vision, but in 1623, being then

seventy-six years of age his faculties failed him, and though he survived till 1626, his last three years were passed in a state of childish imbecility. He was twice married, and had fourteen children by his first wife, who died in 1612. An edition of his works was printed at Geneva, in seven volumes, folio, in 1681, among them besides those already enumerated, are a treatise on the Eucharist and another called *Concordie Discons*, both which gave great offence to the Lutherans, who replied to them with much asperity. Also others, *De Tempis, Festa Christianorum, De Monachis*, and "De Festis Judaeorum et Ebreorum." *Boyle.*

HOSPITAL (*MICHAEL DE L.*) an eminent chancellor of France was born in 1505 at Aigneville in Auvergne. His father who was physician and chief manager of the affairs of the constable de Bourbon sent him to study jurisprudence in the most celebrated universities of France and Italy where he also distinguished himself by his acquirements in polite literature. He quickly rose in his profession and after obtaining the office of counsellor of parliament was sent ambassador by Henry II to the council of Trent. In 1554 he was made superintendent of the royal finances, in which post by his ability economy and integrity he restored the exhausted treasury and put an end to the dishonest practices and the unjust emoluments of a horde of rapacious court favourites whose exorbitant he encountered with inflexible sternness. On the death of Henry II he was introduced by the Guises into the council of state, which post he gave up to accompany Margaret de Valois duchess of Savoy as her chancellor. The confusion which followed in France soon made it necessary to recall a minister of so much talent, and he was advanced to the post of chancellor. Although patronised by the house of Guise, and obliged to acquiesce in many things which he disapproved to prevent a great deal that he disapproved more he never ceased to advocate toleration and was the principal author of the edict of 1568 which allowed freedom of worship to protestants. By this conduct he rendered himself exceedingly odious to the court of Rome which sought in vain to remove him, until the court came to the summary resolution of exterminating the reformed religion by violence. Finding himself regarded with suspicion and dislike he anticipated his dismissal by a voluntary retreat to his country-house where a few days after the seals were demanded from him which he resigned without regret, observing that the affairs of the world were becoming too corrupt for him to take a part in them. In lettered ease the conversation of a few friends, and in the composition of Latin poetry in which he took much pleasure, he enjoyed himself with great satisfaction, until the atrocious day of St. Bartholomew in 1572. Upon this event, his friends fearing that he might be made one of its victims, urged him to take measures for his safety but he not only dis-

dicted to seek condonement, but when a party of人文主义 (although without authority) all hurried towards his house, he refused to close his gates. He was preserved only by the arrival of a second party with express orders from Charles IX to spare him. On this occasion he was told that the persons who made the list of proscription pardoned him when he easily observed: "I did not know that I had done any thing to deserve either death or pardon." This excellent magistrate and truly great man survived that execrable event a few months only dying on the 13th March 1573, at the age of sixty-eight. Distinguished by that firmness of mind, without which the greatest talents are often useless, no one was more determined enemy to injustice, and the reform in legislation produced by him is regarded by the president Henriot, and other enlightened writers, as at once highly honourable to his integrity and capacity and of the greatest benefit to France. It was comprised in various ordinances particularly that of Moulins, in 1566. His other works are "Latin Poems, of a grave and masculine character easy energetic but diffuse, the best edition of which is that of Amsterdam 1732; Harangue before the States of Orleáns, in which he appears to have less advantage as an orator than a poet. Mémoire containing treatise, state papers &c., A Discourse in favour of Peace" and his Testament." The eulogy of L'Hospital was made a prize subject by the French Academy in 1777 and a statue was erected to him by Louis XVI. An able essay on his life was published by M. Bourdier in 1807 from which work and other materials Mr Charles Butler some time after published another essay principally with a view of exalting him as a catholic friend to toleration.—Moreri. C Butler's Life of L'Hospital. Sam. Onson. Bayle.

HOSPITAL or HOPITAL (WILLIAM FRANCIS ANTHONY DE L') marquis de St Maenne, a celebrated French mathematician of the seventeenth century. He was born in 1661, his father being a lieutenant-general in the army and master of the horse to the duke of Orléans. After being educated at home under a private tutor he entered into the army but was obliged to quit the service on account of the imperfection of his sight. He then devoted himself exclusively to the study of mathematics, and being particularly delighted with the perusal of father Malebranche's *Recherche de la Vérité* he sought his acquaintance and followed his advice on all occasions. At the age of thirty two he distinguished himself by solving problems proposed to the lovers of mathematics by James Bernoulli, and in 1693 he was admitted as a honorary member of the Academy of Sciences at Paris. From that period he published in the French and English journals solutions of difficult questions and other mathematical communications. Such was his reputation that M. Huyghens, professor as was his acquaintance in science, did not disdain to apply to him his information relative to the nature of

the differential calculus. This led to the publication of his treatise entitled "L'Analyse des Infiniment Petits," 1696 the first French work on the subject, of which a new edition was published by Lefèvre Paris, 1781 4to. The marquis de l'Hospital continued his researches with ardour till his death which took place in 1704. Besides the works mentioned he was the author of ' Les Sections Coniques les Lieux Géométriques et Construction des Equations, and Une Théorie des Courbes Mécaniques 4to. He was in private life a man of integrity of an open and candid disposition and of agreeable and polished manners suited to his station in society —Fonsenelle's *Eloges des Justes*. Martin's *Bog Philos.* Aikin's *G. Bog*

HOSTE (PAUL) was born May 19 1659 at Pont de Vaise, he joined the junks in 1669 and acquired great skill in mathematics he accompanied the marshals d'Estrees and de Tourville during twelve years in all their naval expeditions and gained their esteem. He was appointed king's professor of mathematics at Toulon and died there February 23 1700 leaving Recueil des Travaux de Mathématiques les plus nécessaires à un Officier 3 vols. 12mo. L'Art des Armées Navales ou Traité des Evolutions Navales Lyons, 1697 and more completely in 1727 folio. This work is equally historical and scientific it contains an account of the most considerable naval events of the fifty preceding years. He presented it to Louis XIV who received it graciously and rewarded the author with 100 pistoles and a pension of 600 livres. A treatise on the construction of ships which he wrote in consequence of a conversation with marshal de Tourville is printed at the end of the preceding. In 1762 lieutenant O Brye published in 4to "Naval Evolutions or a System of Sea Discipline" extracted from father L'Hoste's Art des Armées Navales.—Moreri. Nouv. Dict. Hist.

HOTSTE or L'HOSTE (JOHN) a learned French mathematician of the sixteenth century. For some time he was professor of civil and canon law in the university of Pont-à-Mousson. He then succeeded to the chair of mathematics in the same place whence he was removed to Nancy by Henry duke of Lorraine, who appointed him his superintendent of fortifications and counsellor of war. In this capacity he fortified Nancy and otherwise distinguished himself by mathematical treatises, which, however subsequently superseded entitle him to respectful notice. He died in 1631. His principal works are, "Le Sommaire et l'Usage de la Sphère Artificielle 4to, Description et Usage des principaux Instruments de Géométrie," De Cadran et Quadrat, "Rayon Astronomique," Bâton de Jacob, "Interprétation du grand Art de Raymond Lulle, &c. —Moreri. Nouv. Dict. Hist.

HOTMAN (FRANCIS) an eminent professor of jurisprudence, born at Paris in 1584. His progress in the study of the civil law was so

H O T

rapid, that when only eighteen years of age he was admitted to a doctor's degree so that faculty at Orleans. Returning to the metropolis, of which he was a native, he soon after distinguished himself by his lectures on the Roman code, as well as by his proficiency in the belles lettres but having embraced the tenets of the reformed religion the embrage which he gave by this step to the rest of his family induced him to withdraw from their society and to settle in Switzerland where, after remaining a short time at Geneva, he accepted the professor's chair in belles lettres at Bern. Hence he removed to Strasburg on obtaining the professorship of civil law in that university and lectured with so much reputation that large offers were made him by several German as well as other courts to settle in their respective dominions. Of these he at length accepted the proposals of Margaret of France and took up his abode at Bourges but the massacre of the Huguenots in 1572 from which he very narrowly escaped caused him to leave France with precipitation nor could he ever be prevailed on to return On this occasion he fled back to Geneva, and thence retired to Basel where he passed the remainder of his days. The last six years of his life, which were rendered painful by a confirmed dropsy were spent by him in revising his works on jurisprudence government and antiquities a treatise *De Consolatione* &c all which appeared in three folio volumes in 1599. Of these his Franco-Gallia has been translated into English by Lord Molesworth. Hotman like many of his contemporaries is said to have been a firm believer in alchemy and to have wasted much time and treasure in pursuit of the opus magnum. His death took place in 1510.—*Moreri. Aikin's G Biog.*

HOTTINGER (JOHN HENRY) a learned Swiss divine and Oriental scholar of the seven teenth century He was born at Zurich in 1620 and displaying when young an extraordinary propensity for the study of languages, some friends at Zurich afforded him the means of completing his education in foreign universities. He went to Geneva, Gottingen and Leyden where he applied himself with such diligence and success to the study of the oriental languages as to become one of the first scholars of his time After visiting England he returned to Zurich in 1642 and was immediately appointed professor of ecclesiastical history, and in the following year professor of catechetical divinity and of the oriental languages. In 1653 he was made professor of rhetoric and admitted into the college of orators. His great reputation occasioned his being invited by the elector palatine to Heidelberg to aid in the restoration of that university. He went thither in 1655 after having taken the degree of DD at Basel. He was appointed professor of divinity and principal of the college of Wisdom and raised to the dignity of ecclesiastical counsellor. The next year he was created rector of the university, and in 1658 he accompanied the prince palatine to the electoral diet of Frankfort where he formed

H O T

an acquaintance with the famous orientalist, Job Ludolph. In 1661 he returned to Zurich when he was appointed president of the committee for the revision of the German translation of the Bible. He was sent to Holland in 1664 on some political mission and in 1667 while preparing for a temporary removal to Leyden, where he was offered the professorship of divinity, he was accidentally drowned by the overturning of a boat, in the neighbourhood of Zurich. Among his numerous works are an Oriental History from the Eastern writers, an Oriental Library or Catalogue of Books and Authors, an Heptaglott Lexicon, Exercitations against Morn, who preferred the Samaritan Pentateuch to the Hebrew Text, and Thesaurus Philologicus, or a Key to Scripture illustrating it from the Oriental languages and literature.—*Boyle. Aikin's G Biog.*

HOTTINGER (JOHN JAMES) son of the subject of the last article and also distinguished as a divine and theological writer. He was born at Zurich in 1632 and received his education in that city and at Basel whence, in 1674 he went to Geneva. The following year he was ordained to the ministry at Zurich, and in 1698 on the death of Heidegger he obtained the professorship of theology which he held during the remainder of his life. He wrote Theological Dissertations, and a vast multitude of other treatises on divinity biblical criticism and controversy both in the German and Latin languages. His death took place at Zurich in 1730.—*Moreri. Aikin's G Biog.*

HOTZE (—) an Austrian general who was a native of the canton of Zurich in Switzerland. In 1792 he served in the army as colonel of a regiment of cuirassiers, and in February 1793 he was promoted to the rank of major general when he was employed under Wurmser. He contributed to the taking of the lines of Viessembourg on the 13th of October but failed a few days after in an attack on the heights of Saverne and was unfortunate on other occasions in that and the following campaign though he had the reputation of being a brave and skilful officer. He continued to serve in 1794, 1795, and 1796 in the army of the Rhine, and in March 1795 he was made a lieutenant field-marshal. In August 1796 he assisted in gaining the battle of Neumarkt, and a few days afterwards he particularly distinguished himself in the field of Wurtzbourg where he displayed great talents and activity. In May 1797 the emperor rewarded his services with the grand cross of the order of Maria Theresa. He had the command of the left wing of the army of the archduke Charles in 1799 and was extrusted with the operation of effecting the passage of the Rhine above the lake of Constance and penetrating into Switzerland. He succeeded only after several bloody combats in which he lost a great part of his troops, but his operations contributed powerfully to the future success of the archduke. He was killed near Chaltenbrunn in an attack made by the French, September 25, on his position behind the Laut. The defeat of the Russians under

HOU

Kotzebue at Berlin, which took place at the same time, coincided therewith.—*Dict. des H. M. de l'Acad. S.*

HOUDARD (Davy) a French advocate and polished writer, who was a native of Dieppe and died at Alençon in 1803. He was a member of the Academy of Sciences and Belles-lettres at Paris, and afterwards an associate of the National Institute and was distinguished for his acquaintance with legal antiquity. His works are "Antiquités Latines des Français conservées dans les costumes Anglois," 1766 2 vols., 4to and "Traité sur les Costumes Anglo-Normandans," 4 vols., 4to.—*Nouv. Dict. Hist. des Usages.*

HOUBIGANT (CHARLES FRANCOIS) a distinguished French priest of the congregation of the oratory, born in 1686 at Paris. An incurable deafness made study his only resource for amusement, and his progress in literature was in consequence so great as to procure him the expressed approbation of his pontiff Benedict XIV. The fruits of his learned labours are translations of the Hebrew Psalter and of all the books contained in the Old Testament, into Latin, the former printed in 1746 in 12mo, the latter in seven 8vo volumes. In 1703 he published also at Paris a complete edition of the Hebrew Bible with notes and a Latin translation in four folio volumes. His other works are "Recensement Hebreu," 8vo, "Examen du Psautier des Capuchins," 12mo, and translations of Leibniz's treatise against Deism, and Sherlock's Sermons. He reached the advanced age of ninety-six years dying in the year 1783.—*Nouv. Dict. Hist. Socie. Oeuvr.*

HOUBRAKEN (JACOB) an eminent engraver, the son of Arnold Houbraken a Dutch artist, who visited England to make engravings from the works of Van Dyke to add to a collection which he published of the productions of the Dutch and Flemish painters, in 3 vols. folio. He died in Holland in 1719. Jacob who was a native of Amsterdam, spent much of his life in England, where he was greatly distinguished as an engraver of portraits. His principal work is a series of "Heads of Illustrious Persons of Great Britain," engraved in conjunction with Vertue, and published with accounts of their lives, written by Dr Birch 1752 2 vols. folio, republished in 1813. Houbraken engraved many other portraits, and some historical subjects. He died at Amsterdam in 1780, aged eighty-two.—*Sturt. Brug.*

HOUCHARD (JOHN NICHOLAS) a French republican general. He was at first a private in a regiment of cavalry, then a lieutenant in the dragoons of Bourbon, and rapidly obtaining promotion, at the commencement of the political disturbances, he was in 1792 made colonel of a regiment of chasseurs. Employed in that capacity in the army of Couthon, he displayed great activity before Spire, near Giessen, where he defeated a body of Hessians, and on several occasions against the Prussians. In the beginning of May 1793, he was appointed to succeed Couthon in the command of the

HOU

army of the Rhine, but he very speedily quitted it for the army of the Moselle whence in August he removed to that of the North, where he again superseded Couthon who was accused of treason. In this station he displayed boldness and activity rather than great military talents. He was however very successful, having overthrown the allies before Dantzig on the 6th and 7th of September and beat the English again the following day at Houde-sous-Mont, making himself master of Furnes, Menin, and many other positions. All his success could not save him from destruction. Being denounced by his colleague general Hocine, he was arrested at Lille, the 24th of September removed to Paris and condemned to death as a conspirator against the republic. He suffered by the guillotine November 15, 1793.—*Dict. des H. M. de l'Acad. S.*

HOUGH (JOHN) a sprightly prelate of the church of England, celebrated for his prudent but courageous resistance to the arbitrary measures of James II for the illegal appointment of a president of Magdalene college Oxford. He was the son of John Hough a citizen of London descended from the Houghs of Cheshire and was born in Middlesex in 1650. He received his education at the free-school of Birmingham whence he was removed to Magdalene college Oxford of which he became a fellow in 1675. In 1676 he entered into orders and in 1681 was appointed domestic chaplain to the duke of Ormond then lord lieutenant of Ireland, in whose suite he passed over to Dublin. The next year he returned with the same nobleman to England, and in 1685 was made a prebendary of Westminster and presented to the living of Lempsford in Bedfordshire. He graduated BD in 1687 and immediately after made his memorable stand against the arbitrary attempt of James to impose an unqualified president upon his college. By his example the fellows were encouraged to reject the mandates of the king in favour of one Anthony Farmer who had not been fellow either of Magdalene or of New College as required by the statutes, and who was otherwise of very indifferent character. He proceeded farther and as a stoutish majority concurred in electing him president, he had the spirit to accept the office in defiance of the royal order. His election was regularly confirmed by the bishop of Winchester visitor of the college and in the same year he was admitted DD. This bold step was the commencement of that clerical resistance to the tyrannical proceedings of James, which materially contributed to bring about the revolution nor was the latter slow in showing his indignation. On the day after Dr Hough had taken his degree of doctor, the king's ecclesiastical commissioners deprived him of the presidency, and installed Dr Parker, made bishop of Oxford (although a catholic) by proxy, in his room. At the same time, the fellows, who refused to sign a submission to their new president to the number of twenty five, with Dr Hough were immediately expelled the college, and declared incapable of being ad-

H O U

mitted to any ecclesiastical dignity or benefice whatever. The following year, however, when the prince of Orange's declaration reached England, James found it necessary to retract all those illegal proceedings in his encounter with which Dr Hough had behaved with equal temper, prudence and dignity and to restore that courageous divine and the ejected fellows to their collegiate rights and privileges. Soon after the revolution in April 1690 Dr Hough was made bishop of Oxford. In 1699 he was translated to the see of Lichfield and Coventry and lastly in 1717 to that of Worcester which he held for twenty-six years although of the age of sixty-seven when he took possession of it. Owing to the excellence of his constitution and the calm and even temperance of his mind he reached to the great age of ninety three, and possessed his faculties to the last, although quite exhausted. His death took place on the 8th of March 1743. Dr Hough was a munificent benefactor both to Magdalen college and to his various sees by expending liberally towards buildings, repairs and improvements, and his private charities were proportionably extensive. The life of this respectable prelate was a few years ago given to the world in a splendid publication by John Wilmot, esq FRS, and SA in which biography many of his letters are preserved. Dr Hough published during his life-time eight occasional sermons only and left strict orders that nothing should be printed from his MSS on his decease.—*Life by Wilmot.* *Bug. Brit.*

HOUILLES (ANTOINETTE DE LA GARDE BRS) a French poetess was born at Paris in 1638. She was both beautiful and witty and won much in the time of Louis XIV. Her taste for poetry was cultivated by the celebrated poet Beaumain and she composed epigrams, odes, eclogues, tragedies, but succeeded best in the idyllic or pastoral. She died at Paris in 1694 and left a daughter of her own name who had some talent for poetry but inferior to that of her mother. The first verses which she composed gained the prize at the French academy, although highly to her honour if what is reported be true Fontenelle wrote at the same time and upon the same subject. She was a member of the academy of the Ricovrati of Padua as was her mother who was also of that of Arles. She died at Paris in 1718. The works of these two ladies were collectively published in 1747 in 2 vols. 12mo. Several maxims of the elder of them are much cited by French writers.—*Moreri. Bug. Gallica.*

HOUSTON (WILLIAM) an able promoter of exotic botany. The particulars of his birth and early education are unknown but after a voyage to the West Indies as a surgeon he repaired to Leyden and took his degrees in physic under Boerhaave in 1728-1729. While at Leyden he instituted a set of experiments on brutes some of which were made in concert with the celebrated Van Swieten. These were afterwards published in the *Philosophi et Transactions*, under the title of "Experiments de Perforatione Thoracis equorum in

H O V

Respiratione effervens" the result of which proved contrary to previous persuasion, that animals can live and breathe for some time, although air be freely admitted in both cavities of the thorax. He was in 1738 elected a fellow of the Royal Society and went immediately after to the West Indies, where he felt a sacrifice to the climate the following year. He had previously sent over to his friend Mr Müller, of Chelsea, the seeds of many rare and new plants collected by him in the islands. His MS catalogue of plants also reached the same gentleman at whose death it fell into the hands of sir Joseph Banks, who published it under the title of "Reliquiae Houstonianae 1781 4to.—*Padbury's Botan. Sketch.*

HOUTEVILLE (CLAUDE FRANCIS) a French ecclesiastic chiefly known as the author of a celebrated treatise in favour of Christianity was born at Paris about the year 1688. At the age of sixteen he became a member of the Congregation of the Oratory and distinguished himself by the diligence of his application and for the manner in which he executed the different employments intrusted to him. Having quitted the Congregation after a residence of eighteen years he became secretary to cardinal Dubois whom in 1723 made him abbot of St Vincent du Bourg sur mer. In the same year he was admitted a member of the French academy to which he was elected perpetual secretary in 1742 but died in a few months after at the age of fifty four. His principal work which has been already alluded to was first published in 1722 under the title of *La Vérité de la Religion Chrétienne prouvée par les Faits*. This edition being debased by a gaudy and affected style encountered much criticism by which the author wisely profited and having new cast the whole performance he published a second and considerably enlarged edition in 1741 in 3 vols. 4to. It had extraordinary success on its first appearance but its reputation has since much declined. The other works of the abbe Houteville are a *Philosophical Essay on Providence* 1728 12mo; *An Historical Eulogium on M Bossuet, bishop of Meaux* and several *Discourses* pronounced at the French academy.—*Moreri. Nov. Diet. Hist.*

HOVEDEN (ROGER DE) an English historian who flourished in the reign of Henry II. He was born at York and entering the church was for some time professor of theology at Oxford. He was also a lawyer and is said to have served the king in the capa city of chaplain and in other confidential offices. After the death of Henry he applied himself to the compilation of English history and wrote annals in Latin, commencing at 731 the period at which Bede finished, and bringing down affairs to the third year of John 1161. His style is defective but he is highly esteemed for his diligence and fidelity and according to Leland surpasses all the writers of his class who preceded him. Voynich asserts that he is author of a history of the Northumbrian kings and of a life of Thomas-a-

H O W

Brother. Such was his authority, that Edward I issued a diligent command to be made in all the Shires for copies of Howden's Annals, in order to ascertain the homage due from the crown of Scotland. This work was published in sir Henry Savile's "Collection of ancient English Historians," 1596-1604 folio.—*Leviathan & Scriptor. Ante-Nelson's Hist. Literature.*

HOW (WILLIAM) the first English botanist who gave a sketch of what is called a " Flora," was born in London in 1619. He was educated at Merchant Taylors' school, entered St John's college in 1637 took his degree of MA in 1645 and began to study medicine. With many scholars of that time he entered the royal army and was promoted to the rank of captain in a troop of horse. Upon the decline of the king's affairs he prosecuted his studies in physic, and began to practise. He died in September 1656 leaving behind him as Wood says, " a choice library of books of his faculty and the character of a noted herbarist." The work to which we have alluded was entitled " *Phytologia Britannica, Natales exhibentes indigenarum Stirpium sponte emergentium Lond. 1650 12mo.* It is a copious catalogue for that time but there are many articles in it which have no title to a place as in digenous plants of England."—*Chalmers Biog. Dict.*

HOWARD (THOMAS) duke of Norfolk, an eminent statesman and warrior in the reign of Henry VIII. He was born about 1473 and was grandson of the first duke of the Howard family who lost his life at the battle of Bosworth fighting for Richard III. His father who was also in arms on that occasion was reprieved by Henry VII to his title and estates which he had forfeited. The son was made a knight of the garter soon after the accession of Henry VIII and he obtained early distinction by his talents, both as a naval and military commander. He assisted in the capture of the Scottish freebooter sir Andrew Barion in 1511, and when his brother sir Edward Howard, was killed in an engagement with the French off Brest, in 1513 he succeeded him as high admiral of England. The same year he commanded, with his father at the battle of Flodden in which James IV king of Scotland was totally defeated and slain. For their services on this occasion the father was made duke of Norfolk and the son earl of Surrey. The latter was sent to Ireland as lord lieutenant, in 1521 where he suppressed a dangerous insurrection under O'Neal. He next made a successful expedition to the coasts of France, and in 1523 he was appointed lord treasurer and soon after landed an army into Scotland where he burnt the town of Jedburgh. His father dying in 1524 he succeeded to the dukedom. He was after wards a leading member of the king's council and was considered as the head of the Roman Catholic party, though he acted with so much astuteness as to retain the favour of his captious sovereign till near the close of his long reign. In 1536 he was employed against the

H O W

Catholic insurgents in the north of England; and in 1542 against the Scots. In 1544 he went to France with the king, in an hostile expedition, and commanded at the siege of Mantes. All his services could not excuse him from the suspicious jealousy of Henry, who on slight grounds had condemned him to suffer the death of a traitor on the 29th of January 1547. The king's death the preceding night, granted him a respite, but he was detained a prisoner in the Tower during the reign of Edward VI. He was released and reinstated in his rank and property on the accession of queen Mary and he sat as high steward on the trial of the duke of Northumberland. He closed his long life in peace, at Kenning-hall, Norfolk in August 1554.—*Colinus's Peerage. Arthur.*

HOWARD (HENRY) earl of Surrey eldest son of the preceding an accomplished noble man, and the best English poet of his age. His birth is dated by some writers in 1515 and by others in 1520. While a youth he resided at Windsor as companion to the duke of Richmond natural son of Henry VIII whom he accompanied to cardinal Wolsey's college at Oxford now Christchurch where he studied poetic literature with great success. He then made the tour of Europe, and after remaining some time at Paris where the duke of Richmond died he went to Germany and thence to Florence. In that city he signified his courage and romantic spirit by publishing in the style of a knight-errant a challenge to all comers Christians Jews Saracens Turks or Cannibals, in defence of the surpassing beauty of his mistress the fair Geraldine and he was victorious in the tournament instituted by the grand duke on the occasion. The lady who was the subject of lord Surrey's chivalrous defiance is supposed by lord Orford with great probability to have been lady Elizabeth Fitzgerald, daughter to the earl of Kildare afterwards married to Edward Clinton earl of Lincoln. Whoever the peerless beauty may have been Surrey proposed to maintain her superiority in all the principal Italian cities, but he was prevented by the royal mandate requiring his speedy return to England. In 1540 he greatly distinguished himself at a tournament held before the court at Westminster and not long after he was honoured with the order of the garter. In 1542 he served under his father as lieutenant general of the army sent against Scotland and in 1544 he accompanied the troops with which the king invaded France and was field marshal of the army before Boulogne. On the surrender of that place in 1546 he was made captain-general and commander of the garrison left for its defence, but the same year, being defeated by the French in an attempt to intercept a convoy he was suspended in his command by Seymour earl of Hertford. On his return to England, conscious of his former services and smarting under what he conceived to be unmerited disgrace he dropped some reflections on the king and council which being reported to his majesty by the earl's enemies, proved the cause of his ruin.

R O W

He had quarrelled in his countenance the royal cause of Edward the Confessor to which he held an hereditary right ; and being a widower, he is said to have aspired to the hand of the princess Mary. On these and other charges of a more frivolous nature he was, together with his father, committed to the Tower, in December 1546 ; and on the 13th of January following, Surrey was tried at Guildhall before a common jury by whom he was obsequiously found guilty of high treason notwithstanding he made an eloquent and skilful defence. Six days after he suffered the sentence of the law by decapitation on Tower hill and his body which was first interred in the church of All hallows, Barking near the Tower was in the reign of James I removed to Farmingham in Suffolk. By his wife Frances, the daughter of the earl of Oxford he left two sons and three daughters. Few individuals have been more generally applauded than the earl of Surrey. Dr Heylin in his Church History says, He was beheld in general by the English as the chief ornament of the nation highly esteemed for his chivalry his affability his learning and whatsoever other graces might either make him amiable in the eyes of the people or formidable in the sight of a jealous impotent, and wayward prince. Lord Orford in reference to this nobleman observes We now emerge from the twilight of learning to an almost classic author that ornament of a boisterous but not unpolished court the earl of Surrey celebrated by Drayton Dryden Fenton Pope illustrated by his own muse and lamented for his unhappy death a man as sir Walter Raleigh says no less valiant than learned and of excellent hopes. Leland calls him the conscript enrolled heir of sir Thomas Wyatt the elder in his learning and other excellent qualities and Pattenham in his Art of English Poetry says that the earl of Surrey and sir Thomas Wyatt may be justly called the reformers of our poetry and style His works consist of Songs and Sonnets in a collection published in London in 1557 of which there were several reprints in the 16th century the second and fourth books of Virgil's Aeneas translated into blank verse London 1557 12mo a translation of Ecclesiastes and some of the Psalms, Satires on the Citizens of London a translation from Boccaccio and some smaller pieces. The entire works of Henry Howard earl of Surrey and those of sir Thomas Wyatt were published with notes and memoirs, by Dr Nott 2 vols, 4to, 1816.—Cat of Royal and Noble Authors. Werlins Hist of Eng Poetry Berkenhout's Eng Lit. Aikin's G Bigg.

HOWARD (Hawke) earl of Northampton second son of the foregoing a man of talent and learning but destitute of principle both as a politician and in private life. He was born in Norfolk about 1539 and according to Wood he received his education at Oxford where he took the degree of MA. After leaving the university he travelled on the continent, and on his return to England in the reign of queen Elizabeth, he became a

H G W

counsellor, and, with a view to promote himself dressed the greatest foppery to the reigning favourite the earl of Essex. After the fall of that nobleman he attached himself to Robert Cecil, and was employed by that minister to conduct his secret correspondence with the king of Scotland, on whose accession Howard was made a privy counsellor warden of the cinque ports, and constable of Dover castle. Soon after he was created baron Howard of Marshill and earl of Northampton. He was likewise appointed one of the commissioners for executing the office of earl marshal on the trial of the gunpowder treason conspirators, in 1605 he was installed knight of the garter and in 1608 he obtained the office of lord privy seal. Such was the baseness of his sycophancy that he condescended to become the pander of his infamous kinswoman lady Francis Howard in her intrigue with Car Earl of Somerset the favourite of James I and he was also implicated in the murder of sir Thomas Overbury. His death in 1614, prevented his conduct from becoming the subject of legal investigation. Lord Northampton was the author of A Defensative against the Poysen of supposed Prophecies, not hitherto confuted by the Pen of any Man which being grounded upon the warrant and authority of old painted Bookes Invocations of damned Spirits &c have been causes of great disorder in the Common wealth London 1583 reprinted in 1680. He wrote other tracts which have never been published. This nobleman built Northumberland house in the Strand, on the site of a convent and he was the founder of three almshouses.—Walpole's Noble Authors. Wood's Athenae Oxoniensis Berkenhout.

HOWARD (Craxton) earl of Nottingham a distinguished naval commander in the reign of queen Elizabeth. He was the son of William lord Howard of Effingham and grandson of the second duke of Norfolk. He was born in 1536 and while a youth served in several expeditions under his father who was lord high admiral. In 1559 he went on an embassy to France and he subsequently acted as general of the horse in the army sent against the rebel earls of Northumberland and Westmorland. He made an ostentatious display of his lofty spirit as a British admiral when commanding a small fleet in the English channel at the time that the princess Anne of Austria was proceeding to Spain with a convoy of 130 sail. "He environed their fleet" says Hakluyt "in a most strange and warlike sort and enforced them to stoop gallant and valie their bounets for the queen of England before he joined the convoy." In 1573 he succeeded to his father's title and to the office of lord chamberlain and was made a knight of the garter. But the principal occasion on which this nobleman signified himself was in the defeat of the famous Spanish armada, in 1588 when he was commander-in-chief of the English fleet. In 1596 he had the command of the naval force sent against Cadiz, while the earl of Essex led the military branch of the expedition. The following year he was

HOW

created earl of Nottingham, and also made chief justice in 1645, south of the Trent. His last public service of importance in Eltham had a tragic note, the suppression of the ill-conceived rebellion of the uniforms and earl of Essex, whom he took into custody. James I continued him in his employment and availed himself of his services in an embassy to Spain, and on other occasions. He died in 1626 and was buried at Bygate in Surrey.—Foster's *Martyrs*. *Biog. Brit.* *Campbell's Lives of Authors*.

HOWARD (or ROSSER) an English poet and historian, of the same family with the preceding, being a younger son of Thomas Howard earl of Berkshire. He was born in 1626 and was educated at Cambridge. Having been a royalist during the civil war he was knighted on the restoration of Charles II and appointed auditor of the exchequer. He promoted the revaluation of 1663 and after that event distinguished himself by his opposition to the nonjurors. He died in 1698. The works of sir Robert Howard consist of poems, two comedies and three tragedies, a translation of the fourth book of the *Aeneas* another of the *Thebans of Statius*, the History of Edward II and Richard II and the History of Religion.—*Cibber's Lives of the Poets*. *Biog. Dram.*—**HOWARD (EDWARD)** another poet of the Norfolk family who was contemporary with the foregoing and has been commemorated as an unsuccessful dramatist. He seems to have served as a butt for the wits and satirists at the beginning of the last century and his writings afforded abundant room for amazement. From his play called

The British Prince the following lines have been given as a quotation exemplifying the height of bombastic absurdity.

A painted vest prince Volnger had on
Which from a naked Pict his grandsons
won.'

The blunder in this couplet, however belongs not to the author but to the critic who disingenuously altered the original to render the poet ridiculous, and make a display of wit at his expense.—*Biog. Dram.*

HOWARD (THOMAS) earl of Arundel an English nobleman whose tasteful and efficient patronage of the fine arts has associated his title with some of the most celebrated relics of classical antiquity. Lord Arundel was earl marshal in the early part of the reign of Charles I, and was employed in several foreign embassies by that prince and his father. He sent agents into Greece and Italy to collect for him, at a vast expense, whatever was curious and valuable of the works of ancient art which had escaped destruction. His unrivalled museum of antiquities was divided at his death. He bequeathed his personal property to his eldest and second surviving sons, Henry Frederick lord Maltrevers, and William, afterwards viscount St. John. Henry second son of the former and sixth duke of Norfolk, about the year 1668 presented to the university of Oxford a considerable part of his mother's including the celebrated *Tunus Chronicle*,

HOW

which, with the other ancient inscribed stones accompanying it, have been termed the Arundel marbles. At Oxford also, are part of the statues collected by lord Arundel, which were given by lady Penfret, whose husband had purchased them. Of the remaining part of the Arundel collection some curious reliefs are at Greswick castle, others at Wotton-house the canons and mitrages were in the possession of the duke of Marlborough, and there is a fine bronze head of Homer at the British Museum. Lord Arundel, interrupted in his peaceful pursuits by the dissensions which preceded the war between Charles I and the Parliament, retired to Italy in 1648, and died at Padua in 1646.—*Lodge's Portraits of Illustrious Personages of Great Britain*. *Gruinger's Biog. Hist. of England* vol. II.

HOWARD (FREDERICK) earl of Carlisle an accomplished nobleman of this distinguished family was the eldest son of Henry the fourth earl, by his second wife Isabella, daughter of William fourth lord Byron. He was born May 28 1748 and succeeded to the family title and estates Sept. 3, 1758. He was sent at an early age to Eton where he was the contemporary and friend of Fox, Hare, Storer, the late duke of Leinster and other distinguished alumni of that seminary. Having completed his education in England, he set out on the grand tour and while at Turin in 1763 was invested with the order of the thistle the king of Sardinia representing his Britannic majesty on the occasion. At the expiration of his minority he took his seat in the house of Peers and was afterwards from his acknowledged temper and moderation selected as one of the commissioners dispatched in 1773 to America, with a view of healing the breach between the mother country and the revolted colonies. In 1780 he was appointed viceroy of Ireland which office he retained for a period of two years, when the sudden dissolution of the Rockingham administration recalled him to his native country. From this period lord Carlisle continued in opposition till the breaking out of the French revolution when he ranged himself on the side of ministers and pursued a line of conduct which in 1793 was rewarded by the vacant blue ribbon. He continued till his decease to take a prominent part in the politics of the day but his leisure hours were devoted to literary pursuits the fruits of which appeared in various dramatic and other writings. Many of the juvenile compositions of lord Carlisle are to be found in *The Foundling Hospital for Wit* and the 'Asylum.' In 1773 he published a quarto volume, containing miscellaneous pieces original and translated, among the latter of which was a version of the story of Ugolino from Dante, which is said to have been purposely rendered into English, in order to assist sir Joshua Reynolds in the composition of the celebrated picture in which he has so successfully embodied the horrible events of the narrative. In 1801 appeared a complete and elegant edition of the *Tragedies and Poems of Frederic, earl of Carlisle*,

H G W

"G. W." from Bulwer's press containing, among other dramatic effusions, the "Father's Revenge" and the "Stepmother," pieces which, though not altogether calculated for scenic exhibition are deficient rather in mechanism than poetical requisites. The Earl of Carlisle was a liberal patron of the fine arts, and had made a valuable collection of paintings at his seat, Castle Howard where he died in his seventy eighth year, Sept. 4 1825
Genl. Mag.

HOWARD (John) a celebrated philanthropist, who if he had lived in ancient Greece or Rome would probably have been honoured with hero-worship as the genius of active benevolence. He was the only son of a person who had earned on the trades of upholsterer and carpet-warehouseman in London but having acquired a handsome fortune had retired from business and resided either at Enfield or Hackney about 1727, where the subject of this memoir was born. He was educated among the protestant dissenters to which sect his family belonged and to which he adhered throughout his future life but his instructors appear to have confined their attention to moral and religious tuition as his literary attainments were very slight a circumstance which he had future cause to lament as an irreparable inconvenience. His father dying while he was young he was bound apprentice to a wholesale grocer in the metropolis, but on the approach of his majority he purchased the remaining term of his indentures, and indulged his taste by making a tour in France and Italy. Returning home in an ill state of health he took lodgings at Stoke Newington and on his recovery he married his lady, an elderly widow out of gratitude for her care in nursing him. She died in 1756 after they had been united about three years when Mr Howard commenced a voyage to Lisbon to view the effects of the recent earthquake which had destroyed that city. This was during a war with France, and the vessel in which he embarked being captured he was consigned to a French prison. The hardships he suffered and witnessed previously to his release first roused his attention to the subject of his future very important researches. When he reached England he was induced to lay before the commissioners of the sick and hurt office the information he had gained, and his communication was well received. In 1758 he married the daughter of Edward Leeds esq of Croxtot in Cambridgeshire and settled on his estate at Cardington in Bedfordshire whence he subsequently removed to the neighbourhood of Lyndhurst in the New Forest. After a residence there of about four years he returned to Cardington where he indulged the natural benevolence of his disposition in building cottages for the peasanty establishing schools for gratuitous instruction and other plans for the encouragement of industry among the lower orders. Horticulture at this time was his principal amusement, and he also made some experimental researches in natural philosophy and

H O W

communicated them to the Royal Society of which he was a member. In 1766 he had the misfortune to lose his wife who died after giving birth to a son. His usual pursuits and the early education of this child engaged his attention till 1773 when he served the office of sheriff for the county of Bedford. In applying to the necessary duties of this station the subject of prison discipline came under his notice, and finding that many abuses existed in the management of jails, he resolved to devote his time to the investigation of the means of correcting them. With this view he visited personally most of the English county jails and houses of correction and in March 1774 he laid the result of his inquiries before the house of Commons for which he received a vote of thanks. Having now adopted an occupation suited to the energy of his mind and the resources of his fortune he prosecuted it with the undeviating perseverance which insured his success and raised him to a conspicuous station among the benefactors of the human race. In 1775 and 1776 he visited many of the continental prisons, as well as those of Scotland and Ireland, and the substance of his investigations appeared in a work he published in 1777 entitled "The State of the Prisons in England and Wales, with Preliminary Observations and an Account of some Foreign Prisons" 4to. In 1778 he repeated his visit to the continent and extended his tour into Italy. After his return from this journey he made a fresh survey of the prisons throughout the British empire to which he added an examination of the public hospitals and the result of his inquiries was communicated to the public in an Appendix to the former work published in 1780 4to. He now also accepted the office of a supervisor under the act of parliament, for establishing penitentiary houses, on a plan which he had recommended. But Dr Fothergill, one of his two colleagues dying and some difference of opinion arising between him and the other supervisor he soon resigned the situation. In 1781 and 1782 he made a tour through the northern parts of Europe including Denmark Sweden Russia, and Poland in 1783 he visited Spain and Portugal and having again surveyed the prisons of this country he printed in 1784 a second Appendix, comprising the additional information he had obtained and at the same time was published a complete edition of his State of the Prisons with all the supplementary matter. A new subject now engaged his attention namely the management of lazarettes and the means of preventing the communication of the plague and other contagious diseases. The enthusiasm by which he was actuated in his researches may be estimated from the fact, that in order to obtain accurate information he went to Smyrna, where he knew that the plague prevailed there for the purpose of proceeding to Venice, with a foul bill of health that he might be subjected to all the regulations of quarantine in the harbotto and thus become experimentally acquainted with them. On his return home

H O W

through Vienna he was introduced to the emperer Joseph II, whose clemency was exerted by the fame of Howard's philanthropic labours to shorten his sentence. At home some of his friends and admirers had projected the erection of a public statue in honour of a man who had conferred such important benefits on society. But such a mark of respect from his fellow citizens was by no means the object of his ambition, and it appearing that the scheme was even disagreeable to his feelings, it was reluctantly abandoned by the undertakers. In 1789 he published An Account of the principal Lazzarettos in Europe with various Papers relative to the Plague, together with farther Observations on some Foreign Prisons and Hospitals with additional Remarks on the present State of those of Great Britain and Ireland 4to. At the end of this work he announced an intention of revisiting Russia and European Turkey and extending his travels into Asia. In pursuance of this plan he set off from London in the summer of 1789 and proceeded through Germany to Petersburgh and Moscow. The greatest respect was everywhere paid to his exalted merit, and he seemed to be regarded as the general censor of the discipline and management of prisons and hospitals, which were thrown open for his inspection as a friendly monitor and public benefactor. But the termination of his career of philanthropic exertion now approached. He had taken up his residence at the town of Chernon, a Russian settlement on the Black Sea. A malignant fever prevailed here and having been prompted by humanity to visit a patient labouring under the contagious disease, he received the infection and died in consequence January 20 1790. He was interred in the vicinity of Chernon and every respect was shown to his memory by the Russian authorities. His death was considered not merely as a national but as a general misfortune to the civilized world, and biographers and poets employed their talents in his praise. An honour of an unprecedented nature was paid to him in England; his decease was announced in the London Gazette. A cenotaph has also been erected in St Paul's cathedral exhibiting his statue in a Roman garb, executed by Bacon. Tl e speech encomium pronounced on Howard by Edmund Burke, in his speech at Bristol previously to the election in 1780 must not be omitted. "I cannot said the orator name this gentleman without remarking that his labours and writings have done much to open the eyes and hearts of mankind. He has visited all Europe—not to survey the sumptuousness of palaces, or the stateliness of temples, not to make accurate measurements of the remains of ancient grandeur nor to form a scale of the curiosity of modern art, not to collect medals or collate manuscripts, but to dive into the depths of dungeons, to plunge into the inflections of hospitals, to survey the sensations of sorrow and pain; to take the gauge and dimensions of misery depression, and desolation to remember the forgotten to attend to the neglected, to visit the forsaken

H O W

and to compact and collate the distresses of all men in all countries. His plan is original, and it is as full of genius as it is of humanity. It was a voyage of discovery, a circumnavigation of charity. Already the benefit of his labour is felt more or less in every country, I hope he will anticipate his final reward, by seeing all its effects fully realized in his own. He will receive, not by retail, but in gross, the reward of those who visit the prisoner, and he has so foreseen and monopolized this branch of charity that there will be, I trust, little room to merit by such acts of benevolence hereafter.—*Ackin's Life of Howard. Memoirs of Howard by J. Baldwin Brown 4to. Dr Clarke's Travels, vol. i. Chistiansburg. Duf*

HOWE (CHARLES) a member of a distinguished English family of that name. He was a native of Gloucestershire born 1661 and during the latter part of Charles II's time was much about the court. In the succeeding reign he accompanied the English ambassador a relation of his own on his mission to the emperor's court and on the death of the principal of the embassy continued to conduct the negotiations. Mr Howe by the marriage of his daughter with Peter Bathurst brother to the first earl of that title became connected with that noble family but being of a strong religious turn at length forsook public life, and retired into the country where he composed his celebrated Devout Meditations, a work of which Dr Young speaks highly in his commendatory letter. He died in 1765.—*Cent. Mag. vol. lxxv.*

HOWL (JOHN) There were two of this name, the first an eminent nonconformist clergyman of the seventeenth century was born in 1630 at Loughborough in Leicestershire. He entered originally at Christ college Cambridge and took his bachelor's degree there, but afterwards removed on a Bible clerkship to Brasenose college in the sister university. This society he again quitted for a fellowship at Magdalene where he graduated as A.M. in 1652. Having obtained the living of Torrington in Devonshire from his college he quitted it awhile to become domestic chaplain to Cromwell's household in which situation he continued till the death of the protector and acted afterwards in the same capacity to his son Richard until the abdication of the latter when he returned to his benefice. Refusing to comply with the provisions of the act of Uniformity he was ejected from his living and went to Ireland, as chaplain in the family of lord Massarene obtaining a license to preach while in that country. In 1675 he officiated to a presbyterian congregation in London and continued his ministry for nearly ten years when he went to the Netherlands, and remained at Utrecht till James II's proclamation of liberty of conscience once more brought him back to England in 1685. In due metropolis he remained till his death, which took place in 1705. He was the author of a work entitled 'The Living Temple,' which, together with his numerous other wri-

H O W

stage, has been published by Dr Calamy with a life of the author, in two folio volumes.—The second John Howe was a near relation of Charles Howe, the subject of the preceding article and was a statesman of great firmness, integrity and weight in the house of Commons. He was a member of the Convention parliament, and exerted himself strongly in favour of William III. but becoming afterwards disgusted with the measures of government, joined the opposition, and conducted the measures of his party with such ability as well as warmth of expression that he is said to have so far roused the anger of the sovereign as to have drawn from him a declaration that if his own dignity had permitted he would have fought him. In the succeeding reign he was made a privy counsellor, paymaster of the forces, and vice-admiral of the county of Gloucester, but on the accession of George I retired from public life and was succeeded in the paymastership by Walpole. He published a few miscellaneous poems, and died in 1720. He was father to the first lord Chedworth.—Nichols's *Poems. Collins's Peerage.*

HOWE (JOSIAS) an English ecclesiastic of the seventeenth century a native of Credon Bucks. He received his education at Oxford and obtained a fellowship at Trinity college in that university in 1637. Seven years afterwards he delivered a sermon there before Charles I and thirty copies were printed in red letters by command of the court the favour of which was further manifested towards him by his admission to the degree of bachelor in divinity pursuant to royal command in 1646. The ruin of the royal cause proved as fatal to his pecuniary resources as to those of many of his brethren and he was ejected by the parliamentarian sequestrators from his fellowship but surviving the restoration of monarchy once more became possessed of his preferment and died in the enjoyment of it in 1701. Several short poems of his are extant especially those prefixed to the works of Beaumont and Fletcher Randolph Cartwright, &c.—Athen. Oxon. Warter's *Life of Sir T. Pope.*

HOWE (RICHARD earl) a celebrated English admiral one of the most distinguished naval commanders of modern times. He was the third son of Emmanuel, second viscount Howe and was born in 1725. After having received the rudiments of a liberal education at Eton his strong predilection for the sea induced his father to place him at the age of fourteen, in quality of a midshipman on board the Severn in which ship he sailed with Anson for the Pacific and continued going through the usual gradations of the service under that admiral till 1740, when, though only twenty years of age he obtained the command of the Lizard-sloop of war. In this vessel he had with much gallantry in an action with two French ships, laden with supplies for the service of the pretender, whom he beat off with considerable loss, that his immediate promotion to the rank of post-captain was the consequence. In 1758 and the following year,

H O W

while in the Mediterranean under command of E. Hawke he distinguished himself by his exertions against the Isle of Aix St Malo, Cherbourg, &c. He was afterwards present at the unfortunate affair of St Cés, where he exposed his own person with great coolness, and by his courage and conduct succeeded in bringing off many of the wounded who must otherwise have perished. The same year he took a prominent part in the fight with Conflans, and did much towards the victory of the day. His elder brother having been killed in America, in 1758, he succeeded to the family title and estates but continued to follow his profession. In 1760 he was raised to the rank of colonel of marines and three years afterwards he obtained a seat at the board of Admiralty which situation he resigned in 1765 when he was made treasurer of the navy. In 1770 he sailed as commander in chief to the Mediterranean with the rank of rear admiral of the blue from which step he proceeded in due gradation to those of rear admiral of the white and vice admiral of the blue. On the breaking out of the war with France lord Howe sailed for the coast of America with a squadron destined to act against D Estang who commanded the French force in that quarter and on his return was raised in 1782 to an English earldom. In the course of the same year he again sailed with a small fleet to the relief of Gibraltar which important service he effected in despite of the combined fleets of the enemy. In 1783 he accepted the post of first lord of the Admiralty which with a partial intermission he continued to hold until 1793 when on the breaking out of the revolutionary war he took the command of the English fleet and bringing the enemy to an action on the 1st of June 1794 he obtained over them a most complete and decisive victory. The arrival of the news of this welcome event excited the greatest sensation throughout the nation. Illuminations took place all over the kingdom, the thanks of both houses of Parliament were voted to the conqueror, and the king and queen visited the victorious fleet at Spithead on its return on which occasion the king conferred on earl Howe a valuable sword, with a gold chain and medal struck for the purpose. The rank of general of marines and the vacant garter both conferred on this successful commander in the course of the next year were the consummation of his honours. In 1797 lord Howe exerted himself with great success to quell the mutiny among the seamen at Portsmouth which was the last public act of his valuable and meritorious life. His death took place August 5 1799. One daughter alone survived him and the gratitude of the nation has honoured his memory by a monument, erected to him at the public expense in St Paul's cathedral.—Collins's *Peerage. Bigg's Necro.*

HOWEL the Good, or HYWEL DDA a Cambrian prince famous as a legislator in the tenth century. He was the son of Cadell, king of all Wales, and having succeeded to the crown, he in 926 went to Rome, ac-

H O W

compounded by three bishops, to obtain information preparatory to the compilation of a code of laws for the Welsh. On the return of Howell and his attendants, a kind of national convention was assembled of the heads of tribes, and learned clergymen and laymen by whose co-operation a collection of laws was prepared founded on the laws of Danwalli Mabinogion, an ancient British sovereign, and this code was constitutionally established throughout the territories of Wales. Howell went again to Rome in 1730 to procure the further sanction of learned jurists for the confirmation of his laws, which were long held in great veneration among the inhabitants of Wales. These Institutes are still extant and may be found among the *Leges Walliae ecclesiasticae et civiles Hoclo Boni et aliorum Wallie Principium* published by Wotton in 1730. The laws and ordinances of Howell Dda, says Davies Barrington, are the most regular of any extant and have been wonderfully preserved considering their antiquity but though there are many provisions in them dictated by wisdom and sound policy there are some which it is impossible to pass without a smile and others which should not be passed over without censure — *Welsh Archæology*. *Meyrick's Hist. of Cardiganshire*.

HOWEL (LAWRENCE) a nonjuring divine of the church of England who was a sufferer for his seal in the cause of intolerance. He was educated at Jesus college Cambridge where he graduated as MA in 1688. After having been a school master at Epping in Essex he received ordination among the non-jurors, from the hands of Dr George Hickes, titular bishop of Thetford. He was a man of considerable learning as appears from the works which he published namely *Synopsia Canonum SS. Apostolorum*, Lond. 1708 folio, ' *Synopsis Canonum Ecclesie Latiane* 1710 folio. *View of the Pontificatus* to 1563, 1712, 8vo, and *History of the Bible* with engravings, by Sturt, 1716 3 vols 8vo. But Mr Howell is chiefly memorable on account of his having had the impudence to print in 1716 a pamphlet entitled *The Case of Schism in the Church of England*. On account of the sentiments contained in this work he was tried at the Old Bailey and being convicted of sedition he was sentenced to be degraded from his clerical office, to pay a fine of 500*l.* and to be twice whipped. The latter part of the sentence was remitted by the king in consideration of the clerical character of the culprit, but the remainder of his doom was rigidly executed, as he was stripped of his gown in open court, and being unable to pay the fine, he was detained in Newgate prison till his death, which took place July 19 1780. *Nichols's Lit. Anec.* *Noble's Cost of Granger*.

HOWELL (JAMES) a popular writer of the seventeenth century. He was the son of a clergyman in Carmarthenshire and was born about 1626. He received his education at Jesus college Oxford, and in 1643 took the degree of BA, but left the university without any other honours. Going to London he ob-

tained the patronage of his countryman, Sir Robert Mansel, through whom he was appointed steward to a patent glass manufactory which had been established in Broad street by a company of courtiers and men of rank. In 1619 he commenced a continental tour in the service of his employers, and after visiting Holland Flanders France and Spain he went to Italy and at Venice engaged workmen skilled in the casting of plate glass an article for which that city had long been famous. In 1621 he returned to England and soon after was nominated to a fellowship at Jesus college. He then travelled as a companion to the son of Baron Altham and afterwards obtained the appointment of agent at the court of Madrid for the owners of a richly laden English ship which had been taken by the Spaniards on a charge of contraband trade. Political circumstances interrupted his negotiations, and he returned unsuccessful to England in 1624. After some solicitation he got the office of secretary to lord Scrop, then president of the North and going to reside at York in that capacity he was chosen MP for Richmond in 1627. Three years after he went to Denmark as secretary to the English ambassador the earl of Leicester. His next patron was Wentworth earl of Strafford lord deputy of Ireland whose misfortunes disappointed his hopes of promotion. In 1639 he published a poem entitled *Dodona's Grove or the Voracious Forest* which passed through several editions and procured the author some reputation. It was followed by another loyal effusion *The Vote* presented to the king on his birth-day. The office of clerk of the council was bestowed on him in 1640, but the rupture between the king and parliament prevented him from long retaining this post, for on his going to London on private business in 1643 he was arrested, and committed to the Fleet. There he remained till after the death of the king, supporting himself in his confinement by writing for the press. When Cromwell attained supreme power Howell addressed to him a panegyrical dedication, but on the restoration of Charles II he appeared in the character of a loyalist sufferer and was gratified with the appointment of royal historiographer being the first who held the office in this country. He continued to employ his pen till his death which happened in 1666. Howell was a prolific writer but his only works which require notice are his *Epistles Homiliae*, *Familiar Letters*, domestic and foreign partly historical partly political, and partly philosophical, first printed in 1645, of which there are many subsequent editions, *Londinopolis or Perustration of the City of London* 1637 folio, and "Instructions for Foreign Travel" with a poetical parallel between Charles I when prince of Wales, and Edward the Black Prince 12ms.—*Biog Brit Granger Aikin's Gen. Eng*.

HOWELL (WILLIAM) an English civilian, the author of some historical works of considerable merit. Little is known of his personal history, except that he was an Ormonian be-

H U A

came chancellor of the diocese of Lincoln, and died in 1683. He published at London in 1671, a work, entitled "Gul. Höel, LL.D. Elementa Historiae ab Orbe condito usque ad monachum Constantium Magnum 12mo" from the preface to which it appears that he had been tutor to Sheffield lord Mulgrave afterwards duke of Buckingham to whom the book is dedicated. His other productions are 'A History of the World from the earliest Times to the Ruin of the Roman Empire' 1680 3 vols. folio, and 'Medulla Historie Angliae' 6vo., an abridgement of English history which has gone through several editions.—*Croft's Lives of Clergymen.*

HOZIER, the name of a French family several of whose members were celebrated as heralds and genealogists in the seventeenth century.—PATERSON HOZIER, born in 1592 at Marseilles, was much esteemed both by Louis XIII and Louis le Grand. The latter made him a judge of arms, certifier of tilts &c. and a counsellor of state. Besides some curious genealogical tables he was the author of a History of Bretagne in folio and died in 1660.—His son, CHARLES, born 1640 succeeded him in his post of judge of arms and was made a knight of St Maurice by the duke of Savoy. He died in 1732 and was in his turn succeeded by a nephew who compiled a Registry of the Nobility of France in ten folio volumes published under the title of *L'Armorial*. His death took place in 1767.—*Moreri. Novæ Diet. Hist.*

HUARTE (JOHN) a native of French Navarre although often supposed a Spaniard lived in the seventeenth century. He acquired considerable celebrity by a work in Spanish entitled *Examen de ingenios para las Ciencias &c.*, or an examination of such geniuses as are born fit for acquiring the sciences wherem by marvellous and useful secrets drawn from true philosophy both natural and divine, are shown the gifts and different abilities found in man and for what kind of study the genius of every man is adapted in such a manner that whoever shall read this book attentively will discover the properties of his own genius, and be able to make choice of that science in which he will make the greatest improvement. This work has been translated into several languages, and has gone through many impressions. An English version is extant, by Carew and Bellamy under the title of *The Tryal of Wit.* This author once so much extolled for acuteness and subtlety, has now very deservedly lost much of his reputation. Bayle not himself very nice in such matters, remarks that there are many things repugnant to Modesty in this very curious production as may be easily imagined when it is added that he pretends to teach the formalities to be observed by those who would beget children of a virtuous turn of mind. Huarte also deserves censure for publishing, as an authentic piece a pretended letter of Lentulus, the pro-consul, from Jerusalem, wherein a particular description is given of the person of Jesus Christ.—*Moreri.*

H U B

HUBALD HUEBALD or HUGBALD, a monk of Amand in Flanders, who lived in the ninth and tenth centuries. He was author of a treatise on Music still subsisting in the library of the king of France under the title of *Enchanted Musica*. In this work there is a kind of gamut or expedient for delineating the several sounds of the scale in way wholly different from his predecessors. The method of Guido about a century after superseded that, and every other invention of the kind, but this tract, rude as it is, shows that Guido did not do so much to improve his art as might have been imagined. Hubald was not only a musician but a poet, and addressed three hundred verses in praise of baldness, to the emperor Charles the Bald, in which he laboriously obliged the letter C to commence every word as the initial of his patron's name and infirmity, as for instance—
Carmine Clariomus Calvis Cantata Cam-
monae."

Hubald died in 930 at the age of ninety.—*Moreri. Rees's Cyclop.*

HUBER (JOHN JAMES) an eminent anatomist who was a native of Basel. After studying under Haller at Berne and also at Strasburgh he returned to Basel where he took the degree of doctor of medicine in 1733. He visited Paris in 1735 and the same year was appointed physician to the court of Baden Durlach. He assisted Haller in his great work on the Plants of Switzerland, published in 1742. In 1738 he removed to Göttingen to become dissector to Haller through whose interest he was made professor of anatomy there in 1739. He became professor in the Caroline college at Cassel with the rank of court physician in 1742 and in 1748 counsellor of state and body physician to the prince of Hesse. He was in 1741 elected a member of the Academia Curiosorum Naturæ in 1750 the same honour was conferred on him by the Royal Society of London and subsequently by the Medical Society of Basel and by the Academy of Sciences at Berlin. His death took place in 1778. The principal objects of his investigations as an anatomist were the spinal marrow and other parts of the nervous system on which he published a work, entitled *Commentatio de Medula Spinali* Götting 1741 4to. He also wrote on the influence of imagination in pregnant women, and other topics.—*Aldis's Gen. Eng.*

HUBER (MARY) a miscellaneous and philosophical writer of the eighteenth century who was a native of Geneva. She professed the Protestant faith but with a liberality of sentiment which exposed her to the imputation of infidelity. The following are the titles of her principal works: 'Le Monde bon, préféré au Monde sage,' 1731 1744, 12mo; 'Le Système des Théologiens, anciens et modernes, sur l'Etat des Ames séparées des Corps,' 1731 1739 12mo.; 'Scrits du même Ouvrage servant de Réponse à M. Rochat, 1733-1739 12mo.; 'Lettres sur la Religion essentielles à l'Homme' 1739 1754, 6 vols. 12mo., and 'Réduction du Spectateur An-

H U D

glio," 6 vols. 1622, an abridged translation of the celebrated work of Stolin and Johnson. She died at Lyons, in France, in 1753 aged about fifty-six. *New Dict. Hist. Biog. Unit.*

HUBER (Ulfius) a Dutch civilian of eminence in the seventeenth century. He was born at Dordrecht, in Holland, in 1636 and after having received a learned education he became professor of jurisprudence at Franeker. He was an indefatigable student, oftentimes continuing among his books from six o'clock in the morning till eight in the evening with the exception of a single hour during which he took his dinner. Among his works are, *Jurisprudentia Frisica*, *Prælectionum Juris Civilis tom. tres*, sec. *Institut. et Digesta Justiniani*, *De Jure Cavatina*, *Libri tres Novam Juris publica universalia disciplinam contuscentes*. He also wrote on history and other subjects. His death took place in 1694. His son, *ZACHARIAH HUNTER* was also a lawyer and succeeded his father in his professional capacity. He was the author of a dissertation on the Pompeian law among the Romans relative to patricide, and some other juridical tracts. He died in 1732 aged sixty two.—*Stella Intro. in Hist. Lat. Nos. Dict. Hist.*

HUBERT (MATTAEW) a learned and eloquent French divine who flourished during the end of the seventeenth and the commencement of the succeeding century. He was born in 1640 and having entered into the church became a priest of the oratory at Paris. His sermons, which are considered scarcely inferior to those of Boardauld, were published in six duodecimo volumes at Paris, eight years after his decease, which took place in 1717.—*New Dict. Hist.*

HUBNER (JOHN) a native of Torgau in Saxony who became rector of the school of Hamburg and professor of geography at Leipsic. He made himself known by an elementary work on geography of which thirty six editions appeared during his life and which was translated into most European languages. This sketch of geographical science served as the foundation for the elaborate productions of Busching and other German writers, towards the close of the eighteenth century. Hubner published several other works on history and the branches of science connected with it, for the purposes of education which became exceedingly popular. He died in 1731, at the age of sixty two. *New Dict. Hist.*

HUDDART (JOHN) F.R.S. an eminent navigator and hydrographer. He was born in 1741, at Alcester in Warwickshire and in the early part of his life he went to sea, and was employed in the herring fishery in the Firth of Forth, and afterwards in the Irish and West India trade. In 1773 he engaged in the service of the East India Company in which he attained the rank of commander in 1778 but relinquished the situation in 1788 and retired to enjoy the fruits of his industry. Captain Huddart was distinguished as a nautical surveyor, both in the Indian seas and on our own coasts. He likewise obtained a patent for the

H U D

manufacture of cordage for which purpose he erected machinery at Murysport. He was a director of the East India Company and for many years held the situation of an elder brother of the Trinity house. Besides several valuable charts he published "A Sketch of the Straits of Gasper a passage between the Islands of Banca and Billeton" London 1768, 8vo., and some important papers in the Philosophical Transactions. He died in 1816, at his residence at Highbury Terrace near London.—*Bug Diet of Living Authors Month Mag.*

HUDDESFORD (WILLIAM) a naturalist and antiquary of the eighteenth century. He appears to have received his education at the university of Oxford where he took the degree of doctor of divinity and he held the office of keeper of the Ashmolean museum. He was also principal of Trinity college and died October 11 1772. His publications are

Martini Lister Historia sive Synopsis Conchyliorum et Tabula Anatomica edit. alt. Oxon 1770 folio and the *Lives of those eminent Antiquaries Leland Hearne and Wood* 1772 2 vols 8vo.—*HUDDERSFORD* M.A. (GEORGE) a burlesque poet of the latter part of the last century some of whose works attracted a good deal of notice and displayed much originality of manner. They consist of *Topsy Turvy* anecdotes and observations illustrative of the leading characters of the present Government of France London 1790 8vo *Salmagundi* original poems 1793 8vo, Poems including *Salmagundi* *Topsy Turvy* *Bubble and Squeak* and *Crisp's Repton*, 1801 2 vols 8vo. The *Wicca* meal Chaplet, a selection of original poetry comprising smaller poems serious and comic, &c 1805 8vo *Les Champignons du Diable* or *Impenal Mushrooms* a mock heroic poem in five cantos, including a Conference between the Pope and the Devil on his Holi ness a Visit to Paris, illustrated with Notes, 1805 12mo.—*Vatt's Bibl. Brt.*

HUDSON (HENRY) Of this distinguished English naval discoverer nothing of the parentage or education is known. The first fact recorded of him relates to his being fitted out in the year 1607 by some London merchants, in a small vessel for the purpose of exploring a north-east passage to China and Japan. He sailed on the 1st May with a crew of only ten men and a boy besides himself and proceeding beyond the 80th degree of latitude returned to England in September. In a second voyage the next year he landed at Nova Zembla but could proceed no farther eastward. He undertook, in 1609 a third voyage under the patronage of the Dutch East India Company, but no material result ensued. His last voyage was undertaken in 1610 on which occasion he was fitted out by Mr Thomas Smith, Mr Dudley Digges and others of his friends. He sailed on this occasion on the 17th April, in a bark named the *Discovery* with a crew of twenty three men and came within sight of Greenland on the 4th of June. Proceeding westward he reached, in 60 degrees of latitude

the spirit bearing his name. Through this he steered along the coast of Labrador towards which he gave the name of Nova Britannia, until at length, into the vast bay, which is also called after him. He resolved to winter in the most southern part of it and the crew drew up the ship in a small creek and endeavoured to sustain the severity of that dismal climate, in which attempt they endured extreme privations. Hudson however fitted up his shallop for farther discoveries, but not being able to establish any communication with the natives, or to revictual his ship with stores in his eyes he distributed his little remaining bread to his men, and prepared to return. Having a dissatisfied and mutinous crew, he imprudently uttered some threats of setting some of them on shore which menaces induced a body of them to enter his cabin at night, when they tied his arms behind him and put him in his own shallop at the west end of the straits with his son John Hudson and seven of the most infirm of the crew. They then turned them adrift when it is supposed that they all perished as they were never more heard of. A small party of the crew after enduring in credible hardships arrived at Plymouth in September 1611. Such was the melancholy end of this adventurous mamer.—*Biog. Brit.*

HUDSON (JOHN) a learned divine and philological writer of the early part of the last century. He was born in 1662 at Widehope near Cockermouth in Cumberland, and received his education at Queen's college Oxford. In 1684 he took the degree of MA and removing soon after to University college he there obtained a fellowship in 1686. He was elected keeper of the Bodleian library in 1701 and the same year proceeded DD. In 1712 he was made principal of St Mary hall through the interest chiefly of Dr Radcliffe. He distinguished himself as editor of several of the Greek and Roman classics whose works he illustrated with his own notes and those of preceding critics. His editions are esteemed for their correctness and elegance particularly “Thucydides,” 1696 folio. “Geographiae Veteris Scriptores Graeci minores” 1703 1712 4 vols. folio and “Josephi Opera,” 1730 2 vols. folio, the last was a posthumous publication. Dr Hudson who though in holy orders, never held any church preferment, died at St Mary hall November 27 1719. He enjoyed high reputation as a classical scholar both at home and abroad, and held an extensive correspondence with several learned foreigners. Dr Hudson left an only daughter the heiress of large property who having imprudently contracted a species of matrimonial engagement with a clergyman, who paid his addresses to her was afterwards regularly married to another person. Her first admirer instituted some proceedings, with a view to establish his claim as a husband to the lady and her fortune, and he published a pamphlet, from which it appeared that he had without the presence of any third person, performed the marriage ceremony between Miss Hudson and himself; on which very irregular

not having expanded his pretensions. It is scarcely necessary to add, that his scheme proved unfruitful, and his appeal to the public provided him little advantage as his own conduct was obviously more discreditable than that of any other of the parties in this strange affair.—*Biog. Brit. Genl. Mag. for 1734.*

HUDSON (WILLIAM) one of the first English botanists who adopted the Linnæan system. He was born in Westmorland about 1730 and served an apprenticeship to an apothecary in Westminster to whose business he succeeded. His acquaintance with Mr Benjamin Sulkingfleet, a naturalist of some eminence induced him to study the writings of Linnæus and ultimately occasioned his becoming the author of the first classical work on English botany published in 1768 under the title of “Flora Anglica” 8vo. He subsequently engaged in a correspondence with Linnæus, Haller and other naturalists and extended his researches to insects, shells, and various subjects connected with British zoology. In 1761 he was chosen an FRS and he was for many years botanical demonstrator to the apothecaries company. In 1778 he published a new and much improved edition of his Flora, in two volumes. He had projected the publication of a “Fauna Britannica” on the plan of his other work and had collected materials for the purpose but the destruction of his house by fire in 1783 prevented the execution of his undertaking. In 1791 he became a fellow of the Linnæan society and attended its meetings as often as his health would allow. His death took place May 23 1793 and he was interred in St James's church Westminster.—*Rae's Cyclop.*

HUDSON (THOMAS) an eminent English artist born at Exeter in Devonshire in 1701. He studied portrait-painting under Richardson whose daughter he married and settled in London where he speedily acquired great reputation in his profession. This however was at length eclipsed by the growing fame of his great pupil Mr Joshua Reynolds. Hudson died in 1779.—*M. Ainslie's Anecdote.*

HUERTA (VINCENT GARCIA DE LA) a Spanish poet and critic and a member of the Spanish academy was born at Zarau in Extremadura, about the year 1730. He acquired considerable fame among his countrymen for his poetical and critical talents and was successful at least in one of his dramas “La Raquel” a tragedy which to many stronger recommendations added the merit of an avoidance of the anachronisms and irregularities which are so much objected to in the Spanish drama. He published a “Military Library” but his principal work is his “Teatro Español” Madrid 1785 17 vols. 4to being a collection of the best Spanish plays with prefaces, in which he endeavours to vindicate Spanish literature from the censure of Voltaire Liniger, and others. According to lord Holland he has not only failed in his design but exposes the Spanish drama to still greater ridicule. He died towards the close of the last century.—*Lord Holland's Life of Lope de Vega.*

H U E

HUET (Pierre Damaz), a celebrated cleric and classical scholar of the seventeenth and eighteenth centuries, who was a native of Caen in Normandy. He was born in 1630, and was the son of a gentleman of good family who had abjured calvinism and become a zealous catholic. Left an orphan in his infancy Huet was brought up by an aunt, who placed him in the jesuit's college at Caen, for education. After gaining a general knowledge of literature, he went to Paris where he indulged his passion for study by reading all the books he could procure and cultivating the acquaintance of the most eminent scholars of his time. In 1652 he accompanied Bochart on a visit to the court of Christina, queen of Sweden, of which journey he wrote an amusing narrative in Latin verse. On his return to Caen he found that a literary academy had been instituted there during his absence, of which he was chosen a member. In 1661 he published a treatise on translation in the form of a Latin dialogue entitled, *De Interpretatione*, and in 1664 a collection of Greek and Latin poems. An edition of Origen's *Commentaries on the Scriptures* followed in 1667; nor did he neglect the lighter kinds of literature for at the request of his townsmen Segrais he wrote a tract on the *Origine des Romances*, which was prefixed to the *Zayde de madame la Fayete*. He was subsequently appointed preceptor to the dauphin in conjunction with Bosset. It was during the period he filled this office that he wrote his defence of Christianity published in 1679 under the title of *Demonstratio Evangelica*, which he considered as his greatest work, but which is chiefly calculated to display the vast edition and extensive reading of the author. At this time also he undertook, at the earnest recommendation of the duke de Montausier governor to the dauphin the plan of publishing all the Latin classics, with that ample furniture of illustration which has made what are called the Delphin editions so well known, and generally esteemed throughout Europe. The plan was executed under the direction of Huet, in less than twenty years to the extent of sixty two volumes, Lucan being the only ancient Roman author of importance who was omitted the freedom of his political principles rendering his works objectionable to the French despot Louis XIV. Various jesuits and other learned persons were engaged by Huet as editors of the different classics, one alone, namely the *Astroamericum* of Mauillé, was edited by himself. After the completion of his tutorage, having taken holy orders, he was made abbot of Attinal, and subsequently nominated bishop of Soissons which see he exchanged for that of Arras. But after holding the episcopal office some time, he became so tired of the troublesome duties attached to it that he applied to the Bishopric contending his right with the abbey of Fontenai as a pacemaking stipulation. In whatever station or place, his characteristic attachment to literature remained unabated, to the very evening of his life, which closed at the house of the

H U G

jesuits, at Paris January 26, 1701. Besides the works already mentioned, he wrote *l'Histoire du Commerce et de la Navigation des Anglais*, *Origines de Caen*, and memoirs of his own life in Latin, besides other pieces of less importance. A translation of the memoirs, with copious notes, was published in 1810, 2 vols. 8vo by Dr John Adair. —*Moreri Nov. Dict. Hist. Brog. Univ.*

HUGH CAPET, first king of France of the third dynasty was the son of Hugh count of Paris and duke of France and Burgundy a potent nobleman who in fact reigned under the name of king Lothaire. He died in 936, leaving his son Hugh at the age of fifteen or sixteen, under the guardianship of Richard duke of Normandy. At a proper age he returned to the court of Lothaire, who left his son Louis V to his care. That weak prince dying soon after without issue the vigorous ability and great possessions of Hugh induced the nobles to prefer him to the rightful heir of the blood of Charlemagne Charles, duke of Lorraine brother to Lothaire. He was accordingly proclaimed king at Noyen in June 937 and obliged all who disputed his title to submit, making Charles of Lorraine and his consort prisoners in the recapture of Laon. He reigned with great policy governing the people with much mildness, and allowing his potent vassals to weaken each other by mutual hostilities. He made Paris his chief residence and the future seat of the monarchy. After a reign of ten years, he died in 997 leaving his son Robert sole king, and his postently saving the interval produced by the French revolution, have swayed the Gallic sceptre ever since.—*Molin. Mod. Univ. Hist.*

HUGH, of Amiens a learned French prelate in the twelfth century was born at Amiens educated at Laon and became prior of Cluny. He was afterwards abbot of Reading in England which he quitted to become archbishop of Rouen in his native country, over which see he presided with great repute until his death in 1164. He was the author of *Three Books of Instruction* against the heretics of his day of seven books of *Theological Dialogues*, and of an explication of the Apostle's Creed and the Lord's Prayer the first of which piece was published by d' Achery at the end of the works of Guibert de Nogent and the two latter by fathers Marteneus and Durand, is the fifth volume of their *Thesaurus Anecd.* and in the ninth of their *Vetus et Nova Collectio*. —*Moreri. Dugue. restav.*

HUGH DE CLUNY a Roman, monk was born in Burgundy in 1023. He entered the monastic life at Cluny where he became prior and at last chief of his order, which he greatly reformed and extended. He died in 1098 leaving behind him some epistles, which are still extant.—*Dugue.*

HUGH DE FLAVIGNY a monk of Verdun afterwards abbot of Flavigny, and an esteemed historian, was born in 1094. He was descended from a noble family, and com-

H U G

ing young into the monastic life abandoned his studies in his thirty-second year. He now however lost it again in less than two years in consequence of a dispute with his diocesan and remained despoiled of his dignity until 1151 when he was appointed to the abbey of Vauclair. The time of his death is unknown. This abbot was the author of "Chronicon Verdunense" in two parts the first containing an ecclesiastical history from the birth of Christ until the close of the tenth century and the second a continuation of the same until 1107. The first is trifling and extraneous, but the last contains much information of the ecclesiastical affairs of France in the eleventh century. It was withdrawn from obscurity by father l'Abbe and printed in the first volume of his "Bibliotheca nova Manuscriptorum" —*Cœs. Diction. Moret.*

HUGH DE FLEURY was a learned French monk who flourished about the year 1120. He embraced the ecclesiastical life in the abbey of Fleury and rendered himself celebrated by his writings which are held in much esteem. He is the author of "Chronicon Libri VI ad Iovem Carnotensem, commencing with the reign of the Aegyptian Nium, and terminating with the death of the emperor Louis the Pious in the year 840." It is inserted entire in the "Bibliotheca Caesaris," and partly in the "Scriptor de Rebus Franc." of Duchesne which likewise contains another short but well digested chronicle from the beginning of the world to the reign of the same Louis. Hugh was also the author of "Lib. II de Regia potestate et sacerdotali dignitate ad Henricum Angliae Regem" inserted by Baluze in the fourth volume of his "Miscellanea." This last production is much esteemed by catholic writers as exhibiting an accurate representation of the doctrine of the church before it was obscured by the disputes between the papacy and the emperors. —*Cœs. Dupuy. Moret.*

HUGH DE ST CHYFRE or **HUGO DE SANCTO CARO** a French cardinal of the thirteenth century distinguished as a scripture commentator. He studied at Paris and in 1225 he entered to the order of Dominican friars of which he became provincial. He was subsequently created a doctor of the Sorbonne and was employed by pope Gregory IX on a mission to Constantinople for the vain purpose of effecting an union between the Greek and Latin churches. After his return he was again elected provincial of the Domicans, and in 1245 he was created a cardinal under the title of St Sabina, by pope Innocent IV who as well as the succeeding pontiff Alexander IV employed him in several important and delicate negotiations. He died at Orvieto in 1263. Besides his commentaries he compiled a concordance of the Bible printed at Cologne in 1264 and he left a copy of the Bible with various readings from ancient Latin Greek and Hebrew MSS. —*Jens. Hist. Lat. Aduin. G. Biog.*

HUGO DE ST VICTOR a learned divine of the twelfth century. He was a native of Flanders, and at the age of eighteen he

H U G

entered into the order of the canons regular of St Augustine at the monastery of St Victor in the city of Paris. He subsequently rose to the office of prior and in 1130 he was appointed professor of theology when he obtained great reputation and was termed a *second Augustine* and constituted the *torus of St Augustine* from his adherence to the doctrine and imitation of the style of that saint's father. He died in 1140. His works consisting of commentaries on Scripture, sermons, dialogues &c were published in three volumes folio at Paris, in 1586 and subsequently at Venice and elsewhere. —*Trithemius. Dupuy. Moret.*

HUGHES (John) an English poet and dramatist, was born in 1677 at Marlborough, in Wiltshire of which county his mother was a native his father being a respectable citizen of London. He was educated at a dissenting academy under the care of Mr Thomas Rowe, where he was a fellow student with Dr Watts. He early imbibed a taste for poetry music, and drawing which did not however render him averse to business. He had a situation under the Board of Ordnance and was secretary to several commissioners under the great seal for the purchase of lands for the dock yards of Portsmouth Chatham and Harwich. The first specimen he gave of his poetic vein was a poem on the peace of Ryswick which he followed up by several others on temporary occasions and in the mean time became the companion of Addison Pope Congreve Southernor Rowe and other wits of the day. His views were not however very promising until in 1717 lord chancellor Cowper made him secretary to the commissioners of the peace. He had now affluence but his health became precarious and in this condition he composed his well known "Siege of Dandascus" a tragedy his last and best work which was first performed on the day of his death February 17 1720. He was much lamented and Steele devoted an essay to his memory in the paper called the Theatre and he appears to have been equally regarded by Pope. In 1735 a complete collection of his poems and dramatic pieces was published in 9 vols. 12mo, by his brother in law Mr Duncombe. Also subsequently to his death appeared his literary correspondence in 3 vols. 12mo. He was likewise the author of several works in prose with many Tales, Spectators and Gaieties and translated Fontenelle's dialogues, and the abbe Verlof's history of the revolution in Portugal &c. Lastly in 1715 he published an accurate edition of the works of Spenser. The genius of Hughes cannot be estimated above mediocrity and at present the siege of Dandascus chiefly supports his name. —*JAMES HODGES*, younger brother of the above and like him a votary of the muses and an excellent scholar was born in 1683. He published in 1714, a translation of "The Rape of Proserpine" from Claudio and the story of "Sparta and Erichthon." He also translated Suetonius' lives of the Caesars, and novels from the Spanish of Cervantes. Herford

H U L

In 1734 A posthumous volume of his manuscripts, in prose and verse, appeared in 1737.—*Bug. Hist. Anderson's Lives of the Poets.*

HUGHES (GEORGE) an English naturalist, who was minister of Lucy's parish in the island of Barbadoes, in the West Indies. In 1748 he circulated proposals for publishing the natural history of Barbadoes where he had then been a resident twelve years. He was a fellow of the Royal Society and appears to have been highly esteemed for his talents by Dr Stephen Hales, and other men of science in England. The work appeared in 1750 in a folio volume in two books with twenty four engravings, and it was republished with a larger number of plates in 1760. This production contains the most ample account of the curious zoophytes called animal flowers which grow on the rocks by the sea side at Barbadoes. Mr Hughes also published a paper in the philosophical transactions on the same subject.—*Clement le Long d'An. Lett. Watt's H. B.*

HUGO (CHARLES LOUIS) a learned prelate of the Romish church who flourished during the early part of the last century. He was originally a canon of the Praemonstratenses of which order he published a history in two folio volumes. He afterwards obtained the abbey of Etival and became titular bishop of Prokemus. His other works are "A Life of St Norbert," the founder of his order printed in quarto 1704. Historical and Critical Memoirs of the House of Lorraine 8vo, 1711 which work incurring the censure of the parliament of Paris he afterwards defended it in an able and spirited essay. He also published a learned treatise entitled "Sacre Antiquitatis Monumenta Historica Dogmata, Diplomatica" in two folio volumes 1725. His death took place in 1735.—*Rowl. Dict. Hist.*

HULDREICH (JOHN JAMES) a Swiss divine born in 1683 at Zurich in which university he became afterwards the law professor. For his appointment to this chair he was principally indebted to the reputation which he acquired by his refutation of a work by a Jewish rabbi, directed against the Christian religion, and entitled "Sepher Toledot Jeseho," or "The History of the crucified Jesus." This treatise Huldreich reprinted at Leyden in 1706, with his own reply annexed. He was also the author of a commentary on Puffendorf's *Principia* upon the duty of men and citizens and of three octavo volumes entitled "Miscellanea Tigrina," as well as of several sermons. His death took place in 1731, at his native city.—*Rowl. Dict. Hist.*

HULL (THOMAS) a veteran actor of the Garrick school, with whom he was contemporary and who lived to be the father of the stage. He was born in 1728 at Westminster and received the rudiments of a liberal education at the Charter-house. On his removal from that seminary his father a medical man, residing in the Strand apprenticed him to himself with a view to his eventually succeeding him in his practice. He had however

H U M

early inhabited a strong predilection for the works of Shakespeare which at length induced him to quit the study of pharmacy for the boards. Though always a judicious performer and a good speaker he never rose to any great eminence in his profession, playing for the most part second and even third rate characters, but as an author he was more successful. The work by which he is most advantageously known is a poem still deservedly popular entitled "Richard Plantagenet" containing the legendary history of an illegitimate son of Richard the Third who after the ruin of the White Rose party found an asylum at Eastwell park Kent, where he worked many years in the capacity of a brick layer and where the remains of his habitation are yet to be seen. Mr Hull's other works are "Henry the Second or the Fall of Roamond" a tragedy in which the beautiful Mrs Hartley personated the heroine. Two volumes of metrical tales, "Letters from Gentleman to a young Lady. Select Letters between the Duchess of Somerset, Shestone the Poet and others" and "Sir William Harrington" a novel in 4 vols. He survived till the year 1808.—*Bug. Dram.*

HULLIF (NATHANIEL) an ingenious physician who was a native of Yorkshire. He served an apprenticeship to an apothecary and was afterwards a surgeon in the navy. On the peace of 1763 taking place he became a student of medicine at Edinburgh where he graduated as MD in 1765. His inaugural thesis was entitled "Dissertatio Medica de Scorbuto." He settled in practice in London and at first devoted his attention chiefly to midwifery but in 1775 he was through the influence of lord Sandwich then first lord of the admiralty elected physician to the Charter house which situation he retained till his death in April 1807 at the age of seventy two. He was a fellow of the Royal and American Societies and in 1800 he published, in the Philosophical Transactions an account of a series of experiments on the light spontaneously emitted from various bodies. Some other papers and several other medical tracts, also proceeded from his pen. Among the latter are a treatise on puerperal fever and another on the stone and scurvy which were translated into German and published at Leipzig and Vienna.—*Rowl. Cyclop.*

HUME (DAVID) an eminent historian and philosopher was born at Edinburgh, in 1711. His father was a descendant of the family of the earl of Home but not opulent, and the subject of this article being his youngest son his fortune was very small. Losing his father in his infancy he was brought up under the care of his mother a woman of singular merit and was destined by his family for the law, but his passion for literature was so strong he could not confine himself to professional studies and as he observes in his memoirs while they fancied him to be poring over Voet and Vinnius he was occupied with Cicero and Virgil. His slender patrimony however not allowing him to follow his facil-

H U M

actions without some view of profit he was induced, in 1734, to visit Bristol with recommendations to some eminent merchants; but, as might have been expected he was as little disposed to commerce as to law and resolved to retire to some provincial town of France with the intention of prosecuting his literary pursuits in privacy and of supplying by economy his pecuniary deficiencies. He resided first at Rennes and afterwards at La Fleche in Anjou and passed three years in France in a manner very accordant with his own inclinations. In 1737 he came to London and the next year published his *Treatise upon Human Nature*, the cool reception or rather entire neglect of which proved a severe mortification. Being of a sanguine temperament he was not altogether discouraged but pursued his studies and in 1742 printed at Edinburgh his *Essays moral political and literary* which work owing to its more popular form and elegance of style was very favourably received and made some amends for his former disappointment. In 1745 he took up his residence with the young marquis of Anandale to whom he acted as a sort of guardian an office which was rendered necessary by that nobleman's health and state of mind. He remained in this situation for a year and then stood candidate for the professorship of moral philosophy at Edinburgh but although strongly supported he was excluded by the negative of the presbytery in consequence of his known scepticism. In 1746 he accompanied general Sinclair as his secretary in an expedition designed against Canada but which ended in an attack upon the French coast and in 1747 attended the same officer in a military embassy to the courts of Vienna and Turin. Here he increased both his knowledge of the world by good company and his little fortune by frugality accumulating the handsome sum as it then appeared to him, of 1000*l.* Having been led to imagine that the neglect of his *Treatise upon Human Nature* originated from its too dry and systematic form he cast the first part of the work anew and caused it to be published while he was abroad with the title of an *Inquiry concerning the Human Understanding*. It however attracted very little more notice than at first and on his return the author retired to Scotland where he resided two years. Meantime all his writings, except the first, began to attract notice and answer the usual contestants of new opinions when ably supported were occasionally making their appearance. Of a cool temper and careless of obtaining converts, he made it a rule to reply to none of these structures a resolution which he subsequently pleaded when called upon to notice the answer of Dr Campbell to his *Essay on Miracles*. In 1751 he repaired to the metropolis, where in the next year he published his *Political Discourses* which were at once well received. Nearly about the same time appeared his *Inquiry concerning the Principles of Morals* a work that he himself deemed incomparably his best but which

H U M

like most mere abstract speculations met with but little attention. In 1752 he obtained the congenial appointment of librarian to the faculty of advocates at Edinburgh which by affording him the command of a large and curious collection of books seems first to have inspired him with a notion of writing history. His local situation might also suggest his first subject in that line *The History of England under the House of Stuart* of which a quarto volume appeared in 1754. To use his own language it was received with one cry of reproach disapprobation and even detestation." He attributes this reception to his favourable treatment of Charles I and lord Strafford but it was much more owing to his equally contemptuous mention of the opposing religious parties which as far as they were sincerely actuated by their opinions, he regards as little more than votaries of superstition on the one side and of enthusiasm on the other. The work was, therefore, not only despised but neglected and had not a war broken out between the two countries, the author would have again retired to France. His constitutional equanimity however gradually prevailed, and he resolved to proceed in his task and in the mean time he published his *Natural History of Religion* and other pieces the first of which was answered by Warburton in the name of Dr Hurd. In 1756 he published the second volume of his history which embraced the period from Charles II to the Revolution and was comparatively well received. He now resolved to take a wider range and in 1759 published his *History of the House of Tudor* which excited a clamour against him almost equal to his first volume. His reputation as an historian however gradually increased and he was encouraged to complete his work from the earliest period which he accomplished in two additional volumes, in 1761 and his *History of England* became thenceforth a standard book. Upon this important work now so well known little remark is necessary. Although free from the narrow partialities and prejudices which so frequently influence national historians and enlarged and philosophical in his general views of events and characters his researches into the origin and progress of the English constitution are deemed wanting both in depth and accuracy. According to this opinion he has too sweepingly regarded the liberty of the country as of modern date and the mere result of forced concessions from the sovereign and has sometimes even coloured facts to support that conclusion. His predilection for the house of Stuart, has also made him somewhat unfair to that of Tudor and still more to the real patriotism of the motives of many of those who sought to curb the high pretensions and baleful extent of prerogative so imprudently claimed by that unhappy family. With every abatement, however his reputation stands high and, aided by his clear style which, although sometimes incorrect and exhibiting gallicisms, is frequently eloquent, and always agreeable will probably remain so. The copy money received

M U M

M U N

for his victory, added to a considerable sum, was received from the crown by the interest of lord Hertford, recently created his attendant, and he was sent to visit his native country when he was unexpectedly invited, by the earl of Huntingdon then proceeding to representation in Paris, to attend him with a view of ultimately becoming the secretary of the embassy. He reluctantly accompanied this ambassador to France and received the expected appointment. He was also further gratified by a most enthusiastic reception in the Parisian circles in his character of historian and philosophical writer. He remained charge d'affaires after the departure of lord Hertford, in 1765 and returned to England in 1766, accompanied by that singular and paradoxical character, Jean Jacques Rousseau, to whom he behaved with the greatest delicacy and generosity, a conduct which that eccentric person repaid with his usual ingratitude, and *injuste suspicion*. Having now acquired a relish for public life Mr Hume, in 1767, became under secretary of state, under general Conway which post he held until the resignation of that minister in 1769. He then finally retired to Edinburgh and having by this time realised a thousand per annum, he drew round him a chosen set of suitable associates, among whom he lived generally placid and respected, until the spring of 1775, when he was attacked by a stroke in the bowels, which never after altogether left him, but gradually produced a state of exhaustion, which carried him off on the 26th August, 1776 in the sixty fifth year of his age. He died in a state of mental composure, which has been eloquently described by Dr Adam Smith who in his estimation of the character of this eminent man departs but as charitable generous where, and possessed of a degree of gravity and good humour which is seldom attendant on students so appearing as Mr Hume. This temper even vindicating itself on his death bed which as might be expected, has in many quarters produced more censure than admiration. Upon the whole however it will be as difficult to deny the high personal moral claims of this writer, favoured as he was with the rare talent of self command, as the vigour and acuteness of his intellect. He doubtless takes the lead among modern philosophical sceptics and while open to the objections to which that system of philosophy will ever be liable, he must be allotted to have upheld it with distinguished ability. Besides the works already mentioned, in 1763, An Essay on Suicide appeared, which a critic in the Monthly Review informs, from his own knowledge to be really by Mr Hume. If so, it more openly assails received opinions than any thing published during his life-time, although it is said that it would then have appeared, had not the booksellers been afraid of publishing it.—*Hume's Discourse of his own Life and Death* Letter d'Ustarac à C Biog.

HUMPHREY (Lavarcen) dean of Wimborne, a native of Newport Pagnel, Bucks, about the year 1557. He entered humbly at Cambridge but removed

thence to the sister university, or a fellowship at Magdalen college, where he graduated in 1559. The persecutions of the reformed church under queen Mary drove him, together with many other refugees, in 1558 to Zurich in Switzerland and living almost longer than the period allowed by statute he was formally ejected from his fellowship. In the following year however, he returned, and succeeded in obtaining the restoration of his preferment. In the course of the next twenty years he passed from the deanery chair and the headship of his college through the deanery of Gloucester to that of Winchester which latter appointment he received in 1580. It is far from improbable that his learning and abilities would eventually have carried him up to a more but the severe Calvinistic principles which he had imbibed and which he professed in their utmost rigor rendered him obnoxious to the more moderate reformers of the day, and stopped his advancement. He was an excellent linguist as well as a good general scholar besides being well versed in all the polemical controversies of the period, to which he contributed his share, in the shape of a variety of tracts, written against the doctrines of the Romish church Of these the principal is entitled *De Religionis Conservacione at Refutacione et de Primatu Regum*. Among his other works are *Epiatola de Graeciis Literis et Homeris lectio et Imitatione*, 1558 *De ratione interpretandi auctores Opiniones*, sive de Nobilitate etusque antiquis Originib; and a *History of the Life and Death of Bishop Jewell*. His own decease took place in February 1590.—Athen. Oxon. Scripta Lycei Crameri.

HUMPHREY B.A., (Oxons) an eminent miniature painter was born in 1743, at Honiton, in Devonshire. He was educated at the grammar-school of his native town and on discovering a genius for drawing was placed under Samson Collins a painter of Exeter, who abruptly quitting the kingdom, he received but a small share of instruction, notwithstanding which, he settled at Bath as a miniature painter, until by the advice of his countryman sir Joshua Reynolds, he repaired to London. By the friendly instructions of that eminent artist he quickly rose to the first rank in his own branch of art, and became a royal academician. In 1780 he went to India, and was chosen one of the first members of the Asiatic Society and was held in great esteem by Warren Hastings and sir William Jones. On his return to England, he continued his profession whilst his sight would allow him, and died suddenly, in 1810.—Gent Mag.

HUNTAULD (FRANCIS JOSEPH) a French physician and writer on anatomy in the last century. He was a native of Brittany and after having studied at Rennes, Angers, and Paris he took the degree of M.D. at Rennes, in 1722. He settled at Paris, and in 1726 he was chosen a member of the Academy of Sciences. When the duke de Rohan went on an embassy to Vienna, Huntauld accompanied

shed his; as his physician and ever after retained the confidence and esteem of that noble man. In 1730 he became astronomical professor at the Jardin des Plantes, and lectured with great reputation. In 1735 he visited Holland, where he obtained an acquaintance with Boerhaave, and England where he read before the Royal Society *Keflexions on the Operation for Fistula Lachrymatis* which were published in the Philosophical Transactions and he was elected FRS. He died in 1742 at the age of forty-one. The memoirs of the Academy of Sciences comprise several papers by Hunnius the most important of which relate to the formation of the bones.—*Elog. Diet. Hist. de la Med. Atlan. & G. Bigg.*

HUNNIADES (JOHN CORVING) vassal of Transylvania and general of the armies of Ladislaus king of Hungary was one of the greatest commanders of his time. He fought against the Turks very heroically and in 1442 and 1443 gained important advantages over the generals of sultan Amurath and obliged that prince to retire from Belgrade after besieging it seven months. In 1456 he obliged Mahomet II also to relinquish a siege of the same place but died on the 10th of September in the same year. He was at this time regarded as the hero of Christendom and not less esteemed by his enemies than regretted by his friends. He left two sons the younger of whom, MATTHIAS was afterwards king of Hungary.—*Mod. Univ. Hisz. Morior.*

HUNNIS (WILLIAM) gentleman of the chapel royal under Edward VI and afterwards chapel-master to queen Elizabeth a voluminous writer of moral and religious poetry. He translated into rhyme many select psalms which, says Warton had not the good fortune to be rescued from oblivion by being incorporated into Hopkins's collection, nor to be sung in the royal chapel. They were printed in 1550 with the title of *Certayne Psalmes chosen out of the Psalter of David and drawn forth into English Meter by William Hunnis servant to the Ryght Honourable Syr W Harbord Knight.* This poet also published a *Handful of Honey-suckles* consisting of devotional verses and the whole book of *Genesys in English rhyme entitled A Hive full of Hopeny.* But his honey-suckles and his honey are no longer delicious and his works are merely noticed as specimens of the fashionable religious poetry of his time. He was a copious contributor to the *Paradise of Dainty Devices* and Thomas Newton a contemporary poet, says of Hunnis, that in the prime of youth his pen 'had depauperated Somers-Sainte' probably in allusion to his share of that work.—*Warton's Hist. of Eng. Poetry.*

HUNT (THOMAS) a learned Hebrew and Oriental scholar of the last century born 1696. He graduated at Oxford in 1731 as AM and in 1738 was elected to the Arabic professorship in that university. His inauguration address on this occasion together with a small tract on the use of the oriental dialects, has been printed. In 1744 he took his doctor's degree

in divinity and three years after obtained the regius professorship of Hebrew with a chair of Clericibus unius. Dr Hunt also wrote some valuable *Observations on the Book of Proverbs* which together with a selection from his sermons, were edited by Dr Kenneth, after the decease of the author in 1774.—*Gent. Mag. vol. lxxi. Nichols's Lit. Anecd.*

HUNTER (ALEXANDER) a very ingenious physician, naturalist, and writer on rural and domestic economy. He was a native of Scotland and studied at Edinburgh where he took the degree of MD. He established himself as a medical practitioner at York where he attained high reputation in his profession and was a principal contributor to the foundation of an asylum for lunatics. His chief literary productions are an *Inaugural dissertation De Cantharidibus*, Edinburgh 1751, 4to, *Geographical Essays*, 6 vols 8vo, 1770 &c., a new edition of Evelyn's *Sylva*, or Discourse of Forest Trees and the propagation of Timber with Notes 6 vols. 4to 1775 republished in 1786, Evelyn's *Terra*, a Philosophical Discourse of Earth with notes, 4to 1778 republished in 1787 a treatise on Burton waters 1776 8vo, and another entitled *Culina Familiarium Medicinae or Receipts in modern Cookery with a Medical Commentary* 1806, 12mo in which the subject is treated in a manner at once novel, impressive and useful. Dr Hunter died in 1809 in the eightieth year of his age.

HUNTER (CHRISTOPHER) a physician who distinguished himself by his writings and researches relative to the history and antiquities of the county of Durham. He was a native of that part of England and was educated at St John's college Cambridge. Having regularly taken his degrees, he settled as a medical practitioner at Durham and died there in 1757 aged eighty two. Dr Hunter was the author of *The Ancient Rates and Monuments of the Church of Durham*, 1753 and of *Remarks on a part of Neal's History of the Puritans* and he had also collected copious materials for a work on the parochial antiquities of the bishopric of Durham but the project was not carried into execution.—*Nichols's Lit. Anecd. Surtees's Hist. of Co. of Durham*

HUNTER (HENRY) a Scottish presbyterian divine born at Culross in Perthshire in 1741. At the age of thirteen he was sent to the university of Edinburgh where his literary requirements were such that when but seventeen he became tutor to a gentleman who was afterwards one of the lords of the session. The illness and death of his father having prevented him from retaining that situation he next accepted one of the same description in the family of lord Dundonald, at Culross abbey. In 1764 he obtained a license to preach, and in 1766 was ordained minister of South Leith. In 1771 he removed to London to become pastor to the Scottish church at London Wall and about the same time he was admitted to the degree of DD. by the university of Edinburgh. His most popular

HUN

HUNTER published the "Sacred Biography," a series of discourses on the lives of the most eminent persons mentioned in the Bible, was commenced in 1783 and was subsequently extended to seven volumes octavo. During the progress of this work Dr Hunter became a convert to the physiognomical system of Lavater, and in 1787 he made a visit to Switzerland, for the purpose of procuring materials from the author preparatory to an English translation of his works which he executed and published with splendid graphic illustrations by Mr Thomas Holloway the engraver. In 1790 he was chosen secretary to the corresponding board of the Society for Propagating Christian Knowledge in the Highlands of Scotland. In 1793 he published

Sermons preached on various occasions, to which were subjoined illustrative memoirs and anecdotes and in 1798 appeared his Lectures on the evidences of Christianity in conjunction with those of the Rev John Fell. He died at Bristol Hot Wells October 27 1802. Besides his original literary performances, he translated from the French Euler's Letters on Natural Philosophy St Pierre's Studies of Nature Saumur's Sermons Sonnini's Travels and Castor's & Memours of Catherine II of Russia. Two volumes of his Sermons &c with a biographical memoir were published posthumously.—*Aikin's G. Reg.*

HUNTER (Robert) an English gentleman, who obtained some literary distinction and was employed in a civil and military capacity in the colonial service of his country. He attained the rank of a colonel in the army and in 1708 he was appointed lieutenant-governor of Vizcaya; but in his voyage thither he was taken prisoner by the French. During his stay at Paris he corresponded with Dean Swift, who it appears had been suspected of being the author of the famous letter concerning euthanasia, usually printed in Lord Shaftesbury's Characteristics, but which was really written by Colonel Hunter. Returning to England he was made governor of New York and was sent thither in 1710 with 2700 expatriated Palatines, to settle that colony. After having expended very considerable sums from his private fortune, in furthering the objects of the English ministry he came home in 1719. On the accession of George II he was reinstated in his government of New York and the Jerseys. The chancery not agreeing with him, he obtained the government of Jamaica instead and arrived there in February 1727. He died March 31 1734. Besides the letter above-mentioned, he is said to have written a farce, called 'Androsboros.'—*Gough's Account of Creweland. Chalmers's B. D.*

HUNTER (William) a native of Montrose in Scotland who studied at the Marischal College of Aberdeen where he took the degree of M.A. in 1777. In the meantime he was acquiring a knowledge of medicine under a master, who practised all three branches of the profession; and after an apprenticeship of four years, he got a situation on board an East

HUN

Indiaman from which service he was transferred in 1781 to the Company's medical establishment at Bengal, where his genius and learning had an ample field for acquiring distinction as a man of science. From 1796 to 1806 he was surgeon of the marines and for some years inspector general of hospitals in the island of Java. As secretary to the Asiatic Society and professor and examiner at the college of Calcutta and in his previous post of surgeon to major Palmer's embassy with Dowlat Raj Scindia from 1784 to 1794 he had the best opportunities of studying the languages and literature of India. His publications were A Concise Account of the Kingdom of Pegu, with a Description of the Caves of Elephants Amboola, and Canara London 1783 8vo, an Account of some artful Caverns near Bombay 1788 12mo, An Essay on the Diseases incident to Indian Seamen or Lascars on Long Voyages Calcutta 1804 8vo besides papers on medicinae natural history &c in the Asiatic Researches and other periodical works. After an absence of thirty eight years he was preparing to return to his native country when he was seized with a fever which occasioned his death in the beginning of the year 1815.—*Month Mag. Watt's Bibl. Brit.*

HUNTER (William) a celebrated anatomist and medical practitioner born May 23, 1718 at Kilbride in the county of Lanark in Scotland where his father possessed a small estate. At the age of fourteen he was sent to the university of Glasgow as a student of divinity but in the course of his academic education having become dissatisfied with the doctrines of the kirk he relinquished all thoughts of the clerical profession and engaged himself as the pupil and afterwards as the partner of Cullen at Hamilton. The result of that connexion has been already partially related.—[See CULLEN (William).]—Mr Hunter went to reside at Hamilton in 1737 and after having passed the winter of 1740 at Edinburgh he went to London in 1741 and shortly after was engaged as successor to Dr James Douglas a metropolitan physician and public lecturer who was then employed on a work relating to osteology. This gentleman died within a few months, and Mr Hunter though he continued to reside with the widow found that he must depend on his own exertions for success in his profession. He soon evinced his ability by a paper

On the Structure and Diseases of articulating Cartilages" which he communicated to the Royal Society in 1743 and which was inserted in the Philosophical Transactions. He determined to establish himself in London as a teacher of anatomy and commenced lecturing on that subject in 1746 having previously been engaged to assist Mr Samuel Sharpe as a lecturer on surgery. In 1747 he was admitted a member of the corporation of surgeons, and in the spring of the following year, soon after the close of his lectures for the season he went to Leyden and Paris in company with his pupil the son of his late patron,

HUN

Dr Douglas. On his return home he devoted himself to the practice of midwifery, and his success in that department was promoted by his being chosen surgeon-accoucheur first to the Middlesex hospital and then to the British lying-in hospital. In 1750 he obtained the degree of MD from Glasgow when he entirely relinquished mere surgical practice.

He much consulted as a physician in cases requiring peculiar anatomical skill for their investigation. In 1755 he became physician to the British lying-in hospital on the resignation of Dr Layard, and the following year he was admitted a licentiate of the college of physicians, and soon after elected a member of the Medical Society. In the first volume of *Observations and Inquiries* published by that association in 1757 appeared Dr Hunter's *History of an Aneurism of the Aorta*, and he was an important contributor to the subsequent publications of the society of which he was chosen president on the death of Dr Fothergill. In 1762 he published a work entitled *Medical Commentaries* 4to to which was subsequently added a *Supplement* the object of which was to vindicate his claim to some anatomical discoveries in opposition to professor Monroe of Edinburgh and others. Such was the professional distinction attained by Dr Hunter that in 1766 he was appointed physician extraordinary to the queen. About this time he engaged as his assistant and afterwards as his associate in his lectures, Mr William Hewson but the connection between them was dissolved in consequence of some disputes after it had continued nearly six years. Dr Hunter was elected a fellow of the Royal Society in 1767 and was also admitted into the Society of Antiquaries, and in 1768 on the establishment of the Royal Academy of Arts he was appointed professor of anatomy. It may be added to the list of his scientific distinctions that he was made a foreign associate of the Royal Medical Society at Paris in 1780 and of the Royal Academy of Sciences in 1782. The most elaborate and splendid of his publications

The Anatomy of the human Grand Uterus foeto illustrated by thirty four large plates appeared in 1775. In 1777 he joined Mr Watson in presenting to the Royal Society

A short Account of the late Dr Maty's Illness and of the Appearances on Dissection," and in 1778 he published "Reflections on the Section of the Symphysas Pubas, designed to show the impropriety and inutility of that surgical operation which had become fashionable among accoucheurs on the continent and especially in France." Two introductory Lectures to his Anatomical Course "which he had prepared for the press, were published after his death. When his professional emoluments produced an extraordinary supply of wealth, he was desirous of devoting a portion of it to the establishment of an anatomical school and museum in the metropolis. With that view, about 1765, he presented a memoir to Mr Grenville then minister requesting a grant from government of the site of the

HUN

king's mews wherein he offered to erect an edifice at the expense of 7000/- and endow a professorship in perpetuity. But his proposal was treated with neglect in consequence of which he purchased a spot of ground in Great Windmill street, Haymarket where he built a house anatomical theatre and museum for his own professional purposes and thither he removed in 1770. Here besides objects connected with the medical sciences he ultimately collected a library of Greek and Roman classics, and a valuable cabinet of medals. The latter furnished the materials for a publication, entitled *Numerorum veterum Populorum et Urbium qui in Museo Gulielmi Hunter astraruntur Descriptio Figurae illustrata, Op. et Stud. Carol. Combe S.R. et S.A. Sec* 1763 4to. In 1781 the museum was augmented by the addition of shells and other natural curiosities which had been collected by Dr Fothergill who had given testamentary directions that his cabinet of natural history should be offered to Dr Hunter for 500/- less than the appraised value and he accordingly purchased it for 1200/-. He continued with unabated industry and application to attend to his avocations as a practitioner and lecturer till within a very short time of his death, which was probably hastened by want of relaxation from the fatigues of business. After an attack of gout about the middle of March 1783 having partially recovered, he imprudently determined to commence his usual course of lectures on surgery. He had however overrated his own strength as after having delivered the introductory lecture, he fainted away and being conveyed to bed, was the ensuing night seized with palsy which occasioned his death March 30 1783. In his last moments he is said to have exhibited a kind of philosophical indifference to his approaching fate of which many similar examples occur among persons of his profession. To his friend Mr Combe a short time before his decease he said—"If I had strength enough to hold a pen I would write how easy and pleasant a thing it is to die." By his will he bequeathed his museum to his nephew Dr Matthew Baillie for the term of thirty years, after which it was removed to the university of Glasgow where it is now deposited.—*Lives of Dr Hunter by Dr S F Simmers Hutchinson's Biog Med. Aikin's G Biog*

HUNTER (JOHN) younger brother of the preceding highly celebrated as a practitioner and writer on surgery anatomy and physiology. He was born July 14, 1728, and his father dying when he was about ten years old, his education was neglected and he was suffered to spend his time unprofitably in country amusements. One of his sisters having married a cabinet maker settled at Glasgow he became his apprentice, but the failure of his brother-in-law prevented his continuance in that situation. At length, hearing of the success of his elder brother in London he offered his services to him as an anatomical assistant, expressing a wish to enter into the army if his proposal was rejected. In answer to his ap-

HUN

plicances he was invited to London, where he arrived in September 1748. His first essays at the dissecting-room did him great credit and he improved so speedily that in the winter of 1749 he was able to undertake the instruction of dissecting pupils. He at this time attended to the practice of surgery at Charing-cross hospital, and afterwards at St Bartholomew's. In 1753 he visited Scotland, and in 1755 he entered as a gentleman-commoner of St Mary Hall, Oxford, but of the advantages of academic study he could but slightly have availed himself, as he became a surgeon's pupil at St George's hospital in 1754, where he continued during the summer months and in 1756 he was appointed house-surgeon to that establishment, with which he continued to be connected during the remainder of his life. In the winter of 1755 he was admitted to a partnership in the lectures delivered by his brother in which situation he most assiduously devoted himself to the study of practical anatomy not only of the human body but also of brute animals for which latter purpose he procured from the Tower and from the keepers of other menagères, subjects for dissection. His health having been impaired by too close attention to these pursuits he went abroad in 1760 as a surgeon on the staff of the army in the expedition to Belgrade and he served in the same capacity in Portugal in 1763. Returning to London he engaged in surgical practice and added to his income by giving winter courses of lectures on anatomy and operative surgery. Continuing to cultivate comparative anatomy and natural history he purchased some ground at Earl's-court, Brompton, where he built himself a house and kept several foreign and uncommon animals for the purpose of studying their habits, manners and organisation. In the beginning of 1767 he was elected a fellow of the Royal Society when his zeal for the advancement of science induced him to institute meetings of his associates at a coffee house after the formal sessions of the society which was the means of exciting a spirit of inquiry, whence originated many philosophical improvements and discoveries. In 1769 he was elected one of the surgeons of St George's hospital, through the interest of his brother. His first publication, a treatise on the Natural History of the Teeth &c. appeared in 1771. In the winter of 1773 he commenced a course of lectures on the theory and principles of surgery in which he developed some of those peculiar doctrines, which he afterwards explained more fully in his published works. His perfect acquaintance with anatomy rendered him a bold and skilful operator and enabled him to make some considerable improvements in the modes of treating certain surgical cases. But the fame of John Hunter steadily rose on his researches concerning comparative anatomy, and the structure of the higher classes of organised beings, in the investigation of which he spared neither pains nor expense. In 1776 he obtained the appointment of surgeon extraordinary to the

HUN

army. In 1781 he was chosen a member of the Royal Society of Göttingen, and in 1785 of the Royal Society of Medicine and Academy of Surgery at Paris. In the year last mentioned he removed from Jermyn-street, where he had resided, to Leicester-square, and thither he removed the very extensive museum of anatomical preparations which it had been the great occupation of his professional life to form for the illustration of physiological science. In 1786 he was made deputy-surgeon-general to the army and in that year published a long promised work on the vesicular disease, which contained some novel opinions, and became the subject of critical animadversion but which was the obvious production of a highly talented and well informed mind. About the same time appeared a quarto volume entitled *Observations on various Parts of the Animal Economy*, consisting of physiological essays, most of which had been inserted in the philosophical transactions. A fit of illness with which he was seized for a while disabled him from attending to business and laid the foundation of a disease of the heart, which rendered his future health and even existence, very precarious. He resigned to Mr Home the office of lecturer in 1790 that he might devote his time to the composition of a *Treatise on the Blood, Inflammation and Gun-shot Wounds* which was one of the last of his literary labours. On the death of Mr Adair he was appointed inspector-general of hospitals and surgeon-general to the army and the duties of these offices interfered not a little with his scientific pursuits, and doubtless contributed to shorten his life. The spasmodic disease, which had for some years been undermining his constitution at length became so serious that the most imminent danger was to be apprehended from any sudden or violent exertion. Though perfectly aware of his situation, he fell a sacrifice to the agitation arising from some unpleasant circumstance which occurred at St George's hospital where he died suddenly October 16 1793. On examining his body after death, it appeared that he had laboured under an occlusion of the vessels of the heart, whence the previous disease and ultimate catastrophe had been produced. Besides the works already noticed, he published some papers in the transactions of the Royal Society and of a Society for the Improvement of Medical Knowledge, of which he was an active member. His treatise on the blood, &c. was published in 1794 with an account of his life by Mr now Sir Everard Home. Government purchased the museum of Hunter for 15 000*L* and transferred it to the Royal College of Surgeons, for the use of the public. —*Lif's of John Hunter by Jess. Post. Great Mag. vol. lxxv. Hutchinson. Aikin.*

HUNTER (Anne) widow of the subject of the last article and remarkable for her literary attainments. Intimately connected with Mrs Elizabeth Carter Mrs Delany &c. Mrs Hunter was no inconsiderable member of the learned circle of ladies who composed their

HUN

society. She excelled in lyric poetry as is evinced by the well-known "Queen Mary's Lament," "The Death-song of Alceste" and the Indian Warrior," and especially the beautiful words to some of Haydn's canzonets such as "My Mother bid me bind my Hair," "The Mermaid's Song" &c. These, as well as her other productions, were some time previous to her decease collected and published in a small volume under her own superintendance. Her maiden name was Home, her father Mr Robert Home being at the time of her birth a surgeon in the army. She had three brothers, the youngest of whom is now Sir Everard Home. Mrs Hunter died in London January 7 1821 in her seventy ninth year.—*Genl Mag.*

HUNTINGDON (SUSANNA countess of) the second daughter of Washington, earl Ferrers, and sister to the unhappy nobleman of that title who was hanged at Tyburn for the murder of his steward. She was born in 1707 and married June 8 1728 to Theophilus earl of Huntingdon, by whom she had a family of four sons and three daughters. Becoming a widow she acquired a taste for the principles of the Calvinistic methodists and patronised the famous George Whitfield, whom she constituted her chaplain. Her rank and fortune giving her great influence, she was long considered as the head of a sect of religiousists and after the death of Whitfield his followers were designated as the people of lady Huntingdon. She founded schools and colleges for preachers, supported them with her purse and expended annually large sums in private charity. After a widowhood of forty five years, she died June 17 1791 regretted for her virtues even by those who regarded her conduct as the offspring of mistaken enthusiasm.—Original.

HUNTINGDON (WILLIAM) a religious enthusiast, who attained some notoriety towards the end of the eighteenth century. He was the son of a farmer's labourer in Kent, and the early part of his life was passed in manual service and other low occupations. After indulging in vice and dissipation for several years according to his own account he was converted and became a preacher among the Calvinistic methodists. He soon engaged in religious controversies, published a vast number of tracts and was regarded as the head of a peculiar sect. His followers erected for him a chapel in Titchfield-street, and afterwards one of larger dimensions up Gray's Inn-road, where he officiated till near the time of his death which took place at Tunbridge Wells, in August, 1813 at the age of sixty nine. He was a man of some talent, though little cultivated by education. His publications are very numerous, and some of them contain curious details relative to his personal history and religious experience. The titles of two may be mentioned as specimens:—The Armenian Skeleton, or the Arameans dissected and anatomized; Eve and "The Bank of Faith," &c. After having lost his first wife by death he married the wealthy widow of six

HUN

James Sanderson, a London citizen, and passed the latter part of his life in all the comfort, if not the luxury of affluence.—*Letter of Don Manuel Escribano.* Edit.

HUNTINGTON (HENRY or) an ancient English historian was the son of one Nicholas a married priest, and was born towards the end of the eleventh or the beginning of the twelfth century. He was educated by Alonso of Ayton, a learned canon of the church of Lincoln and in his youth discovered a taste for poetry by writing epigrams, love verses, and three long didactic poems, one upon herbs, another concerning spaces and a third on the subject of precious stones. In his more advanced years he applied to the study of history and composed a general history of England from the earliest accounts to the death of king Stephen in 1154 in eight books which have been published by sir Henry Savile. Towards the conclusion the author honestly acknowledges that it is only an abridgment and allows that to compose a complete history of England many books were necessary which he could not procure. Mr Wharton has published a letter of this author on the contempt of the world which details many curious anecdotes of the great men of his time. The Bodleian library also contains a Latin poem of Henry on the death of Stephen and arrival of Henry II which is by no means contemptible. In Trinity college library Oxford is a fine MS of his book "De usmagne Mundi." When he died is unknown.—*Henry's Hist. of Gr Britain. Wharton's Antiqua Secra.*

HUNTINGTON (Reneau) a learned English divine and prelate of the seventeenth century. He was born at Deerhurst in Gloucestershire of which place his father was minister in 1638 and after receiving his grammar learning at the free-school of Bristol was sent at the age of sixteen to Merton college, Oxford. In 1662 he graduated as MA, and having undergone the usual course of study applied himself with extraordinary zeal and diligence to the study of divinity and the Oriental languages. In 1670 probably on this account he was appointed chaplain to the factory of Aleppo. This appointment he held for eleven years during which time he peculiarly dedicated himself to the discovery and collection of ancient MSS. in which pursuit he was patronised by the bishops Mordaunt and Fell, and other learned persons in England. He travelled with this object not only through the districts adjoining Aleppo, but to Mount Sinai various parts of Palestine, and in 1677 made a voyage to Cyprus to examine the library of the archbishop of Justiniana Nova but without success. In two journeys which he took in 1680 and 1681 to Egypt, he was more fortunate, being enabled to rescue many curious copies of the Gospel and other MSS. from oblivion. He returned to England in 1682 and immediately retired to his fellowship at Merton college, and the next year received the degrees of bachelor and doctor of divinity and was appointed master of Trinity college, Dub-

H U R

18 Upon the descent of James II in Ireland after the revolution, he retired for safety to England but returned when the danger was over and in 1691 resigned the mastership of Trinity college, resolved not to live out of his native country. In the mean time he sold his fine collection of MSS about six hundred in number to the curators of the Bodleian library for 900. In 1692 he was offered the Irish bishopric of Kilkeel which he refused but in 1701 accepted that of Raphoe but survived his consecration only two days. He published nothing from his own pen excepting An Account of the Porphyry Pillars in Egypt, and Letters written while abroad which appear at the end of his life by Dr South.—*Biog. Brit.* Life by Smith, in Latin.

HUNTON (PHILIP) a nonconformist divine of the seventeenth century deserving of notice as a political writer. He was a native of Hampshire and was educated at Wadham college Oxford where he took the degree of MA. Having entered into holy orders after preaching at some other places he settled at Westbury in Wilshire. His reputation for learning occasioned him to be appointed by Oliver Cromwell in 1657 the provost of his then recently erected college at Durham with which office Mr Hanton held the living of Sedgfield in the bishopric though he had only a part of the revenue belonging to it. This he lost on the return of the old incumbent in 1660 and the dissolution of the collegiate establishment taking place he retired to his congregation at Westbury where he died in July 1682. He was the author of A Treatise of Monarchy viz. concerning Monarchy in general and the English Monarchy in particular in which work he broached the constitutional doctrine that the sovereignty of England is not in the king only but in the three estates, viz. the king lords and commons. Such principles did not please the high toned churchmen of Charles the second's reign and Hanton's assertion was condemned by a decree of the convocation held July 21 1683, and the book ordered to be burnt in the school quadrangle at Oxford which was accordingly done. The treatise on monarchy provoked the animadversions of Dr Henry Feme and Mr Robert Filmer the latter of whom composed his famous Patriarcha in defence of the divine right of kings, against Hanton.—*Catamy's Nonconformists' Memorial, Magna Britannia—Witton*

HURD (RICHARD) an eminent English poetical and philological writer of the last century. He was born January 15 1720 at Cosegrave, in Staffordshire where his father was a factor. After a school education he went to Emmanuel college Cambridge in which he obtained a fellowship in 1742 having previously proceeded MA, and in 1749 he took the degree of BD. The same year he published *Ælfric's Ars Poetica, Epistola ad Pisones*, with an English commentary and notes which were dedicated to Warburton whose friendship and literary patronage constituted much of his future prosperity. In 1750 he published

H U R

a "Commentary on the Epistle of Horace to Augustus," and in 1751 a tract intituled "The Opinion of an ancient Lawyer, concerning the Right of Appeal from the Vice Chancellor of Cambridge to the Senate" supported by a short historical Account of the Jurisdiction of the University by a Fellow of a College 8vo. His next production was a scatrical attack on Dr Jortin in defence of Warburton in an Essay on the Deity of Friendship which he afterwards endeavoured to suppress. His first ecclesiastical preferment was the rectory of Thurgarton in Leicestershire which he obtained in 1757, and the same year he published Remarks on David Hume's Essay on the Natural History of Religion 8vo. His Dialogues Moral and Political, with Letters on Chivalry and Romance, appeared at different times from 1758 to 1764, and were republished collectively in 1765, three vols. 8vo. It ought to be remarked that the later editions of this production show the sentiments of the author to have undergone some change after the first publication of his dialogues in which he eulogises the friends and martyrs of liberty in terms which to his more matured judgment probably appeared too strong. None of his works attracted so much notice as the dialogues which were translated into German by the post Holty and published at Leipzig. About 1765 he was chosen preacher to the society of Lincoln's Inn and in 1767 he was made archdeacon of Gloucester. He took the degree of LLD in 1768, in which year he commenced a series of sermons on the prophecies, preached at the lecture founded by his friend Warburton, at Lincoln's Inn. These discourses were published under the title of an Introduction to the study of the Prophets concerning the Christian Church in twelve Lectures, 1772. In 1775 Dr Hurd was raised to the bishopric of Lichfield and Coventry, and not long after was made preceptor to his present majesty and his brother now the duke of York, through the influence of lord Mansfield. He was translated to the see of Worcester on the removal of Dr North to Winchester in 1781, and at the same time was bestowed on him the confidential situation of clerk of the closet. These preferments seem to have satisfied his ambition for on the death of Dr Cornwallis, archbishop of Canterbury the king would have elevated Dr Hurd to the primacy a station for which he was well qualified by his talents and standing in the church but he modestly declined the offer. In 1788 he published an edition of the works of bishop Warburton, in which he thought proper to omit some of the productions of his deceased friend, a circumstance which subjected him to the severe reprehension of the late Dr Samuel Parr who supplied the editorial deficiencies of bishop Hurd's collection by prefixing a volume with the title of Tracts by Warburton and a Warburtonian. In 1795 the right reverend editor himself published a kind of supplement to the works of Warburton, in the form of a biographical preface and he subsequently also pub-

H U S

lished the correspondence of Warburton which was his last literary undertaking. He died at the episcopal palace of Hartlebury, in Worcestershire May 23, 1808 and was interred in the church yard of that parish.—Nichols's *Life and Letters*. Month. Mag. vol. xxv. Ediz.

HUBERTUS (JAMES) an ingenious poet and amiable man was the son of a gentleman of small fortune at Bishopstone in Sussex where he was born in 1763. He was educated at Chichester school and in 1780 was entered a commoner of St Mary hall Oxford and at the election of 1782 was chosen a demy of St Mary Magdalen college. In 1784 he became tutor to the youngest son of the earl of Chichester the honourable George Pelham since bishop of Exeter. In 1788 he first appeared before the public as a poet in his *Village Curate* which was followed by his "Adrano his Panthen, Elmer and Ophelia," and the *Orphan Twins*. In 1791 he was presented to the living of Bishopstone, and in 1793 was elected professor of poetry at Oxford where in 1794 he took the degree of BD and in 1797 that of DD. He died December 23 1801. In addition to the works already mentioned Dr Hurdus was author of

A Dissertation on Genesis 1 and 21. Select Remarks on the First Ten Chapters of Genesis Sir Thomas More a Tragedy "Curious Remarks on the Arrangement of the Plays of Shakespeare A vindication of the University of Oxford from the aspersions of Mr Gibbon, The Favourite Village a poem and Twelve Dissertations on the Nature and Occasions of Prophecy After his death his poems were published in three volumes by subscription with a life by his sister.—*Life by Miss Hurdus Hayley's Life of Cooper*

HURE (CHARLES) the son of a peasant of Champigny-sur-Yonne where he was born in 1639. In spite of the disadvantages arising from the poverty of his parents he contrived by unceasing industry to make himself master of most modern and several ancient languages. His progress in Oriental literature was also considerable. He was a member of the Port Royal Society professor of languages at Paris and eventually obtained the headship of the college of Boncourt. He was inclined to Jansenism in his religious opinions and proved himself a good biblical scholar by a dictionary which he wrote of the Scripture in folio two vols. This work is not however considered equal to that of Caiet. His other writings are a Sacred Grammar an edition of the Latin Testament, with his own annotations, in two 12mo vols. and a French translation of the same work which appeared afterwards in four vols. His death took place in 1717.—*Newes Dier Hure*

HUSS (JOHN) an eminent Bohemian divine and martyr to unjust persecution, was born at Husinec about the year 1370. He received his education at the university of Prague, and in 1400 became pastor of the church of Bethlehem in that city in which situation he displayed great erudition and eloquence. About

H U S

this time the writings of Wickliffe had been introduced into Bohemia when Hus adopted several of his opinions, and in particular those relating to the papal hierarchy and the dignification of the priesthood. In the year 1407 he began openly to declaim against the vices of the different ranks of the clergy and the discipline of the church of Rome and thereby excited the most violent animosity on the part of the archbishop of Prague and of the clergy in general. He also added to this resentment by embracing the philosophical opinions of the realists, in opposition to those of the nominalists, which were chiefly espoused in Germany. His success in preaching against the sale of indulgences produced still further exasperation, and Subsecut archbishop of Prague in 1409 issued two mandates addressed to the members of the university of Prague one to bring in all the writings of Wickliffe in order that such as were heretical might be consigned to the flames and the other enjoining all clerics and ministers to insist upon the existence of the real presence under the appearance of bread and wine. Hus vehemently opposed both these mandates and upon an appeal to Gregory XII the archbishop was summoned to Rome who however so represented matters, that the pope issued a bull for the suppression of the writings of Wickliffe and forbade Hus and other members of the university who had not complied with the mandates of the archbishop from preaching and all other ecclesiastical functions. Hus and his friends on the appearance of this bull, appealed a second time to Rome on which he was ordered by pope John XXIII to appear personally in that capital Assured of the protection of Wenceslaus, king of Bohemia he refused to obey the summons and was excommunicated for contumacy.

He treated this sentence with the utmost contempt, and went on preaching against corruption in religion until the conflicts between the opposing parties became so animated that it induced John XXIII to call a council in 1414, where it was agreed between the pope and the emperor Sigismund that Hus should appear and give an account of his doctrines the latter promising him safe conduct and security of person. He accordingly arrived at Constance 3rd of November 1414, was formally accused, and soon after notwithstanding the urgent remonstrances of the emperor imprisoned and condemned without hearing for maintaining that the Eucharist ought to be administered to the people in both kinds. Of this conduct the emperor so warmly complained that in pretended compliance with his demand, on the 5th and 7th of July 1415 Hus was brought before the council, and permitted to say what he could in behalf of himself and doctrine, but all that he alleged was unanswerable to, and he was soon given to understand that they were disposed to put up with nothing short of a full recantation of his asserted errors. Peremptorily refusing compliance with this demand, he was remanded back to prison, and being again brought before the council on the 6th of July was condemned for heresy and

H U T

seized to be burnt. His execution followed the next day with circumstances of great savagery and cruelty; and his ashes were gathered up and thrown into the Rhine. He died with unshaken firmness and resolution and the day of his execution the 7th of July was for many years held sacred by the Bohemians. The works of Husa which are numerous and learned were collected into a body and published in two vol. folio, Nuremberg 1550. They are distinctly specified in our authorities.—*Cave & Hist. Lat. Franks Thesaurus.*

HUSSEY (Giles) an ingenious English painter an estimable but somewhat eccentric character in private life. He was born of a good family at Marnhill, in Devonshire in 1710, and his friends being of the catholic persuasion he was educated at Douay and St Omer. With a view to the cultivation of his talents for painting he was placed under Jonathan Richardson and afterwards with Domenico, a Venetian artist, with whom he went to Italy. In 1737 he returned to England and commenced portrait painter. He had invented a peculiar theory relative to the form and proportions of the human face, which he conceived to be connected with the harmonic intervals of a musical scale, and he is said to have been so successful in the practical application of this apparently fanciful system as to have produced very accurate likenesses of those who sat to him for their portraits. He did not however meet with the encouragement which his talents deserved, and after residing for some time in London in distressed circumstances, he retired into Wiltshire where his elder brother possessed an estate after whose death he removed to the neighbourhood of Ashburton in Devonshire. He died suddenly while giving directions to labourers in his garden, in the month of June 1788. Barry thought this artist worthy of a place in the historical group with which he decorated the rooms of the society for the encouragement of arts and manufactures in the Adelphi.—*Bart's Pictures of Wiltshire.*

HUTCHESON LLD (Francis) an Irish protestant dissenting divine and ingenious philosophical writer was the son of a dissenting minister of the north of Ireland where he was born August 8, 1694. After receiving a proper education at a grammar school he was sent to an academy to begin his philosophical career, and in the year 1710 was entered a student in the university of Glasgow. He early displayed supreme abilities, and made a distinguished progress in all his studies, finally devoting himself to divinity as a professor. After spending six years at Glasgow he returned to his native country where he was licensed to preach among the dissenters but accepted the invitation of some gentlemen acquainted with his talents, to set up a private academy in Dublin. He had not been long settled in that city, before his merits and accomplishments made him generally known, and persons of all ranks, who esteemed literature and learned men, cultivated his acquaintance.

H U T

and. In 1725 the first edition of his celebrated "Inquiry into the Ideas of Beauty and Virtue" appeared without his name; but his merit would not allow the author to be long concealed and it secured him still further notice from the learned and eminent among whom were lord Granville, then lord Lieutenant of Ireland archbishop King and the primate Butler. In 1728 he published his "Treatise on the Passions" which has often been reprinted and is admired even by those who dispute the soundness of his philosophy. About the same time he also wrote many philosophical papers which were published in the collection called, *Hibernicus's Letters*, together with some answers to objections to his system in the public journals. After keeping a private academy in Dublin for some years with great reputation he was in 1729 called to the chair of philosophy at Glasgow where he spent the remainder of his life in a manner highly honourable to himself and useful to the university of which he was a member. He died in 1767 in his fifty-third year. He had married soon after his settlement in Dublin, and left behind him a son Dr FRANCIS HUTCHISON a physician who in 1755 published from the MSS of his father A System of Moral Philosophy in three books Glasgow 1755 2 vols 4to to which is prefixed some account of the "Life Writings and Character of the Author by Dr Leechman Professor of Divinity in the same University. The system of morals of Dr Hutchison is founded upon nearly the same principles as that of lord Shaftesbury. He deduces all our moral ideas from an implanted moral sense or instinct, like that of self preservation which independently on argument or the reasonableness of certain actions leads us to perform them ourselves and to approve them in others. The moral sense is by this school of philosophy maintained to be the very foundation of virtue but the fame of the author of the theory according to professor Dugald Stewart, rests chiefly on the taste that his works and lectures contributed to diffuse for analytical discussion in Scotland which led to the production of some of the most valuable writings of the eighteenth century.—*Tutte's Life of Lord Kames. Stewart's Life of Dr Adam Smith. Bigg Brit.*

HUTCHINS (John) the son of a clergyman of Bradford Peverell Dorset where he was born in 1698. He received the rudiments of a classical education at Dorchester grammar school whence he removed in due course to Oxford and entered at Hart hall but quitted that society soon after for Balliol college, in the same university. Having graduated in 1721 he took holy orders, and was presented in succession to the livings of Swyre of Melcombe Horsey in Dorsetshire and to the rectory of Wareham, which latter place of preference he obtained in 1744. Mr Hutchins was occupied during the major part of a long life in collecting materials for and compiling a history of his native county, which he had nearly completed at the time of his death in June 1773. This valuable work was pub-

H U T

lished the year following in two volumes folio for the benefit of his widow, and has since gone through a second edition, with additions by Mr. Geoghe and Mr. Nichols, which has extended the work to four volumes.—*Life by* Bingham *in Bibl. Top. Brit. Nichols's Lit.* *etc.*

HUTCHINSON (John) an English philosophical and theological writer whose opinions have produced much controversy was born at Spennithorn, in Yorkshire, in 1674 His father a person of small landed property sought to qualify his son for a stewardship to some noblemen or gentleman. For this purpose he gave him such learning as the place afforded and the remaining part of his education was supplied by a person who boarded with his father and who instructed him both in the classics and mathematics. Thus educated he became steward in succession to Mr. Bathurst, of his native county and to the earl of Scarborough and the duke of Somerset About the year 1700 being called by his employment to London, he contracted an acquaintance with Dr Woodward, and business carrying him to several parts of England and Wales, he published a small tract entitled *Observations made by J H mostly in the year 1705*. In these journeys he collected fossils which he put into the hands of Dr Woodward, it being the professed object of both one and the other to prove thereby the Mosaic account of the Creation. Some delay taking place on the part of Woodward who was to draw up the work Mr Hutchinson began to doubt his intention to fulfil his engagement and a quarrel ensuing he resolved to trust to his own pen for the purposed discussion. In order to have time for this object, he quitted the service of the duke of Somerset who being master of the house gave him the sinecure of riding purveyor which, with other advantages enjoyed by the favour of the same nobleman enabled him to dedicate his time to study without pecuniary discomfort. In 1724 he published the first part of his "Moses's Principia," in which he not only ridiculed the

Natural History of the Earth, by Woodward but exploded the doctrine of gravitation. From this time to his death he published a volume every year or two, which, with the MSS. he left behind him, were collected in 1746 by the rev. John Bate a disciple, and amounted to twelve volumes octavo, an abstract of which was afterwards published in 18mo. The second part of "Moses's Principia," published in 1727 contains the substance of the principles of his scripture philosophy. In opposition to the vacuum and gravity of Newton, he contends for a plenum and air and heat; that the idea of the Trinity was to be taken from the three grand agents in the system of nature, fire, light, and spirit, these three conditions of the same substance, air being remarkably typical of three persons in one and the same essence. This notion, it is said, was admired by Dr Samuel Clarke, and, with his other doctrines, it has been favoured by more recent divines, including Horne, the

H U T

rev William Jones, in the life of that M. shop, and Peckham. Accustomed to make an excursion every year into the country he neglected to do so in 1737 and thereby produced, by unrelaxed study a bilious attack of no serious a nature that it carried him off on the 16th of August, 1737 in his sixty third year. Mr Hutchinson was of a very singular turn of mind and his leading notion that all knowledge natural as well as theological is contained in the scriptures was supported by visionary and fanciful analogies and no small number of whimsical and doubtful propositions as may be readily imagined when it is added, that he assigned to every Hebrew root a spiritual or mental meaning in addition to the sensible object that it obviously expressed. As already observed however he gained many respectable proselytes. Mr Hutchinson possessed great mechanical skill and invented a chronometer for the discovery of the longitude at sea, which was much approved by sir Isaac Newton. It is to be regretted that his temper was defective and that he was more violent and vindictive in controversy than a theorist of any description ought to be.—*Bing Brit. Biog.*

HUTCHINSON (John Hely) an Irish statesman and lawyer of the last century. He was born in 1715 and educated for the bar. By his talents and assiduity he rose to the offices of prime sergeant, secretary of state, and provost of Trinity college Dublin — in addition to which he held several other lucrative employments. His ardency for office attracted the satirical remark of lord North, that if Hutchinson had England and Ireland given him, he would still sublet the Isle of Man for a potato-garden. He died in 1794.—*Lampr. Hist. Eng.*

HUTTEN (Ulricus) a German poet, soldier and controversialist of the fifteenth century born in 1488, of a noble family settled at Stockenburg in Franconia. He received a liberal education at the abbey of Fulda, and at Frankfurt on the Oder where he graduated. The exhaustion of his pecuniary resources, consequent upon his irregular habits drove him, in spite of a strong literary taste to enter the imperial army, in which he served at the siege of Padua. Gladly availing himself however of the first opportunity which presented itself of returning to his favourite pursuits, he retired in 1511 to Pavia, and, in compliance with the expressed wishes of his family, commenced the study of jurisprudence. Here he remained, till the sacking of the city by the Swiss troops drove him once more into Germany. After going through several vicissitudes of alternate want and plenty he was fortunate enough to attract the notice of the emperor Maximilian himself by his poems, and in 1516 was publicly crowned by that sovereign with the poetic laurel. The three succeeding years of his life were spent in the imperial service of his prince, and in several occasions he proved his ability to wield the sword with as much success as the pen. Unfortunately, however, the dissipated habits of

a camp continued to produce their usual effect upon his mind; which, though vigorous, was but ill regulated, and although his subsequent writings evince that he possessed a strong & vigorous feeling, yet it was altogether unequal to neutralise the violence of his passions. His health in consequence suffered so severely that he was again compelled to retire from the service, and the celebrated bull being issued about this time by the pope against Martin Luther Hutter who was a warm advocate of the reformed doctrines published an edition of it with comments so happy in the causticity of them savagely that the pontiff formally demanded the author from the elector of Meintz. Hutter found a temporary asylum in the castle of Eberberg but was not so dismayed as to discontinue his attacks on the Romish church while the elector appears not to have been very earnest in his attempts to apprehend him if indeed he ever seriously entertained such an intention. Soon after in consequence of the denial of some rates of hospitality which he expected to receive from his friend Erasmus then residing at Basel a violent quarrel ensued between them which was carried on upon the part of Hutter at least, with no slight degree of asperity. In the mean time the disorders consequent upon a life of debauchery began to make such havock upon a frame long debilitated by excess, that he at length retired to an island on the lake of Zurich where he closed his turbulent career in the autumn of 1523. De Thou speaks highly of his genius for satire which he compares to that of Lucan. His works are numerous but almost all written in the same spirit of bitter vituperation. A duodecimo volume of his miscellaneous poems composed in the Latin language was edited by De Thou in 1538 and has since gone through another edition. He himself contributed to the re-publication of several classical sapphoes, especially of the works of Lavy from an original manuscript, and was one of the authors of the 'Epistles Virtutum Obscurorum.' — *New. Eng. Hist. Bayle* see article *Hutter*.

HUTTER. There were two learned protestant divines of this name of the same family contemporaries, and both born at Ulm, about the middle of the sixteenth century. **ELIAS** the elder was born in 1553 and is advantageously known as an excellent Hebrew and Oriental scholar. His Hebrew Bible which contains no less than thirty versions of the 117th psalm in various languages and has all the radical letters distinguished by a peculiarity of type, is a literary curiosity. He also published two polyglots of which that printed in 1596 contains four the other printed 1599 six languages, both in folio. He died in 1603 at Nuremberg.—**LEONARD** who was ten years younger than Elias studied at Strasburg and several other of the German universities and distinguished himself as a staunch supporter of the reformed church. He published a variety of able treatises, principally on controverted subjects. Of these the best known might be *Sigillatae Concordie Christianae*

Compendium Theologiae, "Collationis Theologem. sive disputationes de christiano Confessione Augustinianis;" "Ibd. Christianae Concordie," "Novitiae Controversi," and "Loci Communis Theologici," &c. He obtained the divinity professor's chair in the university of Wittenberg and died there in 1616.—*Froben Theatrum. Bayle.*

HUTTON LL.D. (CHARLES) an eminent mathematician who raised himself to distinction by his spontaneous exertions. He was born at Newcastle upon Tyne on the 14th August 1737 and his father who was a viewer of masts, intended devoting him to his own employment. He received a little instruction in the rudiments of the Latin language and in the elements of the mathematics, but he owed nearly the whole of his subsequent acquirements to his own application. Having received an early injury in one of his arms he was found unfit for his intended occupation on which the natural bent of his inclinations led him to prepare himself for becoming a mathematical teacher. He accordingly gave instructions in that capacity at the age of eighteen at Jesmond a village near Newcastle where his youthful enthusiasm induced him to join the methodists and even to compose sermons, and preach. This turn of mind however forsook him when invited to Newcastle in 1760 where his scholars happily became numerous and among whom was the lord chancellor Eldon. He continued making advances in mathematical knowledge and was a prolific contributor to the Ladies' Diary and Martin's Philosophical Magazine. His earliest separate publications were a treatise on arithmetic and another on mensuration which were soon after followed by selections from the mathematical portions of the Ladies' Diary. About 1772 he was employed by the magistrates of Newcastle to make a survey of that town and neighbourhood and some time after the destruction of the old bridge at Newcastle having attracted his attention to the subject of the construction and properties of arches he was led to the production of a small work on the principles of bridges, which laid the foundation of his future fame. On the resignation of Mr J. L. Cowley professor of mathematics at Woolwich college Mr Hutton was with some difficulty persuaded by his friends to become a candidate for the appointment which the master general of the ordnance the marquis of Townsend had laudably determined to bestow upon the individual who upon a public examination, should appear the most fit for it. He bore away the prizes on this occasion from no less than ten competitors and received at his temporary lodgings the notice of his appointment from the master general who had never before so much as heard his name. Shortly after his settlement at Woolwich, he was elected a fellow of the Royal Society, and in the year 1779 received the degree of LL.D. from the university of Edinburgh. In the same year he was also appointed foreign secretary to the Royal Society, which office he held until the

H U T

Year of 1783. While in consequence of the indefatigable dissensions in that body he resigned with Dr. Hinckley, and other eminent mathematicians, from the society. In the Philosophical Transactions for 1775 appeared Dr. Hutton's first paper "On the Force of exploded Gunpowder and the Velocities of Balls exploded from Artillery" which obtained for author the Copley medal, and much distinction both at home and abroad. Various other papers of great merit succeeded, the last of which presented to the society in 1783 was a Project for a new Division of the Quadrant." In 1785 he published his elaborate Mathematical Tables preceded by an extensive and erudite introduction tracing the progress and improvement of logarithms from the date of their discovery. This work has gone through no fewer than five editions. The next year Dr. Hutton published a quart volume of Tracts, Mathematical and Philosophical which was not long after followed by his Elements of Curve Sections for the use of the academy at Woolwich. For some years after the publication of the last-mentioned work he was occupied in the composition of his Mathematical and Philosophical Dictionary 8 vols. 4to which first appeared in 1796, and of which a new and greatly enlarged edition was published in 1810. In 1796 he gave the world the first edition of his

Course of Mathematics in 8 vols. 8vo. to which a third was added in 1811. From 1803 to 1809 he was employed, in conjunction with Drs. Pearson and Shaw as an abridgment of the Philosophical Transactions published in eighteen thick quarto volumes, for his labour in which work he is said to have received no less a sum than 6000l. While this great concern was in progress, he also produced a translation of Osman and Mostacius' "Mathematical Recreations." In July 1807 he retired from the professorship at Woolwich, which he had held for thirty-four years, and was assigned a pension of 500l. per annum. In 1812 he published another collection of

"Tracts" on mathematical and philosophical subjects. The last scientific labour of Dr. Hutton which he accomplished at the age of eighty-four, was a laborious correction of the computations in Mr. Henry Cavendish's paper on the mean density of the earth. This very able and eminent rotary of science the simplicity liberality energy, and benevolence of whose character were equally conspicuous died on the 27th January 1823, in the eighty-sixth year of his age. Dr. Hutton, who was twice married, left a son and two daughters, the former of whom, lieutenant-general Hutton, is a member of several learned societies, and honoured with the degree of LL.D. from the university of Aberdeen.—*Am. Biog. Memoir by Dr. Gregory.*

HUTTON (JAMES) a natural philosopher distinguished as the author of a system of geology which refers the structure of the solid parts of the earth to the action of fire, hence termed the *Fusional theory*. He was born at Edinburgh in 1786, and studied in the

university under Murchison, the celebrated mathematician. He also applied himself to chemistry; and after having been for some time clerk to a writer to the signet, or attorney he went to Leyden, where he graduated as MD in 1799. On his return to this country he did not however, immediately adopt the medical profession, but devoted himself to the occupation of agriculture. About 1798 he settled at Edinburgh where, at different periods, he published several works relating to natural philosophy of which the titles are as follow "Considerations on the Nature, Quality and Distinctions of Coal and Coke," Edinb. 1797 8vo. This was followed by an answer entitled "Remarks on Considerations, &c. 1777, Dissertations on different Subjects in Natural Philosophy" Edinb. 1793 4to; "The Theory of Ram the Principle of Fire, or the Power of Matter and the appearances of Bodies Dissertation upon the Philosophy of Light Heat, and Fire in seven parts," Edinb. 1794 8vo. "An Investigation of the Principles of Knowledge and of the Progress of Reason from Sense to Science and Philosophy in three parts," Edinb. 1794 3 vols. 4to. "Theory of the Earth, with Proofs and Illustrations, in four parts," Edinb. 1795 2 vols. 8vo. Dr. Hutton was also the author of several papers in the transactions of the Royal Society of Edinburgh, of which he was a member. His death took place in 1797. The geological system or theory of the earth, proposed by this philosopher excited a warm controversy among men of science and while it was opposed by Kirwan Dr. Murray and others, it met with an advocate of no mean talents in the late professor Playfair who in 1808 published a work entitled "Illustrations of the Huttonian Theory of the Earth."—*Gent. May. Watt. Bib. Brit.*

HUTTON (WILLIAM) an ingenious and self educated writer was born at Derby in 1723. From the age of seven to fourteen he worked at a silk mill and was afterwards apprenticed to a stocking weaver. On the expiration of his time he laboured as a journeyman and also taught himself bookbinding by which he added to his humble income. In 1750 he opened a shop in Birmingham for the sale of old books, to which he added a circulating library and succeeded so well as to be enabled to embark in the paper business, and by industry and frugality he arrived gradually at opulence. In 1791 his house in Birmingham, and villa near that town, were burnt by the rioters for which he obtained but inadequate recompensation from the county. He died September 20, 1815, at the advanced age of ninety-two. The works of this acute and ingenious man are, "The History of Birmingham," 8vo; "Journey to London," "History of the Court of Requests, and of the Hundred Court of Birmingham," a lively and impious work; "History of Blacknot," "History of the Battle of Bowes Field," "History of Derby," "Description of the Roman Wall," "Remarks upon North Wales;" "Tour to Scarborough;" "Poems;"

HUY

" Trip to Corkage. —*Lif* by Hempel and Daugler.

HUXHAM (John) an English physician of some celebrity in the west of England towards the middle of the last century. He was a native of Helston in Devonshire and studied under Boerhaave at the university of Leyden, where he took the degree of M.D. Returning to England, he settled as a medical practitioner at Plymouth, and after a residence of about thirty years died there in 1762. In his treatment of fevers he appears to have approached the plan of the Brunonian school bark and wine being his favourite remedies, and as his reputation was considerable his practice probably was generally successful. A spirituous infusion of Peruvian bark and aromatics, which he prescribed is still popularly termed Huxham's tincture of bark. His professional writings consist of *A Treatise on Fevers* 1739 8vo. *A Dissertation on the malignant ulcerous Sore throat*. *Observations on Air and Epidemic Diseases* and *Observations on Antimony*. —*Lycus Mag Brit Pol* whole 2 vols.

HYUGENS (CHRISTIAN) a celebrated Dutch mathematician and astronomer of the seventeenth century. He was the son of Constantine Huygens lord of Zutphen who was secretary to three successive princes of Orange, and he was born at the Hague April 14th, 1629. Under the instructions of his father he was initiated in classical learning geography and music, and when quite young he displayed a predominant inclination for the study of mathematics and practical mechanics taking every opportunity to examine different kinds of machines which occurred to his notice. Having made a great progress in mathematical science by the assistance of an able master he was in 1645 sent to the university of Leyden as a student of law under the learned civilian professor van Mius but his attention to that object did not prevent him from continuing his favourite pursuits under Van Schooten, the mathematical professor. At the end of a year he removed to the then newly founded university of Breda, which was under the direction of his father and there he continued between two and three years, chiefly engaged in the study of jurisprudence. In 1649 he went to Holstein, in Denmark in the retinue of Henry count of Nassau when he wished to have visited Des Cartes at the court of Stockholm, but the short stay of the count in Denmark prevented him. In 1651 he gave a specimen of his talents, by the publication of a Latin tract on the quadrature of the hyperbola, ellipse, and circle; which in 1654 was followed by another on the magnitude of the circle. The following year he travelled into France, and was admitted to the degree of LL.D at the university of Angers. In 1658 he published at the Hague a work designed to vindicate his right to the invention of a pendulum, of which he had exhibited a model in a preceding publication. His observations on the gravitation, with a telescope of his own construction, enabled him to make the impor-

HUY

tant discovery of the ring surrounding that heavenly body, and also of one of its satellites or moons, of which he gave an account in his

Systema Saturnium, sive, de Causa Mirandorum Saturni Phenomenorum, et Comiq[ue] Planetae nove, 1659, 4to. In 1660 he went again to France and the next year passed over to England where he was made a fellow of the Royal Society. He returned to France in 1663 where the minister Colbert invited him to settle and being tempted by the offer of a considerable pension and other advantages he removed to Paris in 1666 and resided there till 1681. He was admitted into the Academy of Sciences and assiduously dedicated his time to the advancement of astronomical science and other branches of mathematics. His health being impaired by close application he twice visited his native country for the benefit of the air and at length was obliged to leave Paris entirely after having passed fifteen years in that metropolis. He however continued his labours in the cause of science till his death which took place in 1695. He was the author of a Latin treatise on the plurality of worlds and the probability of the planets being inhabited which was published posthumously in 1698 of tracts on the construction of telescopic glasses, and many other philosophical pieces which appeared at intervals between 1703 and 1725 under the title of *Opuscula Postuma*. Independent of the merit due to his literary productions, Huygens deserves notice for his invention of optical instruments and of a very ingeniously constructed planetarium.—*Martin's Biog. Philos. Aikin's Gen. Biog.*

HUYSUM (JOHN VAN) a painter at the head of a particular branch of his profession, was born at Amsterdam in 1638. He was educated under his father an artist of considerable talents but chiefly remarkable as a flower painter to which department his son John bent the whole force of his mind. Laudably determined to commence by making fame his object rather than money he spared no time or pains to render his works perfect, and attained a perfection in imitating the floral beauties of nature which is hardly conceivable. His flowers, plants and their accompaniments are finished with a delicacy polish, and accuracy, that almost delude the sight, nor is the apparent freedom of his pencil effected by the height of finish. He had also methods of mixing his tints and preserving the lustre of his colours which with the jealousy unworthy a man of genius, he never would communicate. The beauty of his works was no consciousness that they soon obtained high prices and latterly none but persons of opulence could purchase them. Besides his merits as a flower-painter, he excelled in landscape, his pictures in which trees are well coloured while each tree is distinguished by a tint peculiar to its leading. It is to be regretted that domestic disquiet rendered him foolish and nervous, and he was further annoyed by his extreme jealousy of his own advantages. He never took more than one pupil, a

July, and at her child her bosom misery. He died in 1745. Van Heysem had two brothers, Justus, who painted battles with great spirit and freedom and Jacob, who died in London in 1740 after a residence of several years. He copied the works of his brother so closely that they could scarcely be distinguished from the originals, and also composed flower-pieces himself with great superiority.—*D'Argenville
Vies de Peint. Néphile's Ame.*

HYDE (EDWARD) earl of Clarendon, lord high chancellor of England and an eminent statesman and historian was the son of Henry Hyde, of Dinton in Wiltshire, where he was probably born in Feb. 1608. He received his early education in his father's house under the tuition of the vicar of the parish and at the early age of thirteen was sent to Magdalen College Oxford. He stayed at the university long enough to obtain the degree of BA and he reckons it a piece of good fortune that he did not remain longer in consequence of the habit of hard drinking which then prevailed there. In his seventeenth year he removed to London under the protection of his uncle Nicholas Hyde afterwards chief justice of the King's Bench who died while he was yet a student. In the first instance he appears to have indulged in the licentious manners of the age, but so early as his twenty first year he married the daughter of sir George Ayliffe whom however he lost by the small pox in the short space of six months. After a widowhood of three years, he took for his second wife the daughter of sir Thomas Aylesbury master of requests, with whom he lived thirty six years in cordial union. He was also happy in being early introduced to some of the most gifted and intelligent men of the day, and in the protection of a father of great virtue and merit who survived until soon after his second marriage. While thus happily circumstanced a cause in which he was engaged for some London merchants, introduced him to archbishop Laud then a commissioner of the treasury who favoured his professional advancement, which was otherwise facilitated by his easy fortune and general reputation. In the parliament called by Charles I in 1640 he was chosen burgess for Wotton Bassett, on which he took a part in exposing public grievances and in particular brought forward a complaint of the illegal practices in the court of the earl marshal. In a succeeding parliament he followed up this complaint, and procured the suppression of the court, and laying aside his gown, adhered closely to parliamentary business. Not yet much connected with any party he was frequently chosen chairman of committees on subjects of great importance, in one of which he drew up the charges against the judges, for their decision in the case of ship money. His attachment to his king and church was however so decided, that he was soon regarded with suspicion by the parliamentary party, and when the remissitude of the committee on the state of the nation appeared, "only" to give vent to his own indignation, he observed, he drew up a reply, which was

shown to lord Digby without intending to communicate it. It however got its way to the king, and after a little political huffing, he allowed it to appear as "The King a Answer with the Advice of his Council." He was soon after offered the place of solicitor general which he declined but agreed to join sir John Colepepper and lord Falkland as one of the king's private advisers. In April 1642 he was sent for by the king to York where he assisted in drawing up papers in favour of the royal cause and refusing to attend his recall by parliament without the king's permission he was exempted from pardon by a special vote. After the commencement of the civil war when the king held his court at Oxford, Mr Hyde was nominated chancellor of the exchequer sworn of the privy council and knighted. He remained with the king until 1644, when he accompanied prince Charles into the west, and afterwards to Jersey where he remained two years after the prince's departure pursuing his studies with great tranquillity and attending to the composition of a history of the transactions in which he had borne a part. In 1648 he attended the prince at the Hague where news arrived of the king's death. He then went on a mission on the part of the young king to Spain in company with lord Cottington and on his return finding the exiled court and family in great disunion he retired to Antwerp where he lived with his wife and children in studious retirement and very reduced circumstances. He subsequently took up his abode at Breda where the princess of Orange the sister of Charles gave him a house free of rent, and took his daughter for one of her maids of honour. He also received in this situation the then nominal post of lord high chancellor of England, which however was useful to the indolent Charles, who being eternally applied to for contingent grants and reversions, needed a man of strong minded integrity to refuse improper requests. At the restoration the chancellor who might be deemed the king's leading adviser displayed great wisdom and integrity in the manner in which he endeavoured to settle the many difficult things, public and private which were left to his decision. He has been particularly praised for rejecting the proposal to raise the king a standing revenue independently of parliament for disbanding the army and for moderating the violence and craving spirit of the royalists. His seal for the abolition of every vestige of presbyterianism, will of course be regarded in different points of view according to the creed and party of those who pronounce upon it. His honour naturally arose with his power, in 1660 he was made a peer by the title of baron Hyde, of Hindon elected chancellor of the university of Oxford and in 1661 created viscount Cobham and earl of Clarendon. Many disputes however attended a man of unyielding strictness of morals and integrity in a court so licentious and unprincipled as that of Charles II. The private marriage of his daughter to the duke of York also considerably embarrassed him. While in the duc-

spin of maid of honour to the princess of Orange, she had attracted the attention of the duke, who had secretly married her when he could succeed on no other terms. Having returned to her father's house in a state of pregnancy, with proper agent she insisted upon the annulment of her marriage which was in consequence communicated to the king. The behaviour of the chancellor on this discovery was both in the extreme to his daughter whom he said, before the council he would rather have seen the duke a concubine than his wife. He even advised her commitment to the tower and talked of an act of parliament to deprive her of her head. Much of this might be assumed to prevent the suspicion attached to his connexion with the duchess, which however according to every probability he in no respect deserved. Charles II behaved with justice and propriety in this affair notwithstanding the mean attempt of the duke to deny his marriage, and the rage of the queen mother he acknowledged the daughter of his faithful master as duchess of York and two queens of England have moved from that reason. Further details of the transactions of the ministry of lord Clarendon belong rather to history than biography. The sale of Dunkirk to the French although justifiable on the score of policy and economy was deemed dishonourable by the nation and his opposition to a bill for liberty of conscience and adherence to the more intolerant views of the hierarchy brought upon him the enmity of all the dissenters, as well as the displeasure of the king, who wished by the same step to ease the catholics. He also injudiciously built a stately mansion in the midst of the disasters of the Dutch war in a season of general discontent. On the other hand his very virtues, particularly the stately dignity with which he refused all communication with the royal mistresses and courtly libertines and the freedom with which he admonished the king paved the way for his disgrace. An open parliamentary attack had been made against him by the earl of Bristol so early as 1663 which had however completely and deservedly failed, and it was not until 1667 that he was required to give up the great seal, and resign all his employments. This dismissal was followed by an impeachment for high treason by the commons which the lords would not entertain and during the debates upon this subject, he received the king's command to leave the king down. The apology which he sent to the house of lords, on his departure was deemed a libel, and a bill of attainder was passed against him as a fugitive from justice. He landed at Calais, and on his way from Rosen to Arigues was near losing his life through the outrages of some English seamen who under the influence of the popular odium thought that he defrauded them of their pay. He proceeded to Montpellier where he was treated with great respect during a residence of four years, which he employed in a vindication of his conduct and in other writings. He finally removed to Rosen, where he

in December 1674, and shortly was brought to England and buried in Westminster abbey. Besides various writings upon public topics, lord Clarendon was the author of "Contemplations and Reflections on the Psalms,"

"Autumnivisions on the Roman Catholic Controversy," A brief review of the errors in Hobbes's Leviathan. "The History of the Grand Rebellion" 3 vols. folio or 8 vols. 8vo, to which in 1759 was added his Life and a Continuation of his History 1 vol. folio or 3 vols. 8vo published by the university of Oxford from his original MSS. presented by his heirs. He also wrote some things of a smaller kind, which have been published with his Miscellaneous Tracts. It is chiefly as an historian that lord Clarendon is known at present, and his History of the Civil War will ever be deemed a valuable source of information on the events of the period of which he treats. He writes indeed in the spirit of a man who has taken his part but at the same time like a partisan who is guided by a strong feeling of principle and of general integrity. His great excellence consists in his portraiture of characters in which talent he has been compared to Tacitus and his history will ever prove interesting for his sketches of his leading contemporaries. His style is not destitute of beauty but the structure of his sentences is often ambiguous and perplexed. As a man and a minister lord Clarendon possesses superior claims to general respect, alloyed doubtless, by some strong opinions and prejudices, excusable perhaps, from the course of his experience and the complexion of the family and party to which he was so decidedly attached.—*Life by himself. Walpole's Royal and Noble Authors. Biggs Brit. Burnet's Own Times.*

HYDE (Henry) earl of Clarendon son to the chancellor was born in 1638. He early assisted his father as a secretary, and wrote all his letters in cypher when secrecy was so necessary during the exile of Charles II. After the restoration he was appointed chamberlain to the queen, and in consequence of the treatment of his father entered strongly into opposition to the court but opposing the exclusion bill he was taken into favour and on the accession of James II was made lord privy seal and afterwards lord-lieutenant of Ireland. Being strongly attached to the protestant religion he was soon recalled and was also removed from the office of privy seal. He would not however take the oaths to William, and was in consequence imprisoned for a short time but being released, he spent the remainder of his days at his seat in the country, where he died in 1709 aged seventy-one. His State Letters, during his government in Ireland and Diary for the years 1687, 1688, 1689 and 1690 were published in 2 vols. 4to, 1763. He also drew up "Some Account of the Tombs and Monuments in the Cathedral Church of Winchester, printed in Gatael's Collectanea.—Walpole's Royal and Noble Authors. Collins's Peerage."

HYDE (Henry) lord Hyde and Corbury,

H Y D

eldest son of Henry, and of Clarence and Warwick. He is chiefly known by his high moral and political character, which is greatly praised by Lord Oxford, not to mention the compliment of Popa who makes it the characteristic of merit to "distrust what Cobham disclaims." He was the author of some tragedies in manuscript, and of a comedy printed at the Strawberry hill press, entitled "The Mistakes, or the Happy Reconciliation." He also wrote a paper in the Journal called

"Common Sense" and "A Letter to the Vice Chancellor of Oxford." Lord Cobham addressed a letter to David Mallet deprecating the publication of lord Bolingbroke's MSS which it need not be added was unprinted to. He was killed by a fall from his horse in France May 2 1753.—*Ibid.*

HYDE (THOMAS) a celebrated orientalist of the seventeenth century. He was the son of a clergyman in Shropshire and was born in 1636. After receiving some instruction from his father he went to King's college Cambridge at the age of sixteen. There he became acquainted with Abraham Whewell, celebrated for his skill as a linguist, by whom he was recommended to Brian Walton as a person capable of assisting him in his great polyglott Bible. Such were his attainments at that time as to enable him to make a Latin translation of the Persian Pantaeuch for that work. In 1658 he went to Oxford where he was admitted a student of Queen's college, and soon after appointed Hebrew reader to that society. The next year he was made MA as a tribute to his extraordinary proficiency. Soon after the restoration of Charles II he was appointed under keeper of the Bodleian library a situation which furnished him with extraordinary facilities for pursuing his favourite studies. In 1665 he was with the general approbation of the doctors and masters of colleges in the university made head keeper to the same establishment. In 1666 he was promoted to a prebend in the cathedral of Salisbury, and in 1697 he was appointed regius professor of Hebrew and canon of Christchurch Oxford. He resigned the post of keeper of the Bodleian library in 1701 on account of his age and infirmities, and died in the following year at his apartments in Christchurch. During the reigns of Charles II, James II and William III he held the office of interpreter and secretary for the Oriental languages, a station for which he was admirably qualified. Besides his labours as the editor of many eastern works, he published a curious treatise on the religion of the ancient Persians, and left behind him an immense number of MSS. which show him to have been a most indefatigable Oriental scholar and profound critic.—*Big. Brit. Alibi & G Big.*

HYDER ALLY KHAN, an Amanic prince, who rose by his talents to sovereign power, and was an obstinate and formidable enemy to the English in Hindostan, in the latter part of the last century. He was born at Dilkashai, in the Mysore and after some military service under his father, a petty chief

H Y P

of the country he joined his brother in an alliance with France, and introduced European discipline by that means among his troops. He became general-in-chief of the forces of Coochey who then reigned at Serinapatanam as a vassal of the great mogul and having quarrelled with the grand vizir of his master he marched against the capital, and obliged Coochey not only to deliver the vizir into his power but also to appoint him regent. He subsequently assumed the sovereignty himself, and having deposed the royal family he founded the Mahometan kingdom of Mysore in 1760. He so greatly extended his dominions that in 1766 they contained 5360 square miles, and afforded an immense revenue. His reign was passed in war with the English and with the Mahrattas the former of which powers excited his peculiar jealousy. A treaty which he made with the East India Company in 1769 was violated in 1780 and he was opposed with success in the field by the English general, sir Eyre Coote. The Mahrattas joining in a league against him he carried on a disadvantageous war during the continuance of which he died in 1782. For an account of the subsequent fate of his empire see TIPU SULTAN.—*Big. U.S.A.*

HYGINUS (CAIUS JULIUS) an ancient grammarian. He was the freedman of Augustus, and was appointed keeper of the Palatine library but died poor. He wrote the lives of illustrious men, referred to by Aulus Gellius a copious treatise on the cities of Italy quoted by Servius and Macrobius, and a work on genealogies. There is only extant at present a piece entitled "Poethicon Astronomicum, de Mundi et Sphaera ac utrinque Parte Declaratione," lib. IV and a book of Mythological Fables, but the latter is suspected to be spurious. The best edition of both in conjunction is contained in Munker's "Mythographia Latina" 2 vols. 8vo Amst 1681—*Suctus de Graec. Illus. Voss. Hist. Lat.*

HYLL (ALBAN) an English physician who was educated at Oxford where he took the degree of MD. He practised in London with much reputation in the sixteenth century and died there December 26 1559. He is highly praised by foreign writers, one of whom styles him a most noble and excellent physiologist versed in every kind of learning. He wrote commentaries or observations on the works of Galen particularly relating to anatomy, but his productions are become obsolete.—*Alico & Big. Mem. of Med. Hudiburne & Big. Med.*

HYPATIA, a female philosopher of the eclectic sect, whose extensive learning elegant manners, and tragical end have rendered her name immortal. She was the daughter of Theon a celebrated mathematician who governed the Platonic school in Alexandria, towards the close of the fourth century at which period she was born. As she early exhibited proof of extraordinary genius and judgment, her father besides educating her in all the accomplishments of her own sex, made her mistress not only of the different branches

H Y P

of polite learning, but of geometry and astronomy as then understood. She finally entered upon the study of philosophy, and obtained so high a reputation, that she was strongly solicited to become a proselyte to the school in which Ammonius, Hippocrates, and other celebrated philosophers, had professed. Actuated by the love of science, she accepted this invitation, and her fame soon became so great that the votaries of philosophy crowded to Alexandria from all parts. She was distinguished by a ready eloquence and graceful address, which, united with deep erudition and sound judgment, procured her the admiration of all her hearers. What rendered her most admirable, she discovered none of the vanity or pride of learning; and although eminently beautiful never gave occasion to the slightest suspicion against her chastity. In consequence of these attractive qualities, the house of Hypatia became the general resort of all the persons of learning and distinction in Alexandria, and among others of Orestes the governor, a man of liberal education, who frequently sought her company. At this time the patriarchal chair of Alexandria was filled by Cyril a prelate in the highest degree intolent and haughty who was guilty of the outrage of encouraging the populace to plunder the property of the Jews. Orestes remonstrating this improper conduct, laid the affair before the emperor who declining to interpose his authority Alexandria became a frequent scene of tumult between the partisans of the governor and of the bishop. In one of these broils an attack was made on the life of the governor himself, and the respect paid by Cyril to the remains of one of the executed ring-leaders, which he consecrated as those of a martyr rendered him and Orestes irreconcilable enemies. In the rancor of religious bigotry and infarate intolerance, the intimacy of the governor with Hypatia produced the anger and jealousy of Cyril, and in consequence she was much calumniated by his monkish partisans and the Christian populace, as if guilty of fomenting the breach between the bishop and Orestes. Their blind resentment at length led them to a conspiracy against her life, and a furious band of assassins, headed by one Peter a reader seized upon her as she was returning home from the schools, dragged her through the streets of Alexandria, stripped her naked, and finally tore her limb from limb with circumstances of the greatest barbarity and committed her mangled members to the flames. This horrible circumstance necessarily reflected the deepest disgrace upon Cyril, and the church of Alexandria, and although attempts have been made to remove all imputation from the bishop of having concurred this cruelty, the haughty dignity of his temper, his unjust persecution of the Jews, his oppressive and ini-

H Y P

guitous treatment of the Novatian Christians, but above all, the protection he is said to have afforded to the impudent perpetrator of the murder of Hypatia, render the charge of Damascus, that he either countenanced, or was the concerer of the crime, but less probable. This infamous and disgraceful transaction took place in the year 415, under the reign of Theodosius II.—*Sectra Huius Ecclesie Suidas. Merv. Eusebii Hist. Philos.*

HYPERIDES, an Athenian orator, the contemporary of Demades, Aristote, and Demosthenes, against the latter of whom he brought that accusation of bribery which procured his banishment. Hyperides had studied rhetoric under Plato and Isocrates and attained his self to no mean proficiency in the science. It is a curious coincidence that the death of all the three eminent men first mentioned, as well as his own took place in the same year, 392 before the Christian era, when Hyperides being seized on the demand of Antipater in the temple of Ceres was delivered up to that prince who put him to death. An oration attributed to him is still in existence.—*Scrib. Ossian.*

HYPERIUS (ANDREW GERARD) the son of a civilian of Ypres, in the Netherlands, where he was born in 1511 and whence he took the name by which he is generally known. His father on his death bed expressing a wish that he should complete the studies which he had commenced in the Dutch schools at Paris, he entered himself of that university in 1526. After remaining there three years, he went for a twelvemonth to the college of Caen, in order to perfect himself in philosophy. Becoming suspected of favouring the doctrines of Luther, he found it advisable to retire to England, where he formed a connexion with the family of William lord Montjoy and acted for four years in the capacity of tutor to that nobleman's son. In 1541 he went into Germany and finally settled at Marburg where he filled the divinity chair till his death in 1564. He enjoyed a considerable degree of reputation not only for the knowledge he possessed, but also for the facility with which his mode of instructing communicated it to others. His works fill seven folio volumes. Among them are notes on scripture, and a great variety of tracts principally on subjects connected with the study of divinity and the mathematics.—*Scrib. Ossian. Duxon.*

HYPSCICLES, a mathematician of Alexandria who flourished in the reigns of Marcus Aurelius and Verus. He is principally known as the author of a treatise, entitled "Anaphoricus," which is still extant. An edition of this work appeared at Paris in 1660, with a Latin version, comprised in one quarto volume.—*Fabrioli Bell. Graec.*

IBARRA (Joaquín) *in* *various Spanish*
A painter who may for his skill and intelligence
be ranked with Boucher and Hogarth. He was a native of Saragossa and received his
professor at Madrid, where he died in 1795
at the age of sixty. The productions of his
pens are known throughout Europe and are
much esteemed by amateurs for their beauty
and accuracy. Two of them are regarded as
typographical chef-d'œuvre viz. an edition of
Don Quixote 1780 4 vols 4to and the Spa-
nish translation of Falstaff, by the Infant Don
Gabriel, 1772 small folio. He also printed a
magnificent edition of the Bible and a Mo-
rabic Missal. Ibarra is said to have made
some important improvements in the ink
which he used for printing adding to it a cer-
tain quantity of Prussian blue.—*Bog Univ.*

IBAS *bishop of Edessa in Mesopotamia*
in the fifth century noted in ecclesiastical history
on account of the opposite decisions of
different councils relative to the orthodoxy of
his sentiments. He was a native of Syria
and was promoted to the see of Edessa about
436. He was accused before the patriarch of
Constantinople of favoring the Nestorian
heresy and abusing Cyril bishop of Alexandria.
After being acquitted the same accusation of
Nestorianism was brought against him the
following year and he was condemned and
deposed by the council of Ephesus. In 451
he was declared an orthodox divine and re-
instated in his see by the council of Chalcedon.
Several years after his death he was again
condemned as a Nestorian in the general
council held at Constantinople in 535. A
letter concerning the doctrine of Nestorius
written by Ibás while he was a presbyter
formed a part of the celebrated Three Chap-
ters condemned by the latter council as
heretical but received as orthodox by the
churches of Africa and Illyria whence or-
ganized a schism which lasted 150 years.—
Dunn. Modern. Atks's C. Biog.

IBBETSON (Aona) *see Appendix*

IBBETSON (James) *an episcopal clergyman* who was educated at Exeter college Oxford. He became rector of Baskey in Herefordshire and archdeacon of St Albans and died August 10 1781 aged sixty four. He was the author of *Epistola ad Phil Hebrews Oxonienses* 1743, 'A Short History of the General Convocation of the Province of Canterbury' several single sermons and charges, besides other tracts on ecclesiastical affairs.—James Ibbetson son of the preceding, studied the law and became a barrister. He did not confine his researches to the immediate objects of his profession but paid much attention to the history and antiquities of his native country, as appears from the following publications:— 'A Dissertation on the Judicial Customs of the Saxon and Norman Age' 1770 8vo 'A Dissertation on the National Assemblies under the Saxon and Norman Governments,' 1781, 8vo. These two dissertations were republished with a third

"On the Tribunals and Bishops of the States," in 1783 8vo. Mr Ibbetson died March 26, 1790 aged thirty five.—*Charles buck's Hist of Herefordshire.*

IBBETSON (Juxon Caxia) *an ingenious*
artist who was a native of Scarborough in
Yorkshire, and was originally a ship-painter,
but by the successful cultivation of his talents
became eminent for his skill in the delineation
of landscape. He accompanied colonel Cathcart on
his oriental mission but in consequence of the death of that gentleman he returned
prematurely with the rest of the embassy. Ibbetson employed himself much in
copying the works of Bingham, whose style of
painting he imitated with so much success,
that he was termed by West the Bergom of England. His manner as an artist is said
to be clear and firm but sometimes a little
hard and his colouring rather defective. His
cattle are touched with great spirit and the
pictures in which they constitute a principal
feature are by far the best of his productions.
He died at Masham in Yorkshire in 1817
Mr Ibbetson was the author of a work entitled

*An Accidence or Gamut of Oil Painting for
Beginners* in which is shown the most easy
way of imitating Nature by means of a simple
System the result of many Years practice,
with a Landscape painted in Oil by the
Author and all the Tints in Patterns 1805
8vo.—*Dayes's Prof Sketches of Mod Artists.*
Watts's Brit. Brit. Month Mag.

IBBOT (Benjamin) *the son of an English*
clergyman incumbent of the living of Beach
awfull in the county of Norfolk where he
was born in 1680. He received a liberal edu-
cation and was first a member of Clare hall
Cambridge but quitted that university in 1700
for Oxford on a scholarship of Corpus Christi succeeding to the fellowship unexercised
six years afterwards. In 1707 Tenison arch-
bishop of Canterbury made him one of his
domestic chaplains, on which he abandoned a
college lie and soon after obtained from his
patron the treasurership of the diocese of
Wells, and the rectory of the united parishes
of St Vedast Foster-lane and St Michael le Querne London. In 1716 he was made
king's chaplain, and on George I's visiting
Cambridge in the following year, was admitted
to the honorary degree of doctor in divinity
by the king's command. Dr Ibbot was the
Boyceian lecturer during the years 1715 and
1716, and the series of discourses delivered
by him on this occasion were, as usual printed
in 1727. He subsequently assisted Dr Samuel
Clarke who after his death became his biog-
rapher and edited his theological writings
for the benefit of his family, in two octavo
volumes, reprinted with additions in 1775.
These and a translation of Puffendorf's treatise
on the influence of Christianity upon society
and a few poems in Dodley's collection are
all of his works now extant. In 1756 he
obtained a stall at Westminster, but died in
the April of the following year.—*J. by Clowes.*

IBN DORRUD or DOMEIRI, a celebrated Arabic poet of the sixth century. He was a native of Basora, whence he removed when young in consequence of a foreign invasion and resided twelve years with a relative at Cusca, after which he returned to Basora. Some years afterwards he went to Fara, with the governor of that province, and was engaged in the administration of the finances. Subsequently he obtained great riches in this office, he was reduced to indigence by his generosity. Returning to Bagdad, when his patron was displaced, he attracted the notice of the caliph Moctadas, who gave him a pension of fifty dinars a month. He died at Bagdad, AD 933. Ibn Dossid is reckoned among the principal poets of Arabia, and his works are very numerous, comprising every species of poetical composition. An ode entitled *Al casayd Almazounah* has been commented on by a multitude of Arabian critics, and it has also engaged the attention of modern Orientalists and been published by Schudius at Hardwick in 1768 and by Hartama at Franeker in 1773, &c., with a Latin translation.—*Bug Umar.*

IBN EL ALAM (ALI BEN AL HASSAN) a famous Arabian astronomer and the author of an astronomical table, containing the result of numerous observations made at Bagdad, in the reign of Adadodawia. Unfortunately this work is lost in circumstance much to be regretted from the high reputation of Ibn El Alam among his contemporaries. After the death of Adadodawia, he left his country to make a pilgrimage abroad, and died on his return, at Osaila, in 965.—*Id.*

IBN KHILCAN (SHEIKH-E-KDIN ABOU L'ABAS AHMED) a distinguished Arabian historian who was descended from the family of the Barmeredes, by Malek, the son of Giaffer the unfortunate viceroy of Haroun al Haechid. Ibn Khilcan was born at Arbel in 1211 and studied in his youth the poetry, history, jurisprudence and general literature of Arabia. Early in his life he went into Syria, and thence to Egypt, and in 1261, after having filled the office of cadi at Cairo, he was promoted to the station of grand cadi of the city of Damasus. He remained there till 1270 when he became professor in one of the colleges at Cairo. In 1277 he was re-installed in his post at Damasus, soon after which he joined in the revolt of the governor of that city against the sultan Kalkous. The attempt was unsuccessful, and Ibn Khilcan was condemned to death for rebellion, but he was afterwards pardoned, and even restored to his office. He died in a private station at Damasus in 1283. The principal work of this author is a biographical dictionary, entitled "The Decrees of eminent Personages, and the Lives of Contemporaries." An edition of this book was published by M. E. Fred. Tydeman, at Leyden, in 1809 under the title of "Specimen philologicum exhibens Collectionem operis Ibe Chahzad de vites Eminentium, &c., &c.—*Id.*

IBN M. GUARDY or ALWAKDY, an Arabian geographer and poet of eminence in

the fourteenth century. In his youth he filled the office of deputy to the hakim, or principal judge of the city of Aleppo; but, he quitted the judicature to devote his time to the cultivation of science. He composed for the use of the governor of Aleppo, a curious treatise on geography entitled "The Pearl of Knowledge." He was also the author of an abridgment of the chronicle of Abuafida, poems, &c. His death took place in 1330. Several portions of his geographical work have been published by the heirs of France and Germany.—*Id.*

IBN YOUNIS (ALI BEN ABDALRAHMAN) one of the most illustrious of the Arabian astronomers born of a noble family AD 979. The caliph Azy directed his attention towards astronomy and facilitated his studies in that science. Ibn Younis justified by his acquirements the generosity of his patron. He carried on his researches in an observatory near Cairo, and gave the result of his observations in a work called *Zydi Ibn Younis*, the table of Ibn Younis in which he corrected many of the errors of preceding astronomers. He was also skilled in poetry and music. His death took place AD 1006.—*Nouvelles et Extraits des MSS de la Bibl. du Roi à Paris.*

IBRAHIM AL SHIRAZI a famous doctor among the mashonates who was a native of the city of Shiraz in Persia, but the period at which he lived is uncertain. He led the life of an ascetic being wholly employed in devotional exercises, and the study of the mean law. Many of his works, written in Arabic, are still extant, and are highly esteemed. One of his tracts entitled *Almo Hah*, or *The Good Man*, was commented on by Ibrahim al Mercuri, a doctor of the sect of Al Shafa, who died at Cairo, in Egypt, in 951.—*D'Herbelot Atkin's G Bug.*

IBRAHIM EFFENDI a Turk, who was converted to Christianity in the seventeenth century furnishing an almost solitary example of a muslim convert. He was a member of the body of Ulma, or lawyers, and being skilled in the Persian and Arabic languages, occupied some posts of importance at Constantinople. The perusal of the gospel history produced a conviction on his mind of the truth of Christianity and having abjured the Mahometan faith, he was baptised at Pera, in 1671. He retired to Venice, and was confirmed in the church of St John the Baptist, in that city. Two years after he assumed the habit of St Dominic and the name of Paul Anthony Efendi. He left to the library of St John and St Paul, many Arabic, Persian and Turkish MSS particularly the four Evangelists, translated into Arabic with the psalms, canticles, and other books of the Old Testament. He died in 1697 at the age of fifty-six.—*Bug Umar.*

ICTINUS an Athenian architect, employed by Pericles in the erection of the Parthenon, or famous temple of Minerva, in the Acropolis of Athens. He wrote a description of that edifice, which is not now extant. Callicrate

is accepted by some to have been his associate in this endeavouring, but, according to Virginius, Rufinus and Carpion were the joint architects of the Pantheon. Iulianus also erected the temple of Cæsus and Proserpine at Elania, and the temple of Apollo Eupatorius, in Armenia. He flourished 450 BC.—*Oriental Ancient Pictures*. Elman's *Dict. of the Fine Arts*.

IDACIUS, an early monkish historian, whose chronicle commencing with the accession of Theodosius, and bringing down the narrative to the eleventh year of Leo, was edited in 8vo, by Sammead, at Paris, in 1619. Little more is known of his life, but that he was a Spaniard and a bishop, and flourished in the fifth century. The Fasti Consulares have been by some ascribed to him.—*New Diet Hist.*

IDES (EVERT YSENANT) one of the enterprising foreigners employed by the Russian sovereign Peter the Great. He was a native of Glückstadt, in Holstein, and entering into the service of the czar, he was in 1692 sent on an embassy to the emperor of China. After his return to Europe he published an account of his journey at Amsterdam in 1704. The

Travels of Yskrant Ides from Moscow to China, were translated into English and printed in a quarto volume, in 1706.—*Chayfpe*.—*Bug Univ.*

LETZELER (CHAMONIX) a Swiss architect born at Schaffhausen in 1734. He first followed the profession of his father who was a farrier but having a predilection for the study of mathematics he relinquished his business and went to Berlin where he had the advantage of instructions from the celebrated Euler. After travelling in several parts of Europe, he was appointed city architect at home and the mathematical chair at the gymnasium of Schaffhausen becoming vacant letzeler obtained it, and filled the situation with great distinction, till his death in 1791. He was the author of a description of the new bridge at Schaffhausen and of a plan of the orphan house in the foundation of which he employed a great part of his fortune.—*Bug Univ.*

IFFLAND (AVOYERUS WILLIAM) a celebrated German actor and dramatic writer born at Hanover April 19th 1759. His taste for the theatre manifested itself in his infancy, and he was so much affected by the representation of the Rhodogune of Corneille that his parents would suffer him to be taken to the theatre but very rarely. Nothing however could prevent him from indulging his natural inclination, and his father having declared that he would never permit him to be an actor, he left home privately and made his debut at Gotha, in 1777. The poet Gotter, who then resided in that city assisted young Iffland with his advice, and he soon became a distinguished performer that he was invited to Mannheim, where he became the chief ornament of the court theatre. He was no less famous as a writer than as an actor. His first production was a tragedy, called "Albert of Thuringia," which was well received by

the public, and was followed by a number of distinct pieces for the theatre of Mannheim, among which may be mentioned, "The Night-birds," "Daughters to be married," "The Act of Birth," "The Idiots," "My Mind," Besides translations from the French of Picard and Duvel and from the Italian of Goldoni. The revolutionary wars at length drove Iffland from Mannheim, and he took refuge at Weimar, where he added to his reputation. The king of Prussia at length invited him to Berlin, and entrusted to his direction the entertainments of the court. He died in that city September 20th 1814. The works of Iffland are very numerous. An edition of them was published under his own direction at Leipzig, in 1798, 17 vols. 8vo. It comprises besides forty-seven plays memoirs of his theatrical career and reflections on the theory of his art. Madame de Stael said of him, that there was not an accent or a gesture for which Iffland could not account as a philosopher and an artist. His admirers styled him the Moliere of Germany, but French critics do not think him quite entitled to rank with their celebrated countryman.—*Bug Univ. Bug N des Contemp.*

IGNARRA (NICHOLAS) a learned Neapolitan antiquary born in 1728. He was educated at the college of Urbano at Naples and at the age of twenty he taught Greek in that seminary. When Charles III founded the Herculean academy in 1735 Ignarra was appointed one of the first members. In 1763 he succeeded Massochi as professor of sacred literature in the royal university and in 1771 he became principal professor. In 1783 he was nominated director of the royal printing office, and two years after tutor to the hereditary prince Francis of Bourbon. He was made a canon of the cathedral of Naples in 1794, and died in 1808. His principal work is entitled "De Palaestra Neapolitana Commentarium," 1770 a very learned production. He also published the life of Massochi, and other pieces.—*Bug Univ.*

IGNATIUS (SAINT) one of the primitive fathers of the church who suffered martyrdom at Rome during the third persecution of the Christians. He was a Syrian by birth and an immediate disciple of St John the Evangelist, who, in the sixty seventh year of the Christians era, committed the church at Antioch to his pastoral superintendence, as successor to Evodus. Over this haberdashery he presided for upwards of forty years, when the impudent Trajan, after his triumph over the Dacians, entering the city, exacted many severities towards those who professed the Christian faith and summoned the prelate himself before him, on which occasion Ignatius conducted himself with such boldness in the imperial presence that he was forthwith sent to Rome, and ordered to be exposed in the amphitheatre to the fury of wild beasts. This dreadful death he underwent with much fortitude, having availed himself of the interval between his sentence and its execution to strengthen by his exhortations the faith of the,

ROBERT WAKE. After his disengagement, which took place on the 26th December 1656, his enemies were carried to Antwerp for interment. Of his works there remain seven epistles, edited in 1666 by archbishop Usher, republished by Gardiner in 1673 in his collection of the writings of the apostolical fathers, and again printed in 1697 at Amsterdam with notes, and the commentaries of Usher and Pearson. An English translation of them from the pen of archbishop Wake is to be found among the works of that prelate. There are some other letters of minor importance which though the question of their authenticity has met with supporters, are generally considered to have been attributed to him on insufficient authority.—There was also a patriarch of Constantinople of that name, about the middle of the ninth century. He was son to the emperor Michael Curuplati, and on the deposition of his father, assumed the ecclesiastical habit. The uncompromising firmness which he displayed after his elevation to the patriarchal chair in 847 in subjecting Bardas, a court favourite to the censures of the church on account of an incestuous connexion caused him to undergo a temporary deprivation from office. Under Basil however he was restored to his former dignity and presided in his capacity of patriarch at the eighth general council. His death took place about the year 878.—*Cass. Minors Church Hist. Horsley's Letter to Priscy. Newn. Diet. Hist.*

IGNATIUS see LOYOLA

IRRE (Jean) professor of rhetoric and politics in the university of Upsal, was born in March 1707. On account of the early death of his father who was professor of theology at Lund, he was brought up by his grandfather then archbishop of Upsal. In 1730 he set out on his travels for improvement, and on his return was elected a member of the Academy of Sciences. In 1757 he was made public professor of poetry, and in 1748 was appointed professor of rhetoric and politics an office the duties of which he discharged with great reputation for forty years. In 1756 he was raised to the rank of counsellor of the chancery, and in 1759 he received the order of the polar star. He died in 1760. His works are, *Conspicuum Praelectorum in Linguam Sueciam*, 1745, never finished,

Lectio Dialectorum, 1766, "Glossarium Sæc.-Gothicum," 3 vols. folio 1769 a valuable work, well known to philologists. He also wrote on the old catalogues of the Sæc.-Gothic kings, and on the old West-Gothic laws. In his dissertations "De Rerum, Antiquitate, Patriis, Origine, et Occasio," he asserts that the Gothic writing was formerly used throughout the greatest part of Europe, and that it was introduced into Sweden in the eighth, and became extinct in the fifteenth century. He was a man of sound judgement and good memory, and very generally esteemed.—*Newn. Diet. Hist. Smith. Owen.*

JACOBUS (Cottman) a learned German divine and Oriental writer, who was a native of Bremen, baptised at Utrecht, and in 1714 be-

came preacher at Leyden, and afterwards at Zutphen. In 1729 he removed to Groningen, and the same year obtained the degree of doctor of theology from the university of Utrecht. He was appointed public professor of theology in the gymnasium of Bremen in 1736; and he was also preacher in St Stephen's church, and president of the German society in that city, as likewise a member of the academy of sciences at Berlin. He died in 1756, aged sixty-four. His principal works are,

Hebrew Antiquities, 8vo, of which there are several editions, "Dissertations on remarkable Passages in the Old and New Testaments," 2 vols. folio; and "A Treatise on the Daily Worship of the Temple from the 11th Psalm, with notes" 4to. All his works are written in Latin.—*Aitken's G. Eng.*

ILDEFONSE (Sant) bishop of Toledo in which see he succeeded Eugenius about the year 538. He was born in 535 and studied under St Indore at Seville. On the death of his tutor he entered into a religious house at Toledo of which he became the superior and was thence translated to the superintendence of the diocese. He was the author of a catalogue of writers on ecclesiastical subjects as well as of some other works now little known, and died in 567.—*Newn. Diet. Hist.*

ILIVE (Jacon) was a printer who applied himself to letter cutting in 1730 and carried on a foundry and printing office together. He published some strange productions one of which was a pretended translation of "The Book of Jasher" 1751 said to have been made by one Alcum of Britain but secretly written by Ilive himself. In 1753 he also published an oration to prove the plurality of worlds, and that men are apostate angels, who are punished in this life for the sins of a former one. This farago was spoken at Journe's hall and he followed it up by similar productions. He was confined two years in Clerkenwell bridewell, for publishing "Modest Remarks on the late Bishop Sherlock's Sermons" during which period he wrote "Reasons" for a reform of that prison and other pieces enumerated in Gough's topography. He was deemed not altogether of sound mind. He died in 1763.—*Nichols' Lit. Ann.*

ILLESCAS (GONCALVO) a monk of the sixteenth century a native of Spain, known as the author of a "History of the Lives of the Popes," written in the language of his country and printed in two folio volumes, 1570. He survived the publication of his work about ten years. It was reprinted many years after his death, with a continuation by Louis de Balbu, bringing down the history to 1605, a further continuation was afterwards added by Marcos de Guadalupe.—*Newn. Diet. Hist.*

ILLYRICUS (MATTHIAS FLACCUS) a Lombard divine was born at Altino in Istria in 1520. He studied at Venice, Basle, and Tübingen, and made an open profession of the doctrines of the Reformation. This procured him the friendship of Luther and Melanchthon, although he subsequently had a dispute with the latter on the subject of concurrence to the

Bonaventure, which differences of opinion, on many previous occasions caused his father to leave his native town, where he wrote several works, and composed the collection of an ecclesiastical history, denominated "The Continues of Magdeburg," the best edition of which is that of Basil, three volumes folio, 1554. In 1557 he became professor of divinity and Hebrew at Jena, but gave up his chair in consequence of a quarrel concerning original sin with Strigelius. He then removed to Rostock, and lastly to Frankfort, where he died in 1575. His principal works are, "Varia Doctorum Ploratio, Virorum de Coruptis Ecclesiasticis Statu, 1557 Clavis Scripturae, 3 vols. folio, Catalogus Festuum Veterum et Novorum," folio.—Michael Adam Nicow, Mor.

IMBERT There were three of this name. Jean a lawyer of Rotholle was the author of several treatises on French jurisprudence about the middle of the sixteenth century. Of these the principal are *Institutiones Paganae*, 1541 8vo and *Enchiridion Iuris scripti Gallici* 1559 4to. He died about the year 1598. The second *Josse GABRIEL*, born in 1604 at Marseilles studied painting under Le Brun and Vandermeulen and attained to great eminence as an artist. In 1658 he made taking a devotional turn from some disappointment, the nature of which is unexplained, he took the vows as a monk of the Chartreux but although he thus renounced the world, his pencil continued to be employed on scriptural subjects, and the high altar of the convent belonging to his order in his native city is adorned with what is considered his chief œuvre. He attained to the advanced age of ninety five when he died at Avignon in 1749.—**BARTHOLOMEW** an ingenious French writer was born in 1747 at Nimes. He was the author of several compositions of merit, both in prose and verse which obtained a high degree of popularity. Of these the one most favourably received was a poem, which has for its subject the judgment of Paris. His fables, written in the manner of Fontaine, are less esteemed, and are decidedly inferior both in point and style to those of the last named writer. He was also the author of some successful dramatic pieces, and of a novel entitled "Les Egarments de l'Amour." His literary reputation procured him a seat in the academy of his native city where he died of a stroke of fever in 1790.—*New. Diet. Hist.*

IMHOFF (John WILLIAM) an eminent genealogist, born of a noble family of Nuremberg in 1682. He was a lawyer and senator in that city, and devoted himself to the study of history, politics, and the documents and histories of all the great houses of Europe. He died in 1732, leaving behind him several voluminous monuments of his industry. These are; "De Notitia pretiorum Germanorum," 4 vols. folio; "Historia Genealogica, India et Hispania," folio; "Pantheon Italicum Hispanum, Portugallum, Magnae Britanniae, cum Appendice," such a volume fol.; "Recruitiones omnes Graecorum d'Espagnes," 8vo.—*New. Diet.*

IMPÉRIALE (Johann BAPTISTE) a celebrated Italian cardinal. Was born Augt 20, 1657, of an illustrious family of Genoa. He was appointed general of the papal mint, treasurer of the apostolical chamber and lastly cardinal, in February 1690. He was employed by different popes in the most important affairs, and in the concile of 1736 was within one vote of being elected pope himself. He died in 1737 universally respected for his probity love of learning, and general liberality. He ordered by his will, that his noble library should be made public, of which a catalogue was printed at Rome in 1711 folio. This library was long one of the chief ornaments of Rome.—*New. Diet. Hist.*

INA, king of the west Saxons in the seventh and eighth centuries. He succeeded Cerdwalla about 689 and after having obtained advantages over the people of Kent in 694, he turned his arms against the Britons, from whom he wrested Somersetshire and other parts of the west of England. He then made war on the Mercians, but the contest was terminated without much advantage to either party by a bloody battle which was fought in 715. The latter part of the reign of Ina was spent in works of peace and, according to the prevailing fashion of the age in which he lived, he closed his days in a monastery having resigned his crown in 726. This prince appears to have possessed considerable talents and is celebrated as the principal legislator of the Anglo-Saxons. His laws, some of which are yet extant, served as the foundation of the code formed by Alfred the Great.—*Henry's Hist. of Great Britain. Twysden's Hist. of Anglo-Saxons.*

INCHBALD (ELIZABETH) the daughter of a farmer named Simpson, born at Stansfield in Suffolk in the year 1756. Having lost her father at the age of sixteen she came to London with the view of obtaining an engagement for the stage when attracting the attention of Mr Inchbold then an actor of some celebrity a marriage was the consequence and she accompanied her husband on several provincial towns partaking in his engagements. He dying in 1779 she returned to London, and made her debut at Covent garden as Bellona, in the play of Phœnix October 3, 1780. She continued on the boards about eight years and from her great personal attractions, which she retained to a late period of her life, as well as from her natural talents, was a popular performer. After her retirement from the stage in 1789, she depended principally on her literary labours for support, publishing several dramatic pieces, most of which had a temporary success, while some are even yet considered as what is technically termed "stock plays." Her works, dramatic and miscellaneous, consist of "A Mogul Fub," a farce, 1786, "I'll tell you what," a comedy, "Appearance is against them," and the "Widow's Vow," farces, 1786, "The Child of Nature," a dramatic piece, the "Midnight Hour" a farce, "Such things are," a play 1786; "The Married Miss" a comedy 1787.

INC

"Next door Neighbours," a comedy; and "A Simple Story," a novel, in four 12mo vols. in 1791; "Every woman his Friend," a comedy, 1793; "Wedding Day," a comedy 1794; "Nature and Art," a novel, in two vols. 12mo, 1796; "Wives as they were and Maids as they are," a comedy 1797; Lover's Vows," a play from the German of Kotzebue, 1798; "Miss Miss of the East," a comedy 1799; and "To Marry and not to Marry" 1805. She also edited a collection of drama entitled the "British Theatre," with biographical and critical remarks in 25 vols. 12mo, during the period from 1806 to 1809; a similar collection of the most popular farces in seven vols. 12mo and the "Modern Theatre" in 10 vols. 1809. Her death took place at Kensington, August 1 1821, in her sixty-sixth year. The "Simple Story" will long preserve the reputation of Mrs Inchbald as a novelist, being a tale of great interest and genuine pathos and it adds highly to the merit of this ingenious and able woman that she passed a life attended with many difficulties and temptations with unshaken reputation.—*Gent. Mag.*

ENCHÖFER (MELCHIOR) a native of Vienna, born 1584. He was originally intended for the law and made a considerable proficiency in the study of jurisprudence, but at length resolved to abandon this profession for the church and taking the vows in 1607 at Rome became a member of the Jesuit's college in that capital. Thence he went to Sicily, and gave lectures with great success at Messina, in theology and mathematics, out publishing in 1630 a "Letter from the Blessed Virgin to the People of Messina, proved to be genuine" the work gave great offence to the society to which he belonged nor was it without considerable difficulty that he at length succeeded in appeasing his brethren by an explanation of his views in writing it. If the "Monarchical Schismat," a severe satire on the all-grasping policy and ambition of the disciples of Loyola, be indeed his, and not the composition of Scott, an ex-jesuit, to whose it has also been ascribed this defiance may probably have tended not a little to produce a philippic scarcely less remarkable for its bitterness than for the shakiness with which it is executed. The work, however, did not appear till after his death, when it was printed in Holland, and its title to it is altogether very questionable. Inchöfer, though a good scholar was very credulous, many proofs of which may be found in his writings. Of these, the principal, besides those already named, are, "De Modibus Terni et Sibar," 4to, "Historia trinitatis Majorum," 4to, "De Sacra Latina Testate," 4to, and an Ecclesiastical History of the Kingdom of Hungary, folio. His death took place in 1646 at Milan.—*Niceron.*

INCLEDON (BENJAMIN CHARLES) generally known by the latter of his Christian names only, an eminent English vocalist, born about the year 1764, at St Keverne in the county of Cornwall where his father is said to have been a respectable member of the

ING

sect. When only eight years old, the extraordinary tones of his voice, for which he was in after life so distinguished, induced his parents to entrust him to the celebrated Jackson, of Exeter under whose tuition he remained as a chorister in Exeter cathedral, until he had attained his fifteenth year. The resonances, however, to which he was necessarily subject in this situation, were highly disagreeable to a boy of his maternal disposition and he took an opportunity to quit Exeter abruptly in the year 1779, and to enter as a common sailor on board the *Fornidaid* 98 gun-ship commanded by rear-admiral (then captain) Cleveland. In the royal navy he remained about five years during which period he sailed to the West Indies and saw some service. His vocal abilities having attracted the notice of his officers, especially of lord Mulgrave (then captain Phipps) and admirals Pigott and Harvey he was advised by them to try his fortune on the stage. He accordingly made his first bow to a theatrical audience in Collin's Southampton company in 1786, as Alphonso in the Castle of Andalusia. A subsequent engagement, entered into with the Bath manager the following year introduced him to the acquaintance and eventually to the friendship of Raussini, who not only did his utmost to bring him before the public in a manner suitable to his talents, but also conferred on him the no less solid benefit of his instructions. In October 1790, he made his debut on the London boards, at Covent-garden theatre, with great success in the character of Dermot, in O Keefe's musical farce of "The Poor Soldier" and rose at once into a degree of popularity which attended him till the infirmities consequent upon advancing years and a not very regular mode of life compelled him to retire from the active duties of his profession. Of the diminution of his powers however he never could be persuaded, but constantly attributed his declining popularity to the caprice of the public. His voice a rich tenor combined uncommon power, sweetness and ductility both in the natural and falsetto, and his intonation was singularly correct, taking his imperfect education into consideration. His articulation was however far from equal to his other qualities, being coarse, not to say vulgar. The better sort of the old English ballad, of which Stevens's "Storm," and Gay's "Black-eyed Susan," are perhaps, amongst the finest specimens, was decidedly his forte, nor in this style of singing had he ever an equal. Shield wrote many of his air expressly for him, and never has any one done more justice to his composer. Precarious embarrassments, arising from an utter carelessness of money and general improvidence, embittered the latter part of his life which was closed at Worcester on the 11th of February 1826. His remains were carried to Hampstead, in the vicinity of London, and were there interred.—*Gent. Mag.*

INGENHOUZ (JAN) a Dutch physician-chemist, and natural philosopher of eminence. He was born at Dordt, in 1730 and was

ING

brought up in the study of medicine, which he pursued for nearly seven years in his native city. In 1727 he took a voyage to this country, to learn the Switzerian method of inoculation for the small-pox. He became acquainted with Dr. afterwards Sir John Pringle president of the Royal Society, through whose recommendation he was employed in 1755, to inoculate the children of the royal family of Austria. He went to Vienna for that purpose, and his services were rewarded with a pension of 600 florins. Returning to England, he engaged in medical practice near London and occupied his leisure with chemical and philosophical researches, which were the subjects of his publications in the Philosophical Transactions, and other works of science. He was also the author of "Experiments on Vegetables," 8vo., "New Experiments and Observations on different Subjects relating to Natural Philosophy," 2 vols. 8vo., and an "Essay on the Food of Plants." He died September 7, 1799 at Bowood, in Wiltshire, the seat of the marquis of Lansdown who extended his patronage to that ingenious foreigner.—*New Univ. Biog. Now & Contemp.*

INGELO (NATHANIEL), a clergyman of the church of England, known as the author of "Bentivolio and Ursula," a religious romance. He received his education at Cambridge, and held a fellowship at Emmanuel college which he afterwards resigned for one at Queen's in the same university and held the latter with another at Eton. His death took place in 1683. His correspondence with Dr. Hare appeared in 1739.—*Harrow's Alumni Ebor.*

INGHIRAMI (TOMASO PEDRA), an eminent Italian scholar was born in 1670. He was taken while an infant under the protection of Lorenzo de' Medici where he studied with great diligence. He obtained the name of Phedra or Pedra from pronouncing some extempore Latin verses, while performing that part in Seneca's play of Hippolytus, in order to amuse the audience until some machinery could be recastled behind the scenes. Alexander VI made him canon of St. Peter's, and afterwards a bishop. In 1495 he was sent as nuncio into the Milanese to treat with the emperor Maximilian, who created him count palatine and laureate. He was also made librarian of the Vatican and secretary to the college of cardinals. He died in 1516. He wrote a defense of Cloeuro; a commentary on the Ars Poetica of Horace; a history of Rome, and remarks on Plautus, with additions to that author's Aulularia.—*New. Diet. Hist.*

INGRAM (ROSE) an English clergyman, author of several learned and ingenious treatises on scriptural subjects. He was a native of Beverley, in Yorkshire, where he was born in the spring of 1737, and received the rudiments of a classical education at the grammar-school in that town. Removing in due time to Cambridge, he obtained a fellowship of Corpus Christi college in that university and was professed in succession to the benefices of Bedlam, Kent, Orton, Notts.; and

Wombridge and Boxed, in the county of Essex. The titles of his principal essays are, "A View of the Great Events of the Seven Years' Plague," 1785; "An Account of the Ten Tribes of Israel, being in America, originally written by Moses ben Israel, with Observations," 1792, and "A compleat and uniform Explanation of the Prophecy of the Seven Vials of Wrath," printed in 1804, the year of the author's decease.—*Cotw. Mag.*

INGRASSIAS (JOHN PHILIP) an eminent physician and medical writer was born in Sicily in 1510. He studied medicine at Padua, where he graduated as MD in 1537. He accepted the chair of medicine and anatomy at Naples where he obtained great credit and distinction. From Naples he retired to Palermo, and in 1563 Philip II appointed him first physician for Sicily and the neighbouring isles. He adopted such sanitary regulations, when the plague raged at Palermo, as put a stop to the calamity, and highly endeared him to the citizens, who would have rewarded him with great munificence had not he disinterestedly refused to avail himself of their gratitude. He died greatly regretted at the age of seventy. Ingrassisas ranks among the improvers of anatomy by his discovery of the bone called stapes, in the ear and by that of the seminal vesicles. He wrote several works on surgery and anatomy the principal of which is entitled "In Galen Librum de Osibus Commentaria," folio Massina, 1603. It contains the text of Galen in Greek and Latin, with a diffuse commentary, the figures are those of Vesalius. In this work Galen is ably defended but not against the truth of modern discovery.—*Halleri. Bibl. Ant.*

INGULPHUS, abbot of Croyland, and author of the history of that abbey was born in London about 1030. He received his early education at Westminster and afterwards went to Oxford, where he applied to the study of Aristotle and as he says, "clothed himself down to the heel in the first and second rhetoric of Tully." In the year 1051 William duke of Normandy then a visitor at the court of Edward the confessor became so partial to Ingulphus, then of the age of twenty-one that he made him his secretary. On the return of the duke to Normandy he also became that prince's prime favourite, and as he himself ingenuously confesses, did not behave with the necessary prudence and moderation. Finding that the courtiers were forming a party to ruin him, he obtained leave from the duke to make a pilgrimage to the Holy Land and upon his return entered into the order of the Benedictines, at the abbey of Fountains, in Normandy of which he became prior. On the commencement of the crown of England by Duke William, Ingulphus was created abbot of the rich monastery of Croyland and being in great favour with the king and archbishop Lanfranc, he was enabled to rebuild it, and obtain for it many privileges. He died in 1093. Ingulphus is author of an account of the life of St. Guthlac, and also of a history of the monastery of Croyland, which last work is

innumerable with marginalia of the King-
fishers. It was published by Sir Henry Grafton,
in 1592, among the "Scriptores post-Ber-
nardum," and has been reprinted both at Frankfort
and at Oxford, the latter of these editions, dated
1694, being the most complete. The history
of Croyland commences from 654 to 1091.—
Vestit Hist. Lat., Bayle, Fiz.

INNOCENT III. one of the most tyrannical
of the popes, was born in 1160, at Anagni,
and was a descendant from the counts of
Flegm. He was elevated to the papacy at the
age of thirty-seven in succession to Celestine
III in the year 1198. His first care was
to unite the Christian princes in a crusade for
the recovery of Palestine, and in order to suc-
ceed he began by a cruel persecution of the
Albigenses. He treated monarchs with as
little consideration as heretics. He put France
under an interdict, because Philip Augustus
divorced his queen Isabella, and treated
England in the same manner to be revenged
on king John, whom he deposed by a papal
bull which absolved his subjects from their
allegiance, a fact which forms a conspicuous
portion of English history. He treated Ray-
mond, count of Toulouse, in a similar but still
more insolent and merciless manner. Under
him the temporal power of the popes was built
upon a solid foundation. Romagna Umbria,
the March of Ancona, Oristello, and Viterbo
acknowledged him for their sovereign and he
reigned in fact from sea to sea. The Roman
republic, in her first four centuries, did not
possess more territory than this pope. He
even conquered Rome itself, subjecting the
city to his see the very next day after his con-
secration. Hugheus the prefect of the city
and other magistrates had taken the oath to
the emperors but Innocent boldly insisted
upon their swearing allegiance to himself and
was obeyed. The new senate was no longer
that of the Romans, but of the pope and he
also abolished the title of consul. It is the
province of history to record the political events
of this naughty papal reign, but it may be ob-
served, that Innocent III convoked the fourth
general council of the Lateran in 1215. His
decrees are also famous among canonists and
it was in this postulate that the celebrated
orders of St Dominic and St Francis de Assisi
were founded. Innocent died at Perugia, the
20th July 1216 leaving behind him a cha-
racter for great abilities, and still greater pride
and ambition. From the moment of his ex-
altation, he resolved to follow the example of
Gregory VII and with equal arrogance, iaire
pity, and address, pursued his ambitious plan
until he arrived at a height of despotism be-
held with astonishment by all Europe, but to
which, to the extreme disgrace of the age all
Europe tamely submitted. It may however,
be at the same time observed, that this same
despotism, in its excess, was of no long dura-
tion, and that some of the successors of Inno-
cent could play with impunity the same lofty
part. He was the author of a variety of theo-
logical treatises, a catalogue of which may be
seen in Bayle and Dupuy. The whole of them

were published at Cologne, in 1776, in 4 vols.
folio. The most valuable of his works are the
"Epistles," which throw considerable light
on the ecclesiastical history of his time, and
are serviceable to students in canon law. The
most correct edition of these is that of Salmo,
Paris, 1682.—*Cave's Hist. Lit.*, Dupuy, Me-
rret, New, Diet. Hist.

INNOCENT XI. (BESSIER OBBAGACCI) was
the son of a rich banker at Cuneo, in the
Mihemone, where he was born in the year 1611.
His first profession was that of a soldier which
he quitted for the church, and after passing
through the intermediate dignities, he was elect-
ed pontiff in 1676. This pontiff was chiefly dis-
tinguished for his firm probity of charac-
ter and determined enmity to France. His
opposition to what is in that kingdom called
the *regals* or royal rights, on the decease and
investiture of bishops, was tenacious in the ex-
treme. He even refused bulls to all the French
clergy nominated to benefices, after the famous
decree of the Gallican church in 1682
and at his death more than thirty benefices
filled of pastors on that account. He was
equally decided in the disputes on the privi-
leged quarters of ambassadors which, since
he determined to remove, while Louis XIV,
with equal pride resolved to maintain that of
his own representative although all the rest
of the catholic sovereigns agreed to so reasona-
ble a reform. Innocent would not receive the
monasteries directed by Louis to maintain this un-
reasonable licence and even interdicted the
church, at which he attended divine service.
These disputes were highly favourable to the
English revolution, as it induced the pope in
1689 to unite with the allies against James II,
in order to lower the influence of Louis XIV.
His conduct in this respect has led many ca-
tholics to assert, that he sacrificed the catholic
religion to his personal resentment, and it was
positively said, that to put an end to the
troubles of Europe it was only necessary for
James II to become a protestant, and the pope
a catholic. Bayle however judiciously ob-
serves, that the extreme predominance of any
great catholic sovereign is injurious to the in-
terests of the papacy and mentions the simi-
lar conduct of Sixtus V another able pope
in relation to Philip II of Spain, and queen
Elizabeth of England. Innocent died on the
12th August 1689 at the age of seventy-eight,
leaving behind him the character of an able and
economical pontiff and of an honest and moral
man.—*Bayle Bowyer's Hist. of the Popes.*

INNESES (AUGUSTIN) a youth and his-
torian was born at Saccà in Italy in 1666.
He quitted the society after teaching philoso-
phy and theology and betook himself to the
composition of history. He died at Palermo,
in 1677 at the age of eighty-two. His works are
"The History of Palermo," 3 vols. folio;—
"History of the terrestrial Paradise," 1663;—
"La Cartagine Siciliana," 1665, and the "His-
tory of Casmara," in which last work he cele-
brates the Sicilian vapours as an object which
deserved the applause of all historians.—*New-*
Dic. Hist.

IPIHTHIS, king of Elis, in Greece, that son of Prometheus, and grandson of Oceanus, who was one of the initiates of the famous Olympic games. They are said to have been originally celebrated by Pelops, or according to others, by Hercules, in honour of Jupiter, and after being neglected for several ages, they were restored or re-established by Iphitus. Controversy have arisen as to the ages in which these games lived. Some chronologers place him 684 BC but Mr Isaac Newton has shown that he probably lived a century later and that the first games of his institution were held 776 BC., from which period they were continued without interruption for several centuries. These games were celebrated every fourth year in the month of July near Olympia, a city of Elis. The chief exercises at which the competitors contended were leaping running throwing the disc or quoit darting the spear, and wrestling. Contests of this description were exclusively exhibited at the first institution of the Olympic games but afterwards racing was admitted, either horse or chariot racing; and at a subsequent period candidates contended for the prize of skill in music poetry eloquence &c.—*Skeat's Introduction to Usur. His. Lemprière's Bibl. Class.*

IPHICRALES a famous Athenian military commander in the fourth century before the Christian era. He was born in obscurity but raised himself to eminence in his profession by his courage and talents early in life. In the war of Corinth 390 BC he opposed with success Agesilaus, the warlike king of Sparta. He afterwards commanded a body of auxiliary troops in the service of Artaxerxes, king of Persia in an expedition to Egypt and in 368 BC he relieved Sparta, when invaded by the Thelian general, Epanomocles. In the social war he was one of the commanders of the fleet fitted out by the Athenians for the recovery of Byzantium when being accused of treachery by one of his colleagues he defended himself with such spirit, that he was acquitted by his volatile countrymen but though he lived to a great age he did not again engage in active service. In the early part of his career he restored to his dominions Seuthes, king of Thrace, whose daughter he married. Iphicrates was a strict observer of discipline, and was the author of some important improvements in the arms and accoutrements of the Athenian soldiers. He was accustomed always to fortify his camp in the field, even in a friendly country, and when once asked why he took so much trouble he answered, 'Because if contrary to probability I should be attacked I may not be obliged to make the disgraceful excuse that I did not expect it.'—*Ceratinae Nepae. Xenophon.*

IRELAND (John) an ingenious writer on works of art, who was a native of Shropshire. He was originally a woollen-draper, which occupation he exercised for some years in the metropolis. Having a taste for the fine arts, he became a prints and picture-dealer and also devoted his attention occasionally to literature. He died at or near Birmingham in 1802. His

publications are "The Budget," a journal 1793, 4to; "Letters and Poems, by John Headworth, with Anecdotes of his Life" 1795, 8vo; and "Hogarth illustrated" 1791, 3 vols 8vo which was not to be confounded with a volume entitled "Graphic Illustrations of Hogarth" by the subject of the following article.—*Month. Mag. vol. xxv.*

IRELAND (Samuel) originally a silk-manufacturer in Spitalfields, but left his commercial pursuits to become a speculator in scarce books, prints, &c. He published a multitude of picturesque tours, in various parts of England and the continent, embellished with aquatint engravings, but his chief claim to notice arises from his concern in the publication entitled "Miscellaneous Papers and Legal Instruments under the hand and seal of William Shakespeare including the Tragedy of King Lear and a small fragment of Hamlet from the original MSS." London, 1796 folio. Of wilful participation in this gross experiment on the credulity of the public he was acquitted by the declaration of the acknowledged culprit his son in an "Authentic Account of the Shakespeare Manuscripts," which appeared in 1796 8vo and in a subsequent account of the fabrication of the MSS. published under the title of "Confessions" in 1805 8vo. Samuel Ireland died in 1806. *Genl. Mag. Watt's Bibl. Brit. Theatrum Doct.*

IRENEUS (St.) a christian bishop and martyr of the second century whose exertions with a view to heal dissensions in the church especially those which arose in the year 190 respecting the proper time for the celebration of Easter were not unsuitable to his name. He was born in Greece and was educated in the christian faith by St Polycarp, who sent him on a mission into Gaul where he became a distinguished member of the church at Lyons under Photius. On the martyrdom of this prelate Ireneus was appointed his successor in the diocese in 174 and presided in that capacity at two councils held at Lyons, in one of which the Gnostic heresy was condemned and in the other the Quartodeciman. He also went to Rome, and disputed there publicly with Valentines Florinus and Blasius, against whose opinions he afterwards wrote with much zeal and ability. There are extant several editions of his works one by Erasmus printed at Paris in 1575 another by Grabe at Oxford in 1702, and a third by Massuet, at Paris 1710, folio. Mr Dodwell published a series of six essays on the writings of this father of the church, which he illustrates by many historical references and remarks. St Ireneus suffered death in the fifth persecution of the Christians under Septimius Severus, AD 202.—*Cœc. Drury.*

IRENE, empress of the east in the eighth century. She was an Athenian by birth, and became the wife of Leo IV, and the mother of Constantine VI whom she long kept in a state of tutelage and after a nominal reign of eighteen years, she caused him to be deprived of his sight, and assumed the sovereignty of

the empire. Her opposition to the Ionianists or enemies of independence, at first rendered her popular among her subjects, but her connection with Charibisogard having created an alarm for the independence of the Greek empire, a conspiracy was formed against her and she was deposed by Nicephorus and exiled to Lascos, where she died in indigence about 903. Her zeal for orthodoxy has procured her from the Latin historians those eulogies which were due to her talents, accompanied as they were by unprincipled ambition and maternal cruelty.—*Gibbon. Aksu.*

IRETON (Hawke) an eminent commander and statesman of the parliamentary party in the civil wars of Charles I. He was descended from a good family and was brought up to the law, but when the civil contests commenced he joined the parliamentary army and by the interest of Cromwell whose daughter Bridget he married, he became commissary general. He commanded the left wing at the battle of Naseby which was defeated by the furious onset of prince Rupert, and he himself wounded and made prisoner. He soon recovered his liberty and took a great share in all the transactions which threw the parliament into the power of the army. It was from his suggestion that Cromwell called together a secret council of officers, to deliberate upon the disposal of the king a person and the settlement of the government. He had also a principal hand in framing the ordinance for the king's trial and sat himself as one of the judges. Ireton accompanied Cromwell to Ireland in 1649 and was left by him in that island as lord deputy. He reduced the natives to obedience with great vigour and ability but not without a degree of severity which amounted to cruelty never giving quarter to any prisoner who appeared to have been concerned in the Irish massacre. Having crowned his military career with the capture of Limerick, he was seized with a pestilential disease and died in that city in November 1651 sincerely lamented by the republicans who revered him, says Granger "as a soldier a statesman and a saint." Home also calls him a memorable person celebrated for vigilance capacity and a rigid exercise of justice during his unlimited command in Ireland upon his own principles, the same historian observes that he was deemed by many a patriot and ardent lover of liberty. He received a public funeral but after the restoration his body was taken up and suspended at the gallows with that of Cromwell, and was buried in the same pit.—*Peg. Brit. Home. Granger.*

IRIARTE or **YRIARTE** (John b.) a learned Spaniard, distinguished for his acquaintance with archæology. He was a native of Teneriffe, and going to Spain, he obtained the post of royal librarian at Madrid, and was also interpreter in the office of the secretary of state. He published "Palaeographia Graeca, 1764-66; a Catalogue of the Arabic MSS. in the Library of the Escorial, &c. He was director of the Royal Academy of Madrid, and succeeded, took place in 1774.—*Nova Diet. His. Espag. Und.*

IRIARTE or **YRIARTE** (*Tenerife*) a Spanish poet and political agent of the last century. He was employed as a messenger at the court of Madrid and died in 1786. As a poet he is known by his "Literary Tales," which have been translated into English, and "La Musica, Poem." Madrid, 1784, 4to—[See—*Wiel.*]

IREDEGERDE, see *Ysanderigde.*

IRWIN (*Eyles*) was born of Irish parents at Calcutta, in the East Indies in 1748. He received his education at a private academy in England, and returned to the east in a civil capacity in 1767 but was suspended in 1777 for his attachment to lord Pigot. He came to England, over land to seek redress, which he obtained and was restored to his former situation at Madras. In 1785 he again visited England but in 1792 was appointed to superintend the Company's affairs in China. He finally returned to England where he died in 1817. His works are, "Adventures during a Voyage up the Red Sea, and a Journey across the Desert Bedukah an Indian Pastoral;" *St Thomas's Mount, a Poem;* "Eastern Eclogues Epistle to Mr Hayley" Ode on the Death of Hyder Ali, "Triumph of Innocence an ode on the acquisition of Mr Hastings," Inquiry into the feasibility of Buonaparte's Expedition to the East, "Buonaparte in Egypt" *Niles,* an elegy on Nelson, "The Failure of the French Crusade" "The Bedouins" "Napoleon, or the Vanity of Human Wishes" &c.—*Annual Biog.*

ISAAC KARO a learned Jewish rabbi a native of Spain from which country he was forced to expatriate himself by the famous edict of Ferdinand and Isabella in 1492 or denying all Jews to become converted to Christianity or to quit their dominions within four months on pain of death. From Portugal in which country he first took refuge he travelled with his family into Palestine but was unfortunate enough to lose all his children on the journey as well as his library. This misfortune combined with other causes, induced him to return from the world and he passed the remainder of his days in solitude employing himself in the composition of a work, partly cabalistical and partly historical, having for its subject the generations of Isaac, and entitled "Toledot Yeshach" Of this treatise there are two editions, one printed at Constantinople in 1518 the other at Amsterdam 1708. A Jewish ritual, entitled "Even Habevor" has also been ascribed to him by Buxtorf.—*Mauri.*

ISAACSON (*Harris*) was born in 1581 in the parish of St Catherine Cree, London, for which city his father served the office of sheriff. Bishop Andrews made him his secretary and he is further advantageously known as the author of a valuable system of Chronology printed in folio. His death took place in 1634.—*Wood's Athl. Oxon.*

ISAKUS a Gracian orator was a native of Chalcis in Syria, and the disciple of Lycurgus and master of Demosthenes. He was born

about 430 BC, and taught rhetoric at Athens with great reputation. Sixty-four orations were attributed to this orator, out of which fifty now remain. Of these, ten alone now remain which are published in the "Orationes Veteris Grecorum" of Stephens, 1665. Of the more recent editions that of Rusio is deemed the best. An excellent translation of the orations of Isocrates into English has been given by Mr. William Jones. He must be distinguished from another eminent orator of the same name who came to Rome AD 97 and who is mentioned with great applause by the younger Pliny.—*Fabrius Bubli Oratio Mores.*

ISCANUS (JOSEPHUS) or Joseph of Exeter a distinguished writer of Latin poetry in the thirteenth century. He was a native of Exeter and was patronised by his townsmen Baldwin archbishop of Canterbury with whom he accompanied Richard Cœur de Lion to Palestine. He was the author of an epic poem on the Trojan war founded on the history of Dares Phrygus, and he wrote another epic entitled "Antiochus, or the deeds of king Richard during his crusade which the poet had himself witnessed." Warton styles Iscanus "The miracle of his age in classical composition," and says that Italy had at that time produced no poet equal to him. The Antiochus is unfortunately lost with the exception of a few lines, sufficiently beautiful to make us regret the remainder. The poem on the Trojan war has been published in Germany as the composition of the Roman biographer Cornelius Nepos. Fuller and other English writers have stated that he became archbishop of Bourdeaux, a mistake which is confuted in the Gallo Christians of St. Martin. He was however of the ecclesiastical profession. His death happened about 1224.—*Warton's Hist. of Eng. Poetry. Brog Univ.*

ISELIN (JAMES CHRISTOPHER) an eminent German divine and philological writer of the eighteenth century. He was born at Basel where his father was assessor of the court of justice, and he pursued his academical studies with such success at his native place that at the age of fifteen he produced a Latin poem, which was much admired. On the Passage of the Rhine," by the French. He afterwards spent some time at Geneva, and in the south of France and returning to Basel in 1701 he was ordained a minister. In 1704 he was elected professor of rhetoric and history in the university of Marburg and in 1706 he became professor of history and archaeology at Basel. In 1711 he was made doctor in theology and afterwards rector of the university; to which he added the office of public herald. He was the author of a variety of orations, disquisitions, and tracts on diversity of philology and other subjects, which display to advantage his learning and abilities; and he was the editor of an improved and augmented compilation of the historical dictionary of Budweis, in German, six volumes folio. His death took place in 1737, at the age of fifty-six.—*Adkin's Hist. Aikin's G. Brog Univ.*

ISELIN (ISAAC) an eminent philosopher; Brog Drt.—Vol. II

and Ingenuus writer, born at Tübingen, in 1705. He was educated at Göttingen, where he studied jurisprudence and statistics, and on taking the degree of LL.B. he published a thesis, entitled "Tentamen Quaerendi Iustitiae." He afterwards visited Paris, and returning home became a candidate for the professorship of history, in 1754, but he was disappointed of the situation. He was however elected a member of the grand council of Basel and in 1756 obtained the important office of secretary. He then published a tract entitled "The Dream of a Friend to Mankind" of which there were several editions. He also wrote "Free Thoughts on the Depopulation of my Native City," 1758, 8vo. "The History of Mankind," 2 vols. 8vo, the most important of all his productions, and a periodical work called "Ephemerides of Mankind." In conjunction with Solomon Gessner and Hirzel he founded the Helvetic Society and in 1777 he assisted in the establishment of a similar society at Basle on a plan which he had himself elaborated. He carried on an extensive correspondence, both in Switzerland and in foreign countries, and wrote many articles in a periodical journal called the German Library "Deutsche Bibliothek" Iselin died in 1782. *Aikin's G. Brog Univ.*

ISEMBERG of XAINTE a French architect of the twelfth century who erected the bridges of Hautes and Rochelle in France. These works had procured him great reputation owing to which he was recommended by king John to the citizens of London in 1201 as an engineer or architect, whose skill might be useful in the completion of the bridge over the Thames then building. This structure was commenced under the direction of a priest called Peter of Colechurch, in 1176, and it was finished in 1209 probably by Isembert. Part of the bridge has been recently taken down preparatory to the removal of the whole when the noble structure now in progress shall have been completed. From the manner in which the old bridge was constructed, it appears wonderful that it should have subsisted so long the workmanship having been executed in a manner which is not very creditable to the architectural science of the twelfth century.—*Stow's Merton.*

ISIDORE of Milcita, a Greek architect of the sixth century who, together with Anthemius was employed by Justinian emperor of the East, to erect the church of St. Sophia at Constantinople. That church is a square building, with a hemispherical cupola in the centre 108 feet in diameter and its summit 600 feet from the pavement below. That edifice, which was considered the most magnificient monument of the age was scarcely finished before the cupola was thrown down by an earthquake. But Justinian had a immediately rebuilt. On the taking of Constantinople by the Turks, the church of St. Sophia was appropriated to the worship of the Mahometan conquerors; on which account it has very rarely been visited by Christian travellers.

whence there is reason to believe, that the magnificence and beauty of the building have been exaggerated by time, and that the edifice and its decorations display more show and splendour than taste or architectural excellence.—*Festina lente de droit*. Edit.

ISIDORE of Pelusium, a saint in the Roman calendar, was one of the most celebrated of the disciples of St John Chrysostom, and lived in the fifth century. He professed the monastic life from his youth, and composed some thousand spates, of which 2,012 remain in five books, and are deemed valuable especially for the information which they contain, in relation to points of discipline and for practical rules. The best edition is that of Paris, 1638, Greek and Latin. In 1738 Heumann attacked the authenticity of a part of these spates in a tract, entitled "Epistola Isidori Pelusiorum maxima pars esse ficta."—*Cave Lovinus Mohren.*

ISIDORE of Seville another saint in the Roman Catholic calendar and a distinguished Spanish prelate towards the beginning of the seventh century when he succeeded his brother Leander in the see of Seville. He presided at a council held in that city in 633 and at the fourth national council in 633 in which numerous regulations were by his influence adopted, in order to reform ecclesiastical discipline in Spain. He died in the year 636. He was the author of numerous works, which are chiefly compilations, the principal of which are twenty books of *Origins* or *Etymologies*, Paris, 1601 folio, A Chronicle from the Beginning of the World to the year 626, "A Treatise on Ecclesiastical Writers" "Sentences," Commentaries upon the Historical Books of the Old Testament. *Scriptural Allegories*. A Book of Proems or Prolegomena to the Scriptures of the Old and New Testament" "A Treatise on Ecclesiastical Discipline," in which he mentions seven prayers of the sacrifice still to be found in the Moesiac mass, which is the ancient Spanish liturgy of which Isidore was the principal author. The edition of the Missal 1500 folio and of the Breviary 1502 folio printed by cardinal Ximenes, are very scarce. A collection of canons, attributed to this Isidore were by a later priest of the same name Isidore of Seville, who is more admired by later churchmen for learning than discrimination, is frequently ranked among canonical writers, much being said by him on the introduction of music into the church in his divine offices. He is sometimes called Isidore the younger, to distinguish him from Isidore, Bishop of Cordova, in the fifth century, author of "Commentaries on the Two Books of Kings," the best edition of which is that of Paris, 1601. —*Cave. Dugou. Berney. French Cyclo.*

ISIDORE MERCATOR or PEGGONIOR lived towards the beginning of the eighth century. He was the author of the spiritual collection of canons attributed to Isidore of Seville, containing the precepted decrets of more than sixty popes, from St. Clement to

Sixtus, and the decessus and epistles from the latter pope to Zachary. The object of this clumsy compilation, so a barbarous age was to prove that all ecclesiastical authority derive emanated from the see of Rome and that councils could determine nothing without its approbation and consent. The spuriousness of this collection has been ably shown by the learned Blondel in his "Pseudo Isidoros et Turmenses Vspalantes." It is proper at the same time to observe that they are equally given up by learned and judicious Roman Catholics.—*Fabrii Bibl. Graec. Morevi. Melchis.*

ISIDORE of Charax A Greek writer who lived about BC. 300. He wrote various historical works, and a geographical production on Parthia, entitled "Maznoes Partibus" which was first published by Hoeschelius and is contained in the "Geographi Minores," Oxon. 1703.—*Vetus Hist. Grec.*

ISILA (JOSEPH FRANCIS DE) an ingenious Spanish jesuit who on the suppression of his order retired to Italy and died at Bologna, in 1781. He was the author of a very celebrated work entitled "Historia del Fra Gerundio de Campazas alias Zotes," Madrid 1756 tome 1 which appeared under the assumed name of Frascaro Loben de Salazar, minister of the parish of St Peter in Villagarcia. It was a bitter satire upon the absurd fanaticism and ignorance displayed in the preaching of the monks of Spain and in the first instance was even partially approved by the Inquisition as a salutary correction, but the jealousy of the Dominicans and mendicant orders being at length roused the council of Castile suppressed the work and forbade the publication of the second part. Being thus unable to print it in Spain the author presented it to Mr Boretti by whose means, with a few omissions, both parts were printed in English in 1771 and afterwards in German, with illustrative notes. Father Isila is regarded by his countrymen as a second Cervantes and certainly displays a hundred spirit, although the nature of the subject would not allow of equal diversity. Independently of its wit and caustic humour this work is well worthy perusal for the information which it affords, in regard to Spanish manners among the middling and lower orders, more especially in reference to the influence of the numerous monks, and the nature of the bonds which so intimately connect them with the classes in question.—*Nouv. Dict. Hist. Preface to Translation of Fras Gerund.*

ISELF an Icelandic historian of the eleventh century. His father Gyseir having assisted in converting to Christianity the people in the southern part of Iceland, sent his son Isel to Erfurt, in Germany to qualify him for the ecclesiastical profession. Having finished his studies, he went to Rome in 1065, and was ordained. In his journey he visited the German emperor whose favour he conciliated by making him a present of a晁ographed banner. Returning to his native country in 1077, he founded the see of Skalholt, of which he be-

came the first bishop, and he showed his attachment to learning by establishing a school at the same place, where Jónas Ógmundarson, the first bishop of Hója, and Colmán, Vicente, a Norwegian prelate, both received their education. Íslief wrote Icelandic Annals and the History of Norway according to Árniagnus Jones, and another writer says that he composed the lives of Harold Fairfax, king of Norway, and his successors to Magnus the Good, who died in 1047, including in his chronicle an account of all the Norwegian families, who had migrated to Iceland, in the reign of the former prince. Íslief died in 1080. He was married and had a son, named Gyðær after his grandfather, who wrote and translated some historical works.—*Saborn, Bok. Hist. Danæ-Norwæg.*

ISMENIAS a Theban musician of great skill and eminence the pupil of Antigenes. His vanity and extravagance are commemo-rated by various authors as being at least equal to his subtleties. Lucas speaks of his having purchased a flute at Corinth, at the price of three talents (about 55*l.*), Pliny records his prodigality in the article of jewels, while Plutarch gives an amusing anecdote of his self-conceit during a sacrifice in which he was appointed to accompany the ceremony with his music: the oxen being delayed one of the company impatiently snatched the flute from his hand, and began playing himself when the happy oxen appearing lamen-tous with much self compunction declared that the gods had only kept it back so long in order to have the pleasure of hearing his music and at length bestowed it because they were glad to get rid of the noise of his substitute. When taken prisoner, however, by the Scythians that rude nation appears to have been insen-sible to his melody their king declaring he preferred the neighing of a horse to his most dulcet strains.—There was also a Theban commander of this name notorious for the address with which he contrived to satisfy the court etiquette of Persia, without com-promising his own dignity. When introduced into the presence of the monarch that em-pire he let fall his ring and stooping to pick it up, satisfied the courtiers around him with-out bending his body otherwise than for his own convenience.—*Big Duct of Mus. Assoc. Dart. Nat.*

ISOCRATES, an eminent Greek orator and rhetorician was born at Athens, in the eighty-sixth Olympiad about BC 435. His father, a maker of musical instruments, being ruined by the Peloponnesian war left him no inheritance beyond a good education. He studied eloquence under Gorgias, Protagoras, and other great masters, but a weak voice and timid dis-position prevented him from exercising the talent of public speaking; he opened a school at Chios, and taught the art of rhetoric. He subsequently accompanied Timotheus, son of Conon, to several parts of Greece and finally taught at Athens, with a reputation which brought him many disciples and considerable emolument. Although he sometimes courted

the great, he was capable of spirited and gen-erous conduct when Timotheus, persecuted by the party tyrants, took refuge at the altar, he rose to speak in his defence at the hazard of sharing his fate, and after the death of Socrates when his disciples all took to flight, he had the courage to appear in mourning in the streets of Athens. He passed a long life in peace and honour and had reached his ninety-eighth year at the fatal battle of Charonea, when grieved at the calamity which had fallen on his country he abstained from food four days and expired. There remain of Isocrates twenty-one discourses, which have been distributed into the moral, the deliberative, the panegyrical and the agoracitical, and there are also nine epistles, which bear his name. The style of Isocrates is pure and flowing, but he is seldom lively rapid, or vehement. He was extremely attentive to the harmony of his periods, and Cicero reckons him among the first who fully melodised Greek prose. He polished all his compositions to excess, but although pleasing to please his eloquence was little adapted to forensic contests, or public assemblies. Among the numerous editions of Isocrates those of Baitus, Cambridge, 1729, and of London 1749 are now generally preferred.—*Fabius, Bibl. Greæ. Moxon. Atlas & G. Big.*

ISTHVANFIUS (NICHOLAS) a noble Hun-garian distinguished as an historical writer. He studied in the Italian universities of Pavia and Bologna, after which he served in the army and obtained the favour of the emperor Maximilian II, and his son Rudolph, king of Hungary. The latter employed him in a ne-gotiation with the Turks, and rewarded him for his services with the office of vice palatine of Hungary. Towards the close of his life he undertook to write the history of the events which had occurred in his own age and country which task he completed in thirty-four books, in the Latin language, and the work was published in 1622 and has been several times reprinted. Having become blind previous to his death, which occurred in 1615 Isthvánfius dictated the last four books of his work to his secretary.—*Big. Uzzi.*

ITHON (JOHN de) an astrologer and re-puted magician of the fourteenth century who was a party in a law-suit which displays the miserable ignorance and superstition of that age. There still exists as the court rolls of the manor of Hatfield, near the village of Aughton in Yorkshire under the date of 1337 a complaint of one Robert de Rothesburn against John de Ithon, 'for not keeping an agree-ment he had made with the said Robert, to sell him, on a certain day then appointed, for the sum of Gasparenes furlong (one furlong of 160 acres) and Robert had paid down as earnest' 2*l.* and 'well properly bound in a head, Reticule, Purse or pouch together. That the said Robert had demanded and John to deliver him said furlong, according to agree-ment, but is wan; wherefore he praye the young Justice.'—It appears by the same docu-ments, that John de Ithon having been sum-

mised, attended the court, and did not deny the agreement, which had been made. The court, however, refused to take cognizance of the cause, not by any want of account of its absurdity but from their persuasion that such a suit should not submit among Christians.—*Bien's: Jose Tavera.*—See PARÍA (Gustavus).

JETZIGER (Eusebius) a German ecclesiastic of the reformed religion, born 1644 at Leipzig, where his father filled the professor's chair in the faculty of medicine. He received the rudiments of a liberal education in the university of his native place, and became professor first of philosophy and afterwards of divinity there having completed his studies at Bonn and Strasburg. He was a voluminous author, principally on historical and ecclesiastical subjects. Among his writings are, *Bibliotheca Patrum Apostolicorum Graecæ-Latinae*, *Dissertatio de hereticis*; *Historia Synodus nationalium in Galia reformatæ habitarum*, *Historia ecclæsiastica primi et secundi saeculi selecta Capitula*, *Prolégomena ad Josephi opera Exhortationes Theologicas*, and *Liber de bibliotheca et ceteris Patrum*. Besides several papers in the Leipzig acts and a treatise on volcanoes. His death took place in 1710.—*Moray.* See: *Obit.*

ITURBIDE (—) a Mexican officer who in the course of the political changes which took place in his native country raised himself for a short time to supreme authority but was unable to maintain his station. He was born at Valladolid in Mexico in 1790 being the son of a native of Biscay who emigrated from Spain at the age of twenty eight, and settling in America, married a Creole lady of considerable fortune. The son was bred a farmer and possessing a robust constitution and an active and enterprising disposition he entered into the militia of his native province, and thus became acquainted with military service. In 1810 he was a lieutenant in the army, and his professional merit led to his further promotion. The share he had in suppressing the insurrection of Morales, induced the government of Mexico to give him the rank of colonel. He was also made commander of Bahia, but as being deprived of that post he withdrew from the service of the state and retired to his plantation. Subsequent events opened a new career for his ambitions. He was invited to take the command of an army destined to the South and he marched to Acapulco in the latter part of 1819. There he matriculated a plan, the professed object of which was the emancipation of Mexico from the yoke of Spain, the independence of the country and the extension of freedom to all nations of the people. In the summer of 1820, Iturbide was declared emperor of Mexico, and thence appeared some prospect that the political convulsions which had so long agitated the colonial provinces, would be terminated by this new ruler, under an independent government. But he was unable per-

mantly to maintain his authority against public dissent, and the conflicting claims of rival chiefs. In the beginning of 1823, he found himself obliged to leave the Mexican territories; previously to which however he had attached to his interest a considerable number of the officers of the army and created a strong prejudice in his favour in one or two of the provinces. After the abdication of Iturbide, the province of Guadalajara or Jalisco became the scene of the plots and machinations of his partisans. The conduct of the governor Quintana especially left no doubt of his attachment to the cause of the ex-emperor or of his hostility to the federal government. He had promoted Garza, a relative of Iturbide, and given a military station to baron Rosenberg a German who had manifested the strongest devotion to the exiled chief and had been on that account ordered to quit the dominions of Mexico. Exclamations of "long live the emperor!" were heard in the capital of the province, and the governor rather encouraged than repressed these indications of the spirit of the people. His conduct was not unobserved by the federalists, and an expedition was despatched to crush the incipient conspiracy against the state. Quintana vainly endeavoured to collect an efficient force. He was deserted by his troops and made prisoner while Garza, Rosenberg and others were killed in the field, or shot as traitors. About the time of the miscarriage of this ill concerted insurrection Iturbide sailed from England where he had for some time resided and having reached the Mexican coasts landed in disgrace near Soto la Marana, on the 14th of July 1824. The ex-emperor was accompanied by a friend named Beneke, who applied to general Garza, the commander of the province of New Santander for passports, pretending that they were for persons who had visited Mexico on a mining speculation. Garza granted a passport to the applicant, but refused to grant another till he should see the individual for whom it was wanted. The next day he was informed that Beneke had again landed with two other persons, and proceeded to the interior. A party was sent after them, and they were overtaken and brought back. Iturbide was immediately recognised by general Garza, who had been his companion in arms. The decree issued by the congress declaring Iturbide a traitor, if he should dare to land on the Mexican territory, was then read to him but general Garza, not choosing to be the immediate executioner of public justice sent his prisoner towards Mexico, to await the decision of the congress. His fate was but a short time delayed, for the congress ordered his immediate execution, and he was accordingly shot as soon as the sentence arrived, on the evening of his reaching Padiño. The federal government on his abdication had settled on him a large pension, on condition of his residing in Italy, and after his catastrophe \$6000 dollars were granted to his widow and children. He is said to have possessed great military talents, and considerable strength of

character. It has been asserted that he pursued an intention to follow the example of Washington, had he been successful; but admitting his eloquence, it may be questioned whether he would have been so far proof against the intoxication of power as to have persevered in his purpose.—*Ann. Roy.*

ITURRIGARAY (—) viceroy of Mexico, whose name is permanently connected with the great revolution which has taken place in that country. He was elevated to the office at an advanced age and in 1808 when the news arrived in America of the events which had taken place in Spain, he was so alarmed that he offered to resign his authority. The offer was not accepted, but this act of weakness encouraged subsequent commotions. A conspiracy was formed against him, the officers of his guard were implicated in the scheme, and a merchant at the head of 400 Spaniards, entering his palace at mid night, made the viceroy a prisoner September 15 1808. He was placed in the prison of thequisition where he died some time after.—*Bibl. A des Contemp.*

IVES or YVES a celebrated French bishop was born in the territory of Beauvais in 1035 and raised to the see of Chartres in 1092. He particularly signalised his zeal against Philip I of France who had put away his wife Bertha, and took Bertrade the wife of the count of Anjou, by means of an informal divorce. When this disagreement was composed Ives confined himself to his clerical functions, and laid several religious foundations. He died in 1115 and Pius V by a bull dated December 18 1570 permitted the monks of the congregation of Lateran to celebrate the festival of St Ives. There exist of his compilling A Collection of Decrees 'Exceptiones Ecclesie sanctuarum regularum' besides twenty two sermons, and a chronicon all collected in 1647 and published in one volume folio. A collection of canons, published in the Bibliotheca Patrum under the title of 'Parnomia or Pannomia,' are attributed to this bishop.—*Mores. Cave. Sacri Oxon.*

IVES (EDWARD) an English traveller of the 18th century. He was a surgeon by profession and sailed for the East Indies in that capacity in 1754 with admiral Watson. After the death of that officer in 1757 he left the service and returned to England. Part of his passage was overland as he went up the Tigris and visited Mosul, Aleppo, and other places previously to embarking again at Latakia, for the island of Cyprus, whence he sailed to Leghorn and thence took his route through Italy, Germany and Holland to England where he arrived in March 1759. He published an account of his voyage to India, and the events which occurred there in 1755 56 and 57, and travels from Persia to England, by an un frequented route containing much interesting information. He died September 25 1782.—*Bibl. Univ.*

IVES (JOHN) a respectable antiquary, was the only son of a merchant at Yarmouth, in Norfolk, where he was born in 1781. He was

educated at Colas college, Cambridge; which however he did not long retain but returned to Yarmouth, and by his acquaintance with Mr Mordaunt, of Peckover acquired that taste for antiquities by which his short after life was distinguished. In 1771 he was elected F.R.S. and F.R.A. in 1773, and by the patronage of the earl of Suffolk, the office of Suffolk herald extraordinary was revised in his favour. In 1771 he issued proposals for printing an account of Lottingham hundred, in Suffolk, and in 1772 composed the preface to Swindon's History and Antiquities of Great Yarmouth in 1773 he published 'Select Papers' from his own collection of which second and third numbers appeared in 1774 and 1775. Among these are archbishop Sharp's 'Remarks on English Coins' sir W. Dugdale's 'Directions for the use of Records;' 'Annals of Gonville and Caius College, Cambridge, &c.' In 1773 he also published 'Remarks upon the Garamannon of the Romans.' He died of a deep consumption when he had just entered his twenty fifth year in June 1776. He left a very valuable library and collection, which was sold in 1777.—*Whiston's Lit. Assoc. Nobis's College of Arms.*

IVETAUX (NICHOLAS VASQUELIN younger son) a French poet and man of letters born in 1559 at Fresnay, near Falaise. He was the son of the lieutenant-governor of the city of Caen in Normandy, and at his father's death succeeded him in his appointment, but the gouty of his disposition rendering the comparative retirement of a provincial town irksome to him he went to the metropolis, and becoming distinguished for the brilliancy of his parts was selected by the 'Fur Gabriele' to fill the situation of tutor to the young duke of Vendome her son by Henry IV. He was subsequently placed in the same capacity about the person of the dauphin, afterwards Louis XIII but occasioned great scandal through his irregularities, which injured his advancement and drew on him the pointed reprobation of Richelieu. Finding himself neglected at court, he retired upon his pension to a house he had at St Germaine, and passed the remainder of his life in the greatest sensuality. Of his writings the best known are 'Institution d'un Prince' a clever poem, and a variety of smaller poetical pieces, to be found in the collection, called 'Les Delices de la Poésie Française.' He died at Gennevilliers in 1649.—*Nous. Diet. Hist.*

IWAN BASILOWITZ I, czar of Moscow surnamed the Great. He was born in 1438 and succeeded his father in 1462. The country was then divided into a number of petty principalities, some of them nominally subject to the czar, or grand duke, and all together with him tributary to the Mingul Tartars. Iwan rendered the petty chiefs dependent on his power or seized their territories, subjugated the potent republic of Novgorod, and emancipated himself from the yoke of the Mongols. He extended his dominions in various directions, and during his reign ambassadors arrived at Moscow from the emper-

son of Gattamelata, the general and grand vizier and other Byzantine nobles. This prince, who is considered as the founder of the Roman empire, died in 1505.—IVAN BASILOWITZ II., grandson of the preceding, was born in 1530 and reigned from 1533 to 1564, when he died. He was a cruel but enlightened prince who in a fit of passion killed his own son. He conquered the Tatar province of Kazan in 1552, and that of Astrakhan in 1554 and he took possession of Livonia, but was compelled to relinquish his conquest by the Poles. In 1562 he established the first printing press at Moscow and he instituted the famous body of guards called Strelitzes. In the reign of Ivan Thomas Chancellor an English navigator visited the Russian port of Archangel when the czar sent an embassy to queen Elizabeth and a treaty was made which commenced the intercourse since subsisting between the two countries. The discovery of Siberia in 1581 was another remarkable event in the reign of this sovereign.—See YERKIN.—Mod. *Universitatis Russicae Travels in Russia*.

IXNARD (MICHAEL D.) architect and director of buildings to the elector of Treves. He was a native of Hamm, and was employed by the prince of Montauban and afterwards accompanying the cardinal de Rohan to Strasburg he was by him recommended to several of the German princes. Though quite unacquainted with literature he possessed much skill in his profession. The principal edifices built after his designs, or under his direction

were the cathedral hall at Strasburg called Hotel du Milord, the electoral palace of Clemensberg at Treves, and the abbey of St. Blaise in the Black Forest. The plans of these and other structures of his, were engraved and published at Paris in 1785. He died at Strasburg August 21 1793.—*Bog Univ.*

IZAACKE (RICHARD) a native of the city of Exeter where he was born in the year 1624. He was educated at Exeter college, Oxford and finally became town clerk and chamberlain of his native city where he died in 1700. He compiled the *Antiquities, or Memorials of the City of Exeter Avo. 1677* which was reprinted in 1784 by his son, with considerable additions.—*Wood.*

IZOCALT II. the fourth king of Mexico who mounted the throne in 1433, after the murder of his nephew Chilnacopoca. This prince may be regarded as the real founder of the Mexican empire. Under his reign all the warlike nations on the borders of the lake of Mexico were reduced to subjection and he conquered the Tepecaans and made their kingdom a province of his empire. He fortified and embellished his capital, formed a body of laws for his subjects and changed the political system of the Mexican government. He also first constructed bridges of communication from the islands on which the city of Mexico, (like Venice) is built to the continental borders of the lake. His prince died regretted by his people in 1445.—*Bog Univ.*

JAAPHAR EBN TOPHAIL, a learned Arab of the twelfth century known as the author of a philosophical romance entitled the "History of Huz Ibn Yoldan." The object of this work (which has been translated into Latin by Frococke, Oxford 1571 and by Ockley into English Avo. 1708) is to prove that the light of nature is sufficient to lead mankind to a knowledge of the Deity without the aid of revelation. His death is supposed to have taken place in 1198.—Moyer Brucker.

JABLONOWSKY (JOSEPH ALEXANDER von) a noble Pole, born 1718 who preferring a life of literary ease to the cares of his precarious senatorial dignity left the country and retired to Leipzig where he became the founder and patron of a learned society still in existence, and called after his name. He published an essay on Slavonic poetry and the "Lives of Twelve Generals." His death took place in 1777.—Rau's Cyclop.

JABLONSKI. There were several learned and ingenuous authors of this name in the last century. DAVIDE EARNSAY the elder was a native of Danzig, born November 20, 1660. He studied at various Dutch and German universities, and coming to England, was for a short time a member of that of Oxford. On his return to the continent he took holy orders,

and settling in the Prussian dominions, after acting in his ministerial capacity at Kuningsberg Magdeburg and other provincial towns became eventually an ecclesiastical counsellor at Berlin and president of the academy there. He was an able divine moderate and conciliatory in his religious opinions and laboured earnestly though unsuccessfully both by his preaching and his writings to heal the breach in the reformed church between the Lutherans and Calvinists. Besides several devotional treatises of his own he published a Latin translation of Bentley's Boyleian Lectures, remarkable for its grammatical accuracy and the purity of its style. He died in the spring of 1741.—His brother THOMAS, born also at Danzig in 1654, died ten years before him. The latter cultivated a taste for philosophy and general literature with great success and was the author of several works of merit, to which his diffidence did not allow him to affix his name. Among these are, a French and German dictionary printed in 1712, "A Course of Ethics," written in the German language, 1712; "A Universal Dictionary of Arts and Sciences," in French 1721, and a translation into German of Tacitus De Moribus Germanorum, 1724. He obtained the post of counsellor to the king of Prussia at Berlin.

and held the appointment of secretary to the Royal Academy of Sciences in that capital till his death.—PAUL EUGÈNE, nephew to the last-mentioned personage, was born in the French metropolis in 1693. He inherited the talents of the family and applying himself to the study of theology filled the professor's chair in that science at Frankfort-on-the-Oder. He was the author of a very erudite treatise on the mythology of ancient Egypt, entitled, "Pantheos Egyptiacus," 8vo, 3 vols., also of "Institutiones Historiae Ecclesiasticae," 8vo, 2 vols., "Disquisitio de Laugae Lyconiorum" and "De Memoria Graecorum." His death took place in 1737.—CHARLES GUSTAVUS JABLASKI of the same family, was a member of the Literary and Scientific Society of Halle. He is known as the author of a clever history of insects. His death took place in 1787.—*New Diet. Hist. Bibl. Germanicus* vol. xxii.

JACKSON DD (CYRIL) an eminent divine was born in 1746, at Stamford, in Lincolnshire where his father was a medical practitioner. He received his education at Westminster school whence he was removed to Christchurch college Oxford, where he graduated DD in 1781. He was appointed sub preceptor to his present majesty and for his services in that capacity was made canon of Christchurch and on the elevation of Dr Bagnall to a bishopric succeeded him in the deanship. As Dr Jackson avoided the press, he will be chiefly remarkable to posterity as having declined the mitre, both as Irish prelate and English bishop. He died in 1819. His brother Dr WILLIAM JACKSON born at Stamford in 1730, became bishop of Oxford in 1811 and died in 1812. Bishop Jackson translated a mathematical tract by Eratosthenes into Latin and was an able divine.—*Avg. Bagnall*

JACKSON (John) a learned Hebrew and warm polemic, son to a clergyman who held the living of Lenay in Yorkshire, where he was born April 4, 1686. His father sent him to the grammar-school at Doncaster whence he removed him in due time to Jesus college, Cambridge and placed him under the tuition of the celebrated Oriental scholar Simon Oekley with a view of his entering the church. Having taken orders the corporation of Doncaster in 1712 presented him to the rectory of Rossington, in their gift notwithstanding the strong leaning which he now had exhibited towards Arminianism, in his religious opinions. The university however was less accommodating and on his application to be admitted master of arts, refused him his degree. Being elected a brother of Wigton's hospital, in Lancaster, he afterwards went to reside in that society, but openly professing and advocating his principles, the neighbouring clergy were moved into opposition, so that he was refused the use of the pulpit, and on one occasion even the Eucharist. Dr Clarke master of the hospital, dying in 1729, the duke of Rutland, patron of the establishment, nominated Mr Jackson as his successor and he would have obtained a stall at Salisbury but for the free-

dom of his tenures, given out in his struggle against Wimerton and other difficulties of the family. Besides these and other controversial works, he was the author of a valuable work in three quarto volumes, printed in 1729, under the title of "Chrysological Antiquities." A new edition of the Greek Testament, which he had long had in contemplation and for which he had amassed a large collection of notes and other materials, he did not live to complete dying May 13, 1763, and leaving behind him the character of a sincere, learned, honest, well-meaning, but violent man.—*Life by Dr Sutton. Hydroc. Lut. Ans.*

JACKSON (THOMAS) dean of Peterborough, a learned divine, born of a good family at Willowing, in the palatinate of Durham 1579. From Queen's college Oxford, he removed on a fellowship to Corpus Christi, in the same university in 1606, and in 1624, obtained the vicarage of Newcaste having taken his doctor's degree in divinity two years previously. In 1630 being chosen head of his college he resigned his living, and three years afterwards obtained, through the influence of his friend the bishop of Durham a stall in Winchester cathedral. About the same time he was made a king's chaplain and in 1638, obtained the deanery of Peterborough. Dr Jackson left behind him many valuable tracts on devotional subjects, in which the most complete familiarity with the writings of the early Christian authors is evinced, but his principal work consists of a commentary on the apostles creed, a performance combining great learning and research with the display of much critical ability. This, together with his other works was printed in 3 folio vols. 1672 and is highly spoken of by bishop Horne as well as others. His death took place in 1640. *Bug. Brit. Fuller's Worthies.*

JACKSON (WILLIAM) commonly known among musicians as 'Jackson of Exeter,' an excellent composer and a man of considerable literary attainments. He was born in 1730 at Exeter where his father was a respectable tradesman and received the rudiments of a classical education with a view to his following one of the liberal professions. His taste for music displayed itself however so decidedly while he was yet a youth, that his friends were reluctantly induced to place him under Travere, the organist of the cathedral belonging to his native city. Having passed two years in the metropolis, where he availed himself of the instructions of some of the best musicians of his day, he returned to Exeter in 1750, and succeeding eventually to the superintendence of organist, there passed the remainder of his life. In 1781 he published two small octavo volumes, containing 'Thirty Letters on various Subjects,' which were well received, and went through three editions. He also printed in 1791 some 'Observations on the present State of Music in London,' a work which excited a considerable sensation at the time. His musical compositions are still justly popular and are distinguished by the ingenuity of their conception, the ingenuity

of clear distinction, and their truth of expression. In addition to his other accomplishments, Mr. Jackson was no mean proficient in painting, and several of his landscapes are remarkable for the striking effects produced by his successful introduction of strong and partial lights. His death was occasioned by an asthmatic complaint in 1804.—*Curious Lit. Rev. & Cyclop.*

JACKSON (WILLIAM) a native of Ire-land and a Clergyman of the established church, who rendered himself notorious by his intrigues against the government of his country towards the close of the last century. In the early part of his life he was connected with the dutchess of Kingston who made him her chaplain, and to whom he rendered some literary services in her correspondence with Froude, relative to his comedy "A Trip to Calais," despised as a satire on that lady. Jackson went abroad in the employ of the dutchess and resided some years in France. There he became acquainted with some of the revolutionary politicians who sent him to England to learn the state of the country preparatory to a hostile invasion. He arrived in London in January or February 1794 and finding the people of England not so ripe for a revolution as he had probably expected, he went to Ire-land, where he was detected in carrying on a treasonable correspondence with persons in France describing the state of Ireland at that period, recommending invasion and even pointing out the measures necessary for effecting it with advantage. Being arraigned on this charge, April 23, 1795 he was convicted after an able defence by his counsel Messrs Corran and Ponsonby. On the 30th of the same month being brought up to receive judgment, he died in court, while his advocates were about to move an arrest of judgment. It appeared that he had taken poison but the verdict of a coroner's jury having stated that they were ignorant how or by whom the per-son was administered the property of the de-cessed (and as he had been about 200l. a year) was preserved to his family instead of escheat-ing to the crown.—*Am. Reg.*

JACOB There were two learned Hebrew Rabbis of this name. The elder surnamed BEN NAPHTALI flourished in the fifth century of the Christian era. He was educated at Tiberias, as a Masonic and is said to have invented in conjunction with his friend Ben Aser the Masoretic points most commonly used in distinguishing the vowels of the Hebrew lan-guage. The year 476 is generally assigned as the epoch of this invention which is said to have been confirmed by a Jewish synod held at Tiberias.—The second JACOB BEN HAJIM, lived in the sixteenth century and edited the celebrated Misnor and Hebrew Bible with the Elzeldes paraphrase and rabbinical comments etzim ammudim, which appeared in 1585 at Yerushalayim, in four folio volumes.—There was also an Hungarian fanatic of this name in the thirteenth century, who pretended a communion from the Virgin to liberate Lissa the ninth from the Sentence of Damocles. But the government

disconcerning the success, his project failed, and he himself fell by the hand of a butcher.—Simon's *Brit. Diet.*

JACOB (GEORGE) a writer on topography and antiquities, who was a fellow of the society of Antiquaries and died in 1788 at Faversham, in Kent, where he practised as a surgeon. He republished the old play of "Aida of Faversham" in 1770, with a preface, in which some reasons are offered in favour of its being the earliest dramatic work of Shakespeare now remaining and the genuine account given of the murder [of Arden] from authentic papers of the time. He was also the author of a "History of the Town and Port of Faversham in Kent" with plates London, 1774, &c., A Catalogue of the more perfect Plants growing spontaneously about Faversham with a select view of the Fossils of the Island of Sheppen 1777 &c. and a paper in the Archaeologia.—Watt's *Brit. Brit.*

JACOB (GILES) an English writer in the various literary departments of jurisprudence biography and the drama. He was born at Ronsey in Hampshire in 1686 and served his time as clerk to a solicitor of eminence in that county. He entertained a strong partiality for the drama and even wrote two pieces for representation "The Soldier's last Stake" and "Love in a Wood." The encouragement which they met with was not however sufficient to induce him to continue this species of composition but a work which he printed afterwards containing memoirs of the English dramatic poets under the title of the "Poetical Register" was more favourably received. He also published a great variety of writings on subjects connected with his profession the principal of which a "Law Dictionary" in one volume folio has gone through several editions the best of which is that by Ruff head and Morgan. He died in 1744.—Bower's *Edition of Pope's Beg. Dram.*

JACOB (HENRY) There were two of this name father and son. The elder founder of the first independent or congregational church in England was a native of Kent, and because a commoner of St. Mary Hall in the university of Oxford, where he graduated as AM. On taking orders, he was preferred to the benefice of Chertsey near Hythe but found it expedient to quit both his living and the country on account of a polemical tract, in which he avowed his separation from the church on conscientious grounds. During the term of his expatriation he resided in the Low Countries but returned at length to England and became pastor to the first formal congre-gation of Independents. He was the author of numerous controversial tracts, one of which in particular contained a warm attack upon the sect of Brownists. He afterwards went to America, about the year 1654 and died in that country. His son of the same name born in 1667 was an excellent Oriental scholar having studied first at Leyden, under Expelinus, and afterwards at Oxford, in which latter university he obtained a fellowship at Merton col-

logy. After graduating both in med. and phys., he was ejected from his fellowship by the parliamentary commissioners, at the decline of the royalist party. Besides his "Welsh Prophecies," an edition of which was published by Dickenson, he wrote the author of many curious and learned works, most still in manuscript, a list of which may be seen in our authorizing. His death took place in 1652 at Canterbury, whether he had retired after his degradation and exile for sometime previously to his decease he had struggled hard against the united attacks of disease and poverty.—*Arch. Oxon. Reg. Brit. Arts. Jacob and Dickenson.*

JACOB (John), a nonconformist divine of the last century. He was born about 1667 his family being quaker, among whom he was educated. In early life he was a linen-draper in London, but after the Revolution in the course of which he displayed some political zeal he studied at a dissenting academy to qualify himself for the ministry. About 1697 he set up a weekly lecture at a meeting-house in Thames-street whence he was expelled for his impudent censures of government, in his public discourses. His friends built him a new chapel in Southwark in 1698, and he proceeded forthwith to establish a peculiar class of sectaries, distinguished by some exclusive rites and observances. In this reformed church all penitvys, then almost universally worn were discarded, the men wore whiskers upon their upper lips in which Mr. Jacob set them an example and an order passed for the regulation of the women's garb. The members of this church were not allowed to attend public worship at any other place not even if their business occasionally called them to a distance nor were they suffered to intermarry with other churches. The relations of his could be filled up only from this perfect society, nor could any person excepting Mr. Jacob be safely employed to solemnise the marriage union. Some persons, not conforming to the new rules were forthwith excommunicated, but this harsh usage only offended others, who withdrew in consequence. This proved a great detriment to Mr. Jacob and in the end his church dwindled away so that he was obliged to quit his meeting-house about the year 1702. He however procured another but pursuing the same eccentric course, his followers gradually deserted him previously to his death, which took place June 26th 1722. He is said to have possessed good natural talents and was not destitute of literary acquirements as appears from his publications, consisting of a "Catechism," 1702 12mo, "The Covenant to be the Lord's People under Joseph Jacob's Pastoral Charge, with an Appendix," 1706, 12mo, and two or three sermons.—*Wilson's Hist. and Antiq. of Dissenting Churches.*

JACOB JOHN an Armenian mechanic, who deserves notice for having introduced the art of printing into Persia. He was a native of Zulpha, and in 1641 he held the office of principal joiner to the king of Persia. He dis-

tinguished himself by several useful mechanical inventions; and having visited India, on his return to Ispahan he constructed a printing-press, and cast types from matrices cut by himself. With this apparatus he printed the Epistles of St Paul and the seven postscriptal Psalms, in the Armenian language. He had intended an edition of the whole Bible, but the opposition of the Persian scribes or censors obstructed his undertaking.—*Nous. Des. Hist. Athén's G Bag.*

JACOB (Lorenz) a Carmelite monk of the seventeenth century born in 1606 at Châlons sur Saône. He was a learned man and acted as librarian to the President de Herley and Cardinal de Rets by the interest of the latter of whom he obtained the office of almoner to the king of France. His principal work is his "Bibliotheca Pontifica," a catalogue raisonné of the papal library at Rome printed by him in 1648. He also wrote an account of the principal libraries in the world as also "Bibliotheca Gallica," "Bibliotheca Parisiana," and a treatise, "De Clerc Scriptoribus Calidonensis." His death took place in 1670.—*Astrol. Diction. Böhmianus.*

JACOBÆUS (Oliver) an eminent Danish physician and philosopher son of the bishop of Jutland in which province he was born at Arhusen in 1651. He was nearly connected by his mother's side with the Bartholinæ family of whom Gaspar Bartholinæ has maternal grandfather superintended his education while his first wife was the daughter of Thomas Bartholinæ on whose death he afterwards composed a funeral oration. Having studied for some years at Copenhagen, he visited the greater part of the north of Europe, and on his return obtained the professorship of medicine and natural philosophy in the university attached to the Danish capital. King Christiæn the 5th appointed him his physician and superintendent of the royal museum, in which capacity he published a catalogue of the rarities, both in art and science, contained in that collection as also an eulogium upon his royal patron after his decease. His other works are two treatises on the natural history of frogs and lizards, "Compendium Institutionum Medicarum," "F. Arnost de oleo Montis Zahori," "Gaudia Arcticæ Ordine ob thalassos auguste Fred. et Ludov.;" and a few miscellaneous poems, written in elegant Latin. The death of his wife, by whom he had six children, affected him strongly and though he afterwards took another he survived these second nuptials but a short time, dying in 1701 at Copenhagen.—*Muraro. Scand. Oxon.*

JACOBATIUS or JACOBAZZI (Domenico) bishop of Lucca, employed in various important affairs by pope Sixtus IV and created cardinal in 1517. He died in 1554. That prelate left a "Treatise on Concile," in Latin which although deemed of little intrinsic value, is sold very dear. The first edition is of Rome, 1503 folio, but it is also in the last volume of P. L'Abbé's Concilia, and the Paris edition, got up for that publication, is

other exhibited; and his copy of L'Abbe's *Codicil*, which showed perfect without it. The representation of *Wester* is very interesting.—*Note.*—*Diss. Hist.*—*Clarendon's Big Dict.*

JACOBUS (*Johann Gottlieb*) a German poet, who was a native of Dusseldorf. In 1756 he became a student of theology at Göttingen where he removed to Helmstadt, but finished his education at the former university. He was made professor of philosophy and rhetoric at Halle, and having formed an acquaintance with the poet Goethe through his interest he obtained a prebend in the church of St. Boniface at Halberstadt. The emperor Joseph II in 1784 gave him the chair of belles lettres at Erlangen which he retained during the remainder of his life, the inauguration of which occurred January 4 1814. Jacob was an imitator of the French poets Chapelain, Chauvelin, and Greuze. His "Journey in Winter" and "Journey in Summer" are light and amusing compositions, consisting of verse and prose which have been translated into French and published at Hamburg and at Lausanne. He also wrote *Epopées* in verse and prose, "Songs," "Cantatas," "Operas," "Comedies," "Romances," "Fables," "Discussions" and "Sermons." Jacob was likewise engaged as editor of the *Iron*, "a periodical journal which contributed much to spread among the Germans a taste for polite literature" and he enriched with his productions the

German Library of the Fine Arts, published by professor Klotz, "The German Mercury" of Wieland &c.—*Bigg Univ.*—*Bigg Mon. des Contemp.*

JACOBI KLOEST (baron von) a Prussian diplomatist and statesman memorable for his conduct in relation to the assassination of the French envoys at the congress of Rastadt in 1799. He commenced his career in 1791 as envoy from Prussia, at the court of Vienna. He had the same office at Rastadt where he was insulted by the Austrian horses on account of his endeavours to prevent the outrage above alluded to. He published an account of the execrable affair with a particular statement attested by his signature, in which he formally denounced the Austrian colonel Burckhardt as responsible for the assassination of the French plenipotentiaries, and the consequences which might result from that outrage. He was despatched on a mission to England in 1805 to excuse the occupation of Hanover by the troops of the king of Prussia. Notwithstanding his success, he was obliged to leave London; but he returned thither on hostilities taking place between France and Prussia, and remained in England till 1817. He died at Dresden towards the close of that year.—*Bigg Mon. des Contemp.*

JACOBS. There were two eminent artists of this name. **JACOB**, a native of Switzerland, born 1610, studied under Francis Snyders, and is celebrated for the spirit with which his animals are depicted, especially in his hunting pieces.—**LUCAS JACOB**, more generally known as Lucas Van Leyden, from the place of his birth, was a pupil of Cornelius

Hagheodus, and excelled both in oil and in distemper; he was also a good engraver, and died in 1583, in his thirty-ninth year.—*Bigg Mon. des Contemp.*—*Urgonensis Vita de Pict.*

JACOBSON (*John Caspar Gossman*) an able technologist, was the son of a tinsmith, keeper at Ellingen, where he was born in 1736. He studied at Leipzig, but in consequence of an unfortunate debt was obliged to abandon, and enter into the service of the elector of Saxony and subsequently into that of thinking of Prussia. During a residence of two years in Berlin, he frequented the different workshops, and enabled himself to publish his Description of all the Cloth Manufactories in Germany. After the campaign of 1778 he obtained his discharge and began his Technological Dictionary of all the useful Arts, Trades, and Manufactures, with an Account of the different Processes, Tools, &c. and an Explanation of the Technological Terms. This was published in four parts one each year 4to commencing with 1781. On account of his zeal and extensive information in the department of knowledge he was in 1784 appointed inspector of all the royal manufactories in Prussia. He died in September 1789. He was also the author of

A Description of all the Linen, Cotton and Woolen Manufactories in the Prussian States,—*Hirschung's Menus of Eminent Persons in the 18th Century*.

JACOPONE DA TODI a descendant of a noble family named Benedicti settled at Todi whence he derived the appellation by which he is generally distinguished. He flourished during the latter half of the thirteenth century and was the contemporary and personal friend of Dante. The loss of his wife to whom he was tenderly attached, disgusted him with the world and induced him to retire into a convent of Friars Minor, having previously distributed the greater part of his property among the poor. In this seclusion he appears to have so far regained his tranquillity as to have acquired the title of Il Felice. Much of his leisure time was spent in the composition of devotional hymns and music and both the words and first melody of the beautiful *Sicut Mater dolorosa*, since so celebrated by the compositions of Haydn, Pergolesi, &c. are dedicated to him. He was also the author of a number of sacred canticles, and other poems in the Latin language a quarto edition of which appeared at Venice in 1617. He survived to a considerable age and died in 1306.—*Morari, Thesaurus.*

JACQUELOT (*ISAAC*) the son of a chaplain of Vassy, born there in 1647. Being educated by his father for the ministry, he afterwards assisted him in his clerical duties, till the revocation of the edict of Nantes compelled him, as well as other divines of the reformed church to take refuge in Holland. Here he continued for some time preaching occasionally at the Hague and elsewhere till living being fortunate enough to attract the attention of the king of Prussia, that monarch established him at Berlin in quality of one of

J AC

His opinions. He published a treatise on the Mission, several opuscules for the bishops of the French church; tract "On the Existence of a Devil"; "On the Conformity of Faith with Reason", a reply to Bayle, and a critical examination of the theology of that philosopher, a treatise "On the Inspiration of the Scriptures"; another against Socinianism, and two volumes of sermons. His death took place at Berlin in 1796.—*Gesammt. Novo. Diet. Hist.*

JACQUET (LAWIS) a French ecclesiastic, born in 1732 at Lyons. He was a member of the academies of Lyons and Besançon, the latter of which honoured him with the laurel. His best works are a "Parallel between the Greek and French Tragic writers" and a prize essay on the discovery of America, entitled "Idée des quatre Continents". He affected much both to admire and to imitate Rousseau, and died in 1793.—There was also a PIZZANI JACQUET an advocate of the parliament at Paris about the middle of the last century who was the author of several works connected with French jurisprudence. Of these the principal are, "Traité des Fiefs", "Traité des Justices des Seigneurs, et le Droit independant, &c.", "Commentaire sur la Constitution de Toulouze" 4to, 2 vols. His death took place about the year 1766 at Grenoble.—*Novo. Diet. Hist.*

JACQUET DROU (Pizzani) a celebrated mechanist the inventor of curious automatic machines. He was born in 1721 at Chaux de Fonds in the territory of Neufchâtel and was destined for the professor of an ecclesiastic. After finishing his studies at Basel he returned to his family where he found one of his systems employed in clock making, an occupation then recently introduced into the country. He was immediately attracted by this pursuit to which his friends permitted him to devote his attention. He soon found out a method of adapting to a common clock, chimes and also wind instruments. He then undertook to discover the perpetual motion, and in the prosecution of this chimeraical object he made some important discoveries. Having constructed an improved pendulum, (apparently on a plan resembling that of Hertzsprung) he obtained the patronage of the east marshal the governor of Neuchâtel who sent him to Madrid to exhibit his pendulum to the king of Spain. The king took with him several other pieces of mechanism the ingenuity of which attracted much admiration. On his return from Spain he continued to exercise his skill and produced among a number of wonderful automata, the writing figure, which by means of internal machinery, formed regular and connected characters. An astronomical pendulum was the last work of this ingenious artist, who died at Biarritz November 20th, 1790.—*Nicolas Louis JACQUET DROU*, son of the former was born 1762. He studied mathematics at Nancy with great success. At the age of sixteen he displayed his predilection for those mechanical operations in which his father had been so skilful; and about six

J A C

years after he took with him to Paris several specimens of his workmanship, among which were an automaton draughtsman, and a female figure, which played on the harpsichord. He constructed likewise two artificial hands, for the convenience of a person who had been deprived of the use of those members. The famous Voltaire, on seeing these pieces of mechanism, was struck with astonishment, and exclaimed to the audience,

"Young man, you have commanded your invention where I would have terminated mine." This artist, having passed some years in London and at Geneva, died at Naples in 1796. The former of these sojourns has sometimes been confounded with JEAN PIERRE DROU, another ingenious artist, who was born at Chaux de Fonds in 1746 and died at Paris in 1822. He was connected with Mr Boulton, of Birmingham in the casting of copper for the English government, and he displayed his talents in the construction of a balance of extraordinary accuracy for the Parthenon mint.—*Bog Univ. Diet. Hist.*

JACQUIER (FRANCIS) a youth of Vitry born 1711 eminent for his knowledge both of languages and the mathematics. He edited, with the assistance of Le Sueur, the "Præcipia" of Newton, in 4 vols. 12mo, and was the author of a clever treatise on algebra. His other works are, "Reflexioni sopra alcune difficultà spettanti i danni della cappola di S. Pietro", 4to "Institutiones Philosophicae", 12mo 5 vols., and "Descrizione di un strumento per far conoscere facilmente l'Orologio solare." His death took place at Rome in 1758.—*Novo. Diet. Hist.*

JACQUIN (ARMAND PIERRE) a musical instrument maker born at Amiens in 1721. He studied divinity and was chaplain in the cathedral of his native city, when in 1771 he obtained an employment in the service of the count de Provence (Louis XVIII). Two years after he became historiographer to the count d'Artois the present French king. He died about 1780. Among a number of useful publications of which he was the author may be mentioned, "Estimations sur les Romains", 1754 12mo, "Discours sur la Connaissance et l'Application des Talens", 1760, 12mo; "De la Santé", 1762, 12mo, "Lettres Particularies sur le désir d'être heureux", 1758, 1761, 2 parts, 12mo.—*Bog Univ.*

JACQUIN (NICHOLAS JOSEPH) a celebrated botanist, who was a native of Leyden. He was born in 1727 and was educated for the medical profession. His countryman Van Swieten induced him to visit Vienna, where his botanical science possessed him the notice of the emperor Francis I, who sent him to the West Indies, to collect curious plants for the gardens of Schönbrunn. His commanded his voyage in 1754, and returned to Germany, after an absence of six years, with a rich store of plants from the Andes, Jamaica, St Domingo, and Coromana. He published in 1760 an account of his researches and collections, with which he had enriched the gardens of Schönbrunn, and of the university of Vienna,

J A G

J A L

which were under his direction. Two years after appeared his "catalogue of plants growing in the neighbourhood of Vienna," and in 1773 a magnificent work, entitled "Flora Austriae," folio, with five hundred coloured engravings. He engaged in the practice of medicine in the Austrian metropolis and also occupied the professorships of chemistry and botany in the university of that city. His strenuous and useful labours were rewarded by a patent of nobility; he was created a baron in 1806, decorated with the cross of the order of St. Stephen, and made a counsellor of mines and coinage. He was also a corresponding member of the Academy of Sciences at Paris, and of many other learned associations. He died October 24th 1817. A list of his numerous scientific publications may be found in the annexed authorities.—*Bug Univ. Bug Nov. des Contemp.*

JADELOT (NICHOLAS) a learned physician, born in 1736 at Pont à Mousson in the university of which place his father was a professor. After having passed through his studies with great reputation and taken his degree in medicine, he was made professor of anatomy and physiology in 1768. The university being transferred to Nancy in 1768 Jadelet removed thither and resided in that city till his death in 1798. He was the author of "Tableau de l'Économie animale," Nancy, 1769 8vo, "Mémoire sur les Causes de la Pulse des Arteres" 1771 8vo

Cours complet d'Anatomie 1775 folio descriptive of the anatomical plates of Gautier d'Agoty, "Physica Humana sive, seu Expositio Functionum Corporis Humanus," which last is the most important of his productions, and has passed through several editions.—*Bug Univ. Bug Nov. des Contemp.*

JÄGER (JOHN) a celebrated lutheran divine, was born at Stuttgart, in 1647, his father being a counsellor to the duke of Württemberg. After he had finished his education he was intrusted with the education of duke Eberhard III, with whom he travelled into Italy. On his return he received various promotions, until in 1705 he became professor of divinity, and chancellor of the university. He died in 1720. His principal works are Ecclesiastical History compared with Profane History, "A System of Divinity," several pieces upon mystical divinity in answer to Fenwick, Forst, &c., Observations upon Pufendorf and Grotius de jure Belli et Pacis," "A Treatise of Laws," "An Examination of the Life and Doctrine of Spinoza, &c. All his works are in the Latin language.—*Mauri. Acad. Oss.*

JÄGERMANN (CHRISTIAN JOSPEH) an ingenious writer on the belles lettres and fine arts, who was librarian to the duchess of Westphalia. He was the author of a description of Germany; a history of the arts and sciences in Italy 3 vols. 8vo; a magazine of Italian literature, 12 vols. 8vo; the life of Galileo, an Italian and German dictionary 2 vols. 8vo, and a Latin grammar, and chronography. He died at Düsseldorf, May 1770.—*Hist. Peint. Estampe & Lit.*

JAGO (WILLIAM) one of the minor poets of this country in the last century. He was the son of a clergyman who held the living of Beaudefort in Warwickshire, where he was born in 1715. He received his education at a grammar-school at Schinall, in his native county and at University college, Oxford, and he obtained the degree of M.A. in 1738. Having taken holy orders, he was inducted to the living of Marbury, which was succeeded by further preferment. His first poetical production which attracted notice, was "An Elegy on the Death of a Blackbird," published in the Adventurer and in 1747 appeared his principal work, a descriptive poem, entitled "Edge Hill," the subject of which probably was suggested by his residence in the neighbourhood of that place. He was vicar of Swithland, in Warwickshire and rector of Kimcote, in Leicestershire at the time of his death which took place April 8th 1781. A collective edition of his poems appeared in 1784.—*Lord Mag. vol. vi.*

JAHN (JOHN) a learned Orientalist, who was canon of the metropolitan church of St Stephen at Vienna. After having been professor of biblical archaeology and theology in the university of that capital he obtained the chair of Oriental literature which he held till 1806 when he was obliged to relinquish it on account of his heterodoxy. He died in 1817. Besides Hebrew Arabic, and Chaldee grammar, he published Biblical Archaeology, 1797 1802 3 vols. 8vo, a Hebrew bible 1806 4 vols. 8vo, Eusebius Hermeneutica generalis Tabularum veteris et novi Testudinis, 1812, 8vo, Appendix ad Hermeneuticas sacras, 8vo Fascesque sive Vaticiniorum de Meana, 1815 8vo, Lexicon Arabic-Latinum," with a collection of pieces in the Arabic language many of which had never before been published. His works are said to be the most valuable extant, on the philology of the sacred writings but he has harboured some singular and bold sentiments on points of doctrine which may excite the prejudices of some readers, and consequently detract from the utility of his observations and conclusions.—*Bug Univ.*

JAILLOT (ALEXIS HUBERT) geographer to the king of France in the last century was at first a sculptor but on marrying the daughter of a person who coloured maps, he turned his attention to geography. He engraved many of the maps of the Géomètre, the best of which is that of Lorraine. His work, entitled

Récherches critiques, historiques et topo graphiques, sur la Ville de Paris, 5 vols. 8vo, 1772, is regarded a very curious work. He died in 1780.—*Newsp. Digit. Hist.*

JALLABERG (JEAN) an ingenuous philosopher of the last century. He was born at Geneva in 1712, and having lost his parents when young, he was persuaded by professor Turville to apply himself to the study of divinity. Having previously distinguished himself by his application to the exact sciences, he followed the professor's advice, and became a minister of the church in 1737. This man

gistrates, of Geneva, founded for him the professorship of experimental philosophy. After having taken possession of his office, he travelled for improvement in Switzerland, Holland, England, and France; and returning to Geneva in 1759 published an inaugural discourse, "On the Utility of Experimental Philosophy and its connection with Mathematics." Some time after he was nominated keeper of the public library of Geneva. The state of his health obliged him to resign his ministerial office in 1764 and for a while suspend his lectures. In 1760 he was appointed professor of mathematics, and two years after he succeeded to the chair of philosophy on the death of Gabriel Cramer. In 1766 he became a member of the lesser council of Geneva, and in 1765 was made syndic of the republic. He died in 1768. Besides some essays and papers on natural philosophy he was the author of "Experiences sur l'Electricité," 1748 8vo, containing an account of all the experiments which he had made or proposed, and he was the first who demonstrated the utility of electricity in the cure of diseases.—*Bug Uva*

JAMBlichus, an eminent philosopher a native of Chalcis in Cœlocaœnia who flourished in the beginning of the fourth century. He was the scholar of Anatolius and of Porphyry and having become perfect in the mysteries of the Plotinian school, he taught with vast reputation of which however no great account will be taken at present when it is added that he professed to perform certain wonders by the aid of invisible beings. His writings discover extensive reading, but his style is majestic, and he borrows freely especially from Porphyry. The school of Jamblichus produced many selecto philosophers who were dispersed throughout the Roman empire, but the fate of one of the disciples of the school, named Sopater who was put to death for something connected with his opinions obliged them to propagate their tenets and practise their mysteries with great reserve until the revival of the Alexandrian sect under the emperor Julian. The philosophical works of Jamblichus now extant, are "The Life of Pythagoras," "An Exhortation to the Study of Philosophy," "Three Books on Mathematical Learning;" A Commentary upon Nicomachus's Institutes of Arithmetic, and "A Treatise on the Mysteries of the Egyptians, Chaldeans and Assyrians." St. Jerome states that he also wrote a copious commentary on the golden verses of Pythagoras. He died about 333. This Jamblichus must be distinguished from the person of the same name, to whom the epistles of Julian dedicate his epistles, for Julian was scarcely born when the successor of Porphyry died. The best editions of Jamblichus are those De Myt. Egypt. Chald. et Asyriæ sive non sibi Tractatus philosophi Aldus Verdon, 1497; De Myt. Egypt. nec non Porphyrji Epistola; sc. Or. et Lat. Gale, Oyan, 1676, and De Vita Pythag. Gv et Latt. Koster, Amsterdam, 1704, &c.—Brucker's Hist. of Philos. Londres, Scotti Onom.

JAMES I, king of Scotland and the house of Stewart, born in 1394, was the son of Robert III. by Anastasia Douglas. In 1406 his father sent him to France in order that he might escape the danger to which he was exposed by the malice of his uncle the duke of Albany, but being taken by an English squadron, he and his whole suite were carried prisoners to the Tower of London. Here he received an excellent education from Henry IV of England, and to revere the sedum of captivity applied himself to those poetical and history pursuits, the existing evidences of which do him considerable honour. Robert III died the following year, and James was proclaimed king, but during the remainder of the reign of Henry IV and the whole of that of Henry V he was unmercifully detained in England, with a view to prevent the alliance of Scotland with France. Such however was the mutual policy which connected these two countries, it did not prevent the apprehended result, although Henry made James accompany his expedition into that kingdom, in order to render the act of opposing him, on the part of the auxiliary Scots, more embarrassing. At length under the regency of the duke of Bedford he was restored to his kingdom, after a detention of eighteen years, at which time he was in his thirteth year and highly accomplished both mentally and in the manly exercises. He married Joanna Beaufort a lady of distinguished beauty of the blood royal of England who is thought to be the fair dame alluded to in his pleasing poem of the King's Quair of whom he became enamoured, from beholding her in the royal gardens from the window of his apartments while a captive in Windsor castle. On his return to Scotland, finding that the duke of Albany and his son had alienated many of the most valuable possessions of the crown he caused them to be convicted and executed as traitors, and their estates to be confiscated. These and some other strong measures in the resumption of improvident grants, under the regency of the dukes of Albany were atoned for by the enactment of many good laws in his parliaments and as far as a lawless nobility would allow them to be put in practice they much improved the state of society in Scotland. In 1436 he renewed the Scottish alliance with France by giving his daughter Margaret in marriage to the dauphin, and sending with her a splendid train and a large body of troops. A frantic endeavour of the English to prevent this marriage, by intercepting the Scotch fleet in its passage, so exasperated James that he declared war against England, and summoned the whole array of his kingdom to assist in the siege of Roxburgh. He was, however, so much bed-taxed with his nobility, in consequence of his endeavours to curb their ambition, and improve his revenue against their interests, that he was obliged to raise the siege and disband his army under the apprehension of a conspiracy. He then retired to the Cistercian monastery of Perth, which he had himself founded where he lived in a state of privacy,

which, facilitated the success of a plot formed against his life. The chief actors in this fateful work were Robert, Stewart, and Walter, Earl of Atholl, the king's friends, the former of whom was actuated by a strong desire of reparation of some legal wrongs thus granted to his family, and the latter by the hope of succeeding to the crown. By the means of bribery, the conspirators gained admission to the king's apartment - and so safe being rated, the queen, a widow attempting to secure the champion-door. One of them, Catherine Douglas, thrust her arm through the staple, in which state she remained until it was dreadfully broken by the assailants. The instant the assassin got into the apartments, they dragged the king from his concealment, and in spite of the cries and remonstrances of the queen, who in vain threw herself between them and the object of their resentment, put him to death by multiplied wounds. He perished in the forty-fourth year of his age, and thirteenth of his reign, on the 20th February 1437 leaving one son and five daughters, and his murder was punished by the deaths of the conspirators in exquisite tortures. The king who may be said to have fallen a martyr to his attempt to abolish the anarchy and disorder which prevailed throughout his kingdom, obtains no discreditible place among the catalogue of royal authors by his poems of the "King's Quhair" already mentioned. *Christ's Kirk o' the Green &c.* the latter of which being humorously descriptive of the manners and pastimes of the age, are still highly relished by those who can appreciate the Scottish dialect. James is also said to have been a skilful musician and some attribute to him the composition of several of the most admired of the Scottish melodies, but of this Dr Burney is much inclined to doubt. An accurate list of the works of James will be found in Park's edition of Walpole's Royal and Noble Authors.—*Irene & Lives of the Scottish Poets.* *Walpole's Royal and Noble Authors.*

JAMES I of England and VI of Scotland was the son of Mary queen of Scotland by her cousin, Henry lord Darnley. He was born at Edinburgh castle, in June 1566 at the unfor-tunate period when his mother was at variance with her husband, and had begun to fix her affections on the earl of Bothwell. In the stormy and disgraceful times which followed, the infant prince was committed to the charge of the earl of Mar and in the following year, Mary being forced to resign the crown he was solemnly crowned at Stirling and from that time all public acts ran in his name. His childhood was passed in civil wars under the regencies of Murray, Mar and Morton, during which time he resided in Stirling castle, under the tutition of the celebrated Buchanan. His progress in school learning was rapid, but as his character opened, an instability and weaknes of temper became manifest, which induced what, in the sequel, proved to be the case, that he would become an easy prey to ambition, and his reign be marked by sanguinary revenges. From the first, too, he seems to have mobilized those excited nations

of the royal authority and divine right which proved so great a snare to his position, though impudent measures, in the spirit of those opinions, early produced a conspiracy of his nobles against him, who in 1582 took possession of his person at Ruthven castle. A new conspiracy however, effected his liberation, and he again put himself under the sway of his favorite the earl of Aran. The policy of queen Elizabeth, whose apprehensions from the Catholic party in favour of Mary led her to employ every art to keep up a disaffected party in Scotland, was signalized against the consequences of the recent conspirators, many of whom fled to England. When however it became apparent that the life of his mother was in danger from the sentence of an English judicature, James who had hitherto treated her very irreverently felt himself called upon to intercede. He accordingly wrote a menacing letter to Elizabeth on the subject, appealed to other courts for assistance and assembled his nobles who promised to assist him either to prevent or revenge that queen's injustice. When the news of the catastrophe arrived he repented with proper spirit the artifical excesses of Elizabeth and prepared for hostility; but he was finally prevented from engaging in actual war by a serious consideration of the inadequacy of his resources, and after some time a friendly correspondence was resumed. It is to the honour of James, that one of the first acts of his minority was to reconcile the feuds of his nobility who for that purpose he invited to a grand festival at Holyrood house. On the threatened invasion of England by Philip II he judiciously resolved to support Elizabeth against the Spaniards, and was zealously backed by his people for the preservation of protestantism, who entered into a national covenant for its support. In 1569 James married Anne, daughter of Frederick king of Denmark, and as contrary winds prevented her coming to Scotland with an ardour and spirit not very common with him, he sailed in quest of her and consummated the marriage at Upolo. On his return home, after passing the winter in festivities at Copenhagen, he was in some danger from conspiracy against his life, and for several succeeding years of his reign, the history of Scotland displays much turbulence and party contest. In 1500, while the country was in a state of unusual dissimillity, a very extraordinary event took place, the causes of which were never discovered. While the king was upon a hunting excursion, he was joined by the brother of Ruthven, earl of Gowrie, to ride with a small train to the earl's house at Perth. Here he was led to a simple chamber, on pretence of having a secret to communicate to him, where he found a man in complete armor, and a dagger was put to his heart by Ruthven, with threat of immediate death. His attendants being alarmed, came to his aid. Gowrie and his brother were slain, and the king escaped unharmed. In 1603 James succeeded to the crown of England on the death of Elizabeth, and pro-

coaded amidst the apprehensions of his new subjects to London. One of his first acts was to bestow a professor of honor and titles on the inhabitants of both countries, in which, as in many other points he displayed a contrast to the maxims of the late reign. A conference held at Hampton Court, between the divines of the established church and the Puritans afforded James an opportunity of exhibiting his still in theological controversy and the ill will he bore to popular schemes of church government. The meeting of parliament also enabled him to assert those principles of absolute power in the crown which he could never practically maintain, but the theoretical claim of which provided the increasing spirit of freedom in the house of Commons with constant matter of alarm and contention. Although James had behaved with great lenity to the Catholics in Scotland those in England were so disappointed in their expectations of favour that the famous Gunpowder Plot was concerted in 1605 the object of which was to blow up the king and parliament. Omitting the details of this extraordinary transaction, as an affair of well known history it may be observed, that in 1611 James displayed his zeal for orthodoxy by haughtily remonstrating with the Dutch states for permitting the Arminian Vorstius to hold a professorship in one of their universities and obtaining the unimportant point of his removal. His cares for reducing and improving Ireland do him more honour. In 1612 he lost his eldest son Henry a prince of great promise then of the age of nineteen and in the following year the eventful marriage took place of his daughter Elizabeth with the elector palatine. About this time the object of the weak passion of James for handsome favourites was Robert Carr a youth from Scotland who in a short time was raised from a court page to be earl of Somerset, and was loaded with honours and riches. The scandalous murder of sir Thomas Overbury by the machinations of this minion and his infamous countess put an end to the king's partiality although he disgracefully pardoned the principals in the murder while he allowed their agents to be executed. The fate of Somerset paved the way for the singular rise of George Villiers, duke of Buckingham, who went beyond him both in favour and the rewards attached to it. No circumstance in the reign of James was more unpopular than his treatment of the celebrated sir Walter Ralegh. Soon after the king's accession that statesman who had been opposed to the Scottish succession, engaged in a plot to set aside James in favour of the lady Arabella Stuart, for which he was tried and capitally convicted, but being reprieved, was kept thirteen years in prison. In 1615 he abridged his sentence by due of mercy, and was allowed to set out upon an expedition to the South seas, upon a gold mine discovery, with the sentence of death hanging over his head. Being unsuccessful in his objects moved as it is supposed, by his desire of an alliance between prince Charles and the

queen of Spain James yielded to the suggestions of the latter prevailed at the expense of the whole nation, and a heavy fine imposed upon his former kingdom. The Scotch with the infirm health of James failing, and Charles married Henrietta Maria, daughter of Henry IV of France with the disgraceful stipulation, that the children should be brought up by their mother until thirteen years of age to which engagement the future religious opinions of Charles II and James II may plausibly be very faintly attributed. The close of the life of James was signalized by violent contests with his parliament, which prepared dreadful consequences for his successor. He was also much disquieted by the misfortune of his son-in-law the elector palatine who having been induced to accept the crown of Bohemia and to head the protestant interest in Germany was stripped of all his dominions by the emperor. Urged by national feelings for the protestant cause he was at length in 1624 induced to declare war against Spain and the emperor, and troops were sent over to Holland to act in conjunction with prince Maurice. The defeat of that enterprise through sickness and mismanagement, it is thought produced the king so much uneasiness as to cause the intermission fever, by which he was soon after attacked and of which he died in March 1625 in the fifty-ninth year of his age. James was not destitute of abilities, and as possibly entertained very good intentions but the former were not those of a ruler and the latter were defeated by pliability and unmanly attachments. His reign although not unprosperous to his subjects, was negligent in character and loss of relative influence, and he was neither beloved at home nor esteemed abroad. He received during his life time a great deal of adulation on the score of his literary abilities but he merits far more as an encourage of learning than for any fruits of it displayed by himself all of which were debased by pedantry and prejudice. His Badious Doree. The true Law of Free Monarchs, and his answer to cardinal Du Perou are however deemed honourable to his talents by Hume, but, unfortunately he is far more remembered for his "Democracy" and his "Counterblast to Tobacco", the last upholding witchcraft and the latter being a poemical treatise against the use of the plant which he decries. Upon the whole, the good qualities of James were inestimable and his bad ones unmanly and pernicious.—Hume. Hist. of Eng. Walpole.

JAMES II king of England and VII of Scotland, second son of Charles I and of Henrietta of France, was born in October 1633 and immediately declared duke of York. After the capture of Oxford by the parliamentary army, he escaped in 1646, at the age of twenty, and was conducted to his sister the princess of Orange. He soon after joined his mother at Paris, and when he had reached his twentieth year served in the French army under Turenne, and subsequently entered the Spanish army in Flanders, under Don John of

Archbishop of Canterbury, and his son, the Earl of Dorset, and the Duke of York, were all members of no less than six commissions appointed by him, to consider the expediency of the proposed naval expedition. He had, however, another scheme, which he communicated to the king, and which he told the secretary of the fleet, "to keep him quiet." He had privately married Anne, daughter of Charles de Rohan, afterwards lord Chaville (see article *Hugues*) and intended making his home from the same, but was prevented being satisfactorily established because he could not succeed. In 1664, he took a leading part in promoting a Dutch war for the alleged interests of trade, and on the 3rd of June 1665, with a powerful fleet under his command, engaged that of the Dutch under Opmeer, who with his ship was blown up in the action, and nineteen of his squadron were sunk or taken, with the loss of only one on the part of the English. The date was in the thick darkness of the night, and three men of quality were killed at his side, yet his courage was unbroken to some suspicion, because his ship while in pursuit of the enemy slackened sail in the night, by some asserted unauthorised orders on the part of Broome, his gentle man of the bed-chamber. In 1671 the duchess of York died, leaving her husband two daughters, who became successively queens of England. Before her death she declared herself a convert to the Roman Catholic faith which had been sacred to that of the duke for many years, and was now openly avowed by him. This declaration produced a great impression on the people, and laid the foundation of the convictions which finally drove him from the throne. In the Dutch war of 1672 he was again placed at the head of the fleet, and as he lay in Solebay in conjunction with a French squadron under D'Estrées, he was attacked by De Ruyter, and a famous engagement ensued, in which the earl of Sandwich second in command and his ship were blown up, and that of the duke so shattered, that he was obliged to shift his flag to another. On this occasion the Dutch fleet at length retired, but the English ships were too disabled to pursue and the object of the French had been rather to keep aloof and act as little as possible. A test act being soon after passed to prevent Roman Catholics from holding public employments, the duke was obliged to resign his command, a result which necessarily induced him to join heartily in the plot of the king and certain of his counsellors, to restore the Roman Catholic religion. In 1673 he took for a second wife Mary Beatrice, of Este, daughter of the duke of Modena, and in 1677 his eldest daughter Mary was to the great satisfaction of the queen, united to William, prince of Orange. During the violent proceedings on account of the supposed popish plot, in 1679 by the advice of the king, he retired to Brussels, and a bill passed the Commons for his deposition from the throne, which was, however, suspended by the Lords. When the royal party were recalled, the duke in 1681 was sent to Scotland, where he acted with great severity, if not to say cruelty, to the remonstrants of the discontents. It is even said that he some-

times personally assisted at the torture of criminals, and altogether exhibited himself in a manner of a severe and stern-looking tyrant. During the whole of the remaining reign of Charles II., indeed, during which he possessed great influence in the government, he was foremost in promoting all the severe measures that disgraced it. At length, the king himself was obliged to check his rigorous severity and to submit to him, in opposition to some violent counsels, "Brother I am too old to go again on my travels—you may if you please." On the death of Charles II., in February 1685 the duke succeeded without opposition under the title of James II., and from the time of his ascending the throne, notwithstanding his professions to the contrary on his accession seems to have acted in a steady determination to render himself absolute and to restore the Romane Catholic religion, and such was the temper of the times, and the diffusion of the doctrine of passive obedience and blind loyalty if he had confined himself to the former object only he might have virtually succeeded. A slight sketch of this disgraced reign will serve to display its character. Having recently disgusted the great majority of his subjects, by attending to mass with all the emblems of his dignity he proceeded to levy the customs and excise without the authority of parliament. He even sent an agent to Rome to pave the way for a solemn re-admission of England into the bosom of that church and received advice on the score of moderation from the pope himself. This preposterous conduct naturally enough encouraged the otherwise crude and ill-concerted rebellion of the duke of Monmouth the fate and suppression of which form the subject matter for history. The cold, cruel and unfeeling temper of James was again signally exhibited in the executions on this account. Monmouth paid not unjustly for his rebellion with his life, but the legal proceedings under Jeffreys were brutal and merciless in the extreme, and it is estimated that no fewer than two hundred and fifty one persons suffered in the west of England by the cruel proceedings of that infamous judge; which it was the custom of the king to give scope under the name of 'Jeffreys's Campaign.' The temporary ease, produced by this severity even in punishment, was so great, that James was encouraged to nearly throw off all disguise, both in regard to religion and government. By virtue of his assumed suspending power he rendered laws of no avail, and filled his army and council with Romane Catholics. He put Ireland entirely into their hands, and governed Scotland by a few noblemen who had become converts to the same faith. By a declaration in favour of liberty of conscience, he also sought to gain the favour of the dissenters, who were however two conscious of his ultimate object to be deluded by this apparent liberality. He gradually proceeded, to a direct attack on the established church, by the formation of an ecclesiastical commission, which circled before

it all abegomen who had done any thing to displease the court. The rights of the university were also invaded (see article, *Houses*), and a mandate was issued to Magdalen college Oxford commanding the election of a person as president who either was a Roman Catholic or avowed his willingness to become so. A still bolder measure followed, in the publication of a declaration of indulgence in matters of religion which was ordered to be read by the clergy in all the churches of the kingdom. Seven bishops met, and drew up a loyal and humble petition against this ordinance which step being considered as an act of disloyalty they were sent to the Tower. The result of their trial and acquittal forms an interesting portion of English history, but although James had ocular demonstration of the ecstasy of joy their deliverance created in the army itself he was not deterred from his royal projects, and the birth of a son (afterwards called the pretender) about that time increased his confidence. Meantime the innovations, in regard both to the religion and government gradually re united opposing interests and a large body of nobility and gentry concurred in an application to the prince of Orange who had been secretly preparing a fleet and an army for the invasion of the country. James, who was long kept in ignorance of these transactions when informed of them by his minister at the Hague was struck with terror equal to his former infatuation and immediately repealing all his obnoxious acts he practised every method to gain popularity. All confidence was however destroyed between the king and the people and had it been otherwise a pause in his concessions when he heard that the prince of Orange was driven back by contrary winds would have put an end to it. William arrived with his fleet in Torbay November 4 1688 and landed his forces but the remembrance of Monmouth's rebellion for some time prevented the people in the west from joining him, until at length several men of rank went over and the royal army began to desert by entire regiments. Even the king's favourite Churchill joined the prince and the unfortunate James who had proceeded as far as Salisbury found it advisable to return. From this time he every day saw himself abandoned by those whom he had most trusted and when informed that his daughter Anne married to prince George of Denmark had put herself into the hands of the insurgents the unhappy father in agony of heart exclaimed "God help me my own children have forsaken me". Incapable of any vigorous resolution and finding his overtures of accommodation disregarded he resolved to quit the country and first sending off the queen and infant prince to France, under the care of the French ambassador he himself embarked on board of a ship in the mouth of the Thames. The vessel putting in at Faversham, he was recognized by the people, who detained and insulted him. He was however protected by the gentry who escorted him to London, where, strange to say he was re-

ceived with acclamations and conducted unopposed at Whitehall. The king, however, invited there thence the remaining government, the prince and his party, by neglect and frank denunciation endeavoured to make him renew his purpose to leave the kingdom. The plan succeeded, he asked leave to retire to Rochester where he privately embarked on board a frigate which conveyed him to Ambleteuse in Picardy. He thence repaired to St Germans where he was received with great kindness and hospitality by Louis XIV. In the meantime the throne of Great Britain was declared abdicated and was filled, with the national and parliamentary consent, by his eldest daughter Mary and her husband William conjointly. Anne who had equally with her sister been educated a strict protestant, being declared next in succession to the exclusion of the infant prince Assisted by Louis XIV James was enabled in March 1689 to make an attempt for the recovery of Ireland where the Roman Catholics, possessing the chief power received him with open arms. Failing in the memorable siege of Londonderry he returned to Dublin where he held a parliament and his temporary authority at that time but too clearly proved that his principles of government had experienced no change. At length William landed in Ireland and the decisive battle of the Boyne was fought in June 1690. In this action, so important to his interests, James kept at a distance from danger and showed so little spirit that it has been thought his former displays of valour were either forced and unnatural or that his misfortunes had deprived him of all his pristine energy. He soon after returned to France and buried his disgrace on the retreat of St Germans. All succeeding projects for his restoration proving equally abortive, he spent the last years of his inglorious life distinguished only by the practices of an ascetic and penitulous devotion. He is even said to have entered into the society of Jesus, from which order he had unhappily chosen his most confidential advisers, to the destruction of his own welfare and not to the benefit of others. He died at St Germans on September 16 1701 at the age of sixty-eight. The character of James is sufficiently illustrated by the preceding abstract, which shows his prejudices to have been violent, his understanding narrow, and his temper ungenerous and passively at least cruel. At one period of his life he obtained the character of a man of business, but it seems as if he merited it more by regularity and attention than activity or discrimination. Although cold and grave in manner he by no means escaped the licentious contagion of his brother's court, and had several avowed mistresses. On the favourable side, he may be said to have been a sort of martyr to principles, such as they were, and to have made himself a sacrifice to what false zeal and defective intellect led him to regard as the cause of duty.—*Hume's Hist. of Eng.*

JAMES (Roxana) an ingenious physician and medical writer best known as the inventor of a specific for the cure of fever. His

was born at *Wootton*, in *Staffordshire* in 1700, and was well educated, his father being a man of great wealth and his mother the sister of *Dr Robert Clarke*. He received his education at *St John's College, Oxford*, and took the degree of *B.M.* after which he practised medicine successively at *Sheffield*, *Lichfield*, and *Birmingham*. He subsequently removed to *London*, and became a licentiate of the college of *Physicians*. His practice at first was probably not very considerable and he relied chiefly on his friends for his support. He engaged in the compilation of a *Medical Dictionary* which appeared in 1743 in three volumes folio. In this work, which is very respectably executed, James is said to have been assisted by his friend *Dr Johnson*, who has warmly eulogized his professional skill in his *Lives of the Poets*. A translation from the Latin of *Ramazzini's Treatise on the Diseases of Mechanics*, with additions, appeared in 1746. He published in 1751 *A Dissertation upon Fevers*, the purpose of which was to recommend a peculiar medicine never known by the name of *James's Powder*.³ For this preparation he procured a patent, and sold it as a secret remedy by which he exposed himself to the hostility of his professional brethren who looked upon his conduct as inconsistent with the dignity of the medical character. anxious to secure from participation the profits of his nostrum, he is said to have inserted in the specification of his patent, an incorrect or imperfect formula for its composition. But *James's Powder* is now known to be antimonated phosphate of lime and a preparation very similar to it, if not exactly the same, has long had a place in the *London Pharmacopœia*. In 1755, when the king was at *Cambridge*, James was admitted by a unanimous vote to the degree of *M.D.* Notwithstanding the irregularity of his practice he appears to have been very successful, and the general respectability of his character as a man of science and literary acquirements, enabled him, in a great degree to triumph over the prejudices excited by a mode of conduct which placed him so near the level of those pests of society the majority of advertising quacks and vendors of patent medicines. In 1760 he published a work entitled, "The Practice of Physic," 2 vols. 8vo and subsequently a treatise on *craze* madness, and a *Suppository*. One of his last literary labours was, "A Vindication of the Fever Powder which was not published till after his death. That event took place March 23, 1776.—*Hutchinson's Biblio. Med.* Ed.

JAMES (THOMAS) a learned divine of the establishment, was born in 1571, at *Newport*, in the *Isle of Wight*. He was educated at *Winchester School*, whence he was removed to *New College, Oxford*, where he obtained a fellowship. He took his degree of *M.A.* in 1598, and the following year published 'Philosophia Richardi Deneleensis,' for which he was made keeper of the *Bodleian Library*. He intended in the same spirit to publish "

containing a catalogue of the MSS. in several college library at *Oxford* and *Cambridge*, as also in the public library at the latter university. In 1614 he graduated as *D.D.*, and was promoted to the subdeanery of *Wales*. He next undertook to collate the MSS. of the fathers and ecclesiastical writers, with view to the detection of interpolations and forgeries; but notwithstanding his zeal and exertions, he could not obtain adequate patronage. He however proceeded a certain length without it, but was prevented from completing his design by death in 1622 in his fifty first year. His principal publications are Catalogus Librorum in Bibl. Bodleiana 4to, Concessaria SS Patrum 4to, 'Apology for John Wickliffe,' A Treatise of the Corruption of the Scripture, Councils and Fathers, The Jesuits' Downfall, 'Index Librorum prohibitorum a Pontificis,' &c.—*Wood*

JAMES (RICHARD) nephew of the preceding divine, was born at *Newport*, in the *Isle of Wight*, in 1593. He was admitted of *Corpus Christi College Cambridge* in 1608, and took the degree of *M.A.* in 1615. Having taken orders, he travelled into *Wales* and *Scotland* whence he proceeded to *Shetland*, *Norway* and *Russia* on which latter country he made many written remarks which were found among his MSS. after his death. Returning home, he resumed his literary studies with increased ardour and was engaged to assist the celebrated *Selden* in composing his "Marmora Arundeliana," published in 1626. He was also very serviceable in the arrangement of the library of *Dr Robert Cotton*. Declaring boldly with that gentleman his opinions against the illegal extension of the royal prerogative, he was imprisoned in 1629, by order of the house of *Lords*. He died at the house of *Dr Thomas Cotton* in 1638, in his forty ninth year. His character as a scholar stood very high, and if he had been enabled, by clerical preferment, to devote himself uninterrupted to study great results might have been expected. His published pieces consisted only of two Latin sermons, and five English ones. A poem on the death of *Dr Robert Cotton* and a translation of the Octavus of *Minutus Felix*. He, however left behind forty five MSS. of his own composition, containing observations on Russia, and many pieces on antiquities.—*Ibid.*

JAMES (THOMAS) an English navigator in the seventeenth century, noted for his expeditions towards the North Pole. He was employed by a society of merchants at *Bristol*, in 1631, together with *Luke Fox* to search for a north west passage. *Sir Thomas Roe* presented him to *Charles I* who encouraged his enterprise. He left *Bristol* on the 3d of May, and proceeded to *Hudson's Bay*. After wintering on an island, in the latitude of about 56 degrees, James proceeded northward, and on the 26th of August, 1632, sailed so far as 65 degrees and a half north, where the sea to the north-west was covered with ice. Unable to proceed he returned to *England*, where he arrived the 2nd of October. He published in

J A M

1553, "The strange and dangerous Voyage of Captain Thomas James, for the Discovery of a North-west Passage to the South Sea," to Captain James made some discoveries on the coast of Hudson's Bay, to the country on the western side of which he gave the appellation of New Wales. His journal is curious, and contains an interesting account of the sufferings of himself and his companions during their hibernation on the Isle of Charlton.—*Biog. Univ. Souther's Ossian.*

JAMES DE VORAGINE a learned Italian prelate of the thirteenth century who took his surname from Voragine, the place of his birth, in the territory of Genoa. He entered into the Dominican order of which he rose to be general, and was also nominated archbishop of Genoa, by pope Nicholas IV. He was author of a voluminous collection of the lives of the saints which notwithstanding the monstrous absurdities with which it abounded found especial favour at the time. After the first Latin edition of it printed in 1470 it was translated into English and from that time to the sixteenth century underwent more impressions than any other work. He also published numerous sermons, and a curious work called *Moralia Aureum*, containing one hundred and sixty discourses in praise of the Virgin Mary. He was likewise the author of a *Chronicon Januense Civitatis*, published by Muratori, and he is said to have been the first person who published an Italian version of the Bible.—*Cœl's Hist. Lat. Duxus. Morati. Landri's Hist. Lat. d'Italia.*

JAMES DE VITRI a celebrated cardinal in the thirteenth century so called from the place of his birth a village near Paris. He was canon of Oignies, then pastor of Argenteuil and attending the crusades, was made bishop of Acre or Ptolemais. He was created a cardinal in 1230 by Gregory IX who also made him bishop of Frescati. He was afterwards legate in France Brabant, and Palestine in all which missions he discovered much zeal and prudence. He died at Rome in 1244. He left many works, the most curious of which are an *An Eastern and Western History* a portion of which is printed in Bougier's collection entitled "Gesta Dei per Francos" and in P. Martene's *Thesaurus Auctaeum*. He was also author of *Epsolita ad familiares suis in Lotharingia de Capta Damista* likewise in Bougier's collection, an epistle to pope Honorius III, and sermons on the gospels and epistles for the whole year.—*Ibid.*

JAMESON (George) a native of Aberdeen in Scotland born 1586. He devoted himself to the art of painting, and quitted Scotland for the purpose of studying under Rubens, then in the zenith of his reputation. A portrait which he executed of Charles I, obtained for him from that unfortunate monarch the present of a valuable diamond, court etiquette having been so far dispensed with in his favour, that he was, on account of a defect of vision, allowed to wear his hat while the king sat to him. There are also

J A M

several historical pieces, as well as some very creditable Landscapes from his pencil. His death took place in 1644.—*Wolcott's Anti-Puritan's Sect Gal.*

JAMI (ABD ALKARIM) a celebrated Oriental poet, regarded as the Petrarch of Persia. He was born in 1414, in the province of Khorasan. His reputation procured him an invitation to the court of the sultan Abraim whose patronage he enjoyed, as well as that of his successor till his death, which happened in 1452. Jami was one of the most fertile among the Persian bards, his works amounting in number to nearly forty. The most interesting of these were edited by the author in a collection, which he entitled "Heft Aurenk" i. e. "The Seven Stars of the Bear." They comprise the tales of

Yuseph and Zuleika, founded on the story of the Hebrew patriarch Joseph, and "Mejnoon and Layla" of which there is a French translation, by M. de Chézy. Some of the compositions of Jami have also been translated and published by M. Langlès, in his *Contes, Sentences et Fables turcs d'autres Arabes et Persans* 1788.—*Biog. Univ. Dict. Hist.*

JAMIN DE BERMUY (JEAN BAPTISTE AUGUSTE MARIE) a French officer who was a native of the department of L'Isle et Vilaine, and was born in 1773. He became a sub-lieutenant of cavalry in 1790 and after passing through subordinate stations, was in 1795 aide-de-camp of Namouty and in 1802 he commanded the eighth squadron of cuirassiers. He was aide-de-camp to marshal Macdonald, and served with him in 1806, in his Neapolitan campaign. Being made colonel of the royal guards of light cavalry, he went to Spain at the head of that corps in 1808, and distinguished himself particularly at the battle of Ocana, November 9th, 1809. No mounted general of brigades in the following year he returned to France in 1813, after having given proofs of his bravery at the battle of Vittoria. He served with great credit on subsequent occasions, and in the campaign of 1814 he had the command of a brigade of light cavalry. He was killed at the battle of Waterloo. General Jamin de Bermuy was esteemed one of the best cavalry officers of his time, and had he lived he would probably have reached the highest rank in his profession. He was an officer of the legion of honour a knight of St. Louis, a baron of the empire, and marquis of Berney, a title conferred on him for his services in Spain.—*Biog. N des Contemp.*

JAMYIN (Aman) an early French poet, contemporary with Ronsard, whose friendship he enjoyed, and to whom he has been by some preferred, on account of the comparative smoothness of his style, and the less inflated style of his verse. After having travelled over great part of Asia Minor and the countries of ancient Greece, he returned to France and being fortunate enough to attract the notice of Charles IX, by his productions, that monarch appointed him his private reader and secretary. He published seven poems essays

JAN

and two volumes of *poetry*.¹ He also completed the translation of the *Iliad* begun by Sallust to which he added the three first books of the *Odysssey*, and was also the author of a treatise entitled "Discours de Philosophie à Platon et à Pline." He died in 1585.—*Nous. Dict. Hist.*

JANEWAY (John) a nonconformist clergyman of the seventeenth century a native of Nottinghamshire born about the year 1636. He obtained a硕士学位 at Christ church Oxford but lost his situation, together with all hope of future preferment, in 1662 for his refusal to comply with the provisions of the test act. After his deprivation he came to London and was for several years pastor to a dissenting congregation at Rotherhithe. Among his works are "Heaven on Earth," The Saint's encouragement to Diligence, &c. both in *Svo*, and several other devotional tracts besides the life of his brother John Janeaway a treatise entitled "A Token for Children" which has gone through several editions, and "A Legacy to my Friends" printed after his decease which took place in 1674.—*Ca lung. Granger.*

JANI (CHRISTIAN DAVID) rector of the college of Eisleben a classical scholar and critic of eminence in the last century. He published a valuable edition of the odes of Horace and another of the history of *Paterculus*, and he was also the author of a critical treatise entitled *Arts Poeticae Latine libri Hain.* 1774, *Svo*. His death took place in 1790.—*Zapp's Univ. Hist. Polit. Eccles. & Lit.*

JANICON (FRANCIS MICHAEL) an able journalist was born at Paris in 1674. He was an acute thinker as well as an ingenious writer and although bred originally to the profession of arms, eventually turned his attention with considerable success to the cultivation of letters especially in the political department of literature. His religious opinions making it convenient for him to quit his native country he took up his abode in the Netherlands, and was for many years an active contributor to the gazettes of Amsterdam, Utrecht and Rotterdam, his productions in which journals were equally admired for the soundness of their argument and the elegance of their style. His other works are "The Present State of the Republic of the United States" 8 vol., 1^{mo} 1789 and translations of *Gavin's satire against Monachism*, 4 vols., 1^{mo} and of Steele's Ladies Library. He died of an apoplexy in 1730.—*Nous. Dict. Hist.*

JANOZKI or JANISCH (JOHN DANIEL) a Polish clergyman and man of letters, who was keeper of the Zaluski library at Warsaw. He was born at Wisborg, in 1720 and died in 1786. His works relate to the history of literature in Poland and afford much valuable information. The most important are "Letters on Criticism," 5 vols. *Svo*; "Account of rare Books in the Zaluski Library" in five parts, Brussels, 1747-1753, *Svo*; "A Dictionary of Liv Magazines of Poland," in two parts, *Svo*, "Polish States under Tempore," &c.—*Americ. Biog. Eng. Uni.*

JAN

JANSEN (Cornelius) a learned Flemish prelate was born at Ghent, in the year 1516. He was educated at Ghent and Louvain, where he became a proficient in the Hebrew as well as Greek and Latin languages, and devoted himself to the study of the scriptures. He was appointed professor of divinity at Louvain and in 1568 was nominated first bishop of Ghent. He composed A Paraphrase on the Psalms with copious notes, Louvain, 1569, Notes on the Book of Proverbs, Ecclesiastes the Canticles, and the Book of Wisdom, printed in 1586. Commentaries upon some Passages in the Old Testament, &c. His chief work however was the *Coscordia Evangelica*, published in 1549 and frequently reprinted which was regarded by Dupin as superior to every harmony of the gospels which had previously appeared.—*Meyer. Dupin.*

JANSEN or JANSEN (CORNELIUS) bishop of Ypres so distinguished as giving a name to the sect of Jansenists was born of catholic parents at a village called Akay near Leerdam in Holland in 1585. He studied at Louvain whence he removed to Paris where by the recommendation of John du Verger de Haureme afterwards celebrated as the abbot of St Cyril he became tutor in a respectable family. He subsequently separated, with his friend Du Verger to Bayonne where they spent five or six years in an intense study of the writings of St Augustin until the bishop of Bayonne was induced by their reputation and acquirements to make Du Verger a canon in the cathedral and place Jansenius at the head of a college in that city. On the promotion of the same bishop to the archiepiscopal see of Tours, Du Verger proceeding with him to Paris, Jansenius also gave up his post, and returned to Louvain after an absence of twelve years, and was appointed principal of the college of St Pueraria. In 1617 he was constituted professor of divinity and was selected by the university to take two voyages into Spain in order to defend its privileges against the encroachments of the jesuits. In 1630 he engaged in a protestant controversy with Vetus and in 1634 in another which might be similarly denominated with a wavering catholic named Simons whom he treated with a harsh and persecuting spirit. About the same time in consequence of the alliance between Louis XIII and the united provinces, he composed a work, entitled, *Alexander Patricius Arnaeani Theologi Marc Gallicus, seu de Justitia Armarum et Federis regis Gallici*, which contains the most virulent exclamation against the countenance afforded by France to the protestants, and espouses the Dutch as rebels and traitors to their native sovereign. For this service, the king of Spain advanced him to the see of Ypres, while, on the other hand it is said to have been the cause of the deep resentment entertained by cardinal Richelieu against Jansenius and his followers. He had scarcely taken possession of his new see, and commenced his meditated re-

J A N

fame, when he was arrested by death in 1638 in the fifty-third year of his age. He left several works which it is unnecessary to enumerate, with the exception of the celebrated production in which he bestowed the labours of twenty years, and which was not published until after his death in 1640 entitled, *Augustinus seu Doctrina sancti Augustini de Humanae Naturae sanctitate & dignitate Medicina adversus Pelagianos et Massilienses folio.* This work, which produced the great modern, and probably lasting schism, in the church of Rome, unfolds the doctrine of St. Augustine on the constitution and powers of the human nature in its original fallen and renewed state, on sanctifying grace through Christ and on the eternal predestination of men and angels. It immediately excited the anger of the jesuits as a tacit, but formidable refutation of their opinions concerning human liberty and divine grace, and by their strenuous endeavours it was condemned in 1641 by Urban VIII in a solemn bull as infected by several errors which had long been banished from the church. It is the province of history to relate the incessant struggles between the partisans of the opinions of Jansenius and the jesuits in France and elsewhere until the condemnation by Innocent X of the famous five propositions supposed to be contained in the great work of Jansenius. 1. That there are divine precepts which good men are unable to obey for want of God's grace although desirous to do so. 2. That no person can resist the influence of divine grace when bestowed. 3. That for human actions to be meritorious it is not requisite that they should be exempt from necessity but only from constraint. 4. That the semi pelagians err in maintaining that the human will is at liberty either to resist or receive the aid of preceptive grace. 5. That whoever maintains that Christ died for the sins of all mankind is a semi pelagian. After this condemnation bull after bull was required to settle a dispute in which the most eminent clergy were divided. The persecutions in France of the Jansenists by Louis XIV the destruction of the celebrated Port Royal with the dispersion of its able members and the subsequent fate of the maintainers of these opinions will be found in the ecclesiastical writings of the seventeenth and eighteenth centuries. It will be obvious that the Arminian and Calvinistic parties in the church of England divide upon nearly the same points as the Jesuits and Jansenists.—*Bays. Morel. Molesme.*

JANSENIS There were three eminent Flemish painters of this name. **ABRAHAM**, a native of Antwerp was born in 1569. He exhibited great precocity of talent, and was for a while considered as far beyond his youthful competitors in the art, till the rising reputation of Rubens filled him with so much jealousy that he challenged the latter to paint a picture for the mastery. The invitation was as modestly declined as it was insolently urged, his rival remarking, that public opinion would doubtless do justice to both parties.

J A R

In his private character he appears to have been thoughtless, profligate and given to late debauchery but his excellency as an artist is attested by his celebrated descent from the cross, in the cathedral at Ghent, his resurrection of Lazarus, in the Dusseldorf gallery, and by several of his other paintings which adorn the walls of the Carmelite convent at Antwerp. The time of his decease is uncertain.—**HONORATUS VICTOR JANSENIS** was born in 1664, at Brussels. The duke of Holstein took him under his protection, and sent him to Rome at his own expense, in order to give him an opportunity of cultivating his talents to the best advantage by studying the works of the first masters. His progress in painting did not discredit his patron's munificence. He made Raphael his principal model and on his return enriched the churches of his native country by various valuable productions of his pencil. His paintings are in general small in size but highly esteemed. His death took place in 1739.—**CORNELIUS JANSENIS**, who during his long residence in England, was sometimes called Johnson was a native of Amsterdam. Portrait painting was the branch of the art to which he principally devoted himself. He arrived in this country in James the First's time and was considered by many fully equal to Van Dyke. The breaking out of the civil wars and the consequent dispersion of his court friends, induced him at length to return to his native city where he flourished awhile in considerable reputation and died in 1663.—*Pilkington. Wallpole's Ans.*

JANTET (ANTHONY FRANCIS XAVIER) a learned mathematician, born in 1747 at Bief du Four in the mountains of Jura. After finishing his studies, he embraced the ecclesiastical profession, and in 1768 he was employed to teach Latin in the orphan-house at Dole. In 1773 he obtained the chair of philosophy in the college at that place, on the suppression of which establishment, he became professor of transcendental mathematics in the central school of Jura and he continued in his post after the removal of the school to Besançon with the title of lycéum. He died of apoplexy in 1805. His only published work, "Traité élémentaire de Mécanique," 1785.

It is much esteemed. He left in manuscript a treatise on arithmetic and other mathematical tracts, besides an etymological dictionary of French words derived from the Hebrew.—*Bug Uva.*

JARCHI (SOLomon BEN ISAAC) also called Raechi, a learned rabbi of the twelfth century whose memory and writings are held in much esteem among the Jews. He was born at Troyes, in France, in the year 1104. In 1134 he left his native city for the purpose of travelling, and visited not only a large portion of the European continent, but extended his progress through Russia, Tartary, Persia, Palestine, Egypt, and other Eastern countries. Returning to France, he employed himself in writing Annotations on the Five Books of Moses, the Mischna, German, and Pirsie-Avoda.

with such success, as to have acquired the appellation of the "queen of comedians." He died at Thoyse in 1582, whence his remains were removed to Prague, in Bohemia, for interment. A Latin translation of his *Comment* on the *Pentateuch* was published by Henr. Thomp. at Göttingen, in 1710.—Moreri.

JAHMANS (MARIE CATHERINE de) a witty and saucious, but prodigal French woman, the daughter of a provost of Alençon where she was born in 1640. The comic episodes of an early intrigue inducing her to beseech the protection of her family she came to Paris, and for a while trusted to the exertion of her literary talents for support. The productions of her pen during this period of her life were principally romances, although some of her performances are dramatic occupying altogether twelve octodecimo volumes. Her private character notwithstanding her acquaintance was much courted by the literati of the day, was most exceptionable. M de Villeches, with whom she had formed a connexions, falling in battle she entered into a matrimonial engagement with the marquis de la Chaise, while it was notorious that a former wife of that gentleman was still living, in a state of separation from her husband. A son was the offspring of this attachment, but the father dying shortly after entered into a new arrangement with a near relation. Her death took place at Clachemare in 1683. Besides the edition of her works already alluded to which appeared in 1702, a second was published in fourteen volumes, about twenty years after the first containing some additional poems, fables, &c. The style of this literary female is rapid and animated and she had the merit of banishing the lumbering jargon of Calprenede and the Scuderie. Like Mrs Behn, Mrs Manley and other females of similar character in England, she was in the habit of fabricating the imaginary adventures in her publications on people of rank and eminence. She also wrote poetry but very much differently.—Moreri. Bayle. *Nouv. Dict. Hist. des Savants*.

JARDYN (KARL de) a Dutch painter celebrated for his animals and landscapes born in 1640 at Amsterdam. He quitted his native country in order to improve himself by studying the Italian masters, and settling at Venice, died there in 1676. So great a respect was entertained for his character as an artist that although a Lutheran, his remains were allowed by the government to be interred in consecrated ground.—Pilkington. *D'Argenville. Vies des Peintres*.

JARNOVICK, or GIORNOVICKI (Giovanni Maria) an eminent impianca and violinist, born at Palermo in Sicily in 1765. He studied the violin under the celebrated Lulli and was considered by that master as his most accomplished scholar. Having made his debut at the Concert Spansart in Paris for ten years he resided in that capital as the head of his profession; but circumstances obliging him to quit France, in 1782 he repaired to Potzdam in Germany, where he enjoyed an equal degree of reputation. Ten years after he came to

England, and was very popular in London, till an unkindly dispute with J. B. Cramer induced him to quit the country. He afterwards accepted an invitation to St Petersburg, and remained in that capital till his death which was caused by apoplexy in 1804. The character of Jarrovick was as eccentric as his talents were brilliant, and several anecdotes are told of the effects produced by the singularity of his disposition. He pepped himself on his knowledge of the use of the small-sword and once gave a box on the ear to the celebrated fencer St George, but the chevalier took no further notice of the assault than by saying, I admire his talents too much to fight him.—Baye *Dict. of Mus.*

JARRY (LAURENT JUILARD de) a French ecclesiastic eminent both for his pulpit oratory and his poetry, he was born in 1656 at a village whence he derived his name in the neighbourhood of Xanthe and at length obtained the priory of Notre Dame, in the place of his nativity. For the place of preferment he was principally indebted to his own talents having gained the French academical prizes at Paris both in the years 1679 and 1714 although on the latter occasion Voltaire was one of the candidates. He enjoyed the friendship of Bourdaloue and Bossuet, and distinguished himself highly as a preacher. His works are *Le Ministre Evangelique;* "Oeuvres de l'Abbé Jarry," Poëmes Chrétienans Sermons, &c. De Jarry died in 1730.—Moreri. *Nouv. Dict. Hist.*

JARS (FRANCIS DE ROCHECHOUART chevalier de) a French officer who was a knight of Malta, commander of Lagny le Sec and abbot of St Satur. He was a man of talents, of a bold and resolute disposition and was particularly distinguished for his conduct when he was arrested and confined in the Bastille at the time of the prosecution of Chateauneuf, keeper of the seals in 1653. He was accused of a design to convey the queen mother Anna of Austria, and her second son to England, but of this there was no evidence and the object of the proceedings against him was to procure evidence from him relative to the designs of Chateauneuf and other political opponents of cardinal Richelieu. The chevalier de Jars after eleven months close confinement during which he was examined twenty four times without implicating his friends was transferred to Troyes, where still retaining his constancy he was tried before Laffemas a creature of cardinal Richelieu, and condemned to die. On the scaffold, when he had placed his head on the block, a reprieve was announced, and he was conveyed back to prison where he continued for some time in a state of insensibility. The story which has been often told of an exhortation made him at the foot of the scaffold, to show his gratitude for the king's clemency, by confessing the treason of the keeper of the seals, and his reply, that 'he knew nothing to the disadvantage of his friend,' and if he did he would never betray him, however interesting appears to be incorrect. De Jars was liberated some

J A U

which after had went to Italy. He returned to France after the death of Richelieu, and was employed by cardinal Mazarin. He died in retirement, in 1670.—*Bug. Univ.*

JARL (GABRIEL) an eminent mineralogist, who was a native of Lyons in France. He was born in 1732 and he acquired an early taste for metallurgical researches, in consequence of his father's being interested in some mining speculations. He was educated as an engineer, and in 1757 he was sent by the count de Maupetis to accompany M. du Hamel du Monceau on a visit to the mines of Germany, Hungary &c. In 1765 he was employed to examine the mines in England and Scotland and afterwards those of Norway, Sweden and the Netherlands. Returning to his native country he was made a member of the Academy of Sciences. He engaged in the task of arranging the collection of minerals he had made with a view to lay his observations before the public, but his death in 1769 prevented him from executing his design. His brother who had been his co-advisor in his researches, compiled from his papers a work entitled, *Voyages Métallurgiques ou Recherches et Observations sur une très-grande quantité des Mines d'Or d'Argent &c Lyon 1774 3 vols. 4to.*—*Bug. Univ. Auct. G. Brog.*

JARVIS (John) an eminent artist, who distinguished himself by his paintings on glass. He was born in Dublin about 1749 and practised his art at first in his native city. He is said to have been indebted to Dr Cunningham for instructions in chemistry which were of advantage to him in the prosecution of his profession. He removed to London where he obtained great reputation and the works which he executed were much admired. He was particularly famous for his exquisite finish of single subjects, but his most celebrated performance is the west window of New College chapel, Oxford, from the design of sir Joshua Reynolds. He also executed in painted glass a picture of the resurrection designed by West, in the east window of St George's chapel Windsor. He died in London in 1804 greatly regretted by the lovers of the fine arts.—*Dalway's Obs. on Eng. Archt. Ryan's Bug. Dist. of the Worthes of Ireland.*

JAUQUART (Louis chevalier de) a French author the cadet of a noble family born 1704. He early in life displayed a strong turn for literary pursuits, and abandoned the advantages held out to him by his rank and the fortune of his connexions, in order to indulge his ruling propensity. With this view he became a member of the university of Leyden where he studied medicine and natural philosophy under the celebrated Boerhaave, directing his attention at the same time to ethics, antiquities, and the belles lettres. On his return to France he assisted Gassier and his coadutors in the Museum Sebastianus, was a contributor to the Encyclopédie and in 1740 became editor of the "Bibliothèque Raisonnée." The stadholder made him a very handsome

J E A

offer to take up his residence in Holland, but neither the charms of wealth, nor the prospect of court favour had power to induce him from the moderate line of life which he had chosen out for himself. He declined the proposals made him, and continued to pursue his quiet unpretending mode of life till his death in the spring of 1780. M. de Jaucourt was a member of the academies of Stockholm and Berlin and an honorary fellow of the Royal Society of London. A valuable work of his of which great expectations were formed, and which occupied six large folio volumes, was lost in manuscript, the vessel which had it on board founders on its way to Holland. The treatise which thus unfortunately perished, he had compiled with great care and industry and had intended to usher into the world under the title of "Lexicon Medicum Universale."—*Nova Dact. Hist.*

JAY (Guy Michel le) a French lawyer of the seventeenth century celebrated as a biblical critic. He was an advocate in the parliament of Paris but neglected his profession and ruined his fortune in devoting both his time and means to the publication of a beautiful Polyglott Bible the superintendance of which occupied him fully from 1628 when it was first commenced till its appearance in 1645. Cardinal Richelieu would gladly have had this valuable work in ten volumes folio which contains the Arabic and Syriac versions not to be found in that of Ximenes, published under his auspices and name, but the independent spirit of the author induced him to prefer an honorable poverty rather than to share the credit of his production with a patron however elevated in rank or character. He afterwards entered into holy orders, and obtained the deanery of Verneuil and the rank of a count solar of state. His death took place at an advanced age in 1675.—*Id. Moreri.*

JEAN BON ST ANDRE (baron) a French revolutionary statesman born of a protestant family at Montauban in 1749. He studied in a college of the Jesuits and being destined for the mercantile profession he went to America, but returning to France after suffering three shipwrecks he became a minister of the reformed church. He exercised that office at the commencement of the revolution, of which he was a warm partisan and in September 1792 he was nominated deputy to the National Convention from the department of Lot. He joined the party of the Mountain voted for the death of the king, contributed to the destruction of the Girondists, and as a member of the Committee of Public Safety shared in the tyranny of Robespierre. He was on board the French fleet in the battle with lord Howe, on the 1st of June, 1794, as a commissary of the Convention, and he was wounded on that occasion. He subsequently displayed more moderation in his political conduct, which did not, however prevent a judicial inquiry concerning the transactions in which he had been engaged, but the amnesty which took place in October 1795 having set

man of liberty; he was sent by the Directory as counsel to Algiers. Returning home he was appointed prefect at Mayenne in which station he distinguished himself by his frankness, integrity, and the untiring energy of his views, and having held the post thirteen years, he died in December 1815 much regretted throughout the district over which he had presided.—*Bieg. Nouv. des Contemp.*

JEANNIN (Pierre) a lawyer of Berry, advocate and afterwards president of the parliament of Dijon. He was born in 1540, and practised during the earlier period of his life in the courts of his native province till the resistance which he made to the execution of the commands of the government, or darning the massacre of the Huguenots on the festival of St Bartholomew though it threw him into temporary disgrace occasioned him to obtain eventually the countenance and confidence of Henry IV who called him to his counsels after the ruin of the League. Under that monarch he was charged with the management of several diplomatic negotiations both with Spain and Holland and continued after the assassination of Henry to enjoy the confidence of the queen mother. A collection of his state papers, containing the history of the transactions in which he was personally concerned, appeared in 1656 in one folio volume, and was afterwards printed in two vols. 1^{mo}, in 1659. His death took place in 1652.—*Id.*

JÉAN RIGI (Dionarre) an eminent French physician, regent of the faculty of Paris. He was a native of Nanci and after having studied under a relative he went to Paris, where he became a member of the Royal Society of Medicine and distinguished himself by his intelligence and activity. In 1778 he was sent by the government to Duan where an epidemic disease was then making great ravages. He succeeded in checking the progress of the infection, though at the expense of his own health, and on his recovery he published a tract, entitled *Premier Mémoire sur les Maladies qui ont régné à Duan, en Bretagne en 1778.* Some time after he contributed to the *Encyclopédie Méthodique* several important articles relative to the diseases of children and other subjects. Occupied entirely with his professional avocations, he escaped the storms of the Revolution and after long holding a high station among the members of the medical faculty at Paris, he died of dropsy of the chest, March 27, 1816.

—*Vie. Nouv. des Contemp.*

JEAURAT (Eustac Sébastien) an ingenious astronomer who was born in 1755 at Paris, whose father was engraver to the king. In his childhood he manifested a taste for designing and mathematics, and at the age of twenty-two he obtained a prize medal for a design from the Academy of Painting. In 1772 he assisted in constructing the great map of France, on which Cassini was engaged, and in 1750 was published a very useful treatise on *Perspective.* He was appointed professor of mathematics at the mu-

slary school in 1763, but he devoted much of his attention to astronomy, especially in relation to comets; and in 1763 he was admitted a member of the Academy of Sciences. In 1775 Jeauret succeeded Lalande in making the calculations for the *Connaissance des Temps.* He procured the establishment of an observatory at the military school and was employed in it till his death March 7 1803 at which time he was the oldest astronomer in Europe.—*Bieg. Univ. Bieg. Nouv. des Contemp.*

JEBB MD (John) a celebrated heterodox divine of the last century. He was born in London in 1736, and his father being dead at Cashel in Ireland he received his early education in that country. In 1753 he became a student of Trinity College Dublin whence he removed the next year to Peterhouse in the university of Cambridge. He there took the degree of BA in 1757 and at the same time commenced private tutor. In 1761 he proceeded MA and obtained a fellowship which he relinquished in 1764, on being presented to the rectory of Ovington in Norfolk having the preceding year taken the order of priesthood. In 1765 he published in conjunction with the rev R. Thorpe and the rev G. Wolaston a work entitled, *Excerpta quaedam e Newtoni Principiis Philosophiae Naturalis cum Notis Variorum &c.* In 1766 he returned to Cambridge, and resumed the office of tutor and in 1768 he delivered a course of lectures on the Greek Testament. He obtained in 1769 three livings in the county of Suffolk and was appointed chaplain to the earl of Harborough having married a relative of that nobleman. The freedom of opinion he had expressed in his lectures having given rise to some obloquy he printed a *Short Account* of them in 1770 republished with additions in 1772. About this period he interested himself warmly in the scheme of archdeacon Blackburne to procure the legal abrogation of clerical subscription to the thirty nine articles; and he also endeavoured to effect some improvements in the mode of academical education at Cambridge in which he was unsuccessful. The freedom of his opinion, on points of doctrine and discipline having rendered his situation in the university and the church unpleasant from the hostility excited against him he determined with that promptitude of character which marked all his proceedings to relinquish both his clerical and academical appointments. In September 1775, he resigned all his benefices, and immediately published a justification of his conduct, or at least a statement of the motives by which he was actuated. This disinterestedness candour and conscientious attachment to what he conceived to be the cause of truth caused but command the approbation of all liberal minded persons who differ with him in opinion and even of those who may be disposed to censure the impetuosity with which he prosecuted his purposes. He left Cambridge in September 1776; and taking up his residence in the metropolis, endeavoured to qualify himself for the profession of physick, which he

and adopted on leaving the church. He received a diploma from the university of St Andrews, and being admitted a botanist of the college of physicians, he commenced practice in 1778. He was chosen a fellow of the Royal Society the same year, and became a contributor to the Philosophical Transactions. His practice is said to have been very successful but the ardour of his disposition and the peculiar complexion of his religious and political principles obstructed his professional progress, and deprived him of those advantages which the respectability of his personal character and his family connections might otherwise have ensured. In the latter part of his life he actively engaged in the discussions arising from the war which separated the American states from this country and he was a frequent speaker in the popular assemblies held in the metropolis during the progress of that contest. His death took place March 2 1786. A collection of his works theological political and medical was published, with memoirs of his life by Dr Disney 1787 3 vols. 8vo.—Aiken's G Bag

JEBB MD (SAMUEL) an eminent physician and classical scholar who was a native of Nottingham. He belonged to Peterhouse Cambridge and having adopted the principles of the nonjurors he became connected with the famous Jeremy Collier to whom he was librarian. While at the university he published the Dialogue of Justin Martyr with Trypho the Jew in Greek and Latin. On moving to London he married the daughter of an apothecary and engaged in the study of medicine. Subsequently having procured the degree of MD he practised as a physician at Stratford in Essex and at length retired with a moderate fortune into Derbyshire where he died in 1772. Dr S Jebb was the conductor of a classical journal entitled "Bibliotheca Literaria," of which a few numbers appeared in 1722, and he edited several publications the most important of which is the Opus Majus of Roger Bacon 1733, folio. He was uncle to the subject of the last article One of his sons, Mr RICHARD JEBB, bart. MD who became physician to the king died in 1787.—Nichols's *Lit. Ance* Aiken's G Bag

JEFFREY (THOMAS) a dissenting minister rendered memorable by his able defences of Christianity was born about the year 1700. He was the son of a respectable merchant of Exeter and received his education under Mr Hallet to whom he became assistant. In the year 1726 he settled at Little Budock in Essex, but in 1728 returned to Exeter and soon after died. His works, which were principally composed in opposition to those of Anthony Collins, are entitled 'The true Grounds and Reasons of the Christian Religion' 8vo, "Christianity proved from Holy Scripture," A Review of the Controversy between the Authors of a Discourse, Of the Grounds and Reasons of the Christian Religion and his Adversaries.' The controversial labours of Mr Jeffery were highly esti-

mated by Drs. Dodridge and Keenister Aiken's G Bag.

JEFFREYS (GEORGE, 1st) Baron Jeffreys, commonly known by the name of Judge Jeffreys, was the son of John Jeffreys, esq. of Acton in Denbighshire where he was born towards the beginning of the seventeenth century. He was educated at the free-school of Shrewsbury, whence he was removed to that of Westminster and being subsequently entered at the Middle Temple, he applied himself very assiduously to the law. His father's family being large his allowance was very scanty but his industry and ingenuity supplied all deficiencies, and by attending an assize at Kingston during the plague when few barristers could be met with, he was allowed to plead, although not formally admitted and continued to practise unrestrained until he attained the highest employments in the law. Soon after commencing his professional career he was introduced by an alderman of his own name and probably a relation among the citizens of London who soon after chose him their recorder and to this advancement and the influence it procured him, may be attributed his introduction at court and appointment of solicitor to the duke of York. A willing instrument of all sorts of measures, his farther promotion at such a period was rapid, and he was appointed successively a Welsh judge and chief justice of Chester and created a baronet. When parliament began to prosecute the abhorred, he resigned the recordership and was appointed chief justice of the King's Bench. On the accession of James II he was one of the great advisers and promoters of all the oppressive and arbitrary measures of that misguided reign, and for his sanguinary and inhuman proceedings against the miserable adherents of Monmouth—atrocities which will couang his name to everlasting infamy—was rewarded by the vindictive and cold hearted James with the post of lord high chancellor. What can be said in favour of this despicable adherent should not, however be omitted, and it is acknowledged that he usually showed himself an able and impartial judge where political purposes were not to be answered. His deportment on the bench was however in the highest degree discreditable at all times, and even when his indignation was properly excited he indulged in scurrility and abuse of the most degrading description a practice in which he indulged even to fury against the celebrated Richard Baxter and all prosecuted parties whose politics or opinions were dis agreeable to the court. To this abusive habit he possibly owed the unhappy termination of his disgraceful existence. On the arrival of the prince of Orange, when all was in confusion the conscious chancellor who had disguised himself as a seaman in order to get on board a ship unknown was detected, in a low public-house in Wapping by an attorney whom he had signally rated in open court. The latter making his discovery known, he was immediately seized by the populace and carried before the lord mayor who sent him

In the hands he himself, by whom he was committed to the Tower, where he died April 16, 1600, of intermissions and a broken heart. Penshurst contains a remarkable instance of insult endured by this fallen instrument during his imprisonment. He received, as he thought, a present of a barrel of Colchester oysters, and expressed a great satisfaction that he was still remembered with kindness by somebody, but on opening the barrel instead of the expected contents, appeared a halter. Jeffreys, whose name has become a received appellation in England for unscrupulous judges, left one son, who inherited both his title and unscrupulous habits. He is said to have been the author of some pieces in the State papers, and of 'An Argument in the case of Monmouthshire,' 1689. He died in 1703, and left an only daughter by Charlotte, daughter and heiress of the earl of Pembroke, who married the earl of Pomfret, and after his death presented the noble collection of the Pomfret marbles to the university of Oxford. The deep impression left by the creation of Jeffreys in the west of England is strikingly exhibited, by a fact mentioned by Granger, that the amiable countess of Pomfret was insulted on the western road simply as being the grand-daughter of the execrated Jeffreys.—*Laws of George Lord Jeffreys. Laws of the Lord keeper North. Granger. Penshurst's London.*

JEFFREYS (George) an English poet, born in 1678, was son to a gentleman of Welsh, in Northamptonshire, and nephew to the eighth lord Chandos. He was educated at Westminster school, and was removed to Trinity college, Cambridge, whence he took his degrees in arts, and was admitted fellow in 1704. He was subsequently called to the bar but never practised and after acting for some time as secretary to the bishop of Derry he spent most of the remainder of his life in the families of his relations, the last two dukes of Chandos. His works are 'Miscellanies, in prose and verse,' &c., among which are two tragedies, 'Edwin,' and 'Methope' both acted at Lincoln's-inn Fields; and 'The Triumph of Truth' an oratorio. The anonymous verses prefixed to the tragedy of Cato were by this gentleman, a fact which Addison never knew. He died in 1755, at the age of seventy-seven.

—Nichols's Select Collection of Poetry

JESHLAN GHIR (Ahu'l-Maz'afra Nour Kouth MOHAMMED) one of the Mogul emperors, son of the famous Akbar whom he succeeded on the throne of Delhi in 1605. He was originally called Salim to which he added the intriguing appellations on his accession. He was, like all his race of imperial race, an Oriental despot; but he is said to have been generous, affable, and easy of access to his subjects, and the professors of art and literature experienced his patronage and support. He died in 1627. This prince composed a work containing specimens of the first seventeen years of his reign, and made some additions to the historical commentaries of his predecessor, sultan Habib. His wife or mistress, Jumahah, celebrated equally for her

beauty and wit, has been the theme of numerous Oriental poems and romances, and her adventures have not been neglected by European historians and novelists.—*Bog Uru Ces.*

JEKYLL (or JOSEPH) a lawyer and statesman of the eighteenth century. He was a native of Nottinghamshire, and the son of an episcopal clergyman. Being educated for law, he distinguished himself in his profession; and becoming connected with the whig statesmen in the reign of queen Anne, he had a seat in parliament, and was one of the managers of the trial of Sacheverell. When George I ascended the throne he was knighted and raised to the office of master of the rolls. He published a tract relative to the jurisdiction of his court, in consequence of a dispute with the lord chancellor King. His death occurred in 1758 at the age of seventy-four.—*Wood's Athenae Oxon.*

JELAL-E-DDIN ROUMI a Persian poet, who was a native of Balkh, and died in 1273. He was the author of several works combined under the title of 'Kilst elmetasnev' which signifies a collection of pieces composed of a peculiar kind of verse consisting of distachs or couplets. Specimens of these poems, translated into English by sir William Jones, were published in a Discourse on the Mystical Poetry of the Persians and Hindoos.—*Anastas Rassoukoff, vol. iii.* *Bog Uru Ces.*

JEMSHID or GIAMSCHILD, a Persian sovereign celebrated in Oriental history the period of whose existence is somewhat uncertain. He is said to have ascended the throne of Persia about 800 BC, and to have founded the famous city of Istakhar called by the Greeks Parapopla. To this prince is ascribed the first establishment of public baths, the invention of tents and pavilions and the use of lime for mortar in buildings. He instructed his subjects in astronomy and also probably in the mysteries of Sabean, or the worship of the heavenly bodies. But though he is represented as a wise and powerful monarch he was unfortunate in war, and having been de-throned by Zohak an Arabian king he spent the latter part of his life in indigence and obscurity. His son Pherudous was preserved by the care of the queen from the pursuit of the usurper and ultimately recovered his father's throne.—*Bog Uru Sir John Malcolm's Hist. of Persia.*

JENKIN (ROBERT) a learned English divine was the son of a gentleman of Minster in the Isle of Thanet. He was born in 1656, and educated at the King's school at Canterbury whence he was removed to a sister to St John's college, Cambridge, of which he became a fellow in 1680 and master in 1711. He also held the office of lady Margaret professor of divinity and prelector of Chichester but refusing to take the oaths of allegiance to William and Mary he lost all his preferments but his fellowship, which stood secure until the act passed upon the accession of George I obliging all who held a post of £1 per annum to take the abjuration oath. On this occasion Dr Jenkin appears to have surmounted his

with sarcasm, but suffered so much unpopularity, from being obliged to eject those fellows that were more zealous, that it preyed upon his spirits, and he sank into chilblains. In this state being removed to the house of an elder brother he died in 1727, in the seventy-seventh year of his age. His works are, an "Examination of the Authority of General Councils," "Defensio S. Augustini," "The Reconciliation of the Christian Religion which ran through six editions, &c &c. He also translated Tillenmont's Life of Apollonius Tyrrhenus.—Nichols's *Lit. Antiq.*

JENKINS (DAVID) a judge eminent for his stout-hearted attachment to the cause of Charles I, was born at Hensol, in Glamorgan, about 1656. After studying at Edmund Hall Oxford he entered at Gray's Inn and being called to the bar, was made a Welsh judge. He continued in this office until the commencement of civil hostilities at which time he imprisoned and condemned to death in his circuit several persons for bearing arms against the king. Being taken prisoner at Hereford when that city was surprised by the parliamentary forces, he was taken to London and imprisoned in the Tower. Being carried before the court of Chancery he denied its authority on which he was committed to Newgate impeached of treason and brought before the house of Commons where he refused to kneel and called the house a den of thieves. Provoked by this language that assembly proceeded to vote him guilty of high treason and sentenced him to be hanged, on which he observed, that he would suffer

with the Bible under one arm and Magna Charta under the other. A facetious speech from Henry Martyn allayed this tempest as regarded his life but he was fined 1000l. for contumacy, again committed to Newgate and his estates sequestered. In the same intrepid manner he continued to resist every overture of the parliamentary party to come in and remained in Newgate or other prisons until the Restoration. After that event he was designed for one of the twelve judges but seems to have been set aside as superannuated without receiving any other mark of kindness for his courage and loyalty. He died at Cambridge in 1667 aged eighty one. His works were printed in a small volume in 1648 but as a lawyer he is chiefly known by his Reports of Cases adjudged in the Exchequer Chamber 'foho, 1661 and 1777.—*Bug. Brit. Athos Cava. vol. n.*

JENKINS (or LEOLINE) a civilian and statesman was born at Llantrisant in Glamorganshire in 1653. He was educated at Jesus college Oxford and upon the breaking out of the civil war took up arms with other students on the side of the king. On the death of the latter he returned to Wales and became a tutor in the family of sir John Aubrey and also attended several other families in the same capacity until interrupted by parliamentary jealousy he removed with his pupils to Oxford. He was at length obliged to quit the kingdom with them but returned in

1659, but delivering his scholars up to their respective friends, he lived with sir William Whitmore, in Shropshire, until the Restoration, when he returned to Jesus college, of which he was chosen a fellow and in 1661 principal having previously received the degree of LLD. He received some other marks of distinction at Oxford, but under the patronage of archbishop Sheldon was encouraged to remove to Doctor's Commons, where he was admitted advocate, and in conjunction with other eminent civilians, was appointed to review the maritime laws and compile a body of rules for the adjudication of prizes, which afterwards became the standard of the class of proceedings in the court of Admiralty. In 1665 he was appointed judge of the same court, and in 1668 of the Protagative court of Canterbury. In 1672 he was sent ambassador to treat of peace with the Dutch in which he did not succeed but subsequently in conjunction with sir William Temple, was mediator of the treaty of Nimeguen. On his return to England he was chosen member for the university of Oxford sworn of the privy council, and made secretary of state which office he resigned in 1684. On the accession of James II he was again chosen for Oxford, but was never in sufficient health to sit in that parliament, and expired the first of September 1685. He never married and left all his estate to charitable uses, and in particular was a great benefactor to Jesus college. His letters and papers were collected under the title of his Works, in two folio volumes by W. Wynne in 1724 which collection bears a high price and is esteemed a valuable repository of diplomatic information.—*Life prefixed to Works. Bug. Brit.*

JENKINSON (ANTHONY) an English traveller of the sixteenth century. After having visited various parts of Europe Asia Minor and Palestine he was employed in 1557 by a commercial company on a mission to Russia. He arrived at Moscow according to his own account, in December 1557 and was well received by the czar Iwan IL. He travelled thence to Bogar or Bochara, in Tartary and returned to England in May 1561. He was sent again to Russia and afterwards visited Caspian on the Caspian sea. He a second time returned to England and wrote an account of his adventures, which was published by Hakluyt and Purchas. His narrative is interesting as he gives intelligence relative to countries never visited by any other European traveller but has authority as somewhat questionable from the romantic nature of some of his incidents and descriptions, so that some have not hesitated to class him with sir John Mandeville and Fernand Moudes Pinto, the Great Liar.—*Bug. Univ. Souther : Omnia.*

JENKINSON (CHARLES) earl of Liverpool was the eldest son of colonel Jenkinson, the youngest son of sir Robert Jenkinson the first baronet of the family. He was born in 1727 and educated at the Charterhouse, whence he removed to University college Ox-

and where he took the degree of M.A. in 1762. In 1761 he obtained a seat in parliament; and was made under-secretary of state. In 1766 he was made a lord of the Admiralty from which he subsequently removed to that of the Treasury. In 1773 he was appointed vice-treasurer of Ireland, and was rewarded with the sinecure of the clerkship of the Pells, purchased back from Mr Fox. In 1776 he was made secretary at war and on the dissolution of the administration of Lord North joined that portion of it which supported Mr Pitt, under whose auspices he became president of the board of trade which office he held in conjunction with the chancellorship of the duchy of Lancaster given him in 1786. In the same year 1786, he was also elevated to the peerage, by the title of baron Hawkesbury of Hawkesbury in the county of Gloucester, and in 1796 he was created earl of Liverpool. He remained president of the board of trade until 1801 and chancellor of the duchy of Lancaster until 1803. His death took place on the 7th December 1808, at which time he held the sinecures of collector of the customs upwards of the port of London and clerk of the Pells in Ireland. The earl of Liverpool for a long time shared in all the obloquy attached to the confidential friends of the Duke administration and in a particular manner was thought to enjoy the favour and confidence of George III of whom it was usual to regard him as the secret adviser. Having early devoted his attention to political studies, he became exceedingly conversant with the law of nations and the principles and details of commerce and political arithmetic which it has been seen he turned to great official account. The earl of Liverpool was the author of the following works: "A Discourse on the Establishment of a Constitutional Fund in England" 1756; "A Discourse on the Conduct of Great Britain in regard to Neutral Nations during the present War" 1758, "A Collection of Treatises from 1646 to 1673," 3 vols. 8vo, 1785; "A Treatise on the Coins of the Realm, in a Letter to the King," 1805, which latter work obtained very considerable attention—*Callan's Peerage by Sir E. Brydges.*

JENNENS (CHARLES) generally known by the jocular epithet which his profession gave him, of Solymus the Magnificent. He was a native of Gopseal in Leicestershire, and employed a large fortune acquired by his family in trade at Birmingham, as well in the improvement of literature as in the most unbounded hospitality and in the keeping up of a princely establishment. The selection of the words for Handel's celebrated oratorio, the Messiah, is ascribed to him and he had in contemplation a splendid edition of the works of Shakespeare, of whom he was a most enthusiastic admirer, on a new plan. In this undertaking he was however less fortunate. Four volumes only were printed, and those on circumstances which rendered the subscription of the remainder by the death of the author, and no people to be regretted in a liter-

any point of view. Mr Jennings, who is still religiously dissentient from the church of England, died at Gopseal, in 1773.—*Nichols's Leicestershire.*

JENNER (EDWARD) an English physician, celebrated for having introduced the practice of vaccination as a preventive of the small-pox. He was the youngest son of a clergyman who held the rectory of Roachampton and the vicarage of Berkeley in Gloucestershire, at which latter place the son was born, May 17 1749. Being destined for the medical profession he was, after a common school education, placed as an apprentice with a very respectable surgeon at Fonthill in his native county. He subsequently visited London, to finish his studies by attending the lectures of the celebrated anatomist John Hunter. Returning to the country he settled at Berkeley, as a practitioner of the various branches of his profession. A situation like this afforded but little leisure or opportunity for acquiring distinction and an occasion presented itself for obtaining a larger field for observation improvement and emolument thus however he was induced to decline. The circumstances of the transaction are thus related by Dr Lettiss, in an address to the London Medical Society:

Dr Jenner happened to dine with a large party at Bath when something was introduced at the table which required to be warmed by the application of the candle and doubts were expressed by several persons present whether the most speedy way would be to keep the flame at a little distance under or to immerse the substance into it. Jenner desired that the candle might be placed near him and immediately putting his finger into the flame suffered it to remain some time next he put his finger above it but was obliged to snatch it away immediately. The gentlemen said he 'is a sufficient test.' The next day he received a note from General Smith, who had been of the party the preceding day and who was before that time an utter stranger offering him an appointment in India, which would ensure him, in the course of two or three years, an annual income of 3000!. The offer was referred to his brother and our Jenner, from his attachment to him declined it. While at Berkeley natural history occupied some of his attention, and having ascertained some curious facts relative to the common cuckoo, he drew up a paper entitled *Observations on the Natural History of the Cuckoo* which being transmitted to the Royal Society was published in the Philosophical Transactions for 1758. He had already obtained the reputation of an ingenious practitioner and a man of talent and science, when he made known to the world the very important discovery which has raised him to an enviable situation among the benefactors of the human race. His investigations concerning the cow-pox were commenced about the year 1776 when his attention was excited by the circumstance of finding that some individuals, to whom he attempted to communicate the small-pox by inoculation, were insusceptible of the disease, and

J E N

on痘痘 he found that all such patients, though they had never had the small-pox had undergone the usual cow-pox a disease common among the farmers and dairy servants in Gloucestershire, who were not quite unacquainted with its preventive effect. Other medical men were aware of the prevalence of this opinion, but they treated it as a popular prejudice and Jenner seems to have been the first who ascertained its correctness and endeavoured to derive from it some practical advantage. He discovered that the variolous vaccine as the complaint has been since termed having in the first instance been produced by accidental or designed inoculation of the matter afforded by a peculiar disease affecting the udder of a cow could be propagated from one human subject to another by inoculation to an indefinite extent rendering all who passed through it secure from the small pox. He made known his discovery to some medical friends and in the month of July 1790 Mr Cline surgeon to St Thomas's hospital, introduced vaccination into the metropolis. So singular and anomalous a fact as the prevention of an infectious disease by means of another in many respects extremely differing from it could not but be received with hesitation and a warm controversy took place on the subject among the medical faculty. This ultimately proved advantageous both to the discovery and the discoverer as it terminated in establishing the truth of the most important positions which he had advanced and left him in full possession of the merit due to him as a successful investigator of the laws of nature. The practice of vaccine inoculation was adopted in the army and navy and honours and rewards were conferred on the author of the discovery. The physicians and surgeons of the fleet presented him with a gold medal, the obverse of which exhibits Apollo as the god of physic introducing a sailor recovered from vaccination to Batania who holds forth a civic crown inscribed with the name of Jenner below it is the appropriate motto *Alba Nauta Stella refusa!* On the reverse is an anchor and above it *Georgio Tertio Rege* below *Spencer Duce.* The diploma constituting his doctor of medicine was presented to Jenner as a tribute to his talents by the university of Oxford, he was chosen a fellow of the Royal Society and of other learned associations, and a parliamentary grant was made to him of the sum of £0 000. The extension of the benefits of vaccination to foreign countries spread the fame of the discoverer who received several congratulatory addresses from continental potentates. The emperor of Russia, when in this country in 1814, sought an interview with Dr Jenner treated him with great attention, and offered to bestow on him a Russian order of nobility. He also visited the king of Prussia, marshal Blucher and the count general conte Platoff the latter of whom said to him " Sir you have extinguished the most pestilential disorder that ever appeared on the banks of the Don." On receiving his diploma, Dr Jenner practised as

J E N

a physician at Cheltenham, during the scabies; and that watering-place was his principal residence till he became a widower when he removed to Berkeley to spend in retirement the evening of his life. He died suddenly in consequence of apoplexy January 26 1823, and was interred in the parish church of Berkeley. By his wife whose maiden name was Kingcote he left a son and a daughter Dr Jenner was the author of 'An Inquiry into the Causes and Effects of the Cow pox' 1798, 4to and 'Further Observations on the Variolous Vaccine or Cow pox' besides various letters and papers on the same subject published in periodical works.—*Lit. Chron. Ann. Biog.*

JENNINGS (DAVID) a learned dissenting divine of the last century. He was the son of an ejected minister and was born at Kibworth, in Leicestershire in 1691. He was educated in London under some of the most eminent nonconformist tutors and in 1714 he entered on the pastoral duty. After occupying other situations he became minister of an independent congregation meeting in Old Gravel lane, Wapping with which he continued to be connected as long as he lived. In 1743 he was chosen a trustee of the charities of Mr William Coward and one of his lecturers at the chapel in Little St Helen's Bishopsgate street. The next year he obtained the office of theological tutor at an academy supported chiefly by the funds bequeathed by that gentleman. This station he filled with great ability, and published for the use of the students under his care some works of merit, particularly 'An Introduction to the Use of the Globes and the Orrery and also the Applicanon of Astronomy to Chronology &c' 8vo 1747. The university of St Andrew's in 1749 conferred on him the diploma of DD. He died September 16 1762. Dr Jennings was the author of 'An Appeal to Reason and Common Sense for the Truth of the Holy Scriptures' and other religious tracts besides several sermons and after his death appeared 'An Introduction to the Knowledge of Medals' 8vo, and a treatise on 'Jewish Antiquities' 2 vols. 8vo which is one of the best works extant on the subject and was republished in 1808.—JENNINGS (JOHN) brother of the foregoing was also a dissenting minister. He was for some time pastor of a congregation, and master of an academy for students in divinity at Kibworth whence he removed to Hackney in 1722 and died there the next year. Besides some theological pieces he was the author of a Genealogical Table of the Kings of England &c and of a valuable little work, called 'Miscellanea in usum Juventutis Academicae' printed at Northampton in 1721 12mo for circulation only among his pupils.—*Athenae C. Biog. Wilson's Hist. of Dissent Churches in London.*

JENNINGS (HENRY CONSTANCE) an antiquary and virtuose, more remarkable for the peculiarity of his character and conduct than for his talents. He was born in 1751, and was the only son of a gentleman possessed of a large estate at Shiplake in Oxfordshire,

who was of the same family with the famous duchess of Marlborough. After being educated at Westminster school, he became an ensign in the first regiment of foot guards, at the age of seventeen. He held the commission but a short time, and on resigning it went to Rome, in company with lord Montagu son of the duke of Montagu. While in Italy he made a collection of statues and other antiquities, with which on his return he decorated his seat at Shimplake, which had descended to him on the death of his father. He now led the life of a man of fashion and fortune in indulging in many expensive follies, among which was keeping race-horses, and having dissipated a great deal of property and involved himself in pecuniary difficulties, he was obliged to sell a large estate, and returning into the country, he lived in an economical manner. Soon after he became a prisoner in the King's Bench, where he formed an acquaintance with Mr Horace Tooke. A change of fortune at length took place, and he was not only liberated from confinement, but was settled on an estate he had in Essex, where he gave himself up with enthusiasm to the employment of collecting books, manuscripts, shells, pictures, prints, busts, and curiosities of various other descriptions. From this state of prosperity he was precipitated by an accident which was the result of his own imprudence. Having borrowed a sum of money from a gentleman who was receiver-general for South Wales, the sudden death of that person occasioned the issue of an excheat of the crown in aid against the property of his debtor Mr Jennings, whose mansion was hastily sold for a comparatively small sum to satisfy the claim of government. He himself was soon after an inmate of Chelmsford jail. Here he remained for some years and on obtaining his freedom, he settled at Chelsea, where he passed much of the latter part of his life. The caprices of fortune had again restored him to affluence, but prudence had not accompanied prosperity and his pursuits were of a very similar description to those by which he had been previously occupied. A gentleman who visited him at Chelsea, about 1803 has given the following description of this eccentric vagabond: "On the left hand of the drawing room door was to be seen a very old and decrepit man, generally clothed in a brown suit of coarse cloth with numerous large silver buttons awkwardly fastened to the breast of his coat. He constantly wore a small hat both at home and abroad, and possessed both a white and a black beaver the former of which was always selected for great occasions. Sitting on an immense arm-chair lined with carpet, his body was mechanically placed in a reclining position, approaching nearly to the horizontal. This was effected by invariably supporting his legs and feet on a Roman chair which he valued greatly. This venerable figure, with a sharp and croaking voice, related the visitors, whom he recognized by name, of a singer, and to whom he conceivably belonged to was his bond. He appeared to sit

entirely in all the majesty of wealth, amidst his books, his pictures, and his shells; and never willingly arose, but to gratify himself and his guest, by exhibiting some, or all of these objects." Many of the articles in the museum of Mr Jennings had been procured at a price far beyond their value as appears when in consequence of renewed embarrassments, his pictures, shells, &c. were sold by auction, in April, 1816. He was at that time confined in the King's Bench, and within the rules of that prison, at lodgings in St George's fields, he died February 7, 1819. Though Mr Jennings never published any thing he printed in 1798 for private distribution a volume entitled, *Summary and Free Reflections in which the great Outlines only and principal Features of several interesting Subjects are impartially traced, and candidly examined,* 8vo.—*Anno Dom.*

JENNINGS (John) marshal of the court of Sweden, and knight of the polar star. He was of an English family but was born at Stockholm in 1723. He was sent to England for education, and afterwards studied at Upsal. Mechanics particularly engaged his attention and he distinguished himself by improving the furnaces used for casting metals, and directed the notice of government to the subject of navigable canals. He carried on the canal of Trollhättan, designed to render navigable the Gotha, one of the most important of the Swedish rivers. In the prosecution of his plans he visited England, Holland, and resided for some time in France. He died in 1773 leaving many proofs of his talents in memoirs on subjects of public utility written in the Swedish language. He was an active member of the academy of Sciences at Stockholm.—*Bug. Univ.*

JENSON (Nicholas) one of the most eminent of the early printers, more generally known by his Latin denomination Jansonus. He was a native of France, born in the early part of the fifteenth century and is said to have been originally employed by his government to gain an insight into the newly invented art of printing. The death of the French king terminated his commission on which he retired to Venice and then established himself in the then vacant occupation of printer and letter-founder. The beauty and determinate proportion of the present Roman character is attributed to him, and the neatness of his type is still much admired as being far superior to that of most of his contemporaries. "Deo Preliorum" in Latin, and "Gloria Miharensis," in Italian, were the first books printed by him in 1471, between which year and 1481 several editions of classical authors appeared from his press; but as none are found of a later date, he is supposed to have died soon after the latter period.—*Noss. Diet. Ital.*

JENYN (Beaute) a witty and elegant writer, was the only son of sir Roger Jenyn, knight, of Bottisham hall, Cambridge. He was born in London, in 1704, and received a domestic education until the age of seventeen;

when he was entered a fellow-commoner of St John's college Cambridge. He remained three years at the university and then married early a lady with a large fortune to whom his father was guardian but the marriage proved unhappy and in consequence of an elopement a separation took place. In his youth Mr Jenyns, with a small and delicate person assumed the character of a beau and his first performance a poem on the "Art of Dancing" published in 1723 was very correspondent with this pretension. In 1741 he was left by the death of his father master of a large fortune on which he entered into public life as representative of the county of Cambridge. He began his career by supporting the declining influence of Sir Robert Walpole and and ever after remained a faithful adherent to the minister for the time being. This conduct secured him the situation of a lord of the board of trade through every change from 1755 until its abolition in 1780 in consequence of being deemed more beneficial to its own members than to the nation an opinion which will scarcely be controverted when it is understood that three of its members at one time were the historians Gibbon the dramatist Cumberland and Mr Jenyns. As a country gentleman, the latter appeared to greater advantage than as a politician officiating as a magistrate with great impartiality and exercising much hospitality in his neighbourhood. It is however chiefly as an author wit and companion that he is to be distinguished in all which capacities he excited considerable attention. So early as 1737 he published his well-known "Free Inquiry into the Nature and Origin of Evil" the fundamental principle of which is, that the production of good without evil is impossible that evils spring from necessity and could not be done away without the sacrifice of some superior good or the admission of greater disorder. In respect to moral evil his theory is, that it is permitted, in order to provide objects for the just infliction of physical evils. This paradoxical system, which caused a great sensation at the moment, encountered a severe but masterly critique from Dr Johnson and numerous answers from other persons, to which the author replied in a preface to a subsequent edition. In 1756 he published a pamphlet on the subject of a national militia and in 1767 another on the high price of provisions which claimed only temporary attention. In 1776 appeared his celebrated "View of the Internal Evileances of the Christian Religion" which work created a great sensation and excited a great diversity of sentiment in regard to its good and evil tendency. The foundation of his reasoning is, that the Christian religion is a system of ethics so superior to, and unlike anything which had previously entered into the mind of man, it must necessarily be divine. In the first instance the author was generally applauded, but after a while it was disengaged by many as calculated to make an irreparable breach between faith and reason. The charms of style and manner, however made it very popular. In 1783 appeared his "Disquisitions

on various Subjects," five which are marked with his usual characteristics of sprightly wit and shrewd observation but are otherwise vague fanciful and declamatory. In these he contends for a pre-existent state of mankind as a means of accounting for the misery sustained in this present world, but the chief force of his wit and his satire is directed against the principles of civil liberty. This volume produced an admirable piece of poetical satire entitled, "The Dean and the Squire" by Mason the dean being Dr Tucker whose opinions on liberty coincided with those of Mr Jenyns. His last production was entitled, "Thoughts on Parliamentary Reform," which of course he wholly opposed. He died in 1787 at his town house in Bury-street, leaving a second wife, to whom he had been married thirty four years. Besides the productions above mentioned he was the author of some spirited papers in the *World* and of various poems, received into several of the standing collections which although not of the highly imaginative class are smooth easy and elegant, with a pleasant vein of wit and satire. His works have been collected into four volumes, 12mo with a life prefixed by C. N. Cole.—*Lifes by Col. Chalmers's Eng. Poets.*

JEPHSON (Rowan) a respectable dramatical writer was born in Ireland in 1736. He received a liberal education, and attained the rank of captain in the 73d regiment, and when his regiment was reduced in 1763, retired on half pay. Being intimately acquainted with William Gerard Hamilton that gentleman procured him a pension on the Irish establishment, which was the less difficult, as he was already known at the castle by having held the appointment of master of the horse to the lord lieutenant, viscount Townshend. By the influence of Mr Hamilton he was again nominated to the same post by the duke of Rutland and he also became a member of the Irish house of Commons. He died of a paralytic disorder at his house near Dublin in 1803. As a dramatic writer his claims are chiefly founded on his tragedies of *Braganza*, and *The Count of Narbonne* the latter of which borrows its plot from the Castle of Otranto. His other and less successful pieces were, "The Law of Lombardy" "Julia," and "The Conspiracy," tragedies, "The Campagna," an opera; and "Love and War" and "Two Strings to your Bow" farces the last of which is still sometimes repeated. He was also author of *Roman Portraits*, a poem, and of "The Confessions of James Baptiste Costeau," a satire on the French revolution.—*Lifes of W. G. Hamilton. See. Drum.*

JEROME or HIERONYMUS, a celebrated father of the church, was born of Christian parents, at Stridens on the confines of Panonia and Dalmatia, in 351. His father who was a man of rank and property sent him to Rome for education, where he was placed under the grammarian Donatus, known for his commentaries upon Virgil and Terence. He

had also masters in rhetoric, Hebrew and divinity, in which he made a great progress. After travelling through France and Italy he gave up friends and worldly pursuits to seek retirement in the east, and gradually reached Jerusalem, whence he proceeded to Antioch. Here he endured a grievous fit of sickness, on his recovery from which he wandered through several towns and districts in search of a retreat to his mind, which he found in a frightful desert of Syria, scarcely inhabited by any thing but wild beasts and a few human beings little less ferocious. He was in his thirty first year when he entered upon this life in which he spent four years occupied in an intense study of the scriptures until his health began to be affected by his application and ascetic discipline. He then repaired to Antioch where he was ordained a presbyter in 378 by Paulinus. He soon after visited Constantople, in order to avail himself of the advice and instruction of Gregory Nazianzen and on his return accompanied Paulinus to Rome where his merit and learning soon made him known to pope Damasus who appointed him his secretary and also director to the Roman ladies who had devoted themselves to a religious life. During his residence at Rome he lodged at the house of a matron of the name of Paula, a woman of rank and fortune who afterwards followed him with her daughters into the east. This event exposed him to some scandal from his opponents the Origenists, and to more mortal censure from the relations and friends of the many weak females whom he thus encouraged in their desertion of their proper duties, and misapplication of their wealth to the support of useless or pernicious institutions. On the death of Damasus finding his situation at Rome uneasy he determined to return to the east and accordingly embarked in 385 with a great number of monks and females whom he had induced to embrace the ascetic life. He touched at Cyprus where he visited Emphasia, and arriving at Antioch, proceeded thence to Jerusalem and afterwards to Egypt, where to his great grief he found the tenets of Origen almost universally prevalent. He at length settled at Bethlehem, where the wealthy and devout Paula founded four monasteries three for females and one for males under Jerome. Here he pursued his studies with great ardour and wrote many of his best treatises, and in these occupations might have peacefully closed his days, but for his detection of the opinions of Origen, which involved him in the most animosities controversy for many years with John, bishop of Jerusalem, his former friend Radulfus of Aquileia, and Jovinian, an Italian monk. In the year 410, when Rome was besieged by the Goths, he afforded an asylum to many who fled from thence to Jerusalem but was very careful to exclude all whom he deemed infected with heresy. He died in 420, in the ninety-first year of his age. Jerome is considered the most learned of the Latin fathers, but his knowledge of the Greek language, although respectable

was not profound. He was, at the same time, rather a declaimer than an orator, and his reasoning upon any subject was seldom either clear, consistent, or concise. He is still more to be deplored for his virulence, acrimony, and want of candour in controversy. He was also very superstitious and credulous in a high degree as his admiration of ascetic discipline and the silly romances of Paul the Hermit and Hilarius sufficiently prove. But notwithstanding these and other defects, as fully proved by Le Clerc in his *Quæstiōnes Hieronymianæ*, his writings will always be of great value to the biblical student as furnishing numerous fragments of the ancient Greek translation and of the opinions of the Jews of that period as to the sense of many Hebrew words and passages. At the same time as a most industrious and zealous searcher into scripture himself his opinions are worthy attention in the quarter pointed out. A full enumeration of the works of St Jerome will be found both in Cave and Dupin. The most important of these is a Latin version of the whole Old Testament from the Hebrew accompanied with a corrected edition of the ancient version of the New Testament finally adopted by the Roman catholic church and commonly distinguished by the name of "The Vulgate." The first printed edition of the works of Jerome appeared at Basle under the care of Erasmus 1516-1526. There have been several subsequent editions at Lyons, Rome, Paris and Antwerp but the best and most recent is that by father Mariana a Benedictine Paris, 1693-1706 5 vols folio and that of Vallarsa Verona 1734-42 with notes 11 vols, folio.—*Life* by Erasmus. Dupin *Cave. Le Clerc's Quæstiōnes Hieronymi Moschæ.*

JEROME of Prague the intimate friend and associate of John Hus and like him, a martyr to his zeal against what he deemed the corruption of the church of Rome. He was born at Prague but in what year is unknown and having studied at the university of his native city he proceeded to those of Paris, Heidelberg and Cologne, and as some say to Oxford, where he copied the writings of Wickliffe which he carried with him into Bohemia. He was admitted to the degree of DD in 1396 but it is not known at what university. Upon his return to Prague in 1400 he entered into a strict intimacy with John Hus, whose doctrines he began to publish in 1408. In the year 1410 he was involved in the censures pronounced by Subenec, archbishop of Prague against the Hussites; and in the same year went to Poland, at the request of the king to regulate the university of Cracow. In 1415, when informed of the arrest and imprisonment of Hus, he deemed himself bound in honour to repair to Constance to assist in his defence but on his arrival alarmed at the rage which prevailed against reputed heretics, he withdrew to Ellingen and sought a safe conduct from the emperor. An equivocal paper of the kind was supplied to him together with a witness

from the council. Aware of the futility of the pretended document he prepared to return to Bohemia, but was arrested on his way homewards, and placed in the custody of the prince of Salmberg who finally sent him to Constance, bound in chains. After his examination he was imprisoned in the tower of St Paul's church and treated with great barbarity. Thus seventy the solicitations of his persecutors, and his solitary meditations upon the dreadful fate of Huss at length shook his constancy and on a third examination he was induced to sign a paper approving the condemnation of the doctrines of Wickliffe and Huss. Although some of the council were satisfied and would have set him at liberty he was nevertheless detained in custody and in the course of a few months afterwards new articles were presented against him to which he pleaded in solemn assembly, and having resumed his fortitude he nobly acknowledged that the dread of fire alone had induced him against his conscience to condemn Huss and Wickliffe. Poggio who was present at the trial in a letter to Aretine gives an interesting and affecting testimony to the high qualities and exalted deportment of Jerome in that emergency. His fate was decided on this occasion being sentenced to a similar death to that of John Huss, which he endured on the 30th May 1416 when he was burnt to death and his ashes thrown into the Rhine. The labours of Jerome of Prague as an author appear to have been chiefly confined to the assistance which he afforded Huss in his various works. The answers which he gave to the articles preferred against him may be seen in the twelfth volume *Collect. Concil. Cate.* *Froben Theatrum Life by Grapan.*

JERNINGHAM (LOWARD) an ingenious poet and dramatic writer descended from an ancient Roman catholic family in Norfolk and brother of sir William Jerningham, bart. He was born in 1727 and when young was sent to the English college at Douay in Flanders whence he was removed to Paris. His education being completed he returned to England where he became a member of the established church. One of his earliest productions was a poem in favour of the Magdalena institution which was followed by "The Deserter" 1769, "The Funeral of Arabert Monk of La Trappe," 1771, "Faldon and Teran," 1773, "The Swedish Curate," "The Fall of Mexico," 1775, "Honors, or the Day of All Souls," 1782; "The Ram and Progeny of Scandavian Poetry," 1784, "Estherism" 1789, &c. His play, called "Margaret of Angou," was acted in 1777, "The Siege of Berwick" a tragedy, in 1794, and "The Welsh Hareress," a comedy in 1795. A collection of his poetical and dramatic works appeared in 4 vols, 8vo, 1806. He also published in the latter part of his life, "An Essay on the mild Tenor of Christianity," and other religious tracts. His death took place November 17th, 1812. The private character of Mr Jerningham was extremely amiable and he is spoke of with

Broad Distr.—Vol. II

great respect and esteem by lord Byron, in the notes to his English Bards and Scotch Reviewers.—*Gent. Mag. Witt's Bibl. Brit.*

JERUSALEM (JOHN FREDERICK WILHELM) a Lutheran divine born at Osnaburgh in 1709. Having an ardent passion for knowledge, he visited France and England in pursuit of it, and on his return to Germany the duke of Brunswick Wolfenbuttel confided to him the education of his son afterwards killed at the battle of Jena. Jerusalem was also appointed almoner to the court, and he acquired great reputation as a preacher. He formed a plan of education, which gave rise to the *collegium Carolinae* at Brunswick and he rendered no less service to society by his writings than by his schemes for the benefit of youth. The duke gave him the abbey of Buddagahansen near Brunswick, where he formed a seminary of which during forty years he was director and principal professor. In 1762 he published "Letters on the Religion of Moses," and this was followed by "Considerations on the principal Truths of Religion" which was translated into most European languages. He afterwards wrote against Frederick the Great of Prussia who pleased with his moderation and learning invited him to Berlin but he declined the visit as he also did the chancellorship of the university of Gottingen which was offered to his acceptance. He died September 2d 1789. His posthumous works were published by his daughter at Brunswick, 8 vols 8vo 1792 &c. The son of this gentleman was the unfortunate prototype of Werter the celebrated hero of Goethe's celebrated novel.—*Biog. Univ.*

JERVAS (CHARLES) a portrait painter in the reigns of George I and George II who acquired considerable reputation, founded on adventurous circumstances rather than on his professional skill. He was a native of Ireland, and for a short time studied under sir Godfrey Kneller. Having visited Italy he became on his return a fashionable artist, and Pope to whom he gave instructions in painting has eulogised his talents. He is said to have been infected with personal vanity to a ridiculous degree. Lady Bridgewater a celebrated beauty sitting to him for her picture, he took the liberty to tell her that she had not a handsome ear. "And pray Mr Jervas, said her ladyship, what is a handsome ear?" The painter immediately lifted his velvet cap and pointed to his own auricular organ, as the model of perfection. Jervas died in 1739. Some of his letters have been printed with those of Pope, and he published a very good translation of *Don Quixote*.—*Lord Oxford: Anecd. of Paint.*

JERVIS (John) earl of St Vincent, a gallant and distinguished naval commander, descended of an ancient and respectable family in Staffordshire. He was the second and youngest son of Swayford Jervis, esq auditor of Greenwich Hospital, and was born at Meaford hall January 9, 1734 (old style). At the age of fourteen, he was rated a midshipman on board the Gloucester, of fifty guns, on

the Jamaica station and in 1755 served as lieutenant under Sir G. Sawdene, in the expedition against Quebec. Soon after being made commander, he was appointed first to the Experiment and afterwards to the Albany sloop. In 1760 he obtained the rank of post-captain, and commanded the Foudroyant, in the action between admiral Keppel and the French fleet in July 1778. In 1782, being then under the orders of admiral Barrington, he engaged and took the Pégase, of seventy-four guns and 700 men, in which exploit he received a severe wound in the head from a splinter, and afterwards obtained the red ribbon as a reward for his gallant conduct. In 1794, having accepted the command of a squadron equipped for the West Indies, he reduced Martinique, Guadaloupe and St. Lucia for which services he received the thanks of Parliament, and the freedom of the city of London in a gold box. On the 14th of February, 1797, being then in command of the Mediterranean fleet of fifteen sail he engaged and defeated twenty-seven ships of the line belonging to Spain, the smallest carrying seventy-four guns, and seven of them mounting from 118 to 130 each. On this occasion he was raised to the English peerage, by the titles of baron Jervis and earl of St Vincent, from the scene of his glory. To this was added a pension of £6000. a year for the better maintenance of his dignity and a gold medal from the king. In 1799 he was created admiral, and in 1801 became first lord of the admiralty vice earl Spencer in which capacity he undertook and executed many salutary reforms in naval expenditure but resigned his post in 1804. In May 1814 he was appointed a general of marines, and July 19 1823 admiral of the fleet. Lord St Vincent was a man of a strong and acute mind resolute and unbending in regard to discipline and necessary retrenchment and reform and also of high gallantry and transcendent genius in his profession, with the leading members of which he was deservedly popular. He died March 15, 1823, in his eighty ninth year and though buried privately in the family vault at Stone a monument was voted by the house of Commons to be erected to his memory in St Paul's cathedral. This national tribute, consisting of a single statue and bearing a strong resemblance to the gallant and able individual whose services it is designed to commemorate, was opened to public view in September 1826.—*Ann. Biog.*

JEROME (Hawry) a learned nonconformist divine of the seventeenth century. He was a native of West Bowton, in Yorkshire of which place his father was minister. He studied at St. John's college, Cambridge, and distinguished himself by his proficiency in the Oriental languages. Having been episcopally ordained in 1627 he obtained a living, from which he was soon ejected for nonconformity. He was then received into the family of Mr. Bampfylde, and removing with his patron to Uxbridge, in 1635, he became minister of a congregation in London. After having en-

dured persecution from the episcopalians before the civil war he engaged in controversy with the triumphant party under Cromwell, on the subject of infant baptism, to which he objected. He however held the living of St. George's Southwark which he lost at the Restoration. He then officiated as minister of a Baptist congregation and after having been imprisoned on account of his nonconformity, he died September 4, 1663. His works, relating to theology and biblical literature, are creditable to his learning and abilities, but he principally deserves commendation on account of his having been engaged in making a new translation of the Bible, which he was prevented from completing by the changes in ecclesiastical affairs consequent on the return of Charles II. —*Wilson's Hist. and Art. of Diss. Ch. Crosby's Hist. of the Baptists JESUA (LEVITA) a Jewish rabbi by birth a Spaniard who lived in the fifteenth century. He was a man of considerable learning and his writings are regarded by those of his persuasion as able commentaries on the Talmud. His principal work is entitled *Hachot Olam* (The Ways of Eternity). Constantine I Emperor translated this treatise from the Hebrew into Latin and Bachuyson published an edition of it accompanied by the Latin version in one 4to volume at Hanover in 1714.—*Movers**

JEVERI (ISMA'IL BEN HANNAHAD) a distinguished Arabian lexicographer born at Faras in Transoxiana about the middle of the tenth century. He resided for some time in Egypt where he applied himself to the study of Arabic and returning to Khurasan, published there in 999 the most complete dictionary which the Arabians possess, entitled *Sabah alilghat*, the pure language. Golius has inserted a great part of this work in his *Lexicon Arabicum*, and Memmius more recently has introduced a translation of it into his *Thesaurus Linguarum Orientium*. It was translated into Turkish by Vancoul Constantinople 1728 republished for the third time at Scutari, in 1803. Jeveri died according to some authors, in 1003 at the time when he was engaged in revising his dictionary, and the errors which are found in it are attributed to one of his disciples who completed the task after his death.—*Bug Ussu Class*

JEVON (TAOMAS) a dramatic author and actor of the seventeenth century. The Devil of a Wife or the Comical Transformation, London 1695 4to, claims him as its author being the original of the standard farce of the 'Devil to Pay' —*Bug Drama*

JFWEL (John) a learned episcopal divine of the English church who lived in the reigns of the last sovereigns of the house of Tudor. He was born at the village of Buden, near Ilfracombe, in Devonshire in 1522. After acquiring the rudiments of learning at school he was sent to Merton college, Oxford, and in 1559 he was elected a scholar of Corpus Christi and in the year following took his first degree. He had been situated in the princi-

plies of the protestant faith of which he proved a zealous and able champion. His mode of study shows him to have been indefatigable in the acquisition of knowledge but it was at the expense of his health which was injured by too close application. On his recovery from a fit of illness he was chosen lecturer on rhetoric which office he filled with great credit during seven years. In 1544 he was admitted M.A. and on the accession of Edward VI in 1546 he openly professed the tenets of the reformers and contracted a particular intimacy with Peter Martyr who was appointed professor of divinity at Oxford. In 1551 he commenced BD on which occasion he delivered an excellent Latin sermon. About the same time he obtained the rectory of Sunningwell in Berkshire where he distinguished himself by his zeal and assiduity as a parochial priest. When queen Mary succeeded her brother Jewel was deprived of his office in the university and though he subscribed to a confession of faith drawn up by the catholics yet finding that they suspected his sincerity and were about to prosecute him as a heretic he withdrew secretly from Oxford and with some difficulty made his escape to the continent. He proceeded to Frankfort, where he arrived in 1554 and there he made a public confession before the exiled English protestants of his unfeigned contrition for his late errors and weakness. He afterwards went to Strasburg and became vice master of a college established by his friend Peter Martyr. On the death of queen Mary Jewel returned to England and was received by the new sovereign with all the favour due to his zeal learning and abstinence. In March 1559 he was appointed with other divines advocate for the protestant cause in a disputation held in Westminster abbey. In 1560 he was raised to the bishopric of Salisbury and about the same time in a sermon preached at St Paul's cross he challenged the romantics to produce a single positive testimony from the works of any of the fathers who lived within six hundred years after Christ in favour of any tenet in which the catholics differed from the protestants. This challenge led to a controversy with Dr Cale the deprived dean of St Paul's and with Thomas Harding a learned jesuit. Hence also originated the bishop's principal literary work his famous *Apology for the Church of England*, written in elegant Latin and translated into English by the mother of sir Francis Bacon. Versions were also made of this treatise into German, Italian, French, Spanish, Dutch and Greek, and it is said to have had more effect in promoting the reformation than any other book that was published. In 1565 the university of Oxford conferred on bishop Jewel the degree of DD, and the remaining years of his life were devoted to his pastoral duty, and to the defence and support of protestantism. His death took place while on a journey, either at Moulton Farley or according to other accounts, at Lacock Abbey in Wiltshire, the seat of his friend sir Henry Sherington, in September,

1571. His English works comprising sermons, scripture expositions, &c. were printed collectively in 1609 John and lady Bacon's translation of his *Apology* was republished a few years ago.—*Fuller's Worthies.*

JEZZAR or the Butcher the familiar appellation of the famous pacha of Acre and Acra who defended the latter place against Buonaparte during his Syrian expedition. He was born in Bosnas in the early part of the eighteenth century and was originally named Ahmed. In his youth he sold himself to a slave-merchant who took him to Egypt where he was purchased by the noted Ali Bey then master of that country. From the situation of a common mameluc Ahmed in a few years, was promoted to the office of governor of Cairo. In 1773 when Ah Bey became unfortunate the emir Yusuf confided to the dauntless slave of that prince the government of Beirut in Syria in which post he betrayed the trust reposed in him by his benefactor who assisted by the sheik Dhaber and a Russian squadron laid siege to Beirut both by sea and land. Unable to resist the double attack Jezzar surrendered himself into the hands of Dhaber and went with him to Acre where he made his escape. After the death of Dha her the captain pacha Hassan appointed Jezzar pacha of Acre and Syria and employed him against the partisans of the redoubtable Sheik who had so long defied the power of the grand seigneur. His seal in this service was recompensed with new marks of favour and he was made a pacha of three tails with the title of visir. He took advantage of his situation to extend the boundaries of his government and in spite of the efforts of the Turkish court to displace him, he retained his authority as long as he lived. This ferocious chief was absolute master of a part of Syria at the period of the French invasion of Egypt. Buonaparte after having vanquished the mamelucs endeavoured to make a friend of Jezzar, but the pacha rejected his overtures and with the aid of a naval force under an Sydney Smith and of M Phelippeaux a French engineer he valiantly defended the city of St Jean d'Acra against the reiterated attempts of Buonaparte to make himself master of it. After a siege of sixty-one days, the conqueror of Egypt was obliged to relinquish his enterprise and leave Jezzar in full possession of his power. Two years after general Sebastiani was sent on a mission to the pacha, who received him with civility and in the intercourse between them he expressed the utmost contempt for the sublime porte, whose defence he had previously undertaken only to serve his own interest. He died at an advanced age in 1804 leaving behind him immense treasures. He gloried in the sanguinary title by which he is best known and numerous are the well attested facts on record which prove that it was not unmerited.—*Dr E. D. Clarke's Travels.*
Baq Uss Dikt. Hist.

JOACHIM of Calabria an Italian noble of the twelfth century who obtained the rege

J O A

tation of a prophet among his contemporaries, and incurred, by his writings, the censure of the church, as a heretic. He was born at Calico, near Cesena, in the kingdom of Naples, and after receiving the usual education of his age and country, he obtained some employment at court. Thus he left, to travel to the Holy Land, and on his return to Italy he took the monastic vows among the Cistercians and at length became prior and then abbot of the convent of Corazzo. He relinquished his office with the pope's permission in 1183 in order to turn hermit. In his solitude he projected the constitution of a reformed congregation of the Cistercian order and in 1189 founded the monastery of Flora, in Calabria over which he presided till his death in 1202. Joachim wrote comments on the scripture prophecies, predictions relating to fifteen popes, a treatise against Peter Lombard on the Trinity which was condemned as heretical by pope Innocent III. There is also a supplicious work, entitled "The Everlasting Gospel," or "The Book of Joachim" which gave rise to another called "The Introduction to the everlasting Gospel" by a friar of the thirteenth century the absurdity of which produced a great sensation in the religious world.—*Mosheim's Ecclesiastical History. Adam's G. B.*

JOAN of Arc commonly called the Maid of Orleans, one of the most remarkable heroines in history was the daughter of persons of low rank in the village of Domremy near Vaucouleurs on the borders of Lorraine where she was born in 1412. She quitted her parents at an early age and became servant at a small inn where she acquired a robust and hardy frame by acting nearly in the capacity of hawker attending to the horses, and riding them backwards and forwards to water. At this time the affairs of France were in a deplorable state and the city of Orleans was so closely besieged by the duke of Bedford, that its fall seemed inevitable. Excited by the frequent accounts of the memorable encounters at this siege and affected with the distresses of the country Joan was seized with a wild desire of relieving them until her mind incessantly pondering on this favourite object, she fancied that she saw visions and heard voices exhorting her to re-establish the throne of France, and expel the English invaders. Having communicated this imaginary inspiration to the governor of Vaucouleurs, he forwarded her to Charles VII at Chinon to whom, in the name of the supreme being, she offered to raise the siege of Orleans, and conduct the king to Rheims. The court at first pretended to hesitate, but after a committee of divines had pronounced her mission to be supernatural, Charles granted her request, and she was exhibited to the people on horseback. The English at first regarded the whole affair with derision, but gradually gave way to the superstitious notions of the age, and became possessed with the idea of a divine vengeance hanging over them. Joan entered the city of Orleans at the head of a convoy, arrayed in

J O B

military garb, and being received as a celestial messenger by the commandant Dunois, she actually obliged the English to raise the siege, after famously driving them from their entrenchments. The march of Charles to Rheims followed, and such was the impression produced on the population that although proceeding through what had been deemed an enemy's country every place opened its gates to him, and the ceremony of his inauguration took place as predicted. As a mark of gratitude for this service the king had a medal struck in honour of Joan and all her family was ennobled, in both the male and female line, of which the former became extinct so late as 1760. The town of Domremy, her native place was also exempted from taxes for ever. After the coronation of Charles Joan despaired to return to the course of life which became her sex, but Dunois, who thought she might still prove serviceable induced her to throw herself into the town of Compiegne then besieged by the duke of Burgundy and the earl of Arundel and Suffolk. Here after performing prodigies of valour she was taken prisoner in a sally and no efforts being made by the French court to deliver her she was cruelly condemned by the English under the pretence of witchcraft to be burnt alive which sentence she endured with great courage in 1431 in the nineteenth year of her age. See! are the outlines of this history as generally delivered but many romantic circumstances are probably overcharged. It has even been doubted whether she was really put to death some plausible evidence having been brought forward to prove that she was saved by a trick on the day of execution and that she afterwards appeared and was married to a gentleman of Amboue a story far more improbable than the facts which it is intended to supersede.—*Historiae of England and France. Southey's Joan of Arc.*

JOB or AYUB (SOLOMON) a negro prince son of the king of Bondou in Senegambus, to whom the literary world is indebted for some geographical details relative to his native country. In 1730 he was sent by his father to the sea-coast to treat with the English traders and being taken prisoner by the Mandingo, he was himself sold as a slave to the master of an English vessel. He was allowed to send to inform his father of his misfortune but the messenger not returning in time he was taken to Maryland and employed as a labourer in the culture of tobacco. He fled from his master and being retaken his story excited curiosity and he was ransomed by general Oglethorpe and others in the colony and sent to England. He arrived here in April 1733 and was patronized by sir Hans Sloane for whom he translated some Arabic MSS. During the fourteen months he resided in this country he attracted much notice, and after having been presented at court, and honoured with valuable presents, he set sail for Africa and reached Fort James on the coast of Senegal, the 8th of August, 1734. While preparing to depart for Bondou, he

JOE

leant that his father was dead, and by the return of the vessel which took him out, he sent letters of thanks to his benefactors, but no further intelligence of him was ever received. He professed the Mahometan faith and while in England he wrote from memory three copies of the Koran.—*Aitely's Collect of Voyages, Eng. Univ.*

JOCHANAN BEN ELIEZER, a Jewish rabbi of the third century who compiled what is called the Jerusalem Gemara, a portion of the Talmud. This work consists of the opinions, criticisms, controversies and decisions of the Hebrew doctors and casuists on points of their ritual supplementary to the Mischna or text of the Talmud. R. Jochanan's commentary was so obscure that a new one called the Babylonian Gemara, was composed in the following century by rabbi Asce—*Gadens Moses et Aaron, Novis Dict. Hist.*

JOCONDUS (Jouan) an Italian architect and man of letters in the sixteenth century. He was a native of Verona, and became a Dominican friar. Louis XII sent for him to Paris, where he built the Pont de Notre Dame across the Seine. He also erected a bridge over the Adige at Verona, and executed many other works. His death took place about 1530. He is said to have discovered in France some of the epistles of Phay and the treatise on prodigies by Julius Obsequens, which were printed by Aldus, in 1508. He also wrote notes and made designs for the illustration of Caesar's commentaries, and he published an edition of Vitruvius on architecture—*Tres bouc Tempsa Vitis des Architectis Venetiani*

JODELLE (Stevyns) an early French poet and dramatist who was a native of Paris. He is represented as having been an universal genius possessing an extraordinary faculty and fluency of composition, as a proof of which we are told that he wrote five hundred Latin verses on a prescribed subject, for a wager in a single night. He was the author of the first regular tragedy in the French language his Cleopatra, which was acted before Henry II. He also wrote comedies and poems. Though a favourite with the great, Jodelle became the victim of poverty and died in distress in 1573, at the age of forty one. On his death bed he dictated a sonnet addressed to Charles IX reproaching him unseemly for deserting him in his necessity.—*Baile, Eng. Univ.*

JOECHER (CHRISTIAN GOTTLIEB) a doctor of theology and public professor of history at Leipzig. He was born in 1694 in that city and was instructed by a private tutor in the family of his father who was a merchant. The latter dying in embarrassed circumstances, in 1720 Joecher found himself under the necessity of writing and lecturing with increased ingenuity and became a colleague with Reuter in the compilation of the German Acta Eruditorum. He died in 1758. The best of his philosophical writings is his *Examen Paralogismorum Woolstoni* Leipzig 1734; &c.; but that which is best known is his

"General Dictionary of Learned Men"

JOH

1750 1, 4 vols 4to to which a supplement was published by Adelung 1784-7. He was also author of a treatise on the influence of music on the human constitution being himself a proficient in that science.—*Saxi Chron.*

JOFFRID abbot of Croyland in Lincolnshire in the twelfth century. If the narrative of Peter of Blois, who wrote in the reign of Henry II, be correct, thus ecclesiastic may be considered as the founder of the university of Cambridge. In his continuation of Ingulph's account of Croyland he says that abbot Joffrid sent a deputation of three learned French or Norman monks named Odo, Terrius and William to his manor of Cottenham near Cambridge to teach the people in that neighbourhood grammar logic and rhetoric. These three monks went every day from Cottenham to Cambridge where they hired a barn in which they taught those sciences to a great number of scholars who resorted to them not only from the town of Cambridge but from all the country around.—*Massey's Hist. Engl. Select Mon.*

JOHANNAEUS (Finns) bishop of Skalholt in Iceland was born in that island in 1704. He was the son of John Halderson vicar of the bishop of Skalholt who sent him to finish his education at Copenhagen. On his return to Iceland he became successively minister of several places and at length bishop of Skalholt, where he died at a very advanced age. He distinguished himself by his attention to the history of his native country and was the author of *Historia Ecclesiastica Islandiae* Copenh. 1772-1778 4 vols 4to, *Historia Monastica Islandiae* 1775 4to, and a life of the historian Snorri Sturluson.—*Eng. Univ.*

JOHN king of England, born in 1166 was the youngest son of Henry II by Eleanor of Aquitaine. Ireland being intended for his appanage he was sent over in 1185 to complete the conquest, but such was the imprudence and insolence of himself and his courtiers, it was found necessary to recall him. Although his father's favourite, he joined his brother Richard in his last unnatural rebellion and partook with him the curse pronounced by the heart stricken king and parent on his death bed. He was left without any particular provision which procured for him the name of Sans Terre or Lackland but on his accession Richard conferred on him the earldom of Mortain in Normandy and various large possessions in England and married him to the rich heiress of the earl of Gloucester. This kindness did not prevent him from forming intrigues against his brother in conjunction with Philip of France during his absence in Palestine but Richard magnanimously pardoned him on his return, and left him his kingdom in preference to Arthur of Brittany the son of his elder brother Geoffrey. So imperfectly was the rule of primogeniture then established in England that no disturbance ensued in that country although the French provinces of Anjou and Maine declared for Arthur who was taken under the protection of the king of

JOH

France. A war ensued, in which John recovered his revolted provinces and received homage from Arthur for the duchy of Brittany inherited from his mother. In 1200 he married Isabella of Angouleme after divorcing himself on some pretence from his first wife. In 1201 some disturbances again broke out in France whether he led another expedition, and the young Arthur having joined the malcontents was captured, and confined in the castle of Falaise whence he was subsequently removed to Rouen and never heard of more. The manner of his death is not certainly known but it was generally believed that John stabbed him with his own hand and he now became the object of universal detestation. The states of Brittany summoned him to answer the charge of murder before his liege-lord king Philip, and upon his refusal to appear the latter assumed the execution of the sentence of forfeiture against him and in this manner the whole of Normandy was recovered by the French crown after its alienation for three centuries. John had the fault of his disgrace upon his English nobles whom he harassed by fines and confiscations, but after some ineffectual attempts he was obliged to acquiesce in a truce in 1204. The pope at this time was the haughty and able Innocent III who in consequence of a contested election for the see of Canterbury nominated a creature of his own, in the person of cardinal Stephen Langton. John highly enraged acted with his usual haste and folly and displayed so much contempt for the papal authority that Innocent laid the whole kingdom under an interdict. This quarrel lasted some years, and the king by his tyranny depriving himself of the support of his nobles was perplexed on every side. In order to give some lustre to his degraded administration he undertaken expeditions into Scotland, Wales, and Ireland in which he was successful and as particular quelled all opposition to his authority in the latter. In the mean time the court of Rome proceeded to a sentence of excommunication against the king personally and formally absolved his subjects from their allegiance. Philip of France was again ready to put the sentence against John into execution, and prepared an expedition in the ports of Picardy which however the latter was enabled to oppose. So much disaffection nevertheless prevailed, that Pandulph, the pope's legate induced him not only to receive Langton as archbishop of Canterbury but also to resign his kingdoms of England and Ireland to the holy see in order to receive them again as its vassal with absolution. This most ignominious compact was executed at Dover in May 1213 and the pope now regarding England as his own, and jealous of the aggrandisement of Philip required the letter to desist from hostilities against a country under the protection of the see of Rome. Philip received this mandate with great indignation, but in consequence of a victory over his fleet, was gradually brought to reason. Filled with this success, John

JOH

resolved to endeavour to recover his continental dominions, but the English barons declined their services. In the next year however he carried over an army to Poitou but after some partial successes, was obliged to return in disgrace. John had by this time rendered himself the object of such universal contempt and hatred that his nobles, who had long felt aggrieved by the usurpation of their sovereigns, and of the reigning ones in particular determined to take hold of so favourable an opportunity to control his power and establish their privileges. Langton produced to them a copy of the charter of rights granted by Henry I and at a general meeting in London in January 1215 they laid their demands before the king which he attempted to elude by delay. In the mean time he sought to ingratiate himself with the clergy and the pope with whom he lodged an appeal against the compulsory proceedings of the barons. The pontifical who found it his interest to support a sovereign who had so far humbled himself declared his disapprobation of their conduct but little moved by the declaration the latter assembled in arms at Oxford where the court then was and choosing a general immediately proceeded to warlike operation. They were received without opposition in London which so intimidated the king that he consented to sign such articles of agreement as they thought fit to dictate. Such were the steps which produced the famous Magna Charta, which was signed by John at Runnymede on the banks of the Thames on the 19th June 1215. By this charter the bars of English constitutional freedom the nobles were not only protected against the crown, but important privileges were granted to every order of freemen. The passive manner in which John yielded to these restrictions of his powers indicated a secret intention of freeing himself from his obligations. In order to lull the barons into security he dismissed his foreign forces but in the mean time was secretly employed in raising fresh mercenaries, and in seeking the concurrence of the pope who absolutely issued a bull annihilating the charter as extorted from his vassal contrary to the interests of the holy see. He even forbade John to pay any regard to its conditions and pronounced a sentence of excommunication on all who should attempt to enforce it. Thus furnished with spiritual and temporal arms the king left his retreat, and carried war and devastation through the kingdom. His barons taken by surprise could make no effective resistance and despairing of mercy from John, sent a deputation to France, in which they offered the crown of England to the dauphin Louis. Philip gladly accepted the proposal and Louis with a fleet of 600 vessels landed at Sandwich and proceeded to London where he was received as lawful sovereign. John was immediately deserted by all his foreign troops, and most of his English adherents, but the report of a scheme of Louis for the extirpation of the English nobility, whether true or false, arrested his progress at

g very critical time the John, and induced many to return to their allegiance. But while the king's affairs were thereby assuming a better aspect, he had the misfortune, in a march from Lynn across the sands into Lincolnshire to lose, by the sudden flow of the tide all his carriages and baggage. Being already in a bad state of health, the visitation so aggravated his disorder, that he died at Newark, in October 1216 in the forty ninth year of his age and seventeenth of his reign. No prince in English history has been handed down to posterity in blacker colours than John to whom ingratitude, perfidy and cruelty were habitual. Occasional gleams of vigour and energy were indeed manifest but they always proved themselves the mere explosions of rage and anger and soon subsided into meanness and pusillanimity. His private life was stained with extreme licentiousness and the best part of his conduct as a ruler was the attention he paid to commerce and maritime affairs. More charters of boroughs and incorporations for mercantile pursuits date from him than from any other of the early kings, and the popular constitution of the city of London was his gift. He left by his second wife a family of two sons and three daughters, and his illegitimate children were numerous.—*Hume. Henry Adams's G. Bing.*

JOHN of Pisa (GOVANNI PISANO) a distinguished sculptor and architect of the thirteenth century. He was the son and pupil of Nicholas of Pisa an eminent professor of the art of design. He erected the famous Campo Santo or public cemetery at Pisa, which contains fifty ship loads of earth brought from Jerusalem, in 1228, such was the superstition of that period. The building consecrated by this curious deposit has attracted general admiration for its beauty. Christina of Sweden said of it, Non s'un cimiterio, ma un museo. John of Pisa also designed and executed in Perugia the monuments of popes Martin IV Urban IV, and Benedict IX, the Castello dell' Novo at Naples, the facade of the cathedral of Siena, and the marble table of the great altar at Arezzo, covered with carvings, figures, foliage mosaic work and enamel, which cost 30 000 florins, besides many other works at Bologna and elsewhere. He died very aged in 1300 and was buried in the Campo Santo.—*Orlando Adams. Pittor Elmo's Diet of the Fine Arts.*

JOHN SOBIESKI king of Poland born in 1624, was the son of James Sobieski, Castellan of Cracow, a brave general and able statesman. He received a liberal education and after visiting the various courts of Europe was made captain of the guards to king Casimir, and rose through all the intermediate ranks to be generalissimo and grand marshal. He performed various exploits against the Cossacks and Turks, and in 1673 gained over the latter the signal victory of Chocim. On the death of Michael, being elected king by the diet, he determined to pursue the Turkish war with vigour and by his brilliant success he induced the ports to agree to the favourable

treaty of 1676. A revolt taking place against the emperor in Hungary which was supported by the Turks he was induced, in 1683, to make an alliance with the court of Vienna, which capital he relieved, in conjunction with the imperial forces, in the most gallant manner, when closely besieged by the Turks, whose camp was entirely routed by a grand attack, on the 11th September 1683. Sobieski was considered by the people of Vienna as their deliverer and all Europe gave him the glory of an action so opportunity voluntary to the Christian cause. He followed up the success with other advantages, and having obtained a crown of Moldavia and Wallachia endeavoured without effect to unite them to his dominions. This was his last warlike enterprise and he passed the remainder of his life with less glory in the advancement of his family by alliances and in the discreditable accumulation of riches, in order to secure the crown to his son. This conduct, to which he was incited by the intriguing spirit of his consort a noble French woman, rendered his death less regretted than from his great actions and qualities might have been expected. This event took place in June 1696. Sobieski was not only a brave and consummate commander but eloquent, learned, and scientifically informed beyond most of his countrymen.—*Med. Univ. Hist.* &c.

JOHNES (THOMAS) an English gentleman who distinguished himself by the cultivation of literature. He was born in 1748 at Ledlow in Shropshire and after having studied at Eton he went to Jesus college Oxford and proceeded to the degree of M.A. in 1783. He had previously made the tour of Europe and formed his taste from the survey of the productions of ancient and modern art in France and Italy. Possessing an estate at Hafod in Cardiganshire he obtained a seat in parliament for the borough of Cardigan, and subsequently for the county of Radnor. He also held the office of auditor for the principality of Wales and was colonel of the Carmarthenshire militia. As a country gentleman he handsomely occupied himself in the improvement of his landed property by planting trees to a very considerable extent. He also built for himself an elegant mansion and collected a noble library to which he added a typographical establishment, whence proceeded the works on which his literary reputation is founded. They consist of splendid editions of the chronicles of Froissart and Monstrelet, Jossaville's memoirs of St Louis, the travels of Bertrandou de la Bracquiere in Palestine, and Ste Palay's life of Froissart, all translated by himself from the French. In March, 1807 Mr Johnes's literary pursuits experienced a severe interruption in consequence of a fire, which nearly destroyed his house at Hafod, and a great part of his library especially a number of curious Welsh MSS. The latter part of his life was also embittered by the death of his daughter an amiable and accomplished young lady. His death took place April 6th,

1836.—*March Mag.* vol. xvii. and xiii. *Rev. Rec.*

JOHNSON (Charles) a lively dramatic writer was originally a member of the law which he quitted and commenced writing for the stage, and being tolerably successful, and much liked by the frequenters of Willis and Button's coffee-houses, his benefit nights were so patronised, that being prudent in his expenses, he contrived to live respectably. At length, marrying a young widow with a small fortune, he set up a tavern in Bow street Covent-garden, which however he quitted on her death, and lived privately on an easy competence. The date of his birth is unknown but he existed in the reigns of Anne George I, and George II, and died in 1748 On some trivial page Pope noticed him in his Dunciad, but as the worst said of him was that he was fat, it did him little injury. He wrote nineteen pieces a list of which may be seen in the *Biographia Dramatica*, of these a comedy, called "The Country Lasses," was the most popular.—*Eng. Dict.*

JOHNSON (John) a learned but changeable divine, was born at Freudsbury in Kent, in 1665 being the son of the vicar of that place. He was educated at the king's school Canterbury whence he was removed to Corpus Christi college Cambridge where he took the degree of M.A in 1683 and soon after entered into orders. In 1687 he was collated to the vicarage of Boughton, with which he enjoyed that of Herne Hill, by sequestration. In 1697 he obtained the living of St John's, in the Isle of Thanet to which the town of Margate belongs, and soon afterwards was presented to that of Appledore and finally in 1707 was inducted to the vicarage of Cranbrook, where he died in 1725. At the revolution he was one of the clergy who complied with the new order of things, but in consequence of uniting some disgust with the low church and dissenting party while resident at Cranbrook, he became first an admirer of Sacheverell, and at length a flaming nonconformist. He was not, however, disposed to make all the required sacrifice to these principles, and consequently was obliged to submit, which he did with great reluctance. His works are "The Case of Plurallities and Non residence rightly stated;" "Holy David and his old English translation cleansed, in answer to the exceptions of Baxter;" "The Clergyman's Vade Mecum;" "The Canonical Codes of the Primitive Church to 787;" "The Prophetic Obligation in the Holy Eucharist;" "The unbloody Sacrifice and Altar unveiled and exposed," a piece which caused much discussion, as favouring the real presence; and lastly, "A Collection of Ecclesiastical Laws." *Life by Scott.*

JOHNSON (Maurice) an able antiquary was born at Spalding, in Lincolnshire, and bred to the law in the Inner Temple, after which he settled in his native place, and formed a society for the cultivation of the knowledge of English antiquities. He had by his only lady as few as twenty-six children, sixteen of

whom sat down to his table at the time. He died in 1755. He collected many materials for a history of Cambridgeshire, and several of his manuscripts are in the collection of the Antiquarian Society.—*Nichols's Lit. Ann.*

JOHNSON (Samuel) a clercymen, distinguished for his zeal in the cause of civil liberty, was born in 1649 in the county of Stafford. He was educated at St Paul's school, London whence he was removed to Trinity College Cambridge. After taking orders he was presented to the living of Corningham in the hundreds of Essex, which residence not agreeing with his health he removed to London. Considered conspicuous by his taste for political discussion, he soon acquired the acquaintance of the heads of the opposition to the arbitrary measures of Charles II, and during the time that lord Russel with his coadjutors were promoting the bill for excluding the duke of York he published a tract entitled, "Julian the Apostate" meant as a refutation of the doctrine of passive obedience by Dr Hickes. For this book he was prosecuted in the court of king's bench and sentenced to fine and imprisonment. Inability to pay the fine caused him to be confined in the rules of the prison, where he was privately assisted by the benefactors of his political friends and contrived to dispense several pieces against property. His sufferings in this cause were brought to their height by a paper which he drew up in 1686 when the army was encamped upon Hounslow Heath entitled An humble and hearty Address to all the English Protestants in the present Array. For this production he was committed to close custody tried before the king's bench and condemned to stand in the pillory in three places to pay a fine of 500 marks, and to be publicly whipped from Newgate to Tyburn. Before the execution of this disgraceful sentence he was deprived of his orders by the ecclesiastical communion at the head of which were bishops Crew Sprat, and White. Induced by a bribe a popish priest undertook an application to James II to remit the whipping, but James who never forgave said that as he had the spirit of a martyr he must suffer like one. He bore all these indignities, including the whipping which was inflicted with great severity, with the firmness and absence of the martyr, which he was deridingly called, and happily some informality in the process of degradation preserved to him his living. With unbroken spirit he continued to employ his pen in the same cause, until the revolution changed his situation. He wrote two pieces in favour of that great national change and in 1689 the proceedings against him were reversed and he was offered the deanship of Durham. Unhappily he had fixed his expectations upon a bishopric for which station, even his friends thought him both deficient in calmness and worldly prudence. In the end he received a present of 1000*l.* and a pension of 300*l.* per annum, for the life of himself and his son. He continued to write in favour of king William with much strength of reason, but with a degree of sarcasm which produced

some personal annoyances from opposing parties, which had little effect upon a man of so determined a spirit. Notwithstanding his attachment to the new government he freely censured many of its acts, and even contended for annual parliaments. His jealousy of standing armies also rendered him averse to the wars which made them necessary. He appeared last as an author in 1697 when he was attacked by a gradual decline which carried him off in 1703. His works collected into one folio volume, were published in 1710 and re-edited in 1713. With great firmness, this undaunted character was wholly free from enthusiasm but possessed a strength of temper which many called turbulent and meddling, forgetting that it was the natural consequence of the mode of conduct which his principles induced him to pursue.—*Biog. Brit.*

JOHNSON LL.D. (SAMUEL) one of the most distinguished writers of the eighteenth century. He was born at Lichfield in Staffordshire in 1709 in which city his father was a small bookseller. He was the elder of two sons the younger of whom died in his infancy, and he inherited from his father a robust body and active mind, together with a scrupulous tact which improved his sight and hearing and a strong disposition to mortal melancholy. He also derived from the same source a marked attachment to high church principles, and a decided predilection for the family of Stuart. The character of the elder Johnson will indeed be sufficiently obvious, from the fact that he took his son to London to be touched for the evil by queen Anne. He received his early education partly at the free school of Lichfield and partly at Stourbridge in Worcestershire, and on returning from school he remained two years at home. Having acquired reputation from his exercises, particularly of the poetical class, a neighbouring gentleman of the name of Corbet offered to maintain him at Oxford as companion to his son. He was accordingly entered of Pembroke college in 1728 being then in his nine-tenth year, but he seems to have exhibited no marked attention to his studies in the first instance and the state of indigence into which he fell by the neglect of the promised assistance on the part of the family by whose advice he was sent to Oxford appears to have produced a degree of mental anxiety which he is said to have attempted to conceal by affected frolic and turbulence. Still he acquired credit by occasional poetical compositions in the Latin language but after all, left Oxford after a residence of three years, without taking a degree. About this time, according to his own account, he received a strong religious impression from the perusal of Law's *Serious Call to a devout and holy Life*. Soon after his return to Lichfield his father dying in very narrow circumstances he was constrained to accept the situation of usher at the grammar-school of Market Bosworth. This situation, his impatience under the haughty treatment of the principal, soon induced him to quit, and he passed some time as a guest with a medical

scholar, settled at Birmingham. Here he wrote essays for one of the journals, and translated from the French, father Lobe's travels in Abyssinia. Returning to Lichfield he published proposals for the republication of the poems of Politian with a life and a history of modern Latin poetry which prospectus was but little attended to. Disappointed in this scheme he offered his services to Cave as a contributor to the Gentleman's Magazine which however was but a slight step towards a maintenance, and in 1735 he sought to improve his condition by a marriage with Mrs Porter the widow of a mercer. Her fortune of £600. was a dowry of some moment to a sister in the situation of Johnson, and the fact of her being twice his own age and possessed of no pretension to personal attraction, renders his subsequent description of this union as a "love match on both sides" the more extraordinary. He now took a large house at Edial with a view to take pupils and boarders but the plan did not succeed and after a year's trial, he resolved to seek his fortune in London, in company with one of his own few pupils, the celebrated David Garrick. In March 1737 the two adventurers accordingly arrived in the metropolis, Johnson with his unfinished tragedy of Irene in his pocket and with little to depend upon but his slender engagement with Cave. At this time he became acquainted with the reckless and unfortunate Savage and in some respects his personal conduct seems to have been unfavourably affected by the intimacy, but from irregularity of this nature he was soon recovered by his deeply grounded religious and moral principles. His first literary production which attracted notice in the metropolis, was his

London a poem in imitation of the third satire of Juvenal which production was highly and deservedly praised by Pope. He soon after made an attempt to obtain a Dublin degree of MA through a recommendation to Swift in order to obtain the mastership of a free grammar school in Leicestershire but could not succeed. Failing in this attempt, his engagement in the Gentleman's Magazine led to a new exercise of his powers in the composition of parliamentary debates, which being then deemed a breach of privilege, were published under the fiction of debates in the senate of Lilliput. The extraordinary eloquence displayed in these productions was almost exclusively the product of his own invention, but it is probable that he adhered more faithfully to the tenor of the arguments of the real speakers than to their language. He however confesses himself that he "took care the wily dogs should not have the best of it." His attachment to the jacobites was also farther manifested by the composition of a humorous pamphlet, in 1739, entitled *Marmion Norfolcianus*, consisting of a supposed ancient prophecy in Latin monkish rhymes. For some years longer the Gentleman's Magazine received the chief of his attention. For this miscellany he composed several excellent biographical articles, and in 1744

J O H

published his celebrated "Dictionary of Savage" separately. In 1747, after the failure of a number of abortive projects, he sent out his plans for an English Dictionary in a sumptuously composed pamphlet addressed to the earl of Chesterfield, who, however, concerned himself very little in the success of the undertaking. The time that he could spare from this compilation which had been justly accounted a wonderful exertion of industry was allotted to various literary avocations. In the same year he furnished Garrick with his admirable prologue on the opening of Drury-lane theatre, and in 1749 published another admired imitation of Juvenal which he entitled "The Vanity of Human Wishes." In the same year his tragedy of Irene was produced at Drury-lane theatre under the auspices of Garrick. It was performed thirteen nights with but moderate applause and Johnson satisfied that he was not formed to excel in the drama, wisely gave up the endeavour. In March 1750 appeared the first paper of "The Rambler," the gravity of the tone of which notwithstanding its acuteness of observation richness of illustration and dignity of expression prevented it from obtaining a wide circulation as a periodical paper although when collected into volumes the author himself lived to see it reach a tenth edition. A short time before the appearance of the Rambler half self deluded by his political dislike of Milton he hastily adopted the imposture of Lauder in his attempt to fix the charge of plagiarism on that great poet. When undeceived, however, he insisted upon Lauder's signing a formal retraction, and, possibly as some atonement, wrote a prologue to *Comus*, when acted for the benefit of Milton's grand-daughter. In 1754 the death of his wife proved a severe affliction, not long after which event he charitably and benevolently took Mrs Ann Williams under his roof the blind and destitute daughter of an impoverished Welsh physician. In the year 1755 was published his long-expected Dictionary, to which his name appeared with the degree of M.A. obtained from the university of Oxford, by the good offices of Mr Warter. The approaching publication of this work lord Chesterfield had favourably announced some months before, in two papers of "The World," but Johnson, conscious of having received no sort of support or encouragement from that nobleman during its progress, addressed to him a well known letter replete with pointed sarcasm and manly disdain. This epistle will ever remain an admirable reproach to men of rank, who affect the title of patrons of literature, while they treat its professors with haughtiness and neglect. The Dictionary was received by the public with very general applause; and although its neglect of the northern etymologies, and the defects rendered apparent by more recent research have somewhat lessened its original reputation it still remains the leading work of the kind in the English language. In its progress, however, this great work had done nothing beyond merely supporting him and it appears, from

J O H

an account for a very trifling sum, in the year subsequent to its publication, that his necessities continued unremitted. An edition of Shakespeare's "The Idler" with occasional contributions for a literary magazine formed the sole occupation of several succeeding years. In 1759 he wrote his celebrated romance of "Rasselas, Prince of Abissinia," which fine performance he composed in the space of one week in order to defray the funeral expenses of his aged mother. At length in 1762 the Bute administration granted him a pension of 300*l.* per annum, which he accepted after a short struggle against the receipt of a favour from the house of Hanover. His own sarcastic definition of the word pensioner in the Dictionary was naturally enough quoted upon this occasion but the sterling and acknowledged merits of the man formed a satisfactory apology. His advanced reputation and amended circumstances now considerably enlarged his acquaintance, and he became member of a weekly club in Gerrard-street, Soho composed of the most eminent men of talents of the day and also commenced that intercourse with the Thrale family which produced him so much social and hospitable enjoyment. In 1765 appeared his long promised edition of Shakespeare which was ushered in by an admirable preface, but the work itself did not altogether answer public expectation owing principally to the superficial acquaintance of the commentator with the writings of the age in which Shakespeare flourished. In 1770 although his pension was given without conditions, his attachment to the monarchical side in general politics, led him to compose a pamphlet, entitled "The False Alarm" in favour of the resolution of the house of Commons, in the affair of Wilkes, — that expulsion implied incapacity of re-election. This production was followed by "Thoughts on the late Transactions in Falkland's Island against the conduct of Spain in regard to that unprofitable possession." "The Patriot" written on the eve of a general election in 1774 and "Taxation no Tyranny" a more considerable effort, which made its appearance in 1775 against the arguments of the American colonists relative to the power claimed by the mother country to tax them at pleasure. This pamphlet, although vigorously composed was more dictatorial than argumentative and abounding as it did, with irritating sarcasm did little service to the cause thus espoused. At this time Johnson was encouraged in a view of obtaining a seat in parliament, but meeting with no encouragement from the ministry the scheme was dropped. In 1773 he made a tour to the western isles of Scotland in company with his friend Boswell of which he gives a highly instructive account in his "Journey to the Western Isles of Scotland." In this production he pronounced decidedly against the authenticity of Ossian which sentence involved him in a personal broil with Macpherson. In 1775 he received the diploma of LL.D from the university of Oxford and soon after visits

J O H

France, in company with the Thrales and Bettos. His last literary undertaking was his

Lives of the Poets, which was completed in 1781, they were written to prefix to an edition of the works of the principal English poets, and in a separate form comprise 4 vols. fvo. With an occasional exhibition of political bias, and strong prejudices, a conspicuous instance of which is supplied by the life of Milton they form a valuable addition to Eng. hist. biography and criticism. The concluding portion of the life of this eminent man wasadden'd with the loss of many old friends and by declining health rendered doubly distressing in his case by a morbid apprehension of death which neither his religion nor philosophy could enable him to bear with decent composure. A superstitious trait in his feeling of the former seems indeed to have rendered it more a subject of terror and of awe than of hope or comfort. In 1783 he was greatly alarmed by a paralytic stroke, and his health never wholly recovered the shock although he lived to the 13th December 1784. For some days previously he retained all his horror of dissolution but he finally died with devoutly composed. This event took place in his seventy fifth year and his remains were interred in Westminster abbey with great solemnity being attended by a respectable body of eminent characters, and his statue has been placed in St Paul's cathedral. From the numerous and copious biographical tributes to the memory of Dr Johnson and especially that of Boswell, few persons have been made so well known to the public either as authors or men. In the former capacity he is possibly more to be admired for vigour and strength than for novelty of conception. No writer delivers moral maxims and dictatorial sentences with more force or lays down definitions with more grave precision. He also excels in giving point to sarcasm, and magnificence to imagery and abstraction. His critical acumen setting aside personal and political prejudices, was likewise very great, but he is utterly averse to the easy and familiar both in his style and sentiment, the former of which formed an era in English composition. The admiration of its exuberance of words of Latin etymology and its sonorous rotundity of phrase after having betrayed some able writers into injudicious imitation has duly abated and the share of influence which remains has indisputably improved the general language. As a man, Dr Johnson was in mind as in person tenacious powerful and rugged, but capable of acts of benevolence and of substantial generosity which do honour to human nature. His strong prejudices have been already mentioned and it is to be regretted that his admirable conversational and argumentative powers were sullied by dictatorial arrogance and the most offensive impatience of contradiction qualities that were unhappy heightened by the extreme deference and lavish admiration with which he was treated on arriving at the summit of his reputation. The effect was possibly more injurious to himself than his

J O H

hearts, as it evidently fostered the seeds of bigotry and intolerance with which he set out in life. Upon the whole however both the moral and intellectual character of Dr Johnson stands very high and he may be regarded without hesitation as one of the most eminent in the foremost rank of distinguished writers of the eighteenth century. His works were published collectively in 11 vols. with a life of the author by Sir John Hawkins 1787 and in 12 volumes by Murphy in 1792. *Biography of Johnson by Boswell* Hawkins Murphy & Akens Gen. Biog.

JOHNSON (SAMUEL) a dramatic writer and performer distinguished for the eccentricity of his character and his productions. He was a native of Cheshire and by profession a dancing master but afterwards took to the stage. He was the author of *Hurdi-drumbo* or the *Supernatural* a comedy acted at the Haymarket in 1729 which appears to have been one of the most extravagant and the most popular of his dramas. The others are *Cheshire Comix* 1730

The Blazing Comet, 1731. *The Mad Lovers* or the *Beauties of the Poets* 1732. *'All Alive and Merry'* 1738. *A Fool made wise* 1761 and *Sir John Falstaff* in *Masquerade*. He died in 1773.—*Theatrum Duct*.

JOHNSON (THOMAS) an English botanist of the seventeenth century was born at Selby in Yorkshire and bred an apothecary in London. He was first known to the public by a small piece entitled *Iter in agrum Campanum* 1620 which was followed by a new edition of Gerard's Herbal. He greatly distinguished himself in the cause of Charles I and in consequence, to reward both his science and his loyalty was honoured with the degree of MD from the university of Oxford. He likewise reached the rank of lieutenant colonel in the king's army but in a skirmish near the Basing-house received a wound, of which he soon after died as September 1644. Besides the works above-mentioned he was author of *Materia Botanica* London 1690, *De Thermae Bathonica*, and a translation of the works of the French surgeon Ambrose Paré 1643 and 1676.—*Pittony's Bot Sketches*.

JOHNSON (THOMAS) an eminent classical scholar was a native of Oxfordshire and educated at Magdalen college Cambridge of which he was afterwards a fellow. He took the degree of MA in 1692, after which he left the university and married. He was assistant at Eton and Ipswich and himself kept a school at Bredford and other places, but neither the time of his birth nor of his death are accurately known. His character is said to have been reckless but he was an excellent scholar. He is best known as the editor of Sophocles' Oxford and London 1705 and 1746 3 vols., "Gratus de Venatione cum notis," "Cebetis Tabula," "Graecorum Epigrammata de lectus," "Quæstiones Philosophicae," "An Essay on Moral Obligation." He was also one of the editors of Stephen's *A Theatrum Lingua Latina*. — Herwood's *Almanac*. Eton

J O H

JOHNSON (Sir WILLIAM) a military officer, who served with distinction in North America in the middle of the last century. He was a native of Ireland, and was descended from a good family long settled in that country. Early in life he went to America, under the care of his uncle, sir Peter Warren, K.B. and entering into the army, he gradually rose to the rank of colonel. In 1756 he was appointed to the command of an expedition fitted out against the French fort of Crown Point, when though the main object of the undertaking was not effected, the colonel gained considerable fame by defeating a body of Indian Canadians and French troops commanded by baron Dieskau, who was taken prisoner. The British general was rewarded for his conduct on this occasion by a baronetcy and a gratuity from parliament of 5000l. He had settled on the Mohawk river, and had not only acquired a considerable estate but had also ingratiated himself both with the American settlers and the neighbouring Indians. His shrewdness as a negotiator was displayed in his intercourse with the latter with whose manners and customs he was intimately acquainted. He made a treaty with the Senecas (one of the revolted tribes of the Iroquois and the most formidable enemies of the English) which was concluded at his house at Johnson's-hall where he appeared April 5 1754, as English agent and superintendent of Indian affairs for the northern parts of America, and colonel of the six united nations. He died at his seat at Johnson's-hall in the province of New York in 1774 much regretted for his private worth as well as for his abilities, which had been so usefully exerted in the cause of his country. He was the author of a paper on the Customs, Manners and Languages of the Northern Indians of America, published in the 63d volume of the Philosophical Transactions.—*Bathurst's Burmese War.*

JOHNSTON (AERONUR) a Scotch physician and epigrammatist, born at Caskieburn in Aberdeenshire 1587. He became at an early age a member of the university in the neighbourhood of the place of his nativity, but went to the continent without graduating and after studying some time at Rome and Padua, took the degree of doctor of medicine in the latter university in 1610. He afterwards journeyed through Italy and over the greater part of the north of Europe, till he eventually married and settled at Paris, in which capital many of the compositions by which he distinguished himself were written. In 1638, having spent upwards of forty years in foreign travel, he returned to his native country, and became principal of the university of Aberdeen. Laud, archbishop of Canterbury attending Charles I into the north was much pleased with him, and took him under his protection, a favour which he rewarded by dedicating an elegant paraphrase of the Psalms in Latin verse to his patron. The interest of the prince obtained him the appointment of physician in ordinary to the king,

J O H

on which he came to reside in London, but died soon after of a dysentery while on a visit to a married daughter at Oxford, in 1641. Besides the paraphrase alluded to, he was the author of a collection of Latin epigrams, the *Museus Athonius* &c. and edited a selection from the works of Scottish authors entitled *Poetarum Scottorum deinceps. — Monetae by Baenae. Beatus' Dissertation.*

JOHNSTON (JOHN) a Polish physician and natural philosopher of great eminence, born at Smolensk 1603. He spent a considerable time in that island, occupied in those studies, his proficiency in which afterwards gained him so much reputation throughout Europe. He had scarcely attained his nineteenth year on his first arrival in England and after residing for some time at Cambridge became a member of the university of St Andrews. Thence he removed to Leyden and graduated as MD. in that university, receiving also an honorary degree from Cambridge. He was the author of a Latin work called *The Wonders of Nature divided into Ten Classes;* the natural histories of fishes of birds beasts and insects, contained in four different treatises, and two others entitled *Dendrophylax,* and *Syntagma Dendrologicum.* His death took place in 1675.—*Moretti Sanc Onos.*

JOHNSTONE or JOHNSON (CHARLES) an ingenious inventive writer was a native of Ireland and descended from the Johnstones of Annandale. He was born in the early part of the last century and after receiving a good education was called to the bar and came over to England to practice but being afflicted with deafness, confined himself to the employment of a chamber counsel. His success not being great in this way he turned his attention to literature, and his first literary attempt was the celebrated *Chrysal or the Adventures of a Guinea,* 2 vols. 12mo, a work which attracted so much attention that the author was induced to add two volumes to his first work, which were equally well received. The secret springs of some political intrigues on the continent were unfolded in this production which, together with smart and piquant sketches of many distinguished characters of the day including statesmen, noblemen women of quality citizens, and persons of every description who had claimed any share of public notice rendered it exceedingly popular. As usual in such works however some truth is blended with much fiction and although in regard to known personages, little is absolutely without foundation much exaggeration prevails. His exposure of the excesses of a club of fashionable profligates, held at the seat of a disgraced nobleman in Buckinghamshire produced no small sensation at the time. He wrote other works of a similar class, in which much knowledge of life and manners is united to a considerable talent for spirited caricature. The names of them are,

The Reverie or a Flight to the Paradise of Fools, 1762 2 vols. 12mo; " *Aranea, Prince of Betty,*" 1774, 2 vols., " *The Pil-*

JOH

gest, or a Picture of Life' 1775, 2 vols.; and the "History of John Juniper Egg, alias Juniper Jack," 1781, 3 vols. In 1783 he embarked for India, where he employed himself in writing essays for the Bengal newspapers and finally became a joint proprietor of one himself by which and other speculations he obtained considerable wealth. He died in Calcutta about 1800.—*Gent. Mag.* lxxv.

JOHNSTONE (Chevalier de) a Scottish officer attached to the Stuart family during their attempt to gain possession of the throne of Great Britain in the middle of the last century. He was the only son of James Johnstone merchant of Edinburgh and was related by alliance or descent to some of the first families in Scotland. Being educated in the principles of the Jacobites he left Edinburgh privately on hearing of the landing of the pretender in 1745 and joined that unfortunate prince to whom he for some time was and despatched, after having acted in the same capacity to lord George Murray. After the battle of Preston Pans, he held a captain's commission and served in the actions which subsequently took place. When the battle of Culloden had ruined the cause of his master he sought for safety in flight, and he was fortunate enough to escape to Paris, where after subsisting for a while on the bounty of the government to the Scots exiles, he entered into the service of France and was sent to the French colonies in North America whence he returned on the conquest of Canada by the English. He appears to have spent the remaining part of his life in France and died in that country at an advanced age. His latter years were employed in writing an interesting work published at London in 1820 under the title of "Memoirs of the Rebellion in 1745 and 1746 translated from a French MS. originally deposited in the Scots College at Paris." 4to.—*Preface to the Memoirs*.

JOHNSTONE (GORDON) an English diplomatist who was one of the commissioners sent out with the earl of Carlisle and Eden (lord Auckland) to treat with the congress of the American states, during the war of independence. He was the son of a Scottish baronet, and was educated for the maritime profession. In 1760 he was appointed master and commander in the royal navy two years after post-captain, and in 1763 he was made governor of West Florida. Returning to England he obtained a seat in the house of Commons first for Appleby and then for Cockermouth. In consequence of some reflections which he threw out in a speech in parliament, he fought a duel in 1770 with lord George Germaine afterwards viscount Sackville. He also displayed his zeal in discussions relative to the affairs of the East India Company and distinguished himself by a violent attack on the conduct of lord Clive. His death took place in 1787. He was the author of a tract entitled, "Thoughts on our Acquisitions in the East India, particularly in Bengal," 1771 8vo.—*Leverrier's Univ. Biog.*

JOHNSTONE (JAMES) an ingenious phy-

JOL

sician and physiologist writer of the last century. He was a native of Abergavenny in Scotland, and was educated at Edinburgh, where he took the degree of MD in 1750. He then settled as a medical practitioner at Kidderminster, where he published a tract on malignant fever, a disease in the treatment of which he had been very successful, and in this work he noticed the effect of the mineral acids in counteracting contagion a fact of which he claimed the discovery. He subsequently removed to Worcester and died in that city, at the age of seventy-one, in 1802. He was the author of

Medical Essays and Observations, with Dissertations relating to the Nervous System 1795 8vo. This work contains an essay on the ganglia of the nerves exhibiting some novel and important ideas relative to the use of those parts of the nervous system. He also published several medical papers in the Philosophical Transactions and in periodical journals and two biographical essays.—*Hutton's Abbr. of the Philos. Trans.* vol. xi.

JOINVILLE (JOHN STRE de) seneschal of Champagne an eminent French historian of the age of Lewis IX. He accompanied that prince in his first crusade or expedition to Egypt, in 1249 when he shared his master's captivity and the hardships and dangers with which it was attended. The result of this undertaking convinced him of the impolicy of the king's views, and he excused himself from joining in the second and more unfortunate crusade of the French monarch on the plea of having been ruined by the first. He employed himself at home in writing the memoirs of Lewis IX or St Lewis, and his work is one of the most interesting documents existing relative to the history of the middle ages. He appears to have finished this production in 1305 when he must have been more than ninety years old. His memoirs were published in 1668 with notes by D'Acange, and at the Louvre 1761 folio from a more correct MS. Mr Jones, of Hafod, printed his English translation of Joinville's work in 1897 3 vols. 4to.—*Alkin's G. Eng. Eng. Univ.*

JOLIVET (JEAN BAPTISTE MOYAT, count de) counsellor of state and commandant of the legions of honour was before the Revolution an advocate. In 1790 he was chosen by his fellow citizens administrator of the department of Seine and Marne, and afterwards deputy to the legislative assembly in which he always ranged himself with the constitutionalists. He had the courage to denounce the jacobin club before the National Convention just before the 10th of August, 1792 notwithstanding which he escaped in safety from the perils of that stormy period. In 1795 he was appointed conservator-general of mortgaged property [des hypothèques]. In 1798 he published a work entitled, "De l'impôt sur les Successions, et de l'impôt sur le Sol, et Comparaison de ces deux Impôts, sur entre eux et avec les Contributions directes." This was followed by another financial tract. After the accession of Napoleon, he was introduced into the council of state and subsequently

J O M

charged with the organization of the four new departments on the left bank of the Rhine. On his return to Paris he was made a commandant of the legion of honour. He retained the office of counsellor of state till 1814. His death took place in 1819 at the age of sixty-four. Besides the works already noticed, he was the author of a treatise on the fundamental principles of social government, another on the boundary of the Rhine; and a third, entitled "De l' Expertise."—*Bieg Nouv des Contemp.*

JOLY (GUY) a French writer of the seven teenth century, the confidential secretary of cardinal de Retz. He held also the situations of syndic of the Hotel de Ville at Paris and of king's counsellor at the Chatelet. Besides a variety of tracts of minor importance, he compiled under the title of *mémoirs* of his times, an interesting account of the transactions of the period from 1648 to 1665 in which the private history of his patron is included. An English version of this work appeared in 1775.—*Nouv. Nouv. Des. Hist.*

JOLY (MARC ANTHONY) a French dramatic writer. He was born in 1672 and was the son of the keeper of a coffee house at Paris, which was the resort of men of letters. At one of their entertainments the tale of madame Murat, entitled "Le Palais de la Vengeance" became the subject of conversation. Amazed by the discussion of the literati which he witnessed, Joly shut himself up in his chamber and speedily composed a rhymed drama in three acts, which he called

"Le Rôle des Amants." He offered to read this piece to the literary visitors of the coffee-houses, and it was found to possess so much merit, that it was performed at the theatre in 1715, and was received with great approbation. He produced several other pieces but all inferior to the first, with the exception of "La Fausse Jalouse," acted in 1756. He obtained the office of censor royal, and died in 1755.—*Bieg. Uni.*

JOLY (MARIE ELIZABETH) a distinguished French actress, born at Versailles in 1761 and died at Paris, May 5 1798. She commenced her theatrical career in 1781, and soon rose to great eminence as a representative of the beauties of the French drama, particularly excelling in the chameauxes of Molierre. She subsequently appeared in more lofty characters, as Lise de Castro and Athalia. In 1793 she was imprisoned among other political victims, and only obtained her liberty on condition of performing at the theatre of the Republic. She soon after quitted that theatre to join the company which performed at the théâtre de Louvois. For some years she was the delight of the French metropolis, but was at length attacked with a disease of the chest which ultimately proved fatal. She was married to M. Duhesme who published a collection of verses consecrated to her memory.—*Bieg. Uni. Bieg. Nouv. des Contemp.*

JOMELLI (Nicasio) a celebrated composer and musician of the last century born in 1714, dying in 1770, in the Neapolitan dominions,

J O N

where he studied the rudiments of the sciences of which he afterwards became so distinguished a professor under the name Muzio but completed his musical education under Leo and father Martini. At the age of twenty-three he produced his first opera, "L'Erore Amo reso" at the Florentine theatre in Naples, the enthusiasm excited by which and some of his subsequent compositions, placed his name at once in the first rank of popular favourites. Jomelli afterwards visited Bologna, Rome, Venice and most of the other principal cities of Italy carrying away the palm every where from all his rivals. On his return to Naples however he was not so fortunate and the chingrin he experienced in consequence of the failure of his "Ifigenia," in 1773 produced a paralytic stroke. From this affection he partially recovered and even composed the most celebrated of all his church music the sublime

"Miserere" for two voices, subsequently but died the following year and was honoured with a public funeral. Besides a great variety of devotional pieces he was the author of thirty six operas all of which with the single exception of the one above mentioned met with the most unqualified success.—*Burney's Hist. of Mus. Bieg. Dict. of Mus.*

JONAS (ARNGRIM) a learned Icelandic writer distinguished as an historian and antiquary. He was pastor of Melstadt, in Iceland and conductor of the bishop of Holm Gud brand Thorlak whose life he published at Copenhagen in 1630. He is said to have studied astronomy under the celebrated Tycho Brahe and was well skilled in that science, but his works relate principally to the history of Iceland. Among them are the following: "Brevis Commentarius de Islandia quo Scriptorum variorum Errores deteguntur ac quorundam Convivis in Islandia occurrustr" Hafn 1593, "Svo Crymogea seu Rerum Islandicarum Libri III," "Pastora pro Patria Defensoria," Hamb 1618 4to "Anatome Blefkrimensa [see BLEFREN (DITUMAR)], Specimen Islandicum Historicum et magna ex parte Chorographicum Auct 1643 4to This last was a posthumous publication as the author died in 1640 in the ninety fifth year of his age. He also translated the "Jomsvikings Saga" from the Icelandic into Latin. Among the northern antiquaries and historians there are few if any who are held in higher estimation than Arngrim Jonas.—*Sibbern Bib. Her. Dan. Nor. Bieg. Uni.*

JONAS or JONÆ (RUNOLF) an Icelandic scholar who was the son of a clergyman. He studied in the university of Copenhagen and became rector of the school of Holm in Iceland. In 1649 he removed to Copenhagen, obtained the title of master of arts, and was placed at the head of the academy of Christianstadt in Scania. He died of the plague in 1654. His works are "Lingua Septentrionalis Elementa" 1651, and "Grammatica Islandica Rudimenta," which display to advantage his acquaintance with northern literature.—*Bieg. Uni.*

JONES (EDWARD) a modern Welsh poet,

JON

who enjoyed the honour of being bard to the prince of Wales. He was a native of Monmouthshire and by profession a musician highly distinguished for his skill as a performer on the harp. He published "Musical and Poetical Relics of the Welsh Bards" "Minstrel Serenades for the Harp and Piano-forte."

Lyric Airs "containing specimens of the music of various countries and Terpsichore's Banquet." The pardonable predilection of Mr Jones for the primitive language of his native country rendered him a zealous defender and exponent of its merits in relation to which his industry and research could be equalled only by his enthusiasm. He died in 1821.—*Biog. Dict. of Mus.*

JONES (GRIFFITH) a miscellaneous writer born in 1721 and died September 12 1786 He was the author of a great number of works translated from the French, and published anonymously and he edited the London Chronicle and was coadjutor with Dr Johnson in the Literary Magazine and with Smalllett and Goldsmith in the British Magazine. He also in conjunction with his brother Giles Jones, secretary to the York building water works company and Newbery the bookseller produced the popular little story books for the amusement of children published by the latter.—*Biog. Univ. Jones's Biog. Dict.*

JONES (HEYRY) a dramatic writer was a native of Drogheda in Ireland the date of whose birth is unknown. He was bred a bucklerer but attached to the muses, he showed a portion of talent which secured him some respectable attention and being recommended in 1745 to the earl of Chesterfield then lord lieutenant of Ireland that nobleman brought him with him to England, and recommended him to many of the nobility. He also patronized a large subscription to his poems, and even took upon himself the alteration and correction of his tragedy of the Earl of Essex which he introduced to the managers of Covent-garden. Jones was however at once capacious in temper and defective in economy and after experiencing many reverses chiefly in consequence of his own imprudence he died in great distress in April 1770. His principal performance was the tragedy of the Earl of Essex already mentioned an unfinished tragedy, called the "Cave of Idra" and a few poems, which although not contemptible do not exceed me ducity.—*Biog. Dram.*

JONES (INTAG) the reviver of classical architecture in England in the beginning of the seventeenth century. He was a native of London where his father was a cloth worker and was born about 1572. Destined when young for a mechanical employment, he emerged from obscurity by dint of talent and attracted the notice of that great patron of the fine arts the earl of Arundel, and of William earl of Pembroke the latter of whom supplied Jones with the means of visiting Italy for the purpose of studying landscape painting. He went to Venice where the works of Palladio inspired him with a predominant taste for

JON

another art of architecture in the practice of which he rose to almost unrivaled eminence. His reputation procured him the post of first architect to Christian IV king of Denmark, who visiting his brother in-law James I, in 1606 brought Jones with him to England. He was induced to remain here and was appointed architect to the queen and subsequently to Henry prince of Wales besides which he had a grant in reversion of the office of surveyor to the board of works. After the death of the prince he again visited Italy and remained there some years till the surveyorship becoming vacant he returned home to occupy it. During this interval he extended his knowledge and improved his taste from the examination of the models of ancient and modern art and acquired a fund of ideas for the exercise of his genius in the beautiful edifices which he afterwards designed and executed. The banqueting house at Whitehall (intended as an adjunct to a magnificent palace) still remains a splendid monument of the skill and science of this great architect. The church of St Paul, Covent garden (recently rebuilt after the original design), some houses on the west side of Lincoln's Inn Fields and the water gate at York buildings in the Strand may also be considered as specimens of his ability. He was appointed, in the reign of James I commissioner for the repairing of St Paul's cathedral but the works there were not commenced till the following reign. The choir in question (afterwards ruined by the memorable fire in the reign of Charles II), was a massive Gothic pile, erected in different ages. In restoring a portion of it in the ancient style Jones succeeded but indifferently, and he heightened the ill effect of his work by the incongruous addition of a Roman portico beautiful in itself but disagreeable because misplaced. He committed a similar error at Winchester cathedral another Gothic building in which he erected a screen in the style of classic antiquity. Like his celebrated successor Wren he seems not to have duly felt or appreciated the peculiar character and distinctive beauties of the pointed style of building of which so many fine specimens remain in the ecclesiastical structures of the middle ages in England France and Germany. He built the front of Wilton house in Wiltshire for Philip earl of Pembroke and was much employed both by the court and by many of the nobility and gentry so that he realized a handsome fortune. His talents were often put in requisition for the purpose of designing the scenery and decorations for masques a species of dramatic entertainment, fashionable in the early part of the seventeenth century. In these pieces the dialogues and songs were composed by Ben Jonson who quarrelled with Jones and abused him in epigrams and satires. The vanity of the poet was not the only misfortune to which the architect was exposed. Being a Roman catholic and a partisan of royalty he suffered in the civil war, and in 1646 he was forced to pay a fine of £45. as a malignant or cava-

JON

lier. The sale of the royal cause and the death of the king, distressed him greatly, and at length worn down by sorrow and suffering, he died July 21, 1653. He is said to have been well acquainted with geometry and was competently skilled in various branches of literature and science. As an author he is known by a work relative to that curious monument of former ages, Stonehenge on Salisbury plain published after his death by his son-in-law Mr. Webb. The object of this treatise, composed by the command of king James I is to prove that Stonehenge was erected by the Romans and was an hypothal temple dedicated to the god Coles. This opinion is supported with much ingenuity, and though it has been often reprobated as erroneous and absurd, it is by no means the most improbable or indefensible speculation to which the structure in question has given rise. A collection of the architectural designs of Inigo Jones was published by Kent, in 1777 and 1744 and others more recently by Ware and by Leon.—*Wat. pol. : Anecd. of Paint. &c. Big Brv. Eds.*

JONES (JEREMIAH) a learned English dissenting divine was born as it is supposed of parents in opulent circumstances, in the north of England in 1693. He was educated by the rev Samuel Jones, of Tewkesbury who was also tutor of Chandler Butler and Secker. After finishing his education he became minister of a congregation of protestant dissenters near Nailsworth in Gloucestershire, where he also kept an academy. He died in 1724 at the early age of thirty-one. His works are a *Vindication of the former Part of St Matthew's Gospel from Mr Whiston's Charge of Dualocations, &c.* 1719. A new and full Method of Setting the Canonical Authority of the New Testament," 1726, 2 vols, 8vo which was followed by a third volume. These works, which are highly esteemed by the learned world have been since republished by the conductors of the Clarendon press of Oxford.—*Moth. Mag. April 1800. Genl. Mag. lxxii.*

JONES (Owen) a Cambrian antiquary whose memory is associated with an institution, the object of which is to collect and preserve the monuments of the ancient literature and customs of Britain. This gentleman carried on for many years the trade of a turner in the metropolis and died at his house in Thames-street, in 1816 aged seventy-four. He was a native of Denbighshire, in North Wales, and was enthusiasmatically interested in the antiquities of the principality. He published at his own expence all the ancient poetry which could be collected, together with various historical documents, under the title of "The Archaeology of Wales," 3 vols, 4to besides the entire works of the celebrated Cambrian bard, Dafydd ab Gwilym, and other productions. He also procured transcripts of the unpublished Welsh poetry anterior to the end of the seventeenth century, forming about 100 vols, 4to. In 1773 Mr. Jones, in conjunction with several other persons, formed the Cymrologia (or Cambrian) Society, for the purpose of patronizing the bards of Wales,

JON

and promoting the study of the ancient British language, and of the national music performed on the harp. Prize medals and other rewards were offered for the production of the best musical or poetical compositions by this society of which Mr. Jones was considered as the father and founder.—*Moth. Mag.*

JONES (PAUL) a naval officer in the service of the Americans during the war which separated the colonies from Great Britain. He was born at Selkirk in Scotland in 1736, and going to America when very young he became a deman of that country in 1775 he obtained a commission from the congress and sailed in a squadron commanded by commodore Hopkins destined against New York. His bravery was rewarded with the rank of captain and he was appointed to the command of a frigate of thirty six guns. He sailed across the Atlantic, and in 1777 he made a descent at Whitehaven where he destroyed the shipping in the harbour and afterwards landing in Scotland he attacked the manor of lord Selkirk and carried off the plate and furniture. It is said however that his design was against the liberty and not the property of lord Selkirk and that he purchased the booty from his crew and restored it to his lordship. After taking the Drake sloop of war off Carrickfergus, he sailed for Brest, where he obtained a reinforcement of three ships with which he scoured the English seas. Meeting with the Baltic fleet near Flamborough Head on the coast of Yorkshire convoyed by the Seraph frigate and the Countess of Scarborough a very severe action took place in which Jones was victorious and the Seraph was captured. Arriving at L'Orient in February 1780, he was invited to Paris and was received with high honours by Louis XVI who presented him with a valuable sword. He returned to America in 1781, when the congress voted him a medal of gold and appointed him to the command of a seventy four gun ship. He afterwards served under d'Estaing in the expedition against Jamaica. In 1792 he offered his services to the French government, wishing to be employed as an admiral but his proposal was not accepted. He died at Paris in July that year.—*Big. Uni. Big. Noss. des Contempn.*

JONES (WILLIAM) an eminent mathematician was born in 1690 in the Isle of Anglesey, North Wales. His parents were yeomen or small farmers, who gave him the best education their circumstances would allow consisting of reading, writing, accounts, and the Latin grammar. Addicted very early to the study of the mathematics, he began his career of life by teaching these sciences on board of a man of war. In his twenty-second year he published a compendium of the Art of Navigation which was much approved, and in his naval capacity was present at the capture of Vigo. On his return to England he established himself as a teacher of mathematics in London, where, in 1706, he published his "Synopsis Palmariorum Mathematicorum, or a new introduction to the mathematici

JON

a high work is still held in considerable estimation. Highly respected in his private capacity, he obtained the friendship of the most eminent persons of the period in which he lived and among others, of lord Hardwicke who conferred upon him the office of secretary of the peace. He was also in the habit of intimacy with sir Isaac Newton Halley Mead, Dr Johnson, and the earl of Macclesfield, in whose family he resided at Shropshire, and who, on his endurance of a considerable loss by the failure of a banker, conferred on him a secure place of considerable emolument. He had previously to this event, become first a member and then vice president of the Royal Society. While at Shropshire he married Miss Nur a lady of great mental endowment who brought him three children, one of whom was the distinguished subject of the next article. Mr Jones died of a polypus of the heart in July 1749. Besides the works already mentioned, he was the author of several mathematical and other papers in the Philosophical Transactions which are distinguished by neatness accuracy and perspicuity. According to Mr Nichols he had also made considerable progress in a general introduction to the mathematical and philosophical works of Newton the MSS of which he left in the hands of lord Macclesfield. These have never seen the light, and the statement has neither been confirmed nor disproved by any memorandum found among the papers of his celebrated son. It was the good fortune of Mr Jones to discover among the papers of the mathematician Collins, which fell into his hands, a tract of Newton entitled *Analysis per Quantitatem Series Fluxiones ac Differentias cum Enumeratione Linearum tertii ordines* which he published with the consent of its great author and thereby when the dispute ran high between Leibnitz and the friends of Newton concerning the invention of fluxions, contributed materially to the decision of the question in favour of his countryman.—*Lord Tinsmouth's Memoirs of Sir W Jones. A choice of his best Works. Math. Dict.*

JONES (air WILLIAM) an eminent lawyer and most accomplished scholar the son of the subject of the preceding article was born in London on the 28th of September 1746. He lost his father when only three years of age and the care of his education fell on his mother a lady of uncommon mental endowments. At the close of his seventh year he was placed under Dr Thackeray, at Harrow who was so impressed by his happy genius that he observed, were Jones left naked and friendless on Salisbury plain he would make a way to fame and fortune. Dr Sumner who succeeded Dr Thackeray thought equally highly of him and scrupled not to declare that he believed he knew more of Greek than himself. In 1764 he was entered of University college Oxford and his mother who devoted herself entirely to his welfare, fixed her residence in that city. Here his ardent desire to acquire the Oriental languages induced him to support, at his own expense, a native of Aleppo, qual-

JON

fied to instruct him in the true pronunciation of the Arabic language and as it was soon perceived that he would not despise his time the college tutors allowed him to follow his own plan un molested. His great object was to obtain a fellowship to spare his mother the expense of his education, but not succeeding to his wishes he accepted in 1765 the offer of becoming tutor to lord Althorpe the present earl Spencer and some time after he obtained a fellowship also. He availed himself of a residence at the German Spa, with his pupil in 1767 to acquire the German language, and on his return he distinguished himself by translating into French a Persian life of Nadir Shah brought over in MS by the king of Denmark at the request of the under secretary of the duke of Grafton. Another tour to the continent with his pupil and family followed which occupied his time until 1770 when his tutorship ceasing he entered himself as a law student in the Temple. He did not however wholly sacrifice literature to his professional pursuits, but on the appearance of the life and works of Zoroaster by Anquetil du Perron he vindicated the university of Oxford which had been attacked by that writer in an able pamphlet in the French language which he wrote with great elegance. He also published in 1778 a small collection of poems chiefly from the poets of Asia, and he was the same year elected a fellow of the Royal Society. In 1774 appeared his work *De Poesi Asiatica* containing commentaries on Asiatic poetry in general, with metrical specimens in Latin and English which excited great attention both at home and abroad. He was soon after called to the bar and in 1776 made a commissioner of bankrupt. About this time his correspondence with his pupil evinced the manly spirit of constitutional freedom by which he was actuated and to his feelings on the American contest he gave vent in a very spirited classical Latin ode to liberty. In 1778 appeared his *Translation of the Orations of Isocrates*, with a prefatory discourse notes, and commentary which for elegance of style and profound critical and historical research excited much admiration. In the mean time he rapidly advanced in professional reputation although his opinion of the American contest stood in the way of his progress to legal honours. In 1780 he was respectfully supported in a contest for the representation of the university of Oxford but did not succeed. The disgraceful tumults of the same year induced him to write a pamphlet "On the Legal Mode of suppressing Riots," and in the following winter he completed a translation from the Arabic of seven poems, of the highest repute. He also wrote an ode on the marriage of lord Althorpe and another in the fervid and free strain of Alceus commencing "What constitutes a state?" which is familiar to all the literary admirers of liberty. These sentiments did not prevent a professional "Essay on the Law of Bulwarks." He distinguished himself in 1782 among the friends

Q

JON

to a reform in parliament, and also became a member of the Society for Constitutional Information. The same year he drew up a short

Dialogue between a Farmer and a Country Gentleman, on the Principles of Government, 'for the publication of which tract the dean of St Asaph, afterwards his brother in law had a bill of indictment preferred against him for sedition. Upon this event he sent a letter to lord Kenyon, then chief justice of Chester owning himself the author and defending his position. This event, however added to the want of union among the members of opposition, seems to have damped his political ardour, and on the accession of the Shelburne administration, through the influence of lord Abingdon he obtained what had long been the chief object of his ambition the appointment of judge in the supreme court of judicature Bengal to which he was nominated in March 1783, and knighted. He soon after married Miss Shipton daughter to the bishop of St Asaph and embarking with his bride for India, he arrived at Calcutta in September 1783. Here a new field of action opened to him and he planned a society in that capital similar to the Royal Society of London of which new institution he was chosen the first president. He then applied himself with ardour to the study of the Sanscrit, and his health soon suffering from the climate, he took a journey through the district of Burzor, during which cessation of public duties he composed a tale in verse called "The Enchanted Fruit or the Hindoo Wife and a Treatise on the Gods of Greece Italy and India. In 1785 a paradoxical work entitled The Asiatic Museum was begun at Calcutta, to which he communicated several poetical compositions of the minor kind among which were some hymns addressed to as many Hindoo deities. He soon employed his active mind in planning the compilation of a complete digest of the Hindoo and Mahometan laws, with a view to the better administration of justice among the natives. This work he did not live to finish but its subsequent accomplishment was entirely owing to his recommendation and primary labour. His object in this instance was to secure a due attention to the rights of the natives, and he showed himself equally jealous of those of the British inhabitants, by opposing an attempt to supersede the trial by jury. The publication of the "Asiatic Museum," or memoirs of the society to which he had given birth, also engrossed much of his attention; and it need scarcely be added, that he enriched them himself with a number of curious and interesting papers. In 1790 he gave to the world the translation of an ancient Indian drama, entitled "Saccata, or the Fatal Ring," which, for its novelty of costume, imagery, and design is extremely curious. A work which had long employed this indefatigable genius and scholar being a translation of the "Ordnances of Mena," a famous Indian legislator, appeared early in 1794, being a very interesting work to the

JON

student of ancient manners and customs. The December of the preceding year lady Jones had been obliged to proceed to England for the recovery of her health, and sir William was to have followed when he had concluded the Hindoo and Mahometan digest. Unhappily however he was seized in April 1794 at Calcutta with an inflammation of the liver which terminated his existence on the 27th of the same month, in the forty-eighth year of his age. Few men have died more respected and regretted than this amiable man and eminent scholar who as a linguist has scarcely ever been surpassed. His acquaintance with the history philosophy laws religion science and manners of nations was most extensive and profound. As a poet, too, he would probably have risen to great eminence if his ardour to transplant foreign beauties and professional and dis simulacra pursuits had allowed him to cultivate his own invention with sufficient intensity. His private character was estimable in all the domestic relations and he was equally liberal and spirited in public life. The memory of sir William Jones received many testimonies of respect both in England and India. The directors of the East India company voted him a monument in St Paul's cathedral and a statue in Bengal but the most effectual monument of his fame was raised by his widow who published a splendid edition of his works in 6 vols 4to 1799 and also at her own expense placed a fine marble statue of him executed by Flaxman, in the anti-chamber of University college Oxford. He died without issue.—*Memoirs by Lord Teignmouth. Nichols's Lit. Anec. Rec'd Cyclop.*

JONES (WILLIAM) an episcopal clergyman eminent for his learning ability and public spirit. He was born in 1736 at Lutwick in Northamptonshire and received part of his education at the Charterhouse school London whence he removed to University college Oxford. He there became a convert to the philosophy of Hutchinson and having formed an acquaintance with Mr Home afterwards bishop of Norwich he persuaded him to adopt the same system, and these two gentlemen distinguished themselves as the principal champions of the Hutchinsonian doctrines. Mr Jones took the degree of BA in 1749 and having entered into orders he became curate of Finedon and afterward of Waden hoe both in his native county. His first publication was A Full Answer to Bishop Clayton's Essay on Spurts 1753 8vo, and in 1757 appeared his Catholic Doctrine of the Trinity proved from Scripture, which passed through many editions. He next turned his attention to natural philosophy and made experiments with a view to elucidate the peculiar system he had adopted. The fruit of his researches was the publication of "An Essay on the first Principles of Natural Philosophy," 1766 4to. In 1766 archbishop Secker presented him to the vicarage of Bethesda, in Kent and in the next year to the rectory of Pucklehey in the same county. At the latter place he wrote "Remarks on the Coffins

JON

sional' of archdeacon Blackburne, and produced some other tracts. About 1776 he took up his residence at Mayland, in Suffolk where he held the perpetual curacy, and soon after he exchanged his living of Fluckley for the rectory of Paston, in Northamptonshire. In 1781 he published *Physiological Disquisitions, or Discourses concerning the Natural Philosophy of the Elements* &c, previously to which he had been admitted into the Royal Society. His next production was a "Course of Lectures on the figurative Language of the Holy Scripture" 1787 8vo. Alarmed at the progress of democratic principles, on the occurrence of the French Revolution he employed his pen in the composition of *A Letter from Thomas Bull to his Brother John*, which was widely circulated by the friends of government, and he also published a collection of tracts under the title of *The Scholar armed against the Errors of the Times* 2 vols 8vo. On the death of his friend bishop Horne he published *Memoirs of his Life Studies and Writings*, 8vo 1795 of which a second edition appeared in 1799 with a prefixed exposition of the theological and philosophical doctrines of Hutchinson. In 1798 he was presented to the sinecure rectory of Hollingbourne in Kent which he did not long enjoy dying February 6 1800 in consequence of a paralytic stroke.—*Genl Mag Alder & G Bung*

JONSIUS (JOHN) a learned German philosophical and philosophical writer in the seven
teenth century was born at Rendsburg in Holstein in 1624. He was educated in his native place and afterward removed to Frankfurt where he cultivated literature and philosophy with great success but died prematurely at the age of thirty five. He was the author of a dissertation *De Historia Peripatetica* published at Hamburg 1652 &c which has led the learned world to regret that his continuation of the same subject has never reached the public. He also wrote *De Ordine Librorum Aristoteles Fragmentum*, *De Spartanis aliquae nonnullis Epistola ad Marquardum Gadum*, and *De Scriptoribus Historia Philosophiae*, 1659 &c to which last work was republished by Dornus in 1716 &c with a continuation to the editor's own time.—*Fabre Bibl. Græc. Sacra. Omon.*

JONSON (BENJAMIN) one of our most celebrated English poets, the contemporary and friend of Shakespeare whom he has been accused by some but on insufficient grounds of regarding with envious and malignant feelings. He was the posthumous son of a clergyman, who had suffered considerable privations for his religious opinions and was born June 11 1574 at Westminster, at the grammar-school of which city he was placed under Camden, at an early age till his mother marrying again to a person who held the humble occupation of a bricklayer, young Ben, as he was even then familiarly called, was taken home abruptly by his father-in-law and employed by him as an assistant in his trade. The ardent spirit of the future poet revolted against his condition

JON

he fled from home and entered the army as a private soldier in which capacity he served with much commendation from his officers on the score of personal courage during a campaign in Holland. Returning to England he quitted the service and although his straitened circumstances threw in his way obstacles of no common magnitude he determined on applying himself to literary pursuits. With this view he contrived to enter himself of St John's college Cambridge, but his failing resources eagerly as he desired it prohibited him from continuing long at the university. He went to London and commenced at once author and actor by profession two callings then frequently combined. His progress as a performer was not rapid and before he could make any great impression in his favour a quarrel with a brother actor seemed to close every avenue against this method of gaining a reputation. He had made his debut at the Curtain, an obscure theatre on the skirts of the town and a difference arising between him and another member of the company a duel ensued which terminated in the death of his antagonist, while he himself received a wound in the sword-arm. He was seized and imprisoned and narrowly escaped with life the consequences of this rencontre. During his confinement he is reported to have become through the intervention of a Roman Catholic priest a convert to that communion and to have remained so during a space of twelve years when he resumed his former opinions. His first attempt at dramatic composition in the prosecution of which he is said to have been much encouraged if not actually prompted by Shakespeare was in 1599, when his *Evy Man in his Humour* still considered a standard piece was printed, and from this period he seems to have produced a play annually for several years besides writing occasionally masques and interludes for the entertainment of the court. The favour he had enjoyed there was not however sufficient to protect him from the consequences of a severe and malignant satire on the Scottish nation in a dramatic piece which he wrote in conjunction with Marston and Chapman entitled *Eastward Hoe*. The anger of the court favourites was at once by this unfortunate sally drawn upon his head. He was a second time committed to prison and only by a timely sub mission saved his nose and ears, which he was condemned to lose in the pillory as a libeller. By his address however he soon contrived to reinstate himself in the favour of a monarch to whose pleasures the effusions of his muse had become necessary, and for the remainder of that reign he continued in high favour as a kind of superintendent of the court revels enjoying at the same time the friendship of all the wits and talents of the age. After a tour made through France in 1613 in the progress of which, with his unscrupulousness, he managed to affront cardinal de Richelieu, he returned to England and afterwards obtained the honorary degree of AM from the university of Oxford. On the death of the poet laureate,

J O R

Bernard Jonson was appointed his successor and the salary of one hundred marks attached to that post, was, on his petition raised to the sum of one hundred pounds, by Charles the First. But neither this addition to his income nor a subsequent gratuity from the same royal source could save him from the usual consequences of pecuniary improvidence. Disease supervened on poverty and an attack of palsy at length carried him off on the 16th August, 1637. As an author Jonson may fairly claim considerable distinction. His *Alchymist,*

Espaces and Volpone, besides being admirable as to plot and development, exhibit traits of genuine humour, strong conception and powerful discrimination. The remainder of his dramas are doubtless very inferior. His tragedies of *Sepulchre* and *Catiline* are too learned and declamatory either for the closet or the stage and a great portion of his comedy is low forced and unnatural. Contrary to Shakespeare, he deals rather in passing manners and eccentricities than in general nature but supplies no mean notion of the follies of his times. His poetry is occasionally illuminated by vigorous and pleasing passages, and a few of his short pieces poems, and especially the *Hymn* from *Cynthia's Revels*, his epitaph on the countess of Pembroke and some of his songs and *Underwoods* are excellent. Besides his dramatic and poetical productions, he was the author of a variety of miscellaneous works, among which are an

English Grammar Discoveries, &c. Several editions of his works have been published the last and most complete of which is that by Mr Gifford. A curious tradition prevails with respect to the deposition of his remains in Westminster abbey where a hand some tablet has been erected to his memory in Poet's corner inscribed *O Rare Ben Jonson.* The same words are found on several small square stones in the floor of the abbey under one of which it was generally believed his corpse was buried in a perpendicular position. This was ascertained a few years since to be the fact, his coffin being discovered so situated in one of the aisles during the preparations making for a recent interment.—See *Brit. Johnson's Lives of the Poets.*

JORDAENS (Jacobs) an artist of the Flemish school a native of Antwerp born in that city in 1594, died 1678. He studied painting under Van Orst, whose son-in-law he afterwards became. Rubens too gave him some instruction in the art, and if tradition be to be believed, viewed the progress of his pupil with more of jealousy than complacency. The pictures of Jordens, which are principally historical, and portraits, are executed with a degree of brilliancy as well as correctness, but little to be expected from the extreme rapidity with which he worked.—*Pallington.*

JORDAN There were several of this name. THOMAS JORDAN an English dramatic writer, flourished in the early part of the sixteenth century, and is known as the author of *A Sopique*, an entertainment about that period, much in vogue at court, and also of

J O R

two comedies. Langhorne speaks of his literary talents with respect.—JOSEPH JORDAN, afterwards knighted for his services, distinguished himself as an able naval officer in the fight against the Dutch fleet at Solebay in 1672 on which occasion he commanded a division of the English force.—JAMES CHRISTOPHER JORDAN a German antiquary of considerable learning and research is advantageously known as the author of some excellent annotations on the works of Livy, Polybius, Diodorus Siculus, and Herodotus of Halicarnassus. He was counsellor to the king of Bohemia and died in 1740.—CHARLES STEPHEN JORDAN a native of Berlin born about the commencement of the last century acquired some reputation for his literary attainments and obtained early in life the favour of the prince of Prussia, afterwards Frederick the Great. The prospects held out by this distinguished patronage may be supposed to have induced him in abandoning the clerical profession. Under this prince's auspices he became vice-president of the Academy of Sciences established in the capital of which he was a native and was further advanced by his royal patron to several situations of emolument as well as honour. Jordan travelled through France Holland and England and published a somewhat satirical account of his tour. He was also the author of a *Necessity of Literature Philosophy and History* and a *Life of M de la Croix*. At his death which took place in 1745 Frederick erected a monument to his memory inscribed To Jordan the friend of the Muses, and of the King.—*New Dict Hist.*

JORDAN (CAMILLE) a French revolutionary statesman favourably distinguished for his opposition to the tyranny of the Jacobins. He was born at Lyons in 1771. Becoming a member of the convention he defended his native city when it was denounced as a focus of counter revolution and receptacle of assassins and banditti. His zeal only served to endanger his own safety and he was obliged to retire to Switzerland and afterwards to England. Returning subsequently to France he was, in March 1797 elected a deputy from the department of the Rhone to the Council of Five Hundred. The change of measures which took place a few months after, called the revolution of the 8th of Fructidor rendered him again an exile. He went to Switzerland, and thence to Wurmar. When Bonaparte had subverted the power of the directory Camille Jordan returned home. In 1802 he published a tract, entitled *Vrai sens du Vote National sur le Consulat à vie*, and under the empire of Napoleon he remained a private citizen. After the restoration of the royal family, he displayed his attachment to the government under the whig; and in 1814 he received letters of nobility, and was decorated with the order of the Legion of honour. He was a member of the chamber of deputies and died at Paris, May 19, 1821. He possessed considerable talents for literature, and besides many political pieces, he was the

J O R

author of some biographical eulogies.—*Dict des H. M. du 18me S. Belg. Revue des Contemp.*

JORDAN (DOROTHEA) an English actress of great eminence in various departments of the drama. Her father Captain Bland of a respectable Irish family eloped with her mother who was a native of Wales by whom he had a numerous offspring. The subject of this article adopted the theatrical profession for the support of herself and her mother and made her first appearance at Dublin in the character of Phœbe in *As You Like It*, but her talents first attracted particular attention in the walk of tragedy. Being ill treated by Mr Daly the Dublin manager she left Ireland and obtained an engagement at the theatre of York. There she assumed the name of Mrs Jordan by which though never married, she was subsequently known. In this situation she continued three years with a great increase of her professional reputation which at length led to her removal to the metropolis where she speedily became a favorite with the public. She made her first appearance before a London audience as Peggy in the *Country Girl*, and in that character in *Nell in the Devil to Pay* and others of a similar cast she displayed unrivaled excellence. Such however was her versatility of talent that she appeared to almost equal advantage as a tragic actress, where the tender rather than the violent and lofty feelings of the mind were to be portrayed. Her long theatrical career was terminated by her retirement to France where she resided in obscurity and at length died without a relative or friend near her to soothe the hours of sickness or bestow on her remains the decent rites of sepulture. Circumstances so strangely contrasted with those of the former life and long and well known connexion of this admirable actress with a branch of the royal family increased the regret which was felt at the loss of an individual distinguished alike by the peculiar benevolence of her disposition and the splendor of her talents, and even whose feelings had resulted from situations and circumstances which went far to mitigate the moral censure which they incurred. Her death took place at St Cloud July 5 1816.—*Gent Mag Thesp. Diet*.

JORNANDES a Gothic historian. He was son of Wannus the Alan and flourished during the reign of the emperor Justinian. He was secretary to the Gothic kings of Italy and was made bishop of Ravenna. He is the author of a work on the history of the Goths entitled “De Rebus Geticis” composed in the year 552. It is little more than an abridgment of a lost work on the same subject by Cassiodorus. He likewise composed another work “De Regnorum et Imperiorum Successione” in which the account of Roman affairs is a transcript from Florus. He is blamed for suppressing whatever was discreditable to his countrymen and for attributing to them all the great actions of the Scythians, but his work is still deemed valuable for information not otherwise to be met with.—*Vossi Hist Lat.*

J O R

JORTIN DD (John) an eminent scholar and divine was born in London in 1698. His father a native of Brittany came to England on the revocation of the edict of Nantes, and became gentleman of the privy chamber to king William and secretary to several admirals with one of whom Sir Cloudesley Shovel he perished at sea. Young Jortin was educated at the Charter house whence in May 1715 he was removed to Jesus college Cambridge. Here under the instruction of Dr Thurley he acquired so high a character for learning and acuteness, that he was recommended by his tutor to Pope to extract the notes from Eustathius, to print with his translation of the Iliad. He graduated BA in 1719 and AM. in 1722 in which year he published a small collection of Latin poems entitled *Lusus Poetici* which are highly esteemed both for sentiment and diction. He took orders in 1724 and was presented by his college in 1727 to the vicarage of Sawston near Cambridge, but the following year he married and resigned his living in order to settle in London where he served a chapel of ease to the parish of St Giles in the Fields. In 1730 he published four sermons on the Christian religion, and in 1731 in conjunction with some learned coadjutors gave to the world *Miscellaneous Observations upon Authors Ancient and Modern* 2 vols 8vo. In 1751 archbishop Herring gave him the living of St Dunstan's in the East and in the same year appeared the first volume of his *Remarks upon Ecclesiastical History*. Of this work the preface to which is exceedingly admired for its liberality and candour four volumes more were published in 1752 and 1754 and two more after his death in 1773. In 1755 he was made DD by archbishop Herring, and published *Six Dissertations upon various Subjects*, one of which, on the state of the dead, as described by Homer and Virgil drew upon him an attack from Warburton whose doctrine in his *Divine Legislation of Moses*, it materially controverted. In 1758 he published his *Life of Erasmus* 4 vols in 1760 another quartos volume entitled *Remarks upon the Works of Erasmus*.

In 1762 his friend Dr Osbaldeston succeeding to the see of London he was made his domestic chaplain admitted a prebend of St Paul's, and in a few months afterwards received the living of Kensington, the duties of which he performed for the remainder of his life. In 1764 he was made archdeacon of London and was offered the rectory of St James's, which he declined being unwilling to forsake his parish of Kensington, where he lived a life of study with constitutional serenity until his death, August 27, 1770, in the seventy second year of his age leaving one son and one daughter. The private character of Dr Jortin was highly estimable. He possessed a spirit which raised him above every thing mean and illiberal and would not allow him to stoop for preferment or spare his reprobation of persons in high station whom bigotry or delusion rendered enemies to merit. He

J O S

also possessed considerable sensibility and as small share of humour, and with simple, or almost rustic manners, he evinced great urbanity and benevolence of heart. Besides the works already mentioned Dr Jortin was the author of "Remarks upon Spenser" 1733, &c., "Remarks on Seneca," "Remarks on Tillotson's Sermons" "Letters to Mr. Atkinson, on the Music of the Ancients," and various other miscellaneous productions, all of which appear in two volumes of tracta, Philological, Critical and Musico-ancient. Seven volumes of his "Sermons and Charges" were also published after his death in 1771 and 1772.—*Memoirs of Life and Writings by Dr Disney*

JOSÉ (Antonio) a Portuguese Jew eminent as a dramatic writer. He produced many popular comic pieces and farces distinguished by a fund of genuine humour and satirical wit. During ten years his dramas were frequently represented with undiminished success. He lived in the early part of the last century when the inquisition still possessed much power and influence. José unfortunately for himself not having a due fear of this terrible tribunal before his eyes, became the victim of Portuguese bigotry and superstition. Among his farces which are exceedingly comic two in particular excited the indignation of the holy office. In one of them a criminal was introduced conversing at the gallows with his confessor as may be supposed, in a style not the most edifying. For these productions the valacky author was prosecuted before the court of inquisition, and burnt at the last auto-da-fé in 1745. After this appalling catastrophe the theatrical managers prudently abstained from performing the plays of this dramatist.—*London Mag.* vol. m.

JOSEPH II emperor of Germany son of Francis of Lorraine and the empress queen Maria Theresa, was born at Vienna in March 1741. He was brought up with great devotional strictness by his mother which austerity seems to have early disgusted him. In order to preserve his morals, he was also married to an accomplished princess, Isabella of Parma, at the early age of nineteen. He was chosen emperor on the death of his father in 1765 but possessed little real power his mother remaining in her own right, queen of Hungary and Bohemia, and sovereign of Austria and the Low Countries. The young emperor was distinguished by the simplicity of his manners evident desire of information and anxious wishes for social and political improvement. In 1769 he made the tour of Italy incog and on his return paid a visit to the king of Prussia, at Neisse in Silesia, the consequence of which meeting appeared in the unprincipled partition of Poland between Austria, Russia and Prussia, the first treaty for which was signed in 1772. The same interview might possibly also have led the emperor to understand the various ecclesiastical reforms which he soon after attempted such as the regulation of buildings, the restriction of religious mendicancy and the sale of church lands for the

J O S

benefit of the clergy; all of which was good in itself but too hasty put into practice. He also honourably distinguished himself by using his influence to ameliorate villainage in Bohemia. In 1777 he became involved in a war with Saxony and Prussia, in consequence of some not very defensible claims upon Bavaria. In these hostilities nothing very decisive took place in the field but they terminated under the mediation of France and Russia, in a manner which taught the emperor moderation. In 1780 he had an interview with the empress Catharine of Russia, in Lithuania, whence he accompanied her to St. Petersburg. In the same year the death of the empress-queen left him at liberty to pursue his ecclesiastical measures with less opposition. Some strong edicts followed, regulating and moderating the intercourse with the court of Rome and encouraging much enlightened liberality granting full toleration to the protestants and the extension of the privilege of subjects to the Jews. In 1781 he travelled into Holland and the Netherlands, and carried into effect a project of resuming the line of fortresses called the Dutch barrier; he also gave token of his intentions to open the navigation of the Scheldt. His return to Vienna was marked by still more decisive steps in reduction of the power of the church. He suppressed numerous religious houses disclaimed all subordination in secular affairs to the Roman see and took such rapid strides towards complete emancipation as induced Pius VI to seek by the humiliating expedient of a visit to Vienna, to avert such ominous changes. The aged pontiff accordingly repaired to that capital in March 1782 but although treated with respect he could procure very little alteration in the emperor's plans of policy. In 1783 he alarmed the united provinces with two important claims one upon the town of Maestricht and the other for a free navigation of the Scheldt. In October in that year he sent a vessel from Antwerp with orders to refuse being searched by the Dutch guard-ships, or to pay duty at their ports. His ship being in consequence fired upon the emperor affected to regard this act as the commencement of hostilities and the interference of France alone prevented a war. The Dutch however were obliged to send a deputation to humbly apologize for the alleged insult and to bring off the claim on Maestricht. This scheming sovereign about the same time resumed his views upon Bavaria by attempting an exchange of territory, but was again defeated by the calm policy of the aged Frederic. An entire new code of laws also engaged his attention the general object of which was to establish a more equitable relation between crime and punishment. It abolished the too indiscriminate forfeiture of life but substituted punishments which were even more appalling and upon the whole exhibited little legal regulative ability in this important branch of social economy. In 1787 he had an alarming contest with his subjects in the Low Countries owing to his determination to introduce the same system of ecclesi-

JOS

mestic, and civil government which he had established in his other hereditary dominions. He issued two edicts in one day destroying the small share of constitutional freedom which they enjoyed in virtue of their charter of rights and tending to the entire subversion of all the ancient forms of administering justice. The people under the influence of a rich and powerful clergy were already much disaffected, and his attempts to innovate upon the plan of public instruction completed their disgust. The states of Brabant with great spirit refused to grant supplies, until the obnoxious edicts were repealed and the result was that the emperor at that time thought proper to give up the point. In 1787 he had a second interview with Catherine in her new city of Cherson and being brought into complete accordance with her views he took the field against the Turks in 1788 as her ally and a campaign ensued in which the capture of Chocman was almost the only trophy of their united exertions but the succeeding campaign was more glorious and successful and the Turkish empire seemed verging towards its ruin. In the mean time Joseph unable again to quit Vienna was labouring under a rapid decline of health which was not amended by the renewal of the flame in the Low Countries occasioned by a breach on his part of the condition by which peace had been restored. Military executions took place in some of the cities and a general gloom and despair prevailed. At length in 1789 an open insurrection broke out conducted with so much valour and ability that the imperial troops were defeated the cities of Ghent, Bruges, Louvain and others were taken possession of by the insurgents and the states of Flanders finally declared that the emperor had forfeited all title to sovereignty. Joseph also on his death bed was farther mortified by a remonstrance from the Hungarian nobility demanding the restoration of their ancient privileges which he granted, with some conditions in favour of toleration and the amelioration of the condition of the peasants which did him much honour. He died with perfect calmness and composure 20th of February 1790 in the forty ninth year of his age and having no issue was succeeded by his brother Leopold. Joseph was doubtless, in regard to his own subjects, a well meaning sovereign and possessed many private virtues but he was too ambitious and arbitrary for an efficient reformer not to mention that he defeated his own purposes by the inconsistent multiplicity of his views. He also exhibited an injudicious disregard of the previous habits ideas and opinions of those whom he was desirous to benefit, a mistake to which reformers of the most opposing descriptions are equally liable. Joseph II on this account while he attempted more possibly effected less than any other sovereign of a kindred disposition.—*Annual Reg.*

JOSEPH BEN GORION or GORIO NIDES is supposed to have been a Jew of Languedoc who lived about the end of the

JOS

sixth or the beginning of the tenth century. There is extant a history by him of the Jewish war written in Hebrew which appears to have been compiled out of the Rufinian version of Josephus, and has been attributed to the latter, but its later origin is detected by its numerous anachronisms. Gagner translated this work into Latin Oxford 1706 and there is also an edition in Hebrew and Latin 1704—*Mosn Sadi Oran.*

JOSEPH (FATIMA) a French Capuchin friar distinguished as the political associate of cardinal Richelieu. His proper name was Francis le Clerc du Tremblay and his father was a president of the parliament of Paris, in which city the son was born in 1577. He displayed a disposition for study and retirement when young and resisted the wishes of his friends, who would have procured him a counsellor's robe or commission in the army instead of which he chose to be an ecclesiastic. He entered among the Franciscans in 1599 and for a while he devoted himself to the proper duties of his profession. He acquired eminence as a preacher displayed his zeal as a missionary founded a convent at Sammer and a new order of Benedictine nuns of Calvary at Augers. But the girdle of St Francis had not extinguished the seeds of ambition in the breast of father Joseph, who becoming acquainted with cardinal Richelieu participated in the power of that unprincipled statesman, whose secretary privy-cosmopolit and *amis dévoués* (as he was satirically styled) he continued to be during a great part of the cardinal's minority. Father Joseph died in 1638 just as he was about to obtain the grand object of his wishes—a cardinal's hat.—*Nova. Det. Hist. Marci.*

JOSEPH (FATIMA) a Catholic missionary in Persia, of Roman descent, whose family name was Sebastian. He resided for a long time at the court of the Persian sovereign Fath Ali Shah where he possessed considerable influence which he exerted in behalf of the English and thus made himself an object of jealousy and suspicion to the agents of the French government. He was a skilful mechanician and physician, and spoke the Arabic Persian Greek and Hindoo languages besides being well acquainted with those of his native country. In 1816 he visited London for the express purpose of selling some copies of the works of the Persian poet Hafiz with a Latin translation by himself accompanying the original text. M Joubert employed by Bonaparte in Persia in 1800 has published an account of his travels, containing some details relative to this singular personage and his problematical occupations.—*Bug. Nouv. des Contes.*

JOSEPHINE, the wife of Napoleon Buona parte and for a while the partner of his imperial power. Her name was Rose Tasches de la Pagerie and she was born at Martinique in the West Indies June 24 1763. Greatly distinguished for her beauty in her youth she was brought to France by her father and married to M de Beauharnais governor general of the Antilles. In 1787 she went to Mart-

JOS

sions in consequence of the illness of her mother and remained there three years. The revolutionary commotions in that colony endangered her safety and she hastily departed from the island to seek refuge in France. There fresh dangers awaited her and she narrowly escaped participating in the fate of her husband, who was one of the victims of the tyranny of Robespierre. On the fall of that dictator Madame Beaufort was released from prison. To thank her she is said to have owed her liberty, and she repaid the benefit by allowing him a pension which was continued to him after her death by her son Eugene Beaufort. Berres another of the statesmen of that period procured the restoration to the widow of her late husband's property. Soon after, she became acquainted with Napoleon Bonaparte whose serious attachment was followed by their union in 1796. He was then commander of the army of Italy whither she accompanied him. When he had embarked on his expedition to Egypt she returned to Malmaison and employed her leisure in forming a museum of curious objects of art, and commencing a collection of exotic plants. When her husband was elevated to the station of first consul, she beneficially exerted the powerful influence she had over him and to her many exiles owed the erasure of their names from the list of emigrés; others the recovery of their estates or such favours as their various situations might require. Such was her general affability and beneficence that she appears fairly to have merited the compliment paid her by her victorious helpmate who said to her "So je gagne les batailles c'est vous qui gagnez les cœurs." When Bonaparte assumed the imperial title and authority a divorce was proposed by some of his partisans on account of his having had no issue by his wife. But he then rejected their counsel and she was crowned empress at Paris, and queen of Italy at Milan. Her son was subsequently married to the princess of Bavaria, and her daughter Hortense to Lewis Bonaparte made by his brother king of Holland. At length she was destined to lose her exalted station, being divorced to make way for the elevation of the princess Maria Louisa of Austria to the imperial throne of France. Josephine is stated to have submitted to this measure without opposition expecting probably to retain a greater share of power and influence than in the sequel fell to her share. During the Russian campaign she went to Italy to attend her daughter in law whose husband was then viceroy of that country. Malmaison was her principal residence where she continued to amuse her leisure with botanical studies and making collections of scarce plants. She retained a strong affection for Napoleon whose abdication occasioned her unfeigned distress, notwithstanding she experienced various marks of attention from the emperor Alexander and the king of Prussia when they invaded France. She was at that period labouring under illness and died gradually regratified, in the arms of her children and

JOS

friends, May 29 1814.—*Bibl. Nov. des Cons.*

JOSEPHUS (FLAVIUS) an eminent Jewish historian was born at Jerusalem AC 37 when Caligula was emperor. His father Mattathias, was descended from the ancient high priests of the Jews, and by his mother's side he was of the royal lineage of the Asmoneans or Macabees. He was educated in the knowledge of the Jewish law and at the age of sixteen was induced to join the Essenes, but afterwards became a strict and zealous member of the sect of Pharisees. At the age of twenty six he visited Rome and by means of an introduction to Poppaea, afterwards the wife of Nero procured the release of some priests whom Felix had sent prisoners to that capital. On his return to Judea he was made governor of the two Galilees, in which capacity he bravely defended Jotapha against Vespaean. He was however taken prisoner but his life was spared at the intercession of Titus who became his patron and whom he accompanied to the siege of Jerusalem. He was sent to his countrymen with offers of peace but was treated with great contumely as a deserter. At the capture of the city he was enabled to deliver his brother and several of his friends without ransom. He accompanied Titus back to Rome where he was rewarded with the freedom of that city and received a pension and other marks of favour from Vespasian and his son as a mark of gratitude to whom he assumed their family name of Flavius. He employed his leisure in drawing up those works which have perpetuated his name. These are his *History of the Jewish War in Seven Books*, his *Jewish Antiquities in Twenty Books*, two books against Apion of Alexandria, a great adversary of his nation a *Discourse on the Martyrdom of Maccabees*, and a *Treatise on his own Life*. All these are written in Greek and his style is by Photius held to be easy, pure and even eloquent. Few works are more interesting than his account of the Jewish war of the incidents of which he was a spectator. In respect to his fidelity different opinions prevail in his *Jewish Antiquities* his accounts frequently vary from those of Scripture and generally in circumstances which he thinks will shock the prejudices of his Gentile readers. He is also led by his zeal for the honour of his nation to much exaggeration and affects to believe that all knowledge and wisdom originated in Judea but upon the whole however his works are much esteemed. They have been frequently published with Latin versions but the best editions are those of Hudson Oxford 1720 2 vols, folio and Haerlem Amsterdam 1737, 2 vols, folio. They have been translated into English by Le Strange and Whiston, the latter of whom doubts the authenticity of, and rejects the discourse on the Maccabees. Josephus lived beyond the thirteenth year of the reign of Domitian, but the exact date of his death is uncertain.—*Life prefixed to Works. London. 1790.*

JOSSE (PETRI) a distinguished pharma-

costics, chemist, who was a native of Paris. He was educated under Rouelle and Labeurie both eminent for their skill in medicinal chemistry. In 1777 he published an analysis of the Cohosh root, and another tract, and soon after he made known a new process for the preparation of martial sulphur, or the black oxide of iron. In 1779 he was chosen a member of the college of Pharmacy, and in 1784 adjunct professor of chemistry in that college where he at length obtained the office of provost, and died in 1799. His analytical experiments on opium, his researches concerning ether &c., afford sufficient proofs of his phenomenal skill and science.—*Bug Uare.*

JOUBERT (BARTHOLOMEW CATHERINE) a French general, who was a native of Pont-de-Vaux in Bresse. He was born in 1769 and was destined for the bar by his father. At the age of fifteen he forsook his studies to go to La Ferte in Picardy where he entered a regiment of artillery. But his discharge being obtained he was sent to Lyons to continue his education and at the beginning of the Revolution he was a student at the university of Lyon. In December 1791 he enlisted as a military volunteer and served as a sergeant in the army of the Rhine. In April 1792 he was made a sub-lieutenant, and displayed great courage and activity in the campaign of general Anzelme against the Austrians and Sardinians. Joubert was taken prisoner by the latter in September 1793 and on his return home distinguished himself by opposing the Jacobin agents of the Convention who were tyrannizing in the neighbourhood of his native place. In 1794 he was appointed adjutant general and having signalized his bravery at the battle of Loano, under Keller man in November 1795 he was made general of brigade on the field of battle. In 1796 he again attracted notice at Montenotte as well as at Milleanno Cava Montealdo Rivoli and above all in the Tyrol where though opposed by a bold and warlike people he succeeded in penetrating the defiles of Inspruck. He was afterwards opposed to the Russian general Suvarrow and was killed at the battle of Novi 1799. Much of the future success of the French in Italy may be ascribed to the exertions of general Joubert, who by the boldness and promptitude of his manœuvres and the impetuosity of his attacks, trained his troops to that confidence and courage which contributed to render them victorious. The personal character of this officer is said to have been untainted by the rapacity which disgraced many of his comrades. After the taking of Turin the king of Sardinia offered to give him two valuable paintings. "We should be both blamable," said Joubert, "you in giving them to me and I if I were to accept them."—*Bug Uare.* *Bug Nouv. des Contemp.*

JOUBERT (LAURENT) a learned French physician of the sixteenth century was born at Valence in Dauphiné, in 1549. He studied medicine at Montpellier and Paris, and in the sequel held the situation of first physician in ordinary to Henry III, and the post of chan-

cellor of the university of Montpellier. His Latin works which are written with correctness and elegance, have often been reprinted. He also published some medical treatises in French, one of which is on "Laughter" its causes and effects. 1579 8vo. His most popular work however was entitled, "Exercices populaires, touchant la Medicine Bourgeoise," 1579 which, owing to a broad vein of humour and no small levity of manner went through three editions in six months. He died the 21st of October 1583.—*Niceron.* *Ross's Cyclop.*

JOURDAIN (AMEABLE LOUIS BERNARD BRACHILLIEN) an eminent French dentist and surgeon who was a native of Paris. After having studied at the college of Harcourt, and among the jesuits of Rouen, he returned to the metropolis being destined by his father for the legal profession. He preferred that of surgery and being left at liberty to follow his own inclination, he became a pupil of M. Morand at the Hotel Dieu. He subsequently devoted his attention to the structure and diseases of the teeth and after having long enjoyed the reputation of being one of the most skilful surgeon-dentists in Paris, he died there January 7 1816, aged eighty one. M. Jourdain was the author of "Nouveaux Elémens d'Odontologie" 1756 12mo, "Essais sur la Formation des Dents comparés avec celle des Os" 1766 12mo, "Traité des Maladies et des Opérations, réellement chirurgicales, de la Bouche et des Parties qui y correspondent" 1778 2 vols. 8vo, besides several other publications periodical papers and contributions to the works of others.—*Bug Nouv. des Contemp.*

JOURDAIN (AMEABLE LOUIS MARIE MICHAEL BRACHILLIEN) son of the foregoing born at Paris in 1788. He was designed for the law and placed with a notary to acquire the necessary information. At the age of seventeen he was so struck at hearing the splendid eulogies bestowed on the Orientalist, Anquintil Féron, then recently deceased that he determined to devote himself to the same branches of learning which had been cultivated by that distinguished scholar. He became the pupil of M. M. Salvestre de Sacy and Langlès and prosecuted his purpose with so much success, that the office of adjunct-secretary of the school of Oriental languages was created in his favour. He held it till his death in 1818. His principal work is entitled "La Perse ou Tableau de l'Histoire du Gouvernement de la Religion, de la Littérature &c. de cet Empire" 1814 5 vols. 18mo. He was one of the contributors to the "Biographie Universelle" the "Annales des Voyages," the "Mines de l'Orient" &c and at the time of his decease he was engaged in writing the history of the family of the Barneches.—[See Art. HAROUN AL RASHID.]—*Bug Uare.* *Bug Nouv. des Contemp.*

JOUSSE (DANIEL) an eminent French lawyer of the last century. He was a native of Orléans, and was educated at the college of Plaisir Sorbonne at Paris, where he distinguished himself by his attachment to the

JOY

study of mathematics. In compliance with the wishes of his friends, he prepared himself for a judicial situation; and in 1734 he was installed on the office of counsellor of the presidency of Orléans, which he filled with great reputation till his death in 1781. His works are very numerous, comprising "Nouveau Traité de la Spécie, avec un Discours sur les holopex," 1765 12mo, "Eloge de M. Poisson," besides many treatises on the manufacture of Finance which are highly esteemed.

—*Biog. Univ.*

JOUVENCI or JOUVENCY (Josephus) an eminent jesuit, was born at Paris, September 14, 1643. He taught rhetoric with uncommon reputation at *Casa La Fleche*, and Paris, and at length was invited to Rome, in order to continue the "History of the Jesuits" with more freedom than he could have assumed at Paris. His principal works are two volumes of speeches, a small tract, entitled "De Ratione Descendi et Docendi" and Notes in Latin on *Petrarus, Juvenal, Terence, Horace, Martial, Ovid &c.* with the fifth part of the "History of the Jesuits" all which productions are written in pure Latin. In his history of the Jesuits he attempts to justify Pere Guignard the jesuit, who suffered for encouraging the bigotted assassin Chatelet, in his attempt on the life of Henry IV on account of which suspicious casuistry the parliament of Paris prohibited the work.—*Moreri, Sacra Omnia.*

JOUVENET (John) an historical painter born at Rouen, Normandy 1644. He received his first instructions from his father but his principal teacher was Poussin. He possessed much faculty of invention, and was therefore employed to adorn the apartments of Vermandois and the Tuilleries. He also painted the twelve apostles, each figure fourteen feet high, in the hospital of the Invalides at Paris. He exhibited more eccentricity than taste in all his works. In the decline of life he lost the use of his right side by palsy and was induced to practice with his left hand, by which means he was enabled to finish a ceiling which he had begun in the hall of the parliament of Rouen and a large piece of the Annunciation in the choir of Notre Dame at Paris, with no apparent diminution of ability. He died in 1717.—*D'Argenville's Vie des Peintres, Pallington.*

JOVELLANOS (DON GASPAR MIRLICHTOR de) a Spaniard of distinguished eminence in various branches of literature. He was born at Gijon, in Asturias, in 1749. Endowed with great talents by nature he studied with so much success, as when young to have acquired a knowledge of jurisprudence, history, archaeology, the learned languages, and the belles lettres. At the age of twenty-one he was admitted into the Royal Academy of Madrid, and about the same time Charles III nominated him counsellor of state and entrusted him with some important affairs. He continued in favor while that prince lived and was employed for a while under the next sovereign. The war with the French republic, as well as

JOY

the peace of 1794, left Spain loaded with debt, and Jovellanos proposed, for the relief of the national difficulties, a tax on the property of the higher orders of the clergy. This proposition they resented as a kind of anathema and the minister was exiled to the mountains of Asturias though his project was afterwards carried into execution. In 1799 he was recalled and made minister of justice for the interior but he had held the office only eight months, when he was displaced, and banished to the island of Majorca, where he was confined in the convent of the Carthusians. He did not recover his liberty till 1808, after the invasion of Spain by the French and the fall of the Prince of Peace Don Manuel Godoy to whom his disgrace was attributed. He subsequently became a member of the supreme junta, and Joseph Buonaparte during his transient sovereignty nominated Jovellanos minister of the interior which office however he did not choose to accept. His predilection for the French during the troubled scenes which followed subjected him to suspicion and he was accused of holding intelligence with them and endeavouring to promote their plans for the subjugation of Spain. Being denounced as a traitor he was murdered during a popular insurrection in 1812. He published a collection of lyric poems with a comedy entitled "The Honourable Delinquent," at Madrid in 1780, and he was the author of a tragedy called "Pelayo," represented at Madrid in 1790 and of an excellent translation of Milton's *Paradise Lost*. His discourses and memoirs relative to subjects of public utility are very numerous, and many of them important, but the work which does him most honour is his "Informe sobre la Ley Agraria," Madrid 1793.—*Hagiographia Hist. Rev. of the Spanish Revolution Biog. Univ.*

JOVINIAN an Italian monk of the fourth century who was persecuted for his rational opinions in disfavour of celibacy, fasting and supererogatory mortification. He taught that all those who adhered to the vows made at their baptism and led a life of purity and temperance were equally entitled to the rewards of futurity with those who passed their days unwedded, and in the constant endurance of self-inflicted mortification. For propagating these sentiments he was cut off from the communion of the church by Syncius bishop of Rome who, by means of Ambrose, had his doctrines formally condemned at a council held at Milan in 390. This condemnation only induced him to adhere more firmly to his opinions on which account he was assailed with much violence in a treatise by St Jerome. He was at length together with his followers, scourged and banished from Rome under the emperor Honorius in 413. Jovinian died in banishment some time after at the island of Boe, on the coast of Dalmatia.—*Bonarre Anzai Modern.*

JOVIUS (PAUL) an Italian historian was born at Como in 1483. After studying at Padua, Milan, and Pavia, he took the degree of

MD and practised for some time but resigned the medical profession for the composition of history. The first volume of his work, which comprises the events of fifty years from 1494 to 1544, he presented to Leo X who gave him a pension, and the rank of knighthood. Having taken orders he was presented by Adrian VI to a canonry in the cathedral of Como, and was finally made bishop of Novara by Clement VII. About two years before his death he quitted Como, his usual residence and took up his abode in Florence where he died in 1552. His historical works which are all in Latin are written with great facility, but they are to be perused with great caution as he was at once a malignant enemy and a servile flatterer boasting that he possessed pens of iron and of gold which he used on occasion required. He was peculiarly favourable to Charles V and the Medici, by the former of whom he was pensioned. His other works are,

De Piscibus Romanis Latin poems, the lives of the twelve Visconti lords and dukes of Milan, a collection of portraits with inscriptions entitled *Musae Jovianae Imagines* descriptions of Great Britain of Muscovy and of the lake of Como, and the eulogies of warriors.—His elder brother *BENEDICT* wrote a history of Como transactions and manners of the Swiss with letters, translations from the Greek and Latin poems.—*Rousse's Leo A Sacra Orac.*

JOY or JOYE (GEORGE) an early promoter of the Reformation was a native of the county of Bedford and educated at Peter house Cambridge where he graduated MA in 1517. In 1517 being the friend of Tindale he was accused of heresy and obliged to return to Germany where he continued for many years. He was concerned in the superintendance of Tindale's bibles printed at Antwerp and finally returned to his native country but the time of his death is unknown. Besides his translation of part of the Bible he published *On the Unity and Schism of the Ancient Church* 1534 *The Subversion of More's False Foundation* 1534 *Commentary on Daniel* from Melanchthon and other works enumerated by Tanner.—*Lewis's History of the Translations of the Bible*

JOYCE (JEREMIAH) an ingenious and industrious writer on general literature and science. He first became known to the public in consequence of his being included in the state prosecution with Hardy, Horne, Tooke, Thelwall and others. He had previously been domestic tutor to the sons of earl Stanhope who gave a splendid entertainment on the return of Mr Joyce to his lordship's seat at Chevering in Kent after his liberation. Not long after he relinquished this situation and settling in London devoted himself to writing for the press. One of the first employments in which he was thus engaged was as coadjutor with Dr George Gregory in the compilation of the Cyclopedias which was published as the work of the latter. The success of this undertaking gave rise to another work on a similar plan, which bore in the title page the

name of Mr William Nicholson, but of which Mr Joyce is said to have been the principal author. He subsequently wrote *Scientific Dialogues*, "Dialogues on Chemistry", *Letters on Natural Philosophy*; &c. Mr Joyce, who was a protestant dissenter and of the clerical profession died at Highgate near London in 1816.—*Month Mag.*

JUAN (DON) or DON JOHN of Austria the natural son of the emperor Charles V and the great military hero of his age. He was born at Ratisbon February 25 1545 and his mother is said to have been a German female named Barbara Bloomberg, but from the secrecy with which he was brought up it has been supposed that some extraordinary and disgraceful mystery was attached to his origin. His relation to the emperor was not acknowledged till after the death of that prince when the young Philip II would have destined his brother to the cloister but he was ultimately allowed to follow his inclination, in the practice of martial exercises and the study of the art of war. He was first employed in 1570 against the Moors of Grenada whom he reduced to subjection. The next scene of his success was the Gulf of Lepanto where he gained a memorable victory over the Turks, October 7 1571. He afterwards took from them Tunis, Bursa, and other places on the coast of Africa. In 1576 he was sent to Flanders with the title of governor of the Netherlands. The inhabitants were in a state of revolt and he at first attempted to reduce them to obedience by concessions but not succeeding he had recourse to arms. He took Namur by stratagem, and attacking the magicians on the plain of Gembloers, December 31 1577 he obtained a signal victory. He died at Tongres, near Namur on the 1st of October following not without suspicion of being poisoned.—*Biog Univ.*

JUAN II (DON) the natural son of Philip IV of Spain by Maria Calderona an actress, born in 1629. He was made grand prior of Castile and in 1647 he commanded the Spanish army in Italy and took the city of Naples. He afterwards served in Flanders and in Portugal and being unsuccessful he was exiled by the regency after the death of his father. Under Charles II he was recalled to Madrid and made prime minister. He died in 1679. The life of this prince has been written by Gregorio Leti.—*Nous. Diet. Hist. Biog Univ.*

JUAN Y SANTACILIA (don GONZOS) a learned Spanish mathematician and natural philosopher who was a native of Orihuela in the kingdom of Valencia. Having entered at the age of fifteen into the royal marine guards, while yet young he was appointed commander of a corvette in which he made several voyages to America. The reputation he had acquired as an officer and a man of science occasioned his appointment together with D Antonio de Ulloa to accompany Mreas Bouquer and la Condamine to Peru in 1735 to measure a degree of the meridian at the equator. On his return to Spain he wth

JUD

made a captain in the navy, and afterwards further promoted. Much of his attention was directed to the improvement of marine architecture, and the flourishing state of the Spanish marine about 1770 was in a great measure the fruit of his exertions. He died at Cadiz June 21 1774, aged sixty two. He was the author of an Historical and Geographical Dissertation on the Line of Demarcation between the Dominions of Spain and Portugal and Observations on Astronomy and Physics, made in the Kingdom of Peru both composed in conjunction with D A de Ulloa, beside which he produced a treatise on navigation and another on the construction of ships the latter of which has been translated into French and English.—*Biog Univ.*

JUBA II king of Numidia was the son of the first of the name who taking part with Pompey against Caesar sought a Roman death after being defeated by the latter. The younger Juba then a boy was led as a captive in Caesar's triumph over his father but the victor compensated for that humiliation by bestowing on him an excellent education in consequence of which he became one of the most learned men of his time. He was in great favour with Augustus whom he adhered to against Antony and who bestowed upon him the kingdom of Gætulia. He also gave him to wife Cleopatra Selene the daughter of Cleopatra by Anthony. Juba governed his dominions with great justice and lenity and became the author of many learned works comprising the history and antiquities of the Arabians, Assyrians and Romans the history of painting and painters that of theatres, and treatises on plants and animals. They are quoted by Pliny Strabo Plutarch, Tacitus, and others, but of all these a few fragments only have reached modern times. Juba died AD 24.—*Vasari Hist Grec Novus Diet Hist.*

JUDAH or JEHUDAH HAKKADOSH or the saint a rabbi famous for his learning and riches who lived in the time of the emperor Marcus Antonius by whose order he is said to have compiled the "Mishnah," a new digest of the oral law and of the commentary of the most famous Jewish doctors. His Mishnah or first Talmud comprehends all the laws institutions and rules of life which, besides the ancient Hebrew Scriptures the Jews held themselves bound to observe notwithstanding the obscurities and inconsistencies in which it abounded it soon obtained credit as a sacred book, and it subsequently received additions and improvements by other celebrated rabbis which were published in the fifth century by Joachim ben Eliezer under the title of the Gemara. An edition of the Mishnah was published by Surenhusius at Amsterdam in 1698 in six volumes, folio.—*Mod Unn Hist. Engelsd Hist of Phil.*

JUDAH CHIUG a learned Jewish rabbi, who was born at Fez and studied among the Arabians. He practised as a physician in the northern part of Africa in 1040, but the

JUD

period of his death is uncertain. He was the author of several works on the Hebrew language written in Arabic still in manuscript. They are reckoned very valuable and were translated into Latin by Gagnier and it has been lamented that the fruit of his labours has not been given to the public.—*Biog Univ.* JUDAH RAV or RAB the son of Ezechiel, reported one of the most famous among the disciples of Judah Hakkadosh. He founded or restored six celebrated schools in the vicinity of Babylon whence proceeded those collections of Jewish traditions which compose the Babylonian Gemara or Talmud. Judah Rav succeeded rabbi Samuel in the school or academy of Naharda AD 250. The Gemara of Babylon was first published in 1520 fol.—*Id.*

JUDAH (Luz) a learned protestant divine was the son of John Judah a priest of Alzey by a concubine and was born in 1582. He was sent in 1582 to finish his academical studies at Basel where he became acquainted with Zwinglius and imbued from him such impressions as induced him to embrace the principles of the reformation. Having obtained his degree as MA he was appointed minister of a Swiss church where he preached boldly in defence of protestantism. He afterwards became still more celebrated as the pastor of St Peter's in Zurich for his exertions both with the pen and in the pulpit. He undertaken a translation from the Hebrew into Latin of the Old Testament but before it was completed he fell a martyr to his application in June 1542 in the sixtieth year of his age. The translation was finished by other hands and published the following year. He was also the author of Annotations on the Books of Genesis and Exodus. Some particulars of Judah and his translations may be found in a book written by a divine of Zurich entitled "Vindicatione pro Biblio Romana translatione Tigranna 1606.—*Melchior Adam Simonis Bibl Crit.*

JUDAS LEVITA or JUDAS HALI FVI a Jewish rabbi who was the son of Samuel Halevi a Spaniard and was born in 1090 and died in 1140. He was a philosopher grammarian and poet and was profoundly skilled in all the learning of the age in which he lived. It is said that going on a pilgrimage to Jerusalem as he advanced on foot towards the holy city rending his garments and reciting aloud lamentations for the miseries of his people he was observed by a Mahometan horseman who enraged at his conduct, rode over him and trampled him to death. He wrote in Arabic a curious work in defence of Judaism entitled "Sepher Haqqot" which was translated from an Hebrew version into Latin by Buxtorf and published at Basle 1660 fol., and there is a Spanish translation extant, by Agredano.—*Biog Univ.*

JUDEX (MATTHEW) one of the principal writers of the centuries of Magdeburg was born Sept 21 1528 at Tippoldswald in Misnia. He studied in the first instance at Dresden but removed afterwards to Wittemberg, whence he repaired to Magdeburg, where he

J U L

tought the second form for some years, and then became professor of divinity at Jena. He was not, however, allowed to retain this situation and endured so many persecutions and vexations that his days appear to have been shortened by them, as he died in the prime of life in 1564. He wrote a great many books, one of which 'De Typographus Inventione', Copenhagen, 1566 8vo, is very rare. The centuriae of Magdeburg in which he largely assisted was published under the title of 'Historia ecclesiastica congregata per Magdeburgenses et alios', the best edition of which is that of Basili 13 vols, folio 1562.—Morer.

JUGLER (JOHN FREDERICK) an eminent Saxon writer on philology and literary history. He was born near Naumburg in 1714. After having been for some time employed in the useful office of a teacher of youth he was nominated counsellor to the king of England, and inspector of the equestrian academy of Leimenburg. He died in 1791. His principal literary production is entitled 'Bibliotheca Historiae Literaturae selecta' 3 vols 8vo, founded on Struve's Introduction to the History of Literature. He was also the author of memoirs of eminent European statesmen and lawyers 6 vols 8vo a dissertation on the use of libraries and other works.—Bug Univ.

JULIA DOMNA called also *Pia Fata Augusta* born about AD 170 at Apamea, or at Emesa in Syria where her father Bassianus was priest of the sun. She married Severus who afterwards became emperor of Rome and is said to have partly owed his elevation to her councils. He was much attached to her and she exercised great influence over him till the exposure of her intrigues obliged him to separate himself from her. In retirement she devoted herself to literature and became the patroness of the learned Philostratus at her request wrote his life of Apollonius Tyaneus and Diogenes Laertius dedicated to her his memoirs of Philosophers. After the death of Severus she in vain endeavoured to prevent the quarrels between her sons. Caracalla however when he had murdered his brother suffered her to exercise a great portion of the sovereign authority. She witnessed his assassination and dechirement, and died soon after in 217 aged forty seven.—Gibbon. Bug Univ.

JULIAN (FLAVIUS CLAUDIO JULIANUS) a Roman emperor was the son of Julius Constantine brother of Constantine the Great. He was born at Constantinople in 331 and was only six years of age when the massacre of the collateral branches of the Flavian family took place in which he and his brother Gallus alone were saved. The two princes were sent to different towns for education, and were instructed in the studies and exercises suitable to their birth and were not only initiated in the Christian religion, but admitted to the inferior offices of the ecclesiastical order. When Gallus was declared Caesar Julian was released from the restraint under which he had previously laboured and received an ample patrimony. On the fall of his brother he

J U L

however partook of his disgrace, but was preserved by the friendship of the empress Eusebia, and allowed to return to Athens where he assumed the manners of an ancient philosopher and showed his predilection for the ancient religion by obtaining initiation into the celebrated mysteries of Eleusis. He was at length by the influence of the empress recalled to court; and in 365 married to her sister Helena, and declared Caesar. He was in the first instance sent into Gaul, where he repressed the Alemanni and other barbarians, with great skill and bravery and obtained so much reputation that the envy of Constantius being excited he directed a large portion of the army of Gaul to proceed to the frontiers of Persia. Julian was reduced to great difficulties by this mandate but gave the necessary orders the ultimate consequence of which was a mutiny on the part of the soldiers who in spite of the earnest entreaties of their general declared him emperor. Historians differ as to his sincerity on this occasion he himself strenuously insists on the compulsory nature of the event to which he was obliged to yield while the ecclesiastical writers opposed to him naturally enough represent him as the planner of the whole affair. Having complied however he determined to maintain his new station with firmness, and solicited in the name of himself and army from Constantius a confirmation of the title of Augustus and offered to remain content with Gaul, Spain and Britain. The emperor at once refused acquiescence on which Julian appealed to his army and returned a letter to Constantius, which amounted to a declaration of war. At the same time he threw off the disguise which he had hitherto maintained in regard to religion and declared himself a votary of the ancient faith. Julian then resolved to make himself master of the provinces of Illyrium, but was detained at Aquileia, which was held by the troops of Constantius, who was personally approaching at the head of his veterans legions. The seasonable death of the latter on the confines of Cilicia, prevented the approaching conflict and made Julian sole emperor who entered Constantinople amidst universal acclamations in December 361 being then in his thirty first year. He had passed the period of youth with a degree of temperance and forbearance very unusual in his rank and station nor did his elevation produce any difference in this respect, for disregarding all idle pomp and trifling amusements he diligently occupied himself in the duties of government. His good qualities were however seduced by vanity, affectation and scholastic pedantry, while his zeal for the religion to which he had become a convert was debased by childish credulity and superstition. To confirm the ascendancy acquired by the Christian religion, he composed an elaborate work which was followed by the unexceptionable measure of an edict of general toleration. This of course produced the re-opening of many of the heathen temples, and impious example and influence necessarily multi-

J U L

placed re-conversion. He even attempted to revive Judaism, by rebuilding the temple of Jerusalem, but the workmen are said to have been interrupted by extraordinary eruptions of fire which an exhorter of prophecy have been deemed miraculous. Zeal of this nature can seldom be impartial, and although Julian forsook direct persecution, he systematically pursued measures of a nature to degrade his Christian subjects and behaved with great injustice and severity by debasing all of that religion from acting as teachers of grammar, rhetoric, or the liberal arts. He also excluded them in great part, although not by direct laws from posts of trust or honor, and obliged them to make ample amends for the destruction of the Pagan temples in preceding reigns, as also to restore lands and revenues which had been converted to the use of their own religion. All these cares on the subject of religion did not exclude a passion for military glory. He resolved upon an expedition against Persia, and spent the winter of 362 in Antioch in preparation for that event. Here he created great dissatisfaction by removing a Christian church which occupied the ancient site of the temple of Apollo at Daphne in order to restore that worship. The unconcealed ill humour of the people happily produced nothing more severe from the emperor than a satire entitled "The Misopogon" or Beard hater, in which he lashed their follies and vices with some literary skill but with a degree of levity not always consistent with his station. In the spring of 363 he left Antioch on his grand expedition against Persia, and proceeded with considerable success until the siege of Ctesiphon, when he was much embarrassed by the desertion of his Armenian auxiliaries and the growing discontent of his army. He however persevered, as it is said, with a weak desire of imitating Alexander until involved in great difficulties by treacherous guides, he was finally obliged to retreat. Meantime the whole force of Persia assembled, and harassed the Romans on every side, in opposition to which Julian performed every duty both of officer and soldier. At length a sudden attack being made in the rear of the army the emperor rushed to the scene without his cuirass, and putting the assailants to flight, eagerly led the pursuit. While thus engaged a javelin, discharged by one of the fugitives, pierced the ribs of the emperor who fell senseless from his horse in a state which announced approaching dissolution. Sensible of his condition, he pronounced a farewell speech to his principal officers, and after directing the disposal of his private property entered into a metaphysical discussion on the nature of the soul, with his attendant philosophers. Exhasted by these efforts, he called for a draught of cold water, and as soon as he had swallowed it, calmly expired on June 26, 363 in the thirty-second year of his age, and at the expiration of about twenty months from the death of Constantine. The character of no eminent person has been more differently represented by friends and enemies, than that

J U L

of Julian a fact by no means surprising, seeing that he was regarded as a deserter and usurpator by one religious party and as a convert and a hero by another. It is obvious that he possessed many great qualities, but was more a mystic than a philosopher even in his own sense of that character. Of his writings, which are composed with great purity in the Greek language, *The Caesars*, which in the form of a fable discourses the characters of several preceding emperors, is the best known. Marcus Antoninus appears to have been his hero. Besides his answer to St. Cyril he wrote some other discourses, epistles &c., and his receipts in the Theodosian code show that he made more good laws in his short reign than any emperor who ever preceded or followed him. His works were published in Greek and Latin by Spanheim in 1696 2 vols folio, and a selection from them in English by Duncombe in 1782 translated principally from La Bleterie.—*La Bleterie's Life of Julian* *Masham Gibbon*

JULIAN (Count) governor of Andalusia in Spain and of Ceuta in Africa in the beginning of the eighth century. He defended for a long time the latter fortress against the Moors, from 708 till 710 but Roderic, the Gothic king of Spain having dishonoured Cava, or Flormida, the daughter of count Julian, the latter in revenge made a league with the Moors, and thus facilitated the conquest of the peninsula. The fate of this betrayer of his country is uncertain but it is probable that his new allies suspecting him of designs to produce a fresh revolution threw him into prison where he perished. Sir Walter Scott and D. Southey have both produced poems on the Moorish conquest of Spain.—*Gibbon Ursus Hut*

JULIANA a female who possessed great influence at the court of the Mogul emperors of Hindostan in the earlier part of the last century. She was born in Bengal in 1658 and was the daughter of a Portuguese named Augustin Dias d'Acosta. After having suffered shipwreck she went to the court of the great Mogul Aurengzeb, whose favour she conciliated by presenting him with some curiosities which she had preserved. Being appointed superintendent of the harem of that prince and governess of his son BehaderShah, she had an opportunity of rendering some important services to the latter who succeeded to the crown in 1707 under the title of Shah Aulum. He was under the necessity of defending his newly acquired authority against his brothers by force of arms, and in a battle which took place, Julianah, mounted on an elephant by the side of the emperor animated him by her advice when his troops began to give way and to her exhortations he was indebted for the complete victory which he obtained. Her services were rewarded with the title of princess the rank of the wife of an ornate and a profusion of riches and honours. Shah Aulum had such an opinion of her talents, that he was accustomed to say "If Julianah were a man, I would make him my v.

JUL

star' Jehander Shah, who became emperor of Hindostan in 1712, was equally sensible of her merit, and though she experienced some persecution when that prince was deposed by his nephew in 1713 she speedily recovered her influence and retained it till her death in 1735.—*Bug Uau.*

JULIEN (PIERRE) a native of Paulien in France known as one of the most eminent sculptors of the last century. He was born in 1731 and first applied himself to the study of the art in which he afterwards so much excelled at Lyons, where he carried off the annual prize. He then went to Paris, and placed himself under Coustou whose associate he eventually became. Julien visited Rome in the year 1768, and left behind him several admirable specimens of his ability executed in that capital. About ten years afterwards appeared the principal production of his chisel.

The Dying Gladiator This chief d'œuvre gained him a seat in the academy. Many of his best works still excite the admiration of connoisseurs in the French metropolis. His death took place in 1804.—*Nouv. Dict. Hist.*

JULIEN (SIMON) a Swiss artist born at Cangiano in 1736. His contemporaries bestowed on him the appellation of The Apostle in allusion to the emperor of the same name and to his own abandonment of the French school of painting for that of Italy. Vanloo was his first master and model but a subsequent residence at Rome improved his taste and produced the change of style alluded to. An historical picture of the triumph of Aurelian is the most celebrated of his productions. Julien obtained a seat in the French academy but his emoluments did not keep pace with his reputation and he died in 1799 in very indigent circumstances.—*Nouv. Dict. Hist.*

JULIO ROMANO a celebrated Roman painter whose family name was *Pipa* or *Pippi*. He was born in 1492 and was a student in the school of Raphael with whom he became a great favourite. He displayed extraordinary facility of invention and grandeur of taste united with a vast fund of knowledge respecting every thing connected with his art. His colouring however is defective and his manner has been esteemed hard and dry, whence his designs have attracted more approbation than his finished paintings. After the death of his master who made him one of his heirs he was employed to finish the works left imperfect by that great artist particularly the hall of Constantine in the Vatican. He was courted by pontiffs, kings and princes; and was particularly patronised by the duke of Mantua in whose service he exercised his talents both as a painter and architect. In the latter capacity he was so much distinguished that on the death of San Gallo, architect of St Peter's at Rome, he was nominated to the vacant office, but while preparing to take possession of it, he was seized with illness, and died at Mantua in 1546 when he was interred in the church of St Barnabas in that city. His most famous work as a painter is

JUN

a saloon in which the destruction of the giants by Jupiter is represented in fresco but he has obtained a disgraceful share of notoriety on account of some indecent designs commonly called Aretina's figures, which he made to be engraved by Marc Antoino, who was imprisoned at Rome when the painter made his escape from the mortal penance by flight.—*Vesri. Sandretti. Orlando. dioced. Piat. Palkington.*

JUNCKER (CHRISTIAN) a learned German writer on the history of literature. He was born at Dresden in 1666, of poor parents, who however bestowed on him a good education. After completing his studies he became successively co rector of the gymnasium of Schleswangen rector of the college of Eisenach and in 1713 of that of Altenburg. He died in 1714 of grief for the loss of his wife whom he outlived only five days. Among his works written in Latin are a Sketch of the History of Periodical Journals, Dissertations on learned Women, the Life of Job Ludolph, Synoptic Tables of the History of Philosophy and General Literature. He was also the author of an account of the library of Eisenach and an introduction to the geography of the middle ages, both in German—*Nouv. Dict. Hist. Bug Uau.*

JUNCKER (JOHN) a German chemist who was physician to the Orphan house at Hildburghausen and a professor in the university of that city. He was born near Giessen in 1691 and died in 1759. His works are very numerous and were much esteemed by his contemporaries though the progress of science has rendered them in some measure obsolete. They are written in Latin including *Conspectus Formularium Medicarum*, 1730 4to *Conspectus Chemie in forma Tabularum* 1730 1744, 2 vols 4to, and *Conspectus Materiae Medicorum* 1760 4to—*Bug Uau.*

JUNCTIV or GIUNTINO a Florentine mathematician of the sixteenth century. He became a Carmelite friar but afterwards apostatized and having for some time led a wandering and licentious life he went to France and abjured the Catholic religion. Setting at Lyons, he became corrector of the press, and afterwards is said to have acquired a large fortune as a banker or usurer. His death is reported to have taken place in 1590 in consequence of his being burned under the ruins of his library. He was the author of a commentary on the treatise of Sacrobosco *De Sphaera*, and he also wrote on astrology on the comet of 1577, and on the reformation of the calendar by pope Gregory XIII.—*Nouv. Dict. Hist. Bayle.*

JUNGE (JOACHIM) in Latin, Junquias, one of the most eminent philosophers of the seventeenth century. He was born at Lubeck in 1587 and losing his father in his infancy his surviving parent with some difficulty found means to send him to the university of Rostock in 1606 where he studied mathematics with extraordinary diligence and success. He removed to Giessen, and having taken the degree of M.A. in 1609 he obtained the ma-

J U N

thematical chair which he resigned in 1614 to devote himself to philosophical researches. He afterwards studied medicine, and having visited Italy he took his degrees in that faculty at Padua, and then returned to practise as a physician at Rostock. He wished to have founded an academy there for the cultivation of natural science, but he was forced to relinquish that plan on account of some illiberal misconception of his designs. He became professor of mathematics at Rostock in 1624 but not finding his situation pleasant, he removed to Helmstadt, and then to Brunswick. He was again recalled to Rostock whence he went in 1639 to Hamburg to occupy the place of rector of the school of St John. He then commenced his opposition to the Aristotelian philosophy recommending in his lectures the substitution of science founded on experiment, to the antiquated systems of the schools. This innovation procured him many enemies among the partisans of Aristotle, but he continued to propagate his opinions till the infirmities of old age interrupted his labour. He then resigned a part of his employments and died a few years afterwards September 23d 1657. Junge like his great contemporary lord Bacon seems to have contributed much to enlighten mankind by overturning erroneous systems in philosophy. Leibnitz ranks him scarcely below Descartes and beside Copernicus Galileo and Kepler. He published little but left a vast quantity of MSS whence several valuable works were taken and published by his disciple, John Vaget. His *Isagoge Physiologica*, 1678, 4to contains traces of a plan for the classical arrangement of vegeta- bles, which afforded useful hints to Ray and Linnaeus.—*Cheneopea Biog Univ.*

JUNGER (JOHN FREDERIC) a German dramatist of the last century. He was a native of Leipzig and became director of the theatre of Vienna, where he died in 1797. His dramatic works form three collections. The comedies of Junger 5 vols 8vo., his Comic Theatre 3 vols 8vo. and his posthumous theatrical productions 2 vols 8vo. He also published some romances. Junger is reckoned among the best of the comic poets of Germany.—*Zapp's Univ. Hist.*

JUNGERMAN There were two brothers of this name natives of Leipzig. Godfrey the elder filled the chair as law professor in the university of his native city. He was a sound classical scholar and superintended the publication of a Greek translation of the commentaries of Caesar in two quarto volumes as well as of a Latin one of the pastoral of Longus. He also published an edition of the works of Julius Pollio. Godfrey Jungerman died in 1610 at Hennan.—Lewis his younger brother survived him till 1653, when he died at Alton. He was eminent as a naturalist, especially in botany, on subjects connected with which branch of philosophy he left several useful treatises. Among his writings are "Conspectus Flora Grossmanni," "Hortus Eystettensis;" and "Catalogus Plantarum."

J U N

JUNIUS (ADRIAN) or *A de Jonghe* a Dutch physician and man of letters in the sixteenth century. He was born in 1512 at Hoorn in Friesland where his father was a barge-master. After studying in his native country and at Paris he went to Bologna, and took the degree of M.D. In the latter part of the reign of Henry VIII he settled in England and was physician to the duke of Norfolk. He published a Greek and Latin lexicon which he dedicated to Edward VI and thereby exposed himself to the censure of the court of Rome though he protested he was a good Catholic. In the reign of queen Mary he published a Latin poem, entitled *Philippeti* in honour of her marriage with Philip of Spain. In 1564 he was at Copen hagen and had the office of physician to the king of Denmark but the climate not agreeing with him he returned to Holland and settled at Haerlem. When that city was besieged by the Spaniards in 1572 Junius with drew to Arnuyden and thence to Middleburg where he died in 1575 his life having been shortened by regret for the loss of his library and other misfortunes resulting from the capture of Haerlem. He was acquainted with seven languages besides his mother tongue and such was the extent and variety of his erudition that he was reckoned among his contemporaries second only to Erasmus. His works besides those mentioned before are *Nomenclator Omnium Rerum*, Latin poems notes on ancient authors, translations from the Greek and philological tracts.—*Bayle Moreri Tassier Eloges des H. S.*

JUNIUS (FRANCIS) or *F. du Jon* a learned French Protestant divine of the sixteenth century who was a native of Bourges. Being sent to Lyons when young to qualify himself for a diplomatic office he became a convert to infidelity, but returning home was reclaimed by his father who next sent him to study at Geneva, where he supported himself by acting as a tutor to others, while preparing for the clerical profession. In 1565 he was appointed minister of the Walloon church at Antwerp where he was exposed to some danger from the inquisition and was at length obliged to remove to Germany. In 1568 he officiated as chaplain in the army of the prince of Orange during his expedition to the Netherlands. In 1573 he went to Heidelberg, at the invitation of the elector palatine to be employed with Tremellius in translating the Old Testament into Latin, and thus is the work by which he is at present best known. He was afterwards theological professor at the college of Neustadt, and then in the university of Heidelberg. In 1592 he removed to Leyden to fill the same office and died there of the plague in 1602. His works, which are numerous, relate to divinity and biblical and classical literature.—JUNIUS (FRANCIS) son of the foregoing eminent as a philological writer. He was born at Heidelberg in 1589 and received his education at Leyden. He first engaged in the military profession which he forsook to devote himself to literary pursuits. In 1620 he

JLR

JUR

accompanied Thomas Earl of Arundel to England, and for thirty years he resided in the family of that distinguished nobleman to whom he was librarian. He devoted his attention chiefly to the study of the northern languages and went to Germany for the purpose of investigating the Saxon as still spoken in a part of that country. He returned to England in 1674 and passed some time at Oxford whence he removed to the house of his nephew Isaac Bassus, at Windsor, in August 1677 and died there about three months afterwards. His works are a treatise *De Pictura Veterum*, 1637 4to Observations in *Willebrami Francorum paraphrasa Cantici Canticorum*, 1655, 8vo, and a Gothic Glossary in five languages part of which only was published by the rev Edward Lye in 1743—*Bassus*. *Wood's Athene, Oxon. Aelian* 2
Brog

JUNOT (*ANDOCHE*) a French general who raised himself to eminence by his talents. He was born in low life in 1771 and at the age of twenty he entered into the army as a volunteer. He had arrived at the rank of *hen* tenant when he was noticed by Buonaparte who placed him on his staff. He accompanied his master in his Egyptian expedition and became a great favourite owing chiefly to the daring courage which he exhibited in the field of battle. He was made lieutenant general and in 1806 governor of Paris and colonel general of hussars. The next year he was sent ambassador to Lisbon with orders to take possession of Portugal on the removal of the royal family to Brazil. He remained there two years, and was honoured with the title of duke of Abrantes. The battle of Vimiera, in which he was opposed to Sir A. Wellesley [duke of Wellington] put an end to his authority in Portugal. Notwithstanding his ill success he was trusted and employed by Buonaparte who appointed him captain general and governor of the Illyrian provinces. He died in 1813. Though little acquainted with literature Junot was fond of books and collected a valuable library of which a catalogue was published in 1813, Bva.—*Biog. Univ.*

JURIEU (PETER) a celebrated protestant divine was the son of a minister of the same persuasion at Mer a small town near Blois where he was born in the year 1637. He received part of his education in Holland but completed it in England under his maternal uncle Peter du Moulin and received orders in the church of England. On the death of his father he was called to succeed him and the French protestants disapproving episcopal ordination, he submitted to be re-ordained according to the form of Geneva. He was subsequently chosen professor of Hebrews at Sedan and discharged the duties of his station with great reputation. At the same time he signalled himself as a rigorous defender of orthodoxy and both by his writings and conduct involved himself in continual quarrels and controversy. In 1673 appeared his *Protestant against a change of Religion* to counteract the effects of *The Exposition of*

the Catholic Faith, by Bossuet; and in 1684 he published anonymously a piece, entitled "La Politique du Clergé de France," which created a great sensation by its asserted severity. On the dissolution of the university of Sedan by the intolerance of Louis XIV., Bayle who had been introduced by Jansen to the philosophical chair of that establishment, had now the means of returning the favours by securing that of divinity for his friend at Rotterdam. In 1685 Jansen published his

Parallel between the History of Calvinism and that of Popery, in answer to the history of Calvinism by Mansel. This work although ably written was so much exceeded in popular estimation by a criticism on the same book by Bayle, that its author began to indulge a dislike towards the latter which soon amounted to confirmed enmity. In 1686 he published a work entitled "The Accomplishment of the Prophecies" &c. In this work he imagined that he had discovered a true key to the mysteries of the Apocalypse, which he asserted contained indications of the approaching downfall of popery in France. The weak ness which he displayed on this occasion produced much ridicule, and among many structures serious and satirical there appeared in 1690 a work entitled "Important Advice to the Refugees on their approaching Return to France" written in a felicitous vein of poignant humour as there is little reason to doubt, by Bayle. As already shown (see article BAYLE) the growing hatred of Junius now changed into rage and fury and he persecuted his old friend with the most extraordinary virulence. The same litigious temper led him also to accuse and stigmatise several refugee ministers whose opinions differed from his own toleration in his estimation being the greatest of all heresies. The opposition of many spirited antagonists the refusal of government to second him with the arm of power and above all the condemnation of many of his own opinions by the synods, produced him in return much mortification and a lowness of spirits was thereby engendered under which he sank in 1713 in the seventy sixth year of his age. He possessed learning and abilities but was haggard, intolerant and fanatical. His principal works, besides those already mentioned are "La Jusification de la Morale" "Lettres Pastorales", "Traité de l'Unité de l'Eglise", "Traité de la Nature et la Grace", "Histoire des Dogmes et des Cultes" the latter of which is by far the most able of his productions. Now Diet Hist. Des Ministers's Life of Bowles.

JURIN (JAMES) a learned and ingenious physician who was born in 1654. He studied at Trinity college Cambridge, of which he became a fellow, and on leaving the university he settled in London where he obtained the office of physician to Guy's hospital. He was also for several years secretary to the Royal Society, and died in 1730 while president of the College of Physicians. He distinguished himself by the application of mathematical

J U S

science to physiology, and was published in the Philosophical Transactions for 1718 and 1719 calculations of the muscular power of the heart, which involved him in a controversy with Dr Keill and M. Senac. He likewise wrote on the causes of distinct and indistinct vision, and his opinions on that subject were unanswered by Mr Robins, to whom Dr Junia published a reply. He was the author of several publications in favour of inoculation for the small pox, and many papers from his pen on medical physiological and philosophical topics are to be found in the Philosophical Transactions.—*Elog. Diet. Hist de la Med. Res. a Cyclopædia*

JUSSIEU (ANTHONY de) an eminent botanist and physician who was born at Lyons in the latter part of the seventeenth century. He became a doctor of the medical faculty of Paris and he studied botany under Tournefort, whose system he adopted and improved. In 1712 he was admitted a member of the Royal Academy of Sciences at Paris and he was likewise professor of botany at the Jardin du Roi. He made a botanical tour in Spain and Portugal whence he imported several plants which he described in the Memoirs of the Academy of Sciences. He died in 1748. Among his works are *Eloge de M Fagon avec l'Histoire du Jardin Royal de Paris et une Introduction à la Botanique*, and *Discours sur le Progrès de la Botanique* besides additions to some of the works of Tournefort.—JUSSET (BERNARD de) brother of the preceding and distinguished for his attention to similar studies. He was born in 1699 and having studied medicine in 1728 he was made a doctor of the faculty of Paris. He also obtained the place of botanical demonstrator at the Jardin du Roi, and was a member of the Academy of Sciences Louis XV who consulted him on the formation of a botanical garden at Trianon had a high esteem for him but his modesty prevented him from profiting by the king's favour. He visited England where he was made a fellow of the Royal Society and after a life devoted to science he died in 1777. He published an improved edition of Tournefort's History of the Plants growing in the Environs of Paris 1735 and a Catalogue of the Trees and Shrubs which may be reared about Paris 1735 besides papers in the Memoirs of the Academy of Sciences.—JUSSIEU (JOSEPH de) a third brother of the same family with the former. He was born in 1704 and was educated for the medical profession but he chiefly distinguished himself as a man of science. In 1735 he went to Peru as botanist with the academicians sent from France and Spain to measure a degree of the meridian. He did not return with his associates but remained in South America thirty six years, during which period he made many important observations relative to the natural history of the country though the world was deprived in some measure of the benefit of his discoveries by the unfortunate loss of his diary. He returned to France in a very debilitated state of health and after being reduced almost to a state of second childhood, he died in 1779.—Now *Dart. Hist. Eng. Uni. Hutchinson's Eng. Med.*

JUSTEL (CHRISTOPHER) a French statesman and judicial writer of the seventeenth century. He was a native of Paris and became counsellor and secretary to Louis XIII. His intimate acquaintance with ecclesiastical antiquities and the canon law was displayed in several learned publications among which were *Codex Canonicum Ecclesiae Universae*, *Codex Canonum Ecclesiae Romanae* and *Codex Canonum Ecclesiae Africanae* besides which he left valuable MS collections. He was also the author of a genealogical history of the house of Auvergne. He died in 1649 aged about sixty nine.—JUSTEL (HENRY) son of the foregoing born at Paris in 1620 succeeded his father as royal secretary and counsellor. He published at Paris in 1661 *Bibliotheca Juris Canonici veteris* 2 vols. folio from his father's MSS the remainder of which he presented to the university of Oxford. Being a protestant he retired to England on the revocation of the edict of Nantes and was appointed librarian to the king. His death took place in 1693. *Mores Aikin's Gen. Bio. Chalmers's Eng. Dict.*

JUSTI (JOHN HEINRICH GOTTLÖDE) a skillful German mineralogist of the last century. He studied at Jena in 1720 where he was patronized by the professor of political economy whose lectures he attended. The irregularity of his conduct having obliged him to leave the university where he had gained some literary reputation he enlisted as a common soldier in the service of the king of Prussia. He rose to the rank of sub lieutenant and was then cashiered and imprisoned for disobedience to his colonel. He made his escape and settled at Leipzig where he supported himself by writing for the press. A thesis on political economy which he had maintained at Jena, having attracted notice he was invited to Vienna to become professor in the Theresian college. He did not however obtain that office but was made counsellor of the mines in which capacity he visited the mines of Austria and Hungary. In 1735 he went to Göttingen where he lectured on political economy and natural history. He resided at Copenhagen in 1738 and subsequently travelling in Württemberg he was arrested in consequence of having offended the king of Prussia by his writings. Though he at length obtained his liberty he involved himself in new difficulties, and died in confinement in the fortress of Custrin in 1771. Besides many translations from the French he was the author of a Treatise on Money, a Treatise on Mineralogy, Miscellanies on Chemistry and Mineralogy 3 vols 8vo. A complete Treatise on Manufactures 2 vols. 8vo.—*Eng. Univ.*

JUSTIN a Latin historian supposed to have lived in the second century under Antoninus Pius. Nothing is known concerning his family or condition but one of the MSS of

J U S

his works calls him M. Justinianus Justinianus. His history is merely an abridgment of that of Treges Pompeius in forty-four books. Justin writes with considerable purity; his reflections, although obvious, are sensible and his style occasionally rises to eloquence. He can however only be regarded as a minor historian and his book is chiefly used as an elegant compendium for the youthful Latin student. Justin has been illustrated by the most able annotators, and particularly by Creuza. The best editions of his are that of the last-mentioned critic of Heine, 1705. Svo. or Gronovius 1719 and 1760, and of Fischer 1757.—*Fabrii Bibl. Lat. Harrowi Clas-sec. Sacri Onom.*

JUSTIN surnamed the Martyr one of the earliest and most learned writers of the Christian church. He was the son of Priscus a Greek by nation and was born at Flavia Neapolis, anciently called Sichem a city of Samaria in Palestine towards the close of the first century. He was educated in the Pagan religion and after studying in Egypt became a Platonist until in the year 132 he was led by the instructions of a zealous and able Christian to embrace the religion of the gospel. He subsequently went to Rome in the beginning of the reign of Antoninus Pius and drew up his first apology for the Christians then under a severe persecution in which he shows the cruelty and injustice of the proceedings against them. He was also equally zealous in opposing alleged heretics and particularly Marcion against whom he wrote and published a book. He not long after visited the East and at Ephesus had a conference with Tryphon a learned Jew to prove that Jesus was the Messiah an account of which conference he gives in his Dialogue with Tryphon. On his return to Rome he had frequent disputes with Crescens a cynic philosopher in consequence of whose calumny he published his second apology which seems to have been presented to the emperor Marcus Aurelius in 162. It produced so little effect that when Crescens preferred against him a formal charge of impiety for neglecting the Pagan rites, he was condemned to be scourged and then beheaded which sentence was put into execution in 164 in the seventy fourth or seventy fifth year of his age. Justin Martyr is spoken of in high terms of praise by the ancient Christian writers, and was certainly a zealous and able advocate of Christianity but mixed up its doctrines with too much of his early Platonism. There are several valuable editions of his works the best of which are those of Maran Paris 1742 folio and Oberthur Wurzburg 1777 3 vols. Svo.—*Cate-Logiar Sacri Onom.*

JUSTINIUS I, emperor of the East, was born of obscure parentage in that part of Thrace anciently called Dacia. When his uncle Justin attained the purple he made Justinian a sharer in the imperial power the exclusive possession of which he obtained on his benefactor's death in 527. He was then in his forty fifth year and distinguished for de-

J U S

votional austerity but immediately upon his elevation he solemnly espoused Theodora, an actress and courtesan whose influence over him was unbounded. He even associated her with himself in the sovereignty and by her pride and vanity on the one hand and spirit and magnificence on the other she both disgraced and honoured the ascendancy bestowed on her. Justinian began his administration with a violent persecution of sectaries and heretics which made him a great favourite with the ecclesiastical writers of the age. Theology was indeed his favorite study and engrossed too much of his attention from other affairs. His reign was however memorable for many important transactions of a civil and military nature among which may be enumerated the Persian and African Vandal wars, so successfully terminated by Belisarius, (see his article.) The latter general also delivered his master from the effects of a rebellion produced by the factions of the circus in which revolt thirty thousand persons are said to have been slain. The principal event however which has rendered the reign of Justinian interesting to posterity was the celebrated reformation of the Roman jurisprudence which took place under his auspices and patronage. The person to whom the work was principally confided was Tribonian a lawyer of various and extensive attainments who aided by competent associates completed the Justinian code from the Gregorian Theodosian and Hermogenian codes in 539. Its publication was followed in 538 by that of the Pandects or Digests being a compilation of the opinions or decisions of former civilians and by the Institutes an elementary treatise for the use of students. Lastly the laws of modern date and Justinian's own edicts were in 541 thrown into one volume under the title of the Novelle or new code which completed the important legislative labours of this reign. A passion for building was also entertained by Justinian who displayed his taste in the erection of numerous churches, among which are the celebrated Sancta Sophia now subsisting as the principal mosque of the Turkish empire. Bridges, hospitals, aqueducts, high roads, fortresses and all kinds of works of public utility were likewise undertaken through out the various provinces of the empire. The progress of the Gothic king Totila in Italy although finally repressed by Belisarius and Narses produced considerable anxiety to the declining age of the emperor whose unceasiness was much increased in 559 by a sudden invasion of the Bulgarians through the long wall of Constantinople. These invaders were however checked by the valour and skill of Belisarius and their final retreat purchased by a sum of money. The close of the life of Justinian was embittered by a conspiracy among his principal officers and an accusation being thrown out against Belisarius that great man was disgraced and imprisoned although subsequently declared innocent and restored to his honours. Justinian broken with years and care, expired in 565 in the thirty ninth year R 2

J U S

of his reign and eighty-third of his age. Notwithstanding his general favour with the church at the time of his death, he was about to publish an edict in favor of an opinion of the inextricability of the body of Christ which was not deemed perfectly orthodox, so that his decease was deemed providential. In other respects, his increasing jealousy and the heavy pecuniary burthenes which he imposed upon his subjects, made him disesteemed. The introduction of silk into Greece by two Persian monkish missionaries is an event in this reign which merits being recorded.—*Gibbon. Milner's Church Hist.*

JUSTINIANI (St LAWRENCE) the first patriarch of Venice was descended from a noble family and born in that city in 1381. This prelate died in 1485 and was canonised in 1690 by Alexander VIII. He left several works of pietry which were printed at Brescia in 2 vols. folio 1506 and again at Venice in 1755 with a life by his nephew.—*Moren. Justiniani (Bernard)* nephew of the above was born at Venice in 1408. He received a learned education and took his doctor's degree at Padua. He was sent for to Rome by pope Calixtus III who employed him in several commissions, and on his return to Venice he was sent ambassador to Louis XI of France. He was afterwards employed in several embassies made a member of the council of ten, and finally elected procurator of St Mark, the second dignity in Venice. He died in 1489. He was author of a "History of Venice" which has been esteemed as the first regular attempt of the kind, and also a life of his uncle, as mentioned in the preceding article. His letters and speeches were also printed but were afterwards suppressed. Of the same family which is still honourably distinguished in Italy was the marquis VINCENZO JUSTINIANI who employed Millian Blumenthal, and others to engrave his gallery Rome 1642 folio, of which splendid work much inferior imitations were taken about 1750.—The abbe BERNARDO JUSTINIANI author of the

Origin of the Military Orders Venice 1692 3 vols. folio, was also descended from a collateral branch of the same family.—*Chamfay. Generous Hist. Let & Itala.*

JUSTINIANI (AVVENTIN) bishop of Nebo was of the same noble family as the foregoing. He was born at Genoa in 1470 and entered into the order of St Dominic at Paris in 1488. Being of distinguished learning, pope Leo X made him bishop of Nebo in Corinica but he afterwards accepted the invitation of Francis I to settle at Paris, where he became his almoner and regius professor of Hebrew. He perished in a voyage from Nebo to Genoa in 1536 with a high character both for conduct and erudition. He composed several pieces the most considerable of which is *Psalterium Hebreum. Grecum. Arabicum et Chaldaicum, cum tribus Latinis interpretationibus et glossis*, being the first peaker of the kind which appeared in print. He also wrote "*Annales de Republica Genesina*" Genoa, 1557, and was editor of "*Porchetti Victoriae aduersus impios Hebrewos*."—*Thibault. More. New Dict. Hist.*

J U X

JUVENAL (*Diversus Juvenis*) a celebrated Roman satirist, is supposed to have been born at Aquinum in Campania, about the beginning of the reign of Claudius. He was either the son by birth or adoption of a rich freed man, who gave him a liberal education, and bred him up to the study of eloquence. He passed about half his life in the pursuits of the bar when as appears from some of Martial's epigrams he acquired considerable reputation. His first essay in poetical satire was directed against the player Paris a great favourite with Domitian on which account the satirist was sent into honourable banishment under pretence of being nominated to the command of a cohort in the army quartered at Pentapolis on the frontiers of Egypt and Lybia. On the death of Domitian he returned to Rome and his thirteenth satire addressed to Calvisius, appears to have been written in the third year of Adrian when the poet was above seventy years old. He is supposed to have died in the year 128 at the age of eighty. Sixteen satires of Juvenal have reached posterity and stand prominent in the class of those which castigate vice in preference to folly. Many of his maxims are delivered with great force and elevation but the moral indelicacy of his age renders him extremely gross in much of his portraiture a defect which risks the contagion of vice from the very indignation of virtue. As a poet he has more point and animation than taste and in style is occasionally inflated and negligent, retarding however a rich vein of poetry and picturesque expression. Of Juvenal the best editions are the Variorum of Grævius, the Delphin and that of Cassubon. This poet has been ably translated into English by Dryden Gifford &c.—*Vossi Post Rom. Crustus Hist. Rom. Poet. Sacre Nonn.*

JUVENTUS (CAIUS VECTIUS AQUILINUS) one of the first Christian poets was born of a noble family in Spain about the year 330. He wrote the life of Christ in Latin verse in which he followed the four evangelists almost word for word, but with little poetical ability and in defective Latin. This work which is entitled *Historiae Evangelice lib. iv* may be found in the Bibliotheca Patrum and also in the Corpus Poëtarum. The best separate edition is that of Rome 1792 4to.—*Fabri. Bibl. Lat. Med. Moren.*

JUXON (WILLIAM) bishop of London, and subsequently archbishop of Canterbury prelate of distinguished mildness, learning, and piety. He was born in the city of Chester in 1582 and educated at Merchant Taylors school whence he removed in due course in 1598, on one of the scholarships attached to that seminary to St John's college, Oxford. The law appears to have been his original destination and he even went so far as to enter himself a member of one of the inns of court. It is supposed that the friendship he contracted at that period of his life with his fellow collegian Laud might subsequently

J U X

induced him to take orders, on which he obtained the livings of St Giles, Oxford, and of Somerton. In 1621 he was elected to the presidency of St John's, and by the continued patronage of his friend, was raised in rapid succession to the deanship of Worcester 1627, the clerkship to the royal closet 1632, the bishopric of Hereford 1633, and to that of London before the expiration of the same year. Favoured by the same influence he also secured the personal countenance and esteem of Charles I in so high a degree that in 1635 he was appointed lord high treasurer of England. The nomination of a churchman to this dignified and responsible situation a circumstance which had not occurred for several preceding reigns, excited a strong sensation among the puritanical party who made it the ground of severe invective against the government and more particularly against the primate who was with justice suspected of being the principal adviser of the measure. With regard to Juxon personally however there seems to have been no ground of complaint since on his resignation of the office after having held it *something less than six*

J U X

years, the integrity and ability with which he discharged its various duties, were admitted on all hands. During the whole progress of the unhappy contest which followed, he maintained an unshaken fidelity to the king whom he attended during his imprisonment in the Isle of Wight and on the scaffold, on which occasion he received from the hand of Charles, the moment previous to his execution his diamond George with directions to forward it to his son. After the king's death, the parliament threw him into confinement for treason, in refusing to disclose the particulars of his conversation with the king but he was soon released and continued to live in privacy until the restoration. He was then called again into public life and to added dignity being raised to the primacy. Archbishop Juxon survived his elevation little more than two years, dying June 4 1663. His remains were deposited at his own desire in the chapel of St John's college Oxford where his memory is deservedly held in veneration as a liberal benefactor and an ornament to the foundation.—*Elog. Brit.*

K A B

KAAAS (NICHOLAS) a wise and patriotic Danish statesman. He was born in 1535 and studied in the universities of Germany. In 1573 he was made chancellor of Denmark and on the death of king Frederic II in 1588 he was nominated the first of the four regents to govern the kingdom during the minority of Christiern I. Being attacked with a mortal disease before the coronation of that prince he sent for the young monarch when he lay on his death bed and addressed him in the following terms.— *Sure I promised your father in his last moments that I would do all in my power to see the crown placed on the head of your majesty. Since that satisfaction is denied me I will at least contribute to that event by placing in your hands the key of the place where since the death of your august father the crown and other regalia have been preserved. Take it in the name of God and wear the crown with glory, sway the sceptre with wisdom and clemency, bear the sword with justice and keep the globe with judgment.* He died in 1594. His correspondence with learned foreigners has been published in the epistolary collection of Chytreus and the Law of Jutland, printed at Copenhagen, 1590 4to is said to have been principally reviewed corrected and much augmented by the care of the chancellor Kaaas.

—*Elog. Urn.*

KABRIS (JOSEPH) a Frenchman, the peculiarity of whose adventures entitles him to some notice. He was born at Bordeaux and having entered into the naval service of his country he was taken prisoner during the last war and conveyed to England. He obtained

K A B

permission to become a sailor on board a South Sea whaler and the vessel being wrecked on the coast of the island of Noukahawa in the Pacific ocean Kabris fell into the hands of the inhabitants, who are cannibals. They were on the point of slaying him to feast on his carcass, when he was saved by the intercession of the king's daughter a young girl who shortly after became his wife. He was then invested with the marks of distinction peculiar to the royal family and installed in the office of chief justice of the island. He administered the laws according to his own account much to the satisfaction of the people a task rendered comparatively easy by the simplicity of their institutions. A thief is punished by tying him to a tree for several days, an assassin is killed by the family of the victim, and his body divided among the different tribes while the traitor is flogged alive and thrown into the sea, as not worthy even of being eaten. Kabris had for nine years been in the enjoyment of domestic happiness and legal reputation among the Noukahiwans when he was carried away as he stated, while asleep by the Russian navigator captain Kruzenstern. When he arrived at Petersburg he was appointed professor of swimming, in the imperial school for the navy. He returned to France in 1817 intending after visiting Bordeaux to go back to his wife and family at Noukahawa. To raise funds for his expenses on his journey he exhibited himself to the public at Paris and elsewhere his face being tattooed in the New Zealand style of decoration. While on his travels for this purpose he died suddenly at Valenciennes, in 1822.—*Lit. Chret.*

K A I

KADLUBKO or **KADIJUBEK** (VIVIENNE) a Polish historian, who was a native of Kamien in Galicia, and became provost of Sandomir. He was nominated to the bishopric of Cracow in 1308, and after holding the see ten years, he resigned it to become a cistercian monk, and died in a Cistercian monastery of his order in 1323. He was the author of a work published in 1612 under the title of *Historia Polonica, cum Commentario quicquidem reprinted at Leipzig in 1712.* The history of Kadlubko finishes at the year 1202 but there is a continuation by his commentator to 1424. His work is valuable for its general accuracy and fidelity.—*Bios. Univ.*

KAEMPFER (ECKELBART) a Westphalian physician born at Lemgow in 1611. Having prosecuted the study of natural philosophy with great success at Danzig Thoru Cracow and Upsal he travelled into Persia in quality of physician to the Swiss embassy, and proceeding afterwards to Batavia accompanied that sent by the Dutch authorities to the Japanese Isles in 1660 in a similar capacity. Three years after he returned to Europe and having passed some time in the capital and other parts of the United States during which period he graduated as MD at Leyden retired to the place of his nativity where he published in 1712 an account of his philosophical pursuits during his stay in the East, and a catalogue of the botanical and other rarities he had taken that opportunity of collecting. His other works are, a "History of Japan" of which there is an English translation in two folio volumes *Decas Observationum Exoticarum, and Amentiarum Exoticae.* His death took place at Lemgow in 1716—Rees's *Cyclop.*

KAIN (HENRY LEWIS LE) a celebrated French actor who was born at Paris April 14, 1728. He was originally a maker of surgeons' instruments and owed his theatrical debut to an introduction to Voltaire who, struck with his talents for the brush, drew him from his shop and by his advice and instruction qualified him to appear on the Parisian stage. It is somewhat remarkable that the poet never saw his protégé perform in public, as Le Kain made his first appearance as an actor a few days after Voltaire set out for Prussia, and when after a long absence he returned to Paris the tragic hero had descended to the tomb. Le Kain made his debut in the character of Brutus September 4, 1750. In spite of some physical imperfections he succeeded admirably in exhibiting the more violent emotions of the mind, and raised himself to the head of his profession. He was unfortunately addicted to various indulgences, consequent probably to his former habits of life which injured the respectability of his private character and debilitated his constitution. His habits of low debauchery at length occasioned his death which took place owing to an inflammation of the bowels, in 1778 at the age of forty-nine. He is said to have left behind him the sum of one hundred thousand crowns which he had accumulated by the

K A N

exercise of his professional abilities.—*Nous Dict. Hist.*

KALKBRENNER (CARLSTIAN) a native of Minden in Prussia born there of Jewish parents in 1745. He displayed at an early age a strong passion for music which his friends, seeing the bent of his genius encouraged, with a view to his practising that science as a profession. He was first placed by them under Emanuel Bach master of the chapel to the elector of Hesse Cassel, whence having made considerable progress, both in the practical and theoretical knowledge of his art he removed to Berlin and entered the service of prince Henry of Prussia brother to Frederick the Great. In 1796 he made a musical tour through Germany Italy and France and settled finally at Paris where his reputation obtained him the appointment of singing master to the academy of music. In this institution he continued till his death in 1806. He was the author of five operas *La Veuve de Malabar* *Democritus* *La Femme et le Secret* *Olympae* (which was unsuccessful,) and *Génone* as well as of several didactic treatises on music but his most valuable literary production is his *Histoire de la Musique.* This work of which he only lived to complete the first volume printed in 1802 contains much valuable information on the state of music among the ancient Hebrews and Greeks.—*Bios. Dict. of Mus.*

KALM (PETER) a Swedish traveller and natural philosopher of the last century born in 1710. He made a progress during 1747 and the two following years through a considerable portion of North America and on his return to Abo where he was botanical professor, published his travels, with a copious account of the productions of the soil and the natural curiosities of the countries he had visited. There is an English translation of this work by Foster printed in 1771. Kalm subsequently travelled over several parts of the Russian dominions with the view of increasing his information as a naturalist and died soon after his return in 1779.—*Rees's Cyclop.*

KANT (IMMANUEL) a celebrated German professor of logic metaphysics and moral philosophy who has obtained much celebrity in his own country as the founder of a new philosophical sect. He was born at Königsberg in Prussia in 1724 and his father who was of Scottish extraction was a saddler in humble circumstances. He was instructed in reading and writing at the charity school of his parish, whence by the kindness of an uncle a wealthy shoemaker he was sent to the collegium Fredericianum. His favourite study at the university was that of mathematics and the branches of natural philosophy connected with them and on the completion of his academic education he accepted the situation of tutor in a clergyman's family. After remaining a teacher for some years he returned to Königsberg and supported himself by private instruction until in 1746 being then only twenty two years of age he began his literary career with a small work entitled

K A S

"Thoughts on the Extraction of the Animal Powers &c." In 1754 he acquired great reputation by a fine essay on the revolution of the earth round its axis, and was admitted to the degree of MA. He then commenced a course of lectures on the pure and practical mathematics and from time to time published works which are now of little importance compared with his new metaphysical system the first traces of which are to be found in his inaugural dissertation written in 1770 when he was appointed a professor in the university of Königsberg. Seated at length in the chair of metaphysics his subsequent productions were almost all of that nature until in 1781 he published his "Critique of Pure Reason" which contains the system commonly known under the title of the "Critical Philosophy." To this work in 1783 he published a second part entitled "Prolegomena for future Metaphysics" which are to be considered as a Science. In 1786 he was appointed rector of the university of Königsberg to which office he was again called in 1788 and though now far advanced in life he continued his literary industry by the publication of numerous works in further development of his philosophical principles until 1793 in which year he took leave of the public as an author and gave up all his official situations. He lived for some years afterwards in a state of corporal real and mental decay until released by death on the 12th of February 1804. Kant was a man of high intellectual endowments and possessed so clear a conception and so strong a memory that he obtained an acquaintance with almost every science by reading only and by the extraordinary faculty by which he retained every thing which had once passed through his mind. The Kantian or critical philosophy has been very generally admitted in Germany and for a time banished every other from the protestant universities. When duly considered however by the veteran and unprejudiced metaphysician it will be found to discover little which is new beyond its phraseology and classification and it is already beginning to give way even in the country which gave it birth. Any adequate explanation of a system remarkable at once for subtlety of reasoning and obscurity of phraseology will not be expected in an abridgment of this kind. We therefore refer to an able view of its fundamental principles in the supplement to the Encyclopaedia Britannica to Nitsch's General and Introductory View of Professor Kant's Principles &c., and to Dr Willich's Elements of the Critical Philosophy all which accounts have been written with a view to English readers and more especially the last, which professes to give an adequate statement of the origin and tendency of all the works of this philosopher.—*Encyclop. Brit. Aikins G. Bay.*

K A U

Segner and Karsten, to restore to geometry its ancient pretensions, and to introduce more precision and accuracy of demonstration into the whole of mathematical analysis. Germany is in consequence indebted to Kästner for several able works on every part of the pure and practical mathematics, as also for a History of the Mathematics 2 vols. 1797

To scientific skill he added the rarely accompanying talent of poetical and epigrammatic humour as appears by several works of that description. He died in 1800.—*Tillock; Philos. Mag. Biog. Univ.*

KATE (LAMBERT TEV) a Dutch divine who distinguished himself by his researches relative to the language of his native country. He published in two volumes quarto "An Introduction to the Knowledge of the Dutch Language" Amsterdam 1723, besides which he was the author of a dissertation on the connexion between the Gothic tongue and the Dutch, a life of Jesus Christ and a memoir on the beau-ideal in the arts of painting sculpture and poetry. He also collected a rich cabinet of pictures, &c. which evinced his taste and skill in the fine arts.—*Biog. Univ.*

KAUFFMAN (MARIA ANGELICA) the daughter of a Swiss painter who herself attained to considerable eminence as an artist. She was born at Cirey in 1740 and studied painting both at Roms and Venice, from which latter city she came to England at the invitation and under the patronage of the Wentworth family. After residing many years in this country during which period she obtained a seat among the royal academicians, she contracted a marriage with the chevalier Zucca a native of Venice and a professor of her favourite art whom she accompanied to Italy and continued to reside in that country for the remainder of her life. Many of her most admired productions remain in England, and a large proportion of them have been engraved by Bartolozzi and others. Her death took place in 1807 at Rome.—*Edition of Picturesque by Fuseli.*

KAUNITZ (WENCESLAUS ANTHONY) prince, a German statesman who was a native of Vienna. He was one of a numerous family and was therefore at first destined for the church but he quitted that profession for politics. In 1737 he was made a counsellor of state and two years after he was sent as imperial commissioner to the diet of Ratisbona. In 1742 he was employed as minister plenipotentiary at the court of Sardinia, and in 1744 made minister of state for the kingdoms of Hungary and Bohemia. He was next occupied with the affairs of the Netherlands, and in 1748 he assisted at the treaty of Aix la Chapelle. The empress Maria Theresa then conferred on him the order of the golden fleece and sent him as envoy to Paris. After being again employed in the Netherlands he returned to Vienna in 1753, and took the office of chancellor of state, in addition to that of supreme director of the affairs of the Netherlands and of Lombardy with the rank of minister of state, which he retained till his

K A Y

death. His most important public service was the conclusion of the treaty of alliance between Austria and France in 1756. He was made a prince of the German empire in 1764 and survived that period about thirty years, dying June 27 1794, at the age of eighty three. He enjoyed to the last the confidence of the reigning sovereigns, but the later years of his life were spent in philosophical retirement.—
Akin's Gen. Biog. Biog. Univ.

KAYE in Latin *Catus*. There were two eminent scholars of that name in the sixteenth century contemporaries and heads of colleges in their respective universities of Cambridge and Oxford concerning the comparative antiquity of which seats of learning they carried on a warm controversy with each other. JOHN KAYE, the elder of the two, was born at Norwich in 1510 and was educated for the medical profession first at Gonville hall Cambridge of which society he was elected a fellow and afterwards at Padua and Bologna, in which latter university he graduated as MD. On his return to England he became physician to the court, and retained that office during three successive reigns. He also now became a munificent benefactor to the society in which he had commenced his education, and which still bears his name in lieu of its former designation of Gonville-hall. This foundation he augmented by a liberal proviso for the maintenance and education of twenty three scholars, besides other large endowments, for the perpetual support of which he bequeathed the principal part of his property at his decease. Dr. Kaye was himself the first master of this increased establishment now known as Caius college and added to the old building the quadrangle also called after himself. Besides the controversy already alluded to which commenced by his *History of Cambridge* in which he makes the foundation of that university to coexist with the reign of the emperor Theodosius, he was the author of treatises 'On the English Breed of Dogs,' 'On rare Plants and Animals' On the Hot Springs of England, 'On the correct mode of Pronouncing the Greek and Latin Languages,' 'De Ephemera Britannica,' and some medical tracts, 'De Medicamentis meo theodo,' 'Hippocrates de Medicamenta, &c.' He died at Cambridge in 1573, surviving scarcely by a year his namesake and opponent, Dr. THOMAS KAYE who was a native of one of the northern counties of England and who having graduated as AB at University college Oxford, took holy orders and was elected fellow of All Souls. He was afterwards appointed public registrar but for some ungodly lost the situation. That alleged misconduct, of whatsoever nature it might have been, does not appear to have impeached his moral character as almost immediately subsequent to the death of Mary we find his name enrolled as having been presented to a cell in Salisbury cathedral. This piece of presumption, in less than three years, was followed up by his elevation to the headship of the college in which he had matriculated

K E A

Besides the treatise entitled "Assestio Antiquitatis Ortonensis Academie" to which we have before referred and of which an edition appeared in 1730 in two octavo volumes, comprising the arguments of both the disputants, he also published a translation of Erasmus's work on St. Mark's gospel.—*Biog. Brit. Wood.*

KAZWINI (ZACHARIAH BEN MOHAMMED BEN MAHMUD) an Arabian geographer and naturalist of the thirteenth century. He was a native of Casbun in Persia and according to some authors he studied jurisprudence and became cadi of Wasit and of Hillah in Irak Arabi. He is supposed to have died in 1283 Little is known of his personal history but many of his works are still extant the merit of which is such as to have gained him the title of the Arabian Pliny. The most important of his productions is divided into two parts the first relating to astronomy and the second to the terrestrial elements. He also wrote a description of the earth and history of its inhabitants and according to D Herbelot, he likewise produced a history of Casbun Bochart, Hyde John Assemani Wahli and W Ouseley and other modern Orientologists, have availed themselves of the labours of this learned Arabian.—*Biog. Univ.*

KEACH (BENJAMIN) a baptist minister born at Stokeham in Buckinghamshire in 1640. In 1664 he was sentenced to stand in the pillory for the publication of a book called the Child's Instructor after which he was chosen pastor of a baptist congregation in Southwark where he died in 1704. He was author of two works in the manner of Bunyan's Pilgrim's Progress which made a great noise in their day entitled The Travels of Godliness and The Travels of Ungodliness. He is now best known by his Tropologia or Key to open Scripture Metaphors folio 1682 reprinted in 1778 and by his Exposition of Psalms.—Crosby's Hist. of the Baptists

KEATE FRS (George) an English author of the last century born in 1729 at Rowde in Wiltshire. He received the rudiments of his education at Kingstone grammar-school after which he travelled for some time on the continent and became acquainted at Geneva with Voltaire to whom he some years afterwards addressed a poetical epistle under the title of Ferney. Having become a member of the Inner Temple soon after his return from abroad he prosecuted the study of the law until called to the bar but he seems never to have practised as an advocate, although at the time of his decease he was a bENCHER of the society to which he belonged. His writings are Ancient and Modern Rome a poem 1760 Account of the Republic of Geneva 1761, 'Poetic Epistles from Lady Jane Grey to Lord Guildford Dudley 1763, The Alps a descriptive Poem, 1763 Netley Abbey 1764, The Temple Student 1765, Ferney, (the poem already alluded to,) 1769 The Movement in Arcadia, a drama, 1773, and 'Sketches from Nature' 2 vols. 1779 Captain Honey

K E A

Wilson, in 1783, was shipwrecked on one of the Falas or Felew Islands, and afterwards succeeded in returning to England, in a vessel built by his crew upon the spot, with the assistance of the king, Abba Thulla whose son Lee Boe accompanied him to Europe. This gentleman placed his papers in Mr Keate's hands who from that source compiled his Account of the Pelew Islands, which was his last work his death taking place in the summer of 1797. Mr Keate was a member both of the Royal and Antiquarian societies.—*Gent Mag.*

KEATING (GROVER) an Irish historian of English extraction who flourished in the early part of the seventeenth century. He was a native of Tipperary and educated for the priesthood of the church of Rome and having received the degree of DD from a foreign university became a distinguished preacher. Being well versed in the ancient Irish language, he undertook to collect the remains of the early history and antiquities of the island and formed them into a regular narrative which he drew up in the Irish language and finished about the time of the accession of Charles I. A due notice may be entertained of this production when it is added, that it commences from the planting of Ireland after the deluge and extends to the seventeenth year of Henry II. and gives the lives and reigns of one hundred and seventy four kings of the Milesian race replete with fictitious personages and fabulous incidents, which however it is said the compiler gives as such and only supposes that real facts may be mixed up in them. This work was translated into English by Dermot O Connor in 1723, and published in London in a folio volume of which a new edition with splendid plates of the arms of the principal Irish families appeared in 1738. Keating who also wrote an

Elegy on Lord Decies, and some other pieces of a religious kind, is supposed to have died about the middle of the seventeenth century.—*Harris's Edition of Ware's Ireland.*

KEATS (JOHN) a young English poet of extraordinary promise and almost as extraordinary performance was of humble origin and born October 29 1796 at a livery stable kept by his grandfather in Moorfields. In childhood he was sent to Mr Clarke's school at Enfield, where he remained till the age of fifteen and was then bound apprentice to Mr Hammond, a surgeon in Church street, Edmonton. On leaving Mr Hammond, he attended St Thomas's hospital but his inclination to poetry having been cultivated by his teachers at school who marked his unusual turn of mind, and meeting when he came out in the world with the other engagements of it natural to literary and stirring times he found himself unable to pursue his profession and gave way entirely to the ambition of becoming a great poet. What induced him to exhibit this ambition with the more eagerness was an introduction he had at this time to Mr Leigh Hunt, who was struck with admiration at the specimens

K E A

of premature genius laid before him. Mr Keats's first volume of poems, many of which were written in his teens, accordingly made its appearance in 1817 when he was in his twenty-first year. This was followed by

Endymion, a Poetic Romance in 1818; and in the year 1820 he published his last and best work, '*Lamia Isabella* and other Poems' all which publications excited remarkable attention. Mr Keats's poetical faculty was of a nature to make its way into notice under any circumstances and would unquestionably have done so but the political and other opinions to which his attention had been early directed the public connexions to which he was introduced, and the generous enthusiasm, natural to great talents, which would not allow him to conceal either soon brought on him a host of critics some of whom were but too happy to mask their political hostility under the guise of public seal. An attack from a review the conductors of which were actuated by this motive completed the difficulties with which Mr Keats had to contend and his constitution never having been very strong and undergoing a severe shock in the illness and death of a younger brother whose bedside he had attended when he ought to have been nursing an illness of his own not to mention some other perplexities of a nature too delicate, though unfeigned, to be mentioned here has put forth his last volume with little hope of its doing any thing but shew what he might have done; and withdrew into silence and the arms of his friends to die. It is certain that he had made up his mind to this premature end a good while before it took place. During his sufferings which were considerable owing to the consciousness of what he might have performed the diadem of his own physical weakness, which subjected him to impressions from his enemies that he otherwise despised and above all to a very tender hope which he had reason to indulge and which he now saw he must give up in this world he nevertheless exhibited a manly submission and took a pleasure in showing himself sensible of the attentions he experienced. After residing some months in the houses of Mr Charles Brown Mr Leigh Hunt, and other friends at Hampstead, he was prevailed upon to try the climate of Italy where he arrived but without effect, in the month of November 1820 accompanied by his friend Mr Severn a young artist of great promise since well known as the principal Engish student at Rome, and in Rome on the 27th of December following in the arms of this gentleman, who attended him with undeviating zeal, he expired, completely worn out and wearied of life. His lingering death bed was so painful to him that he used eagerly to watch the countenance of the physician in hopes of seeing what others would have called the fatal sentence yet so sweet was his natural taste of life and so irreproachable his political tendencies to the last that a little before he died speaking of the grave he was about to occupy he said 'He felt the deepest

K E A

growing over him." He was interred in the English burying-ground, near the monument of George Canning, and not far from the grave in which was soon after deposited his poetical remains Mr Shelly who had made him the handsomest offer to come and live with him in Tuscany. It is a mistake to attribute Mr Keats's death as lord Byron has done among others, to the attacks of the cranes, and his lordship was told of it, before the passage to that purpose in Don Juan appeared but a lively couplet with a good rhyme to it is hard for a wit to part with. The attacks may have accelerated, and undoubtedly embittered his death but the cause of it was a consumptive tendency of an extreme kind and of long standing. When his body was opened, there was scarcely any portion of lungs remaining. The physicians declared that they wondered how he could have held out so long and said that nothing could have enabled him to do it but the spirit within him. Mr Keats had a very manly as well as delicate spirit. He was personally courageous in no ordinary degree and had the usual superiority of genius to hit the art and the love of money. His patriotism which was inconsiderable he freely used in part, and even resqued altogether to relieve the wants of others and farther their views. He could be hot now and then, and perhaps was a little proud owing to the humbleness of his origin and the front he thought it necessary to present to vulgar abuse. He was handsome with remarkably beautiful hair curling in natural ringlets. Mr Keats's poems have been so often critiqued both by friends and enemies, and have succeeded since his death in securing him so unequivocal a reputation as a highly promising genius that it will be necessary to say comparatively little of them here. If it was unlucky for his immediate success, that he came before the public recommended by a political party, it was fortunate for him with posterity that he began to write at a period when original thinking, and a dependence on a man's own resources were earnestly inculcated on all sides. Of his standing with posterity we have no doubt. He will be considered, per excellence as the young poet as the one who poured forth at the earliest age the greatest unequivocal exuberance and who proceeded very speedily to show that maturity brought him a judgment equal to the task of pruning it, and rendering it immortal. He had the two highest qualities of a poet, in the highest degree—imagination and imagination. His Endymion with all its young faults will be a store-house for the lovers of genuine poetry both young and old a wood to wander in, a solitude inhabited by creatures of superhuman beauty and intellect, and superabundant in the luxuriance of a poetical domain, not omitting "weeds of glorious statuary." Its most obvious fault was a negligence of rhyme ostentatiously careless which, by the common law of extremes produced the very effect he wished to avoid—a pressure of itself on the reader. The fragment of Hyperion, which was his last per-

K E D

formance, and which extorted the admiration of lord Byron, has been compared to those bones of enormous creatures which are occasionally dug up and remain as of extraordinary and gigantic times.—*Original Com.*

KEBBLE (JOSEPH) an English lawyer of almost incredible industry though as it would seem of little practice in his profession. His father Richard Kebble was a sergeant-at-law during the Commonwealth, and his own birth took place about the year 1638. Having gone through a course of university education at Jesus college Oxford and being appointed by the interest of his father with the dominant party a fellow of All Souls in 1648 he entered him self of Gray's Inn, and in 1658 was called to the bar. Three years afterwards he began to signalize himself by the constant regularity of his appearance in the court of King a Bench where from that time to the day of his decease a period of nearly half a century he occupied himself incessantly with writing out reports of the various cases which came before the court, being himself it is confidently asserted never once professionally employed there even so much as to make a motion. At the chape belonging to his inn of court Mr Kebble was no less persevering and after his decease copies of upwards of 4000 sermons delivered by various preachers in that place of worship were found in his hand writing. His printed works include A new Table to the Statute Book compiled in 1674 An Explanation of the Laws against Recusants 1681 8vo An Assistance to Justices of the Peace folio Reports from the King a Bench folio 3 vols., an essay On Human Nature and another On Human Actions. But by far the greatest proof of his unweary assiduity appears in upwards of one hundred folio and fifty quarto volumes of manuscript, which he left behind him. His death took place suddenly in the month of August 1710.—*Biog. Brit.*

KECKERMAN (BARTHOLOMEW) an eminent Prussian Calvinist divine and philosophical professor was born at Danzig in 1571. He received the first rudiments of learning from James Fabricius and studied divinity and philosophy at the university of Wittenberg. He subsequently became Hebrew professor at Heddleburgh and finally co-rector of the celebrated academical institution in his native city. In this capacity he proposed to initiate students in philosophy in a more compendious manner and with that view drew up a great number of systems and treatises of logic ethics metaphysics physics, astronomy &c and was so assiduous in writing and teaching that his health became irreparably impaired and he died in 1609 at the early age of thirty-eight. KEDER (NICHOLAS) an antiquary and artist born at Stockholm in 1669. After having finished his studies in Sweden, he

K E I

travelled into other countries to acquire a knowledge of foreign languages and to make a collection of medals and of designs of ancient monuments. On his return home he was made archaeological assessor of the chancery and Charles XI employed him to arrange a cabinet of Roman medals. He was consulted relative to the devices, inscriptions, and armisms on the medals struck by the government and on the occasion of his having letters of nobility conferred on him in 1719 a commemorative medal was made with the inscription *Nobilis quis bonus*. He died in 1735. His works consist of a treatise subtitled

Thesaurus Nummorum Sueo-Gothicorum; dissertations in Latin on his own life in the same language inserted in the *Acta Literaria Suecicæ* 1747, and a poem in French —*Bug Uri*
